Mr. ASWELL. I would like to read this patent issued to the railroad company, providing that "where the same shall have not been sold, reserved, or otherwise disposed of" shall go to the railroad company. I call the attention of this House to section 2, to which the gentleman from Wisconsin [Mr. LENROOT] referred. Section 2 provides in this confirmatory act that these lands actually occupied by settlers in 1882 should be excepted from this grant and reserved to the actual settlers. The patents provide that where the land shall have been reserved or otherwise disposed of by the United States, and to which a preemption or homestead claim shall not have attached at the time the said road was definitely fixed—which was in 1881 or 1882—the title shall not vest in the railroad. So that, Mr. Speaker, this patent on the face of it reserves to these settlers the right to occupy their homes. They have lived there all these years. There are not more than 350 of them in my opinion who will ever be considered by the Land Office, and this bill merely directs that they have the right to have their cases adjudicated by the department. You say the cases are in the courts and we should wait. The settlers know they have waited for 15 years on the courts. Delay has been your scheme until you get the timber from the lands. You mention the Blanchard-Robinson compromise. Why should the settlers pay $2 an acre for their homes when section 2 of the act of February 8, 1887, provided they should have their homes free? The Land Office says this act is all the law there is or ever was on the subject. This bill does not affect or change that law.

The SPEAKER. The gentleman's time has expired. All time has expired. The question is on suspending the rules and passing the bill.

The question being taken, the Speaker announced that in the opinion of the Chair two-thirds had voted in the affirmative.

Mr. CRAMTON. Mr. Speaker, I demand the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 198, nays 75, answered "present" 6, not voting 154, as follows:

YEAS—198.

So, two-thirds voting in the affirmative, the rules were suspended and the bill passed.

The Clerk announced the following pairs:

For the session:

Mr. LIEBEL with Mr. ROWLAND.

Mr. DEWALT with Mr. MCFADDEN.

Mr. SCULLY with Mr. BROWNING.

Until further notice:

Mr. PRICE with Mr. SELLS.

Mr. POU with Mr. SCOTT of Pennsylvania.

Mr. PADGETT with Mr. MCKENZIE.

Mr. OVERMYER with Mr. MCCRACKEN.

Mr. OLNEY with Mr. LONGWORTH.

Mr. NEELY with Mr. LANGLEY.

Mr. MCDERMOTT with Mr. LAFEAN.

Mr. LOFT with Mr. KREIDER.

Mr. LINTHICUM with Mr. KIESS of Pennsylvania.

Mr. KEATING with Mr. KENNEDY of Rhode Island.

Mr. JONES with Mr. KELLEY.

Mr. HILLIARD with Mr. JOHNSON of South Dakota.

Mr. HENRY with Mr. HAYES.

Mr. HAY with Mr. GRAY of New Jersey.

Mr. HART with Mr. HASKELL.

Mr. HAMILL with Mr. GRAHAM.

Mr. SHERLEY with Mr. GILLETT.

Mr. DALE of New York with Mr. HUTCHINSON.

Mr. MCANDREWS with Mr. HILL.

Mr. PATTEN with Mr. FAIRCHILD.

Mr. GALLAGHER with Mr. SNYDER.

Mr. MORRISON with Mr. HUMPHREY of Washington.

Mr. WM. ELZA WILLIAMS with Mr. GRIEST.

Mr. DENT with Mr. KENNEDY of Iowa.

Mr. ABERCROMBIE with Mr. TINKHAM.

Mr. MAHER with Mr. AUSTIN.

Mr. DOREMUS with Mr. OAKEY.

Mr. LEWIS with Mr. STINESS.

Mr. HOUSTON with Mr. GUERNSEY.

Mr. FLYNN with Mr. MCCULLOCH.

Mr. GLASS with Mr. SLEMP.

Mr. RAGSDALE with Mr. SUTHERLAND.

Mr. RIORDAN with Mr. SWIFT.

Mr. BLACK with Mr. ANTHONY.
Mr. BRUCKNER with Mr. BACHARACH.
Mr. BUCHANAN of Illinois with Mr. BARCHFELD.
Mr. BURKE with Mr. CARTER of Massachusetts.
Mr. BURNETT with Mr. CHARLES.
Mr. CALLAWAY with Mr. COLEMAN.
Mr. CAREW with Mr. COOPER of Ohio.
Mr. CASEY with Mr. CRAGO.
Mr. CLINE with Mr. DALLINGER.
Mr. CONNELLY with Mr. DARROW.
Mr. CROSSER with Mr. DEMPSEY.
Mr. DAVENPORT with Mr. DRUKKER.
Mr. DOOLING with Mr. TILSON.
Mr. EDWARDS with Mr. WASON.
Mr. FINLEY with Mr. WATSON of Pennsylvania.
Mr. FITZGERALD with Mr. WOOD of Indiana.
Mr. RUBEY with Mr. MAGEE.
Mr. RUSSELL of Missouri with Mr. MEEKER.
Mr. SHACKLEFORD with Mr. MILLER of Delaware.
Mr. SHERWOOD with Mr. MOONEY.
Mr. SHOUSE with Mr. MOORE of Pennsylvania.
Mr. SLAYDEN with Mr. MORIN.
Mr. STEDMAN with Mr. MOTT.
Mr. WALKER with Mr. NICHOLS of Michigan.
Mr. WATKINS with Mr. PARKER of New Jersey.
Mr. WINGO with Mr. PETERS.
Mr. YOUNG of Texas with Mr. PLATT.
Mr. FARLEY with Mr. REAVIS.
Mr. LESHER with Mr. ROBERTS of Nevada.
Mr. OGLESBY with Mr. ROBERTS of Massachusetts.
Mr. GALLIVAN with Mr. RODENBERG.
Mr. GARRETT with Mr. BRITTEN.
Mr. GODWIN of North Carolina with Mr. CHANDLER of New York.

For two weeks:

Mr. SABATH with Mr. NORTH.

Mr. BROWNING. Mr. Speaker, I voted "no," but I have a general pair with the gentleman from New Jersey, Mr. SCULLY. I desire to withdraw that vote and answer "present."

Mr. BROWNING answered "Present," as above recorded.

Mr. BURKE. Mr. Speaker, I want to vote "yea."

The SPEAKER. Was the gentleman in the Hall listening when his name should have been called?

Mr. BURKE. I was not.

The SPEAKER. The gentleman does not bring himself within the rule.

The result of the vote was then announced, as above recorded.

HOUSE BILL WITH SENATE AMENDMENTS REFERRED.

Under clause 2, Rule XXIV, House bill with Senate amendments was taken from the Speaker's table and referred to its appropriate committee, as indicated below:

H. R. 10385. An act making appropriations for the current and contingent expenses of the Bureau of Indian Affairs, for fulfilling treaty stipulations with various Indian tribes, and for other purposes, for the fiscal year ending June 30, 1917; to the Committee on Indian Affairs.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted as follows:

To Mr. MOONEY, for one week, on account of death in his family.

To Mr. LOBECK, indefinitely, on account of important business.

To Mr. RUBEY, for two days, on account of illness.

HOUR OF MEETING TO-MORROW.

Mr. KITCHIN. Mr. Speaker, I ask unanimous consent that when the House adjourns to-day it adjourn to meet at 11 o'clock a. m. to-morrow.

The SPEAKER. The gentleman from North Carolina asks unanimous consent that when the House adjourns to-day it adjourn to meet at 11 o'clock a. m. to-morrow. Is there objection?

Mr. CARLIN. Reserving the right to object, I want to ask if the gentleman from North Carolina understands that the committees of the House meet at 10.30, and this early meeting makes it almost impossible for us to do any work at all?

Mr. KITCHIN. Yes; I understand.

Mr. MANN. The gentleman from North Carolina will recall that we have an evening session to-morrow night until 11 o'clock. Does not he think that 12 hours is a little too long?

Mr. KITCHIN. I think we ought to work 12 hours one day in the month.

The SPEAKER. Is there objection? [After a pause.] The Chair hears none. The Chair will appoint the gentleman from Missouri [Mr. IGOE] to preside to-morrow evening.

ADJOURNMENT.

Mr. KITCHIN. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 16 minutes p. m.) the House, under its previous order, adjourned until to-morrow, Tuesday, April 4, 1916, at 11 o'clock a. m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1. A letter from the Secretary of War, transmitting, with a letter from the Chief of Engineers, report on reexamination of Ouachita River, Ark and La. (H. Doc. No. 979); to the Committee on Rivers and Harbors and ordered to be printed.

2. A letter from the Secretary of War, transmitting, with a letter from the Chief of Engineers, reports on preliminary examination and survey of Lorain Harbor, Ohio, with a view to preventing erosion of banks, if any, caused by the extension of the Government breakwater on either side of the harbor (H. Doc. No. 980); to the Committee on Rivers and Harbors and ordered to be printed, with illustrations.

3. A letter from the Secretary of War, transmitting, with a letter from the Chief of Engineers, report on reexamination of Tennessee River, Tenn., Ala., and Ky. (H. Doc. No. 981); to the Committee on Rivers and Harbors and ordered to be printed, with illustrations.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, bills and resolutions were severally reported from committees, delivered to the Clerk, and referred to the several calendars therein named, as follows:

Mr. TAYLOR of Colorado, from the Committee on the Public Lands, to which was referred the bill (H. R. 11472) to reserve certain lands and make them a part of the Pike National Forest, reported the same without amendment, accompanied by a report (No. 469); which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. DILL, from the Committee on Indian Affairs, to which was referred the bill (H. R. 1776) for the relief of the Wisconsin Band of Pottawatomie Indians, and for other purposes, reported the same with amendment, accompanied by a report (No. 470); which said bill and report were referred to the Committee of the Whole House on the state of the Union.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, private bills and resolutions were severally reported from committees, delivered to the Clerk, and referred to the Committee of the Whole House, as follows:

Mr. POU, from the Committee on Claims, to which was referred the bill (H. R. 12798) for the relief of the estate of Abram M. Matthews, reported the same with amendment, accompanied by a report (No. 471), which said bill and report were referred to the Private Calendar.

He also, from the same committee, to which was referred the bill (H. R. 5501) for the relief of the estate of Isaac Ivy, reported the same with amendment, accompanied by a report (No. 472), which said bill and report were referred to the Private Calendar.

He also, from the same committee, to which was referred the bill (H. H. 5502) for the relief of the heirs of R. F. Jarrell, reported the same with amendment, accompanied by a report (No. 473), which said bill and report were referred to the Private Calendar.

Mr. CAPSTICK, from the Committee on Claims, to which was referred the bill (H. R. 8141) for the relief of the dependent widow of Patrick Curran, civilian employee of the Government, who was killed while in the discharge of his duties at the United States naval magazine at Iona Island, N. Y., reported the same with amendment, accompanied by a report (No. 474), which said bill and report were referred to the Private Calendar.

Mr. POU, from the Committee on Claims, to which was referred the bill (H. R. 9181) for the relief of the heirs of James R. Tolbert, reported the same with amendment, accompanied by a report (No. 475), which said bill and report were referred to the Private Calendar.

Mr. EDMONDS, from the Committee on Claims, to which was referred the bill (H. R. 8310) for the relief of George T. Hamilton, reported the same with amendment, accompanied by a report (No. 476), which said bill and report were referred to the Private Calendar.

Mr. POU, from the Committee on Claims, to which was referred the bill (H. R. 11150) for the relief of mail contractors, reported the same with amendment, accompanied by a report (No. 477), which said bill and report were referred to the Private Calendar.

Mr. YOUNG of North Dakota, from the Committee on Claims, to which was referred the bill (H. R. 2540) for the relief of Lena Garagnon, reported the same with amendment, accompanied by a report (No. 478), which said bill and report were referred to the Private Calendar.

Mr. CAPSTICK, from the Committee on Claims, to which was referred the bill (H. R. 9288) providing for the refund of certain duties illegally levied and collected on acetate of lime, reported the same without amendment, accompanied by a report (No. 479), which said bill and report were referred to the Private Calendar.

Mr. EDMONDS, from the Committee on Claims, to which was referred the bill (H. R. 11679) for the relief of Samuel D. Kingsbury, reported the same without amendment, accompanied by a report (No. 480), which said bill and report were referred to the Private Calendar.

Mr. FOSTER, from the Committee on Claims, to which was referred the bill (H. R. 10546) for the relief of the Illinois Central Railroad Co., and for other purposes, reported the same without amendment, accompanied by a report (No. 481), which said bill and report were referred to the Private Calendar.

Mr. STEPHENS of Mississippi, from the Committee on Claims, to which was referred the bill (S. 585) conferring jurisdiction on the Court of Claims to hear, determine, and render judgment in claims of the Sisseton and Wahpeton Bands of Sioux Indians against the United States, reported the same without amendment, accompanied by a report (No. 482), which said bill and report were referred to the Private Calendar.

He also, from the same committee, to which was referred the bill (S. 1326) for the relief of Vilhelm Torkildsen, reported the same without amendment, accompanied by a report (No. 483), which said bill and report were referred to the Private Calendar.

He also, from the same committee, to which was referred the bill (H. R. 1161) to pay Cowden & Cowden, of Amory, Monroe County, Miss., for the loss of a horse while being used by the Department of Agriculture, reported the same without amendment, accompanied by a report (No. 484), which said bill and report were referred to the Private Calendar.

Mr. YOUNG of North Dakota, from the Committee on Claims, to which was referred the bill (H. R. 2538) for the relief of Ethel Fredrickson and daughter Ethel, reported the same without amendment, accompanied by a report (No. 485), which said bill and report were referred to the Private Calendar.

Mr. STEPHENS of Mississippi, from the Committee on Claims, to which was referred the bill (S. 3436) for the relief of John Alexander Besonen, reported the same without amendment, accompanied by a report (No. 486), which said bill and report were referred to the Private Calendar.

ADVERSE REPORTS.

Under clause 2 of Rule XIII, adverse reports were delivered to the Clerk and laid on the table, as follows:

Mr. CAPSTICK, from the Committee on Claims, to which was referred the bill (H. R. 11800) for the relief of John F. Joy, reported the same adversely, accompanied by a report (No. 487), which said bill and report were laid on the table.

Mr. FOSTER, from the Committee on Claims, to which was referred the bill (H. R. 6208) for the relief of William E. Campbell, reported the same adversely, accompanied by a report (No. 488), which said bill and report were laid on the table.

CHANGE OF REFERENCE.

Under clause 2 of Rule XXII, the Committee on Pensions was discharged from the consideration of the bill (H. R. 6336) granting an increase of pension to Matthew J. McKeon; and the same was referred to the Committee on Invalid Pensions.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. HULL of Tennessee: A bill (H. R. 14117) making appropriation for the construction and equipment of a Weather Bureau observatory on Crab Orchard Mountain, Cumberland County, Tenn.; to the Committee on Agriculture.

Also, a bill (H. R. 14118) to establish a fish hatchery and biological station in the fourth congressional district of the State of Tennessee; to the Committee on the Merchant Marine and Fisheries.

By Mr. HULBERT: A bill (H. R. 14119) to create two additional judges in the District Court of the United States for the Southern District of New York; to the Committee on the Judiciary.

By Mr. DALE of New York: A bill (H. R. 14120) to establish fish hatching and fish cultural stations in the States of Alabama, Arizona, Colorado, Florida, Indiana, Illinois, Maryland, New York, North Carolina, Oregon, Oklahoma, Texas, South Carolina, Massachusetts, and Washington; to the Committee on the Merchant Marine and Fisheries.

By Mr. MILLER of Delaware: A bill (H. R. 14121) for the erection of a public building at Newark, Del.; to the Committee on Public Buildings and Grounds.

By Mr. CARLIN (by request): A bill (H. R. 14122) to authorize certain late physicians and surgeons of the United States Volunteer Army in the War with Spain to practice their respective professions in any Territory, District, dependency, or possession of the United States under the constitutional jurisdiction of Congress upon the presentation and proof of certain facts; to the Committee on Military Affairs.

By Mr. HOWELL: A bill (H. R. 14123) giving the right to an additional homestead to all persons who have exhausted or who shall exhaust their original right of entry through the purchase of Uintah Indian Reservation lands; to the Committee on the Public Lands.

Also, a bill (H. R. 14124) to add certain lands to the Ashley National Forest, Utah, and for other purposes; to the Committee on the Public Lands.

By Mr. FOSS: A bill (H. R. 14125) to authorize the acquisition of a site and the erection of a Federal building at Lake Forest, Ill.; to the Committee on Public Buildings and Grounds.

By Mr. BAILEY: A bill (H. R. 14126) to authorize and empower the Secretary of the Interior immediately to develop oil-producing lands belonging to the public domain, to make an appropriation therefor, and for other purposes; to the Committee on Appropriations.

By Mr. OVERMYER (by request): A bill (H. R. 14127) to authorize the adoption of "Uncle Sam's Power" as the national anthem of the United States of America; to the Committee on the Library.

By Mr. AIKEN: A bill (H. R. 14128) for the erection of a public building at Easley, S. C.; to the Committee on Public Buildings and Grounds.

Also, a bill (H. R. 14129) for the erection of a public building at Seneca, S. C.; to the Committee on Public Buildings and Grounds.

By Mr. KONOP: A bill (H. R. 14130) for the relief of the Wisconsin Band of Pottawatomie Indians, and for other purposes; to the Committee on Indian Affairs.

By Mr. JACOWAY: A bill (H. R. 14131) providing for a survey of Arkansas River, Ark., with the view to making same navigable; to the Committee on Rivers and Harbors.

By Mr. KEY of Ohio: A bill (H. R. 14132) to provide for the erection of a monument to soldiers of the War of 1812 at Fort McArthur, Hardin County, Ohio; to the Committee on Appropriations.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. AIKEN: A bill (H. R. 14133) granting a pension to Henrietta Abney; to the Committee on Pensions.

Also, a bill (H. R. 14134) granting a pension to Medicus F. Day; to the Committee on Pensions.

By Mr. BARNHART: A bill (H. R. 14135) granting an increase of pension to Harmon Kaylor; to the Committee on Invalid Pensions.

By Mr. BYRNES of South Carolina: A bill (H. R. 14136) for the relief of Lewis Claxton; to the Committee on Claims.

Also, a bill (H. R. 14137) for the relief of the estate of T. J. Counts; to the Committee on Claims.

By Mr. CANNON: A bill (H. R. 14138) granting an increase of pension to John Jay Ingersoll; to the Committee on Invalid Pensions.

By Mr. CLARK of Missouri: A bill (H. R. 14139) granting an increase of pension to Ann E. Quinn; to the Committee on Invalid Pensions.

By Mr. CLINE: A bill (H. R. 14140) granting a pension to William G. Kennedy (Spanish-American War); to the Committee on Pensions.

By Mr. CRAMTON: A bill (H. R. 14141) granting an increase of pension to Benjamin Harrison; to the Committee on Pensions.

By Mr. DIXON: A bill (H. R. 14142) granting a pension to Nancy Taylor; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14143) granting an increase of pension to Jacob Eppelsheimer; to the Committee on Pensions.

Also, a bill (H. R. 14144) granting an increase of pension to John M. Hoefling; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14145) granting an increase of pension to Benjamin F. Hedrick; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14146) granting an increase of pension to Charles M. Gaumer; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14147) granting an increase of pension to James W. Boyl; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14148) granting an increase of pension to Samuel Parker; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14149) granting an increase of pension to Margaret J. Cornett; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14150) granting an increase of pension to John S. Kephart; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14151) granting an increase of pension to Peter M. Smith; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14152) granting an increase of pension to George S. Dickey; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14153) granting an increase of pension to Dalton Hinchman, alias Samuel McBurson; to the Committee on Invalid Pensions.

By Mr. EAGLE: A bill (H. R. 14154) for the relief of the estate of Francis Busch, deceased; to the Committee on Claims.

By Mr. GARNER: A bill (H. R. 14155) for the relief of the widow of Albert Champion; to the Committee on Claims.

By Mr. HASTINGS: A bill (H. R. 14156) granting an increase of pension to Lenora N. Hoyt; to the Committee on Invalid Pensions.

By Mr. HENSLEY: A bill (H. R. 14157) granting an increase of pension to Louisa H. Highley; to the Committee on Pensions.

By Mr. HOWELL: A bill (H. R. 14158) to reinstate Edward Eugene Conroy as a midshipman in the United States Navy; to the Committee on Naval Affairs.

By Mr. HULBERT: A bill (H. R. 14159) granting a pension to Anna M. Callahan; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14160) granting an honorable discharge to James Neal; to the Committee on Military Affairs.

By Mr. HULL of Tennessee: A bill (H. R. 14161) granting an increase of pension to Ade Hayes Garrett; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14162) granting an increase of pension to Joseph Hurt; to the Committee on Pensions.

Also, a bill (H. R. 14163) for the relief of James W. Turner; to the Committee on Military Affairs.

By Mr. JOHNSON of South Dakota: A bill (H. R. 14164) granting a pension to James O'Heron; to the Committee on Pensions.

By Mr. KEY of Ohio: A bill (H. R. 14165) granting an increase of pension to Milton B. Smith; to the Committee on Invalid Pensions.

By Mr. LIEBEL: A bill (H. R. 14166) granting a pension to Charles A. Smith; to the Committee on Pensions.

Also, a bill (H. R. 14167) granting a pension to Harry F. Douglas; to the Committee on Pensions.

Also, a bill (H. R. 14168) granting a pension to Margaret Butler; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14169) granting an increase of pension to Charles S. Hohman; to the Committee on Pensions.

By Mr. LITTLEPAGE: A bill (H. R. 14170) granting an increase of pension to Martha L. Lloyd; to the Committee on Invalid Pensions.

By Mr. MATTHEWS: A bill (H. R. 14171) granting an increase of pension to Hiram Shartleff; to the Committee on Invalid Pensions.

Also, petition of Swedish Christian Temperance Federation of Worcester, Mass., favoring national prohibition; to the Committee on the Judiciary.

SENATE.

TUESDAY, *April 4, 1916.*

(Legislative day of Thursday, March 30, 1916.)

The Senate reassembled at 12 o'clock meridian, on the expiration of the recess.

Mr. SMOOT. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst	Hitchcock	Nelson	Sterling
Beckham	Hollis	Norris	Sutherland
Borah	Husting	Overman	Swanson
Brady	James	Page	Taggart
Broussard	Johnson, Me.	Pomerene	Thomas
Burleigh	Johnson, S. Dak.	Ransdell	Townsend
Catron	Jones	Reed	Underwood
Chamberlain	Kenyon	Robinson	Vardaman
Chilton	Lane	Shafroth	Wadsworth
Clark, Wyo.	Lee, Md.	Sheppard	Warren
Culberson	Lodge	Sherman	Weeks
Cummins	McCumber	Simmons	Williams
Curtis	McLean	Smith, Ga.	Works
du Pont	Martin, Va.	Smith, Md.	
Gallinger	Martine, N. J.	Smith, S. C.	
Hardwick	Myers	Smoot	

Mr. CHILTON. I wish to announce the necessary absence of the Senator from Indiana [Mr. KERN], and also the absence of my colleague [Mr. GOFF] on account of illness. I will let this announcement stand for the day.

The VICE PRESIDENT. Sixty-one Senators have answered to the roll call. There is a quorum present.

Mr. BORAH obtained the floor.

Mr. SUTHERLAND. Will the Senator from Idaho permit me to offer an amendment to the pending bill?

Mr. BORAH. I yield for that purpose.

Mr. SUTHERLAND. I offer an amendment to the pending bill, which I ask may be printed and lie on the table.

NATIONAL DEFENSE IN CALIFORNIA (S. DOC. NO. 388).

The VICE PRESIDENT. The Chair lays before the Senate a communication from the Secretary of War, transmitting, in response to a resolution of the 27th ultimo, a tabulated statement setting forth the military forces of the United States now in the State of California. The communication and accompanying papers will be printed in the RECORD and referred to the Committee on Military Affairs.

The communication is as follows:

WAR DEPARTMENT,
Washington, March 31, 1916.

The PRESIDENT OF THE UNITED STATES SENATE.

SIR: In compliance with the Senate resolution of March 27, 1916, I have the honor to inclose herewith a tabulated statement setting forth the military forces of the United States now in the State of California, together with information showing to what branch or arm of the service they belong, the strength of each, the places in the State where they are stationed, and the force of men at each place.

There is also inclosed herewith another tabulated statement showing the coast defenses in the State of California, how they are manned, and the number and kind of guns in each fort.

Very respectfully,

NEWTON D. BAKER,
Secretary of War.

Statement showing the station and strength of troops in California.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by J. C. South, its Chief Clerk, announced that the House had passed the following bills:

S. 1809. An act to create an additional judge in the district of New Jersey; and

S. 4190. An act to authorize the Yankton County Bridge Co., a corporation, to construct and maintain a bridge or bridges and approaches thereto across the Missouri River at a point between Yankton County, S. Dak., and Cedar County, Nebr.

The message also announced that the House had passed the following bills with amendments, in which it requested the concurrence of the Senate:

S. 3977. An act to authorize the Shamokin, Sunbury & Lewisburg Railroad Co., its lessees, successors, and assigns, to construct a bridge across the Susquehanna River from the borough of Sunbury, Northumberland County, Pa., to Monroe Township, Snyder County, Pa.; and

S. 3978. An act to authorize the Catawissa Railroad Co., its lessees, successors, and assigns, to construct a bridge across the west branch of the Susquehanna River from the borough of Milton, Northumberland County, Pa., to the borough of West Milton, Union County, Pa.

The message further announced that the House had passed the bill (S. 3391) to amend an act entitled "An act for the relief of Indians occupying railroad lands in Arizona, New Mexico, or California," approved March 4, 1913, with an amendment, in which it requested the concurrence of the Senate.

The message also announced that the House had passed the following bills and joint resolution, in which it requested the concurrence of the Senate:

H. R. 177. An act authorizing the Secretary of the Interior to accept the relinquishment of the State of Wyoming to certain lands heretofore certified to said State, and the State of Wyoming to select other lands in lieu of the lands thus relinquished;

H. R. 228. An act to amend the United States homestead law in its application to Alaska, and for other purposes;

H. R. 540. An act for the relief of settlers within the limits of the grant to the New Orleans, Baton Rouge & Vicksburg Railroad Co.;

H. R. 2744. An act to correct title to certain lands in Colorado;

H. R. 6099. An act to amend section 72 of an act entitled "An act to codify, revise, and amend the laws relating to the judiciary," approved March 3, 1911;

H. R. 6417. An act to provide for the selection by the Omaha Indians and the setting apart of reservation lands for tribal cemetery purposes;

H. R. 6914. An act to amend section 82, chapter 231, of the act to codify, revise, and amend the laws relating to the judiciary;

H. R. 8356. An act to amend sections 28 and 30 of an act entitled "An act to amend and consolidate the acts respecting copyright," approved March 4, 1909;

H. R. 9819. An act to amend the act of March 3, 1915, providing the time for the holding of United States court at Aiken, S. C.;

H. R. 9923. An act granting the consent of Congress to the county of Mitchell, or to the county of Baker, both of the State of Georgia, acting jointly or separately, and their successors and assigns, to construct a bridge across the Flint River;

H. R. 10139. An act to authorize the city of Fairmont to construct and operate a bridge across the Monongahela River at or near the city of Fairmont, in the State of West Virginia;

H. R. 10307. An act authorizing the Secretary of the Interior to pay and to distribute the balance now in the Treasury to the credit of the Alsea and other Indians on the Siletz Reservation;

H. R. 11792. An act transferring Chariton County from the northern division of the eastern district to the western division of the western judicial district of Missouri;

H. R. 12195. An act to amend section 17 of the United States bankruptcy law of July 1, 1898, and amendments thereto of February 5, 1903;

H. R. 13006. An act to authorize the reconstruction of an existing bridge across the Wabash River at Silverwood, in the State of Indiana, and the maintenance and operation of the bridge so reconstructed;

H. R. 13769. An act to authorize the Secrefary of War to supply tents for temporary use of the sufferers from the recent conflagration in Paris, Tex., and for other purposes; and

H. J. Res. 171. Joint resolution to continue in effect the provisions of the act of March 9, 1906.

PETITIONS AND MEMORIALS.

Mr. THOMAS presented memorials of sundry citizens of Colorado, remonstrating against the enactment of legislation for compulsory Sunday observance in the District of Columbia, which were ordered to lie on the table.

Mr. MYERS. I present a letter in the nature of a petition favoring the enactment of water-power legislation, which I ask may be printed in the RECORD.

There being no objection, the letter was ordered to lie on the table and to be printed in the RECORD, as follows:

MISSOULA, MONT., *March 28, 1916.*

Hon. HENRY L. MYERS,
United States Senate, Washington, D. C.

DEAR SIR: Under date of March 16, 1916, the Missoula Sentinel published an article entitled "Western Senators oppose Myers' bill," clipping inclosed.

This bill to conserve to the people of the United States the water power is one of the best bills proposed in the Senate for a decade, for it is absolutely in the interests of all the people and should have the support of every Senator.

State control of the natural advantages is not for the best interests of the people, as has been shown; and it has been, and always will be, easier to control these inherent rights better through the National Government.

Other pending legislation vital to the welfare and interests of the people should be as valiantly supported, and above all every Member of Congress should endeavor to serve the whole people even though sacrifices are necessary. Convey to Congress if need be, that I, we, all the people want your bill to pass, as well as other legislation for their interests.

Place this letter before them, if you will, so that they will understand that the people want this legislation.

Very truly, yours, CHAS. G. ADAMS.

Mr. MYERS. I present a letter in the nature of a petition from the Farmers' Society of Equity, of Leon, Mont., praying for the enactment of legislation in regard to the Flathead Reservation, in that State, and the price of oil products, and so forth. I ask that the letter be printed in the RECORD and referred to the Committee on Indian Affairs.

There being no objection, the letter was referred to the Committee on Indian Affairs and ordered to be printed in the RECORD, as follows:

LEON, MONT., *March 25, 1916.*

Hon. HENRY L. MYERS,
United States Senator, Washington, D. C.

MY DEAR SENATOR: The Farmers' Society of Equity, of Leon, desires to express its appreciation of the good work you are doing in Congress for the State of Montana, and especially for the Flathead Reservation, in your endeavor to have a Government plant established on Flathead River.

You know the real condition of the settlers on the reservation and their needs, and may rest assured that we will appreciate whatever you can do for the betterment of our condition.

We would also ask you to use your influence to deal with the oil companies to stop the raise in all kinds of oil products, especially gasoline.

Yours, very respectfully,

LEON LOCAL, FARMERS' SOCIETY OF EQUITY,
By E. C. JENKINS, *Secretary.*

Mr. MYERS. I present a petition from the congregation of the Grand Avenue Christian Church, of Bozeman, Mont., praying for prohibition in the District of Columbia, which I ask may be printed in the RECORD.

There being no objection, the petition was ordered to lie on the table and to be printed in the RECORD, as follows:

BOZEMAN, MONT., *March 26, 1916.*

At the regular meeting of the Grand Avenue Christian Church, Bozeman, Mont., the following resolution was adopted:

"To the Hon. HENRY L. MYERS,
"*United States Senate, Washington, D. C.*

"DEAR SIR: We the members of the Grand Avenue Christian Church, of Bozeman, Mont., representing a membership of 450, respectfully petition you to use all your influence to bring to a vote, and that you support the measure now before Congress to outlaw the saloons in Washington, D. C."

Respectfully submitted.

J. H. HARRIS,
Chairman Official Board.
W. C. DAWES, D. O.,
Secretary Official Board.

Mr. MYERS. I present a petition of Silver Bow Chapter, Daughters of the American Revolution, of Butte, Mont., praying for adequate preparedness legislation, which I ask may be printed in the RECORD.

There being no objection, the petition was ordered to lie on the table and to be printed in the RECORD, as follows:

Silver Bow Chapter, Daughters of the American Revolution, Butte, Mont., has placed itself on record as favoring national preparedness against war and authorized the following resolutions:

"Whereas the preservation and protection of our country is of vital moment, and the lessons taught us by the terrible European war have brought realization of the inadequate means of defense now available; and

"Whereas we long for universal peace, but believe that to enjoy peace we must be prepared to defend our beloved country; and

"Whereas we believe that to continue to preserve peace, and to uphold the honor and dignity of our Government, better national defenses are needed: Therefore be it

"*Resolved*, That we, as Daughters of the American Revolution whose ancesters founded this Republic, uphold all measures to put our Army and Navy in a position where, should the need come, they will be able to defend the honor of our country and the lives and the property of its citizens; and

"*Resolved*, That we indorse the endeavors of the President of the United States to increase the efficiency of both Army and Navy, to equip Army and Navy to resist armed invasion of any foe; and

"*Resolved*, That we ask the Montana representatives in Congress to support national preparedness against war."

OLIVIA H. HOPKINS,
BERTHA TAFT KEITH,
Authorized Committee, Silver Bow Chapter, D. A. R.

BUTTE, MONT., *March 25, 1916.*

Mr. MYERS. I present a petition of the Madison County Automobile and Good Roads Association, of Montana, praying for legislation for roads through the national forests. I ask that the petition be printed in the RECORD and referred to the Committee on Public Lands.

There being no objection, the petition was referred to the Committee on Public Lands and ordered to be printed in the RECORD, as follows:

Resolution.

Whereas large areas of the public domain lie within the boundaries of the various national forests, the title to which is in the United States, and which is permanently withdrawn from settlement; and

Whereas all said large areas, not being subject to taxation, contribute nothing toward the development of the country within or adjoining said national forests; and

Whereas it is imperatively necessary that roads should be built through the national forests in order to establish communications between lands adjoining said forests and promote the development of same, and also to provide proper protection against loss by fire; and

Whereas the amounts now apportioned to the various States through the acts of May 23, 1908, and August 10, 1912, from the receipts from said national forests are inadequate for such purposes: Now, therefore, be it

Resolved by the Madison County Automobile and Good Roads Association, That our Representatives in Congress be strongly urged to use every effort to obtain from Congress a permanent annual appropriation of at least 25 per cent of the gross receipts accruing from the operation of said national forests, or a temporary advance for a period of at least 10 years of 75 per cent of said receipts, for the purpose of building, constructing, and maintaining roads through said national forests, to be built by and under the supervision of the Forest Service; and be it further

Resolved, That a copy of this resolution be forwarded to our Representatives in Congress.

Mr. MYERS. I present a petition of the Christian Endeavor Society of the Presbyterian Church of Hamilton, Mont., praying for prohibition in the District of Columbia, which I ask may be printed in the RECORD.

There being no objection, the petition was ordered to lie on the table and be printed in the RECORD, as follows:

HAMILTON, MONT., *March 26, 1916.*

Senator H. L. MYERS,
Washington, D. C.

HONORABLE SIR: We, the undersigned, members of the Christian Endeavor Society of the Presbyterian Church of Hamilton, Mont., hereby petition you to support the bill now pending in Congress for the prohibition of the liquor traffic in the District of Columbia.

Respectfully submitted.

Miss Bessie Carpenter (president), Bethel Irwin (vice president), J. T. Caughmanep (secretary), Jacob Erickson, Mrs. D. E. Anson, Mrs. Fred A. Patch, Fred L. Carpenter, J. N. Taylor, Estella Carpenter, Carrie E. Lupton, F. A. Patch, Helen Shaw, Vashti E. Prentiss, D. E. Anson, J. C. Irwin, Dorris F. Carpenter, Franz S. Carpenter, Reba J. Malin, Mrs. Shaw, Helen Ensign, Emma B. Williams.

Mr. JOHNSON of Maine presented petitions of sundry citizens of Maine, praying for national prohibition, which were referred to the Committee on the Judiciary.

Mr. WARREN. I present resolutions adopted by the Albany County Branch of the Congressional Union for Woman Suffrage in the State of Wyoming, favoring the adoption of an amendment to the Constitution of the United States conferring upon women the right of suffrage. I ask that the resolutions be printed in the RECORD.

There being no objection, the resolutions were ordered to lie on the table and to be printed in the RECORD, as follows:

CONGRESSIONAL UNION FOR WOMAN SUFFRAGE,
Laramie, Wyo., March 28, 1916.

Resolved, That this meeting, the Albany County Branch of the Congressional Union at Laramie, Wyo., March 28, 1916, calls upon the members of the Judiciary Committee to report immediately and favorably to the House of Representatives the Sutherland-Mondell resolution; and be it further

Resolved, That a copy of this resolution be sent to each member of the Judiciary Committee of the House of Representatives and also that it be sent to each Member of the congressional delegation of Wyoming, and that it be read into the CONGRESSIONAL RECORD by Representative FRANK W. MONDELL, of the House, and Senator FRANCIS E. WARREN, of the Senate.

ALBANY COUNTY COMMITTEE,
Mrs. M. C. BROWN, *Chairman*,
Member School Board.
Mrs. W. S. INGHAM,
Dr. GRACE RAYMOND HEBARD,
Professor Political Economy, University of Wyoming.
Mrs. ETTA ROACH.
Mrs. C. L. PATCHELL,
Mrs. MAY BAIRD CAMPBELL, *Secretary.*
Mrs. FRANK D. SPAFFORD, *Treasurer.*
Mrs. C. A. DUNIWAY,
Chairman Resolution Committee.

Mr. WARREN presented petitions of sundry citizens of Wyoming, praying for national prohibition, which were referred to the Committee on the Judiciary.

Mr. TOWNSEND presented memorials signed by 727 farmers in the State of Michigan, remonstrating against the enactment of legislation to prohibit interstate commerce in convict-made goods, which were referred to the Committee on Education and Labor.

Mr. POINDEXTER presented memorials of F. J. Ogden and sundry other citizens of Farmington, Wash., remonstrating against the enactment of legislation for compulsory Sunday observance in the District of Columbia, which were ordered to lie on the table.

He also presented a petition of Stenilt Hill Grange, No. 555, Patrons of Husbandry, of Wenatchee, Wash., praying for Government ownership of telephone and telegraph systems, which was referred to the Committee on Post Offices and Post Roads.

He also presented a memorial of Stenilt Hill Grange, No. 555, Patrons of Husbandry, of Wenatchee, Wash., remonstrating against an increase in armaments, which was ordered to lie on the table.

Mr. HOLLIS presented a petition of Local Grange No. 278, Patrons of Husbandry, of Greenville, N. H., praying for national prohibition, which was referred to the Committee on the Judiciary.

Mr. TAGGART presented a memorial of sundry citizens of Elkhart, Ind., remonstrating against any change in the parcel-post law, which was referred to the Committee on Post Offices and Post Roads.

Mr. GALLINGER presented petitions of the congregation of the Congregational Church, of Cornish; the Conference on Child Welfare, of Somersworth; and of 28 citizens of Westmoreland, all in the State of New Hampshire, praying for national prohibition, which were referred to the Committee on the Judiciary.

Mr. NELSON presented petitions of sundry citizens of Minnesota, praying for national prohibition, which were referred to the Committee on the Judiciary.

He also presented a petition of the Calhoun Commercial Club, of Minneapolis, Minn., praying that an appropriation be made providing for the control of the flood waters of the Mississippi River, which was referred to the Committee on Commerce.

Mr. JONES presented petitions of sundry citizens of the State of Washington, praying for national prohibition, which were referred to the Committee on the Judiciary.

He also presented memorials of sundry citizens of Olympia, Wash., remonstrating against the enactment of legislation for compulsory Sunday observance in the District of Columbia, which were ordered to lie on the table.

He also presented memorials of sundry citizens of Seattle, Wash., remonstrating against the enactment of legislation to enlarge the powers of the juvenile courts relating to the guardianship of children, which were ordered to lie on the table.

He also presented a memorial of Local Grange No. 99, Patrons of Husbandry, of Catlin, Wash., remonstrating against any change in the parcel-post law, which was referred to the Committee on Post Offices and Post Roads.

Mr. BURLEIGH presented petitions of sundry citizens of Maine, praying for national prohibition, which were referred to the Committee on the Judiciary.

He also presented memorials of sundry citizens of Camden and Portland, in the State of Maine, remonstrating against the enactment of legislation for compulsory Sunday observance in the District of Columbia, which were ordered to lie on the table.

Mr. PAGE presented a memorial of sundry citizens of Bristol, Vt., remonstrating against compulsory military training, which was ordered to lie on the table.

Mr. O'GORMAN. I present resolutions adopted at a meeting of the common council of the city of Hudson, N. Y., which I ask may be printed in the RECORD and referred to the Committee on Immigration.

There being no objection, the resolutions were referred to the Committee on Immigration and ordered to be printed in the RECORD, as follows:

HUDSON, N. Y., *March 31, 1916.*

Hon. JAMES A. O'GORMAN,
United States Senate, Washington, D. C.

DEAR SIR: At a regular meeting of the common council of the city of Hudson, N. Y., held March 30, 1916, a resolution, of which the annexed is a copy, was passed by said body, protesting against the enactment of any legislation which would provide a literacy test for admission to the United States. I was directed by that body to transmit a copy of the same to you for your attention.

I am, very respectfully, yours,

HENRY M. JAMES, *City Clerk.*

Whereas there is now pending before the Congress of the United States legislation, which if enacted would impose a literacy test upon those who come to our shores seeking homes and happiness, upon those who seek to better their manner of living, not for themselves alone but for the sake of their children and their children's children; and

Whereas our country has been known and recognized since its foundation as a land dedicated by God to be the home and refuge of the oppressed of all nations; the land of universal opportunity, to which the people of the world might turn; the land of the free, which welcomes all the peoples of the earth irrespective of race, color, creed, or previous condition of servitude; and

Whereas those immigrants who have come to our shores have grown up into the bone and sinew of our Nation, many of whom have died upon the battle field that their country, which gave them shelter, might live. They have become, in many instances, the foremost citizens of the land, and at all times they have been loyal and patriotic Americans; and

Whereas we believe that the enactment of legislation imposing a literacy test would be detrimental to the welfare of the Nation, would bar admission to many who would become valuable citizens of our country, and would work a hardship upon many who, either by birth or conditions over which they had no control, were unable to secure the benefits of even a meager education. We believe further that the imposition of such a test is contrary to the spirit which actuated the founders of this Nation, contrary to the wishes of the Almighty, who has blest this land with the sunshine of his favor and guidance, and has made it to prosper as the home and refuge of the oppressed of the world: Now, therefore be it

Resolved, That we, the common council of the city of Hudson, N. Y., in regular meeting duly assembled on this 30th day of March, 1916, do hereby strongly protest against the enactment of any legislation which would impose a literacy test upon those who seek admission to our country; and further, that we urge the Hon. JAMES A. O'GORMAN and the Hon. JAMES W. WADSWORTH, the Senators from New York State, and the Hon. CHARLES B. WARD, the Representative in Congress from this twenty-seventh congressional district, to vote against such legislation; and be it further

Resolved, That copies of this preamble and resolution be sent to our Representatives in the Senate and the House of Representatives.

CITY OF HUDSON, COUNTY OF COLUMBIA,
State of New York, ss:

I, Henry M. James, clerk of the city of Hudson and clerk to the common council of said city, do hereby certify that I have compared the foregoing resolution with the original adopted by the common council and now on file in my office, and that the same is a true and correct transcript therefrom and of the whole thereof.

In witness whereof I have hereunto set my hand and affixed the seal of said city of Hudson, N. Y., this 31st day of March, 1916.

[SEAL.] HENRY M. JAMES, *City Clerk.*

REPORTS OF COMMITTEES.

Mr. ROBINSON, from the Committee on Claims, to which was referred the bill (H. R. 8466) to relieve J. Lawrence Latham, postmaster at Eupora, Webster County, Miss., of the payment of cash and funds stolen from the post office, reported it without amendment and submitted a report (No. 323) thereon.

Mr. MYERS, from the Committee on Military Affairs, to which was referred the bill (S. 3101) authorizing the Secretary of War to extend the lease issued under the act of August 23, 1912, entitled "An act authorizing the Secretary of War to lease to the Chicago, Milwaukee & Puget Sound Railway Co. a tract of land in the Fort Keogh Military Reservation, in the State of Montana, and for a right of way thereto for the removal of gravel and ballast material, reported it without amendment and submitted a report (No. 324) thereon.

Mr. SMITH of South Carolina, from the Committee on Agriculture and Forestry, submitted a report (No. 325) to accompany the bill (S. 4971) to authorize the designation and withdrawal of water-power sites and the construction of water power and other plants by the United States for the manufacture of nitrates, and for other purposes, heretofore reported by him.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. O'GORMAN:

A bill (S. 5375) for the relief of Maurice Edgar Rose, late assistant surgeon, United States Navy (with accompanying papers); to the Committee on Naval Affairs.

By Mr. MYERS:

A bill (S. 5376) to authorize exploration for and disposition of coal;

A bill (S. 5377) to provide for the sale and development of certain public lands and for the construction and maintenance of public roads;

A bill (S. 5378) to provide for an investigation to determine the best means of furnishing an adequate supply of nitric acid for military purposes by the fixation of atmospheric nitrogen with hydroelectric power, or by other means; and

A bill (S. 5379) validating certain homestead entries; to the Committee on Public Lands.

By Mr. SMOOT:

A bill (S. 5380) for the relief of George E. Yeadon; to the Committee on Claims.

A bill (S. 5381) granting an increase of pension to William Grogan (with accompanying papers); to the Committee on Pensions.

By Mr. TAGGART:

A bill (S. 5382) granting an increase of pension to Allen Conner (with accompanying papers); to the Committee on Pensions.

By Mr. WARREN:

A bill (S. 5383) granting an increase of pension to Ellen Billcock (with accompanying papers); to the Committee on Pensions.

By Mr. PHELAN:

A bill (S. 5384) for the relief of the Western Grain & Sugar Products Co. of California (with accompanying papers); and

A bill (S. 5385) for the relief of Albert Edgerton Buckman and others; to the Committee on Claims.

A bill (S. 5386) granting an increase of pension to F. Isabelle Lawrance; to the Committee on Pensions.

By Mr. SIMMONS:

A bill (S. 5387) for the relief of the Commissioner of Internal Revenue, and

A bill (S. 5388) for the relief of the Commissioner of Internal Revenue; to the Committee on Finance.

NATIONAL DEFENSE.

Mr. SUTHERLAND submitted an amendment intended to be proposed by him to the bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States, which was ordered to lie on the table and be printed.

Mr. McCUMBER submitted an amendment intended to be proposed by him to the bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States, which was ordered to lie on the table and be printed.

Mr. LEWIS submitted an amendment intended to be proposed by him to the bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States, which was ordered to lie on the table and be printed.

Mr. WEEKS submitted two amendments intended to be proposed by him to the bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States, which were ordered to lie on the table and be printed.

AMENDMENT TO LEGISLATIVE APPROPRIATION BILL.

Mr. ROBINSON submitted an amendment providing that in the development of color standards and methods of manufacture and of color measurement, with special reference to their industrial use in standardization and specification of colorants, such as dyestuffs, inks, and pigments, and other products, cottonseed oil shall be omitted, intended to be proposed by him to the legislative, etc., appropriation bill (H. R. 12207), which was referred to the Committee on Appropriations and ordered to be printed.

PRODUCTION OF SUGAR.

Mr. LODGE. I submit an amendment intended to be proposed by me to the bill (H. R. 11471) to amend an act entitled, "An act to reduce revenue duties and to provide revenue for the Government, and for other purposes," approved October 3, 1913, which I ask may be printed in the RECORD.

There being no objection, the amendment was ordered to lie on the table and be printed, and to be printed in the RECORD, as follows:

That on and after the day following the passage of this act, except as otherwise specially provided for in this act, there shall be levied, collected, and paid upon the articles named herein when imported from any foreign country into the United States or into any of its possessions, except the Philippine Islands and the islands of Guam and Tutuila, the rates of duties which are herein prescribed, namely:

DUTIABLE LIST.

First. All products of coal, produced in commercial quantities through the destructive distillation of coal or otherwise, such as benzol, toluol, xylol, cumol, naphthalin, methylnaphthalin, azenaphten, fluorin, anthracene, phenol, cresol, pyridin, chinolin, carbazol, and others, not specially provided for and not colors or dyes, 5 per cent ad valorem.

Second. All the so-called "intermediates," made from the products referred to in paragraph 1, not colors or dyes, not specially provided for, 3½ cents per pound and 15 per cent ad valorem.

Third. All colors or dyes derived from coal, 7½ cents per pound and 30 per cent ad valorem.

FREE LIST.

Fourth. Acids: Acetic or pyroligneous, arsenic or arsenious, chromic, fluoric, hydrofluoric, hydrochloric or muriatic, nitric, phosphoric, prussic, silicic, sulphuric or oil of vitriol, and valerianic.

Fifth. Coal-tar, crude, pitch of coal-tar, woor or other tar, dead or creosote oil.

Sixth. Indigo, natural.

SEC. 2. That paragraphs 20, 21, 22, and 23 of Schedule A of section 1 of an act entitled, "An act to reduce tariff duties and to provide revenue for the Government, and for other purposes," approved 9.10 p. m. October 3, 1913, and paragraphs 387, 394, 452, and 514 of the "free list" of section 1 of said act, and so much of any heretofore existing law or parts of law as may be inconsistent with this act are hereby repealed.

NATIONAL DEFENSE.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States.

Mr. BORAH. Mr. President, the expense or burden of any program of preparedness which shall be efficient and sufficient in time of danger will be great, and startlingly great, do the best we may. Be as economical as we can and as careful as we may, the expense which confronts us is one that will be surprisingly large when we come to view it as a whole. We have heard much complaint of late years of high taxes—municipal, State, and National. Now we are about to add tremendously to the cost of Government.

Nevertheless, we are practically all agreed that even in these times of peace it is proper that the Republic should prepare itself for times when we may not have peace. But in organiz-

ing and presenting our program of preparedness we ought to undertake to make every dollar count. We ought to be able to justify the expenditure and to say to the taxpayers, those who have to meet the burden, that this represents a dollar's worth of preparation for which you are paying a dollar. If we do this we will hear less complaint than has been anticipated, for the people want protection. But they want protection in fact and reality, not merely on paper and in appearance.

This is a Government of public opinion. The programs formulated here and the policies initiated must stand the test of another forum. Another Congress, acting under the specific instructions of the voters, will shortly review our work, and it will remain or be discredited in accordance with the approval or condemnation of the electorate. That is the kind of a Government we have made, and we are not permitted to ignore the fact when we come to deal with matters which so vitally concern the people as the subject now under consideration. To their judgment everything must in the end accord. If we succeed in pushing through a program of preparedness not in harmony with the view of the majority of the people, our labor will be without benefit or avail to the country. Any such program to be effective must be in a measure continuing and permanent and fully sustained by public opinion. It must necessarily have the earnest support of those who come after us, for it will call for large appropriations in the future. If it is to be efficient, it must enlist the interest and pride of those who are to sustain and perfect it as well as the interest and pride of those who originated it. Those, therefore, who believe that there ought to be a permanent program or a program which shall result in permanent preparedness feel that every item of this expenditure ought to be tested, that we may feel assured that the money expended is bringing that which the people desire, real preparation.

Mr. President, we have now upon the pay roll of the Federal Government between 500,000 and 600,000 employees, and the number is increasing with exceptional rapidity year by year regardless of the party or the administration in power. The ordinary running expenses of the Government are increasing at a rate of about $150,000,000 or $200,000,000 a year. This is the ordinary annual increase of expenditure for running the Government superinduced by reason of the fact that we have a perfectly reckless way of increasing the number of employees who draw from the National Treasury and of creating bureaus, departments, and commissions of every conceivable form.

Now, we are about to put upon the national pay roll 280,000 civilians, who will remain in the community in connection with their business affairs and in the politics of the country, at an expenditure of from $50,000,000 to $75,000,000 a year, a cost which will never be less, and if we are to judge the future by the past it will increase from year to year with remarkable strides, a cost which will be enlarged from year to year by the interest and activity of this large number of men who, without charging any bad faith or any improper motives, will nevertheless be interested in building up their strength and widening their power and accentuating their influence. Ten years is a short period, but in that time we will have expended from five hundred to seven hundred and fifty million dollars, even according to present estimates. Thus we get a glimpse of this obligation which we are with what seems to me an air of indifference contracting. And once it is contracted I know not what power will have the courage to cancel it, for these payees take part in the proceedings by which we are sent here, and we know, have good cause to know, they are able and vigilant in such matters.

We are breaking new ground, we are establishing a new precedent, we are making history when we put 280,000 civilians, the police force of the States, in touch with the National Treasury. We are putting out to sea when we practically say to anyone who joins a militia "Your pay begins." We are doing it, Mr. President, under the guise of preparedness, and if it is preparedness, if it means that in the hour of peril the people who shall have borne the burden will have their just returns, well and good. But it behooves us, in establishing this precedent, in obligating ourselves to this $50,000,000 to $75,000,000 a year, to know that it meets in the matter of military preparation the test of experience, that it meets the test of history, that it meets the test of the soundest judgment in the matter of readiness for defense.

We may put sufficient dynamite in this preparedness program to cause later its entire destruction, because if it shall be found that we have put into the program that which is expenditure without returns, a proper discrimination may not be made when the people come to pass upon it between that which is good and that which is bad, and all may go together—all may pass under the condemnation of the voter.

Now, Mr. President, keeping in mind this expenditure and this precedent, let us look into the facts—the precedents, the history, the experience of this and other countries with reference to a militia where a militia system has obtained. If I were disposed to go back, which I am not disposed to do to any length, because I know the Senate would not be patient with such a review, I would ask you to start with me at the time when Philip of Macedon brought his trained soldiers in conflict with the State militia or the city State militias of the free cities of Greece. These troops were not soldiery trained from day to day and year to year in their camps, as Philip's soldiers were, but civilians trained occasionally and relied upon, rather, for their patriotism than their science to overcome the troops trained under the direction and genius of Philip, that master of organization and military skill, who stands back there in history so commanding 300 years before Christ. The soldiers of Greece were not less patriotic, not less courageous, not less brave than the soldiers of Philip. But they melted away before the skill and drill of the Macedonian phalanx. Neither is the State militia, man for man and citizen for citizen, less courageous, less brave, or less patriotic than the average citizen of the community in which he moves, or less brave or courageous than our Regular soldiers, but to march them from the armory in front of the Regulars of some European army would be to offer them for shameless slaughter. When Canada sent her militia to England it took six months, hard pressed as they were for soldiers, to fit them for the front. What I object to is spending this stupendous sum for that kind of training which does not fit the soldier for battle and never has from Philip's hour to this.

If history and experience are worth anything, you can not take a man, whatever his courage may be, and by calling him to an armory once or twice a month at night, away from his family, and sending him back to his family the next day, to bury any sentiment of military training that he may have in the social affairs of his country—you can not prepare him to meet the man who is really a trained soldier. If we were to start, therefore, with the beginning, we should find ample precedent to put us upon our inquiry. But let us come down a little later and deal with our own history and our own experience. Pardon me while I read a single paragraph from the Federalist, which I regard in many respects as a political bible. It makes a good text from which to start our discussion with reference to our own experience. In this number of the Federalist Hamilton said:

> Here I expect we shall be told that the militia of the country is its natural bulwark and would at all times be equal to the national defense. This doctrine, in substance, had like to have lost us our independence. It cost millions to the United States that might have been saved. These facts, which from our own experience forbid a reliance of this kind, are too recent to permit us to be the dupes of such a suggestion. The steady operations of war against a regular and disciplined army can only be successfully conducted by a force of the same kind. Considerations of economy, not less than of stability and vigor, confirm this position. The American Militia, in the course of the late war have, by their valor on numerous occasions, erected eternal monuments to their fame; but the bravest of them feel and know that the liberty of their country could not have been established by their efforts alone, however great and valuable they were. War, like most other things, is a science to be acquired and perfected by diligence, by perseverence, by time, and by practice.

We will pass over the Revolutionary War and examine a later precedent established under better circumstances. In 1792 Washington, Hamilton, and associates conceived the idea of framing a bill to put the militia of the respective States under national control, government, and discipline, in so far as it could be done. In 1795 that act was reenacted with renewed vigor and with extended power, and, as I said the other day, was supposed to have exhausted the entire power of the National Government under the Constitution. It did about all we could do in the way of fitting the militia for war.

Under the acts of 1792 and 1795—in those days which were much more given to military training and to military thought and consideration than these—every effort was made to build up the State militia of the respective States. Not only had they passed lately through a conflict which involved the question of independence, but in those days it was understood, during the time that the French Revolution and such disturbances in Europe were in progress, that at any time this Republic might become involved. There was ever reason to be prepared, to be in readiness for conflict.

In 1807 began the first disturbances which led to the second war with England. Under the inspiration of the Revolution, under the direction and the inspiration of Washington, under the inspiration of the oncoming events which led to the War of 1812, every effort was made to build up the State militia under statutes which were supposed, in the minds of those who framed the Constitution, to give all the power that could be given.

What was the result? I again repeat, although it is not necessary to do so, that the men who constituted the State militia in the War of 1812 are not to be disparaged because of their lack of personal courage or of patriotism; but the story of the State militia of the War of 1812 is one continuous and almost unbroken story of disaster, of humiliation, and of defeat. I stop long enough to read a part of the record, the official reports which disclose the real facts.

Gen. Upton, in his Military Policy of the United States, says:

The wisdom of the Constitution in giving Congress the sole power of raising and supporting armies was demonstrated at the beginning of this war by the refusal of the governors of Massachusetts and Connecticut to furnish their quotas of 100,000 militia authorized by the act of April 10, 1812.

Speaking later of the disastrous expedition of Gen. Hull in his effort to invade Canada, he says:

He—

Referring to Gen. Hull's report—

also states that the 180 of the Ohio militia refused to cross the river at Detroit, alleging as a reason that they were not obliged to serve outside of the United States.

Citing still further from the author, it is said:

The value set upon the militia by our opponents was shown by the fact that they permitted them to return to their homes while the Regulars were sent as prisoners to Montreal.

Again the authority says, speaking of the troops under Gen. Harrison:

The militia of Kentucky and of Tennessee assembled at Louisville and at Newport and those from Virginia at Urbana; those from Pennsylvania at Erie. * * * The left column from Kentucky when a few days out was only prevailed upon to remain by the personal entreaties of the general and other officers. The middle column from Urbana, after a slight engagement with the Indians, refused to obey orders for further pursuit and deliberately returned to their camp. This ended the autumn campaign.

Further on we find this statement:

The construction which the militia put on the powers of Congress to call them out under the Constitution to repel invasions was again illustrated on this occasion. Of the 3,000 militia who marched with Dearborn for Canada nearly all refused to cross the line, including the company who advanced with Pike but halted at the very border. * * * The failures and disasters of the campaign can be plainly traced to the pernicious military organization established by the act of 1792. It will be remembered that instead of relying upon a small but well-disciplined Regular Establishment, this law intrusted the safety and honor of the Nation to armies of militia supported by the several States during the long intervals of peace. These armies, though elaborately organized on paper into battalions, brigades, and divisions, were only to receive such drill and instructions as the various States might think proper.

This history is made up from the official reports of the different expeditions and battles of the war. It is a part of the undisputed history, evincing and establishing beyond question the weakness of the State militias as a national force. No man can read it and feel that he can justify in his own conscience the proposition to put upon the people an expense of from fifty to seventy-five million dollars a year for troops which the National Government can neither train nor compel the States to train.

Time after time was the militia, when placed in conflict with the Regulars, found deficient in training, and their inefficiency as a fighting force was disclosed upon more than one battle field. George Washington said—not with regard to the War of 1812, of course, because he had passed away—but he said in regard to the Revolution that—

If I was called upon to declare upon oath whether the militia had been more serviceable or hurtful, I should subscribe to the latter.

This was said by some in regard to the War of 1812.

Mr. HARDWICK. Mr. President, will the Senator from Idaho yield to me?

Mr. BORAH. And more than once that fact is recorded in the military history of the War of 1812. Not because of the lack of patriotism, but because of the system of training under our dual form of government and the limitations of Congress, it is impossible to prepare men for that ordeal of battle which is necessary when there is a real contest on between this Nation and some other real power.

Mr. HARDWICK. Mr. President, I just wanted to inquire of the Senator from Idaho if he did not think the militia made a pretty good showing at New Orleans under Jackson?

Mr. BORAH. Mr. President, if I were disposed to go into that I would say that in a general way they did; but let us bear in mind that Andrew Jackson more than once had trouble with the militia, and upon one occasion at least put the Regulars in front of the militia, and notified them that if they undertook to return home the shooting would then begin.

Mr. HARDWICK. Yes; but when they faced a foreign foe, the militia gave a pretty good account of themselves at New Orleans, as the Senator from Idaho may recall.

Mr. BORAH. Mr. President, when Andrew Jackson began to realize that he had won his battle, and looked about, he discovered that a part of the militia had broken and was fleeing into the city. This is a part of the history of the War of 1812. I quote here from Upton:

This campaign of 1815 opened and closed with the only brilliant victory of the war, won at the Battle of New Orleans on the 8th of January, two weeks after the conclusion of the treaty of peace.

The British loss was about 2,000 killed and wounded; our own, 7 killed and 6 wounded. * * *

Despite all of his difficulties, such was the indomitable energy and perseverance of the commander that on the morning of the battle the force he had collected, consisting of Regulars, Volunteers, militia, marines, sailors, and privateers, numbered 5,698 men. With these posted behind works so formidable that no one but a reckless or infatuated commander would have hazarded an assault he awaited the onset of 8,000 veterans, the flower of the British Army. The struggle was soon over. In the brief space of 25 minutes the enemy lost 2,100 killed and wounded, followed after the cessation of the firing by the surrender of 500 prisoners. The survivors of the assaulting columns, bereft of their general and nearly all of their commanding officers, fled in the wildest confusion and disorder. This terrible slaughter was attended on our side by the loss of but 7 killed and 6 wounded.

While the Nation had reason to exult over so signal a victory, the battle in no sense vindicated a dependence on raw troops. * * * Agreeable as it might be to give the entire credit for this battle to raw troops, their heroic commander knew so well the uncertainty of their conduct in the open field that he was obliged to accept the advantages of a mere passive defense.

In fact, at the very moment when the men from the breastworks were cheering over a victory still unparalleled in our history, at a time, too, when the advance of a skirmish line might possibly have compelled the surrender of the British Army, the commander had the mortification of seeing the division on the west bank of the river abandon their position and run in headlong flight toward the city.

Not only that, Mr. President, but the governors of many of the States, being unfriendly to the War of 1812, refused to cooperate, refused to permit the militia to take part.

Mr. President, the putting of an oath in a different form would not change the situation; the writing of a different obligation would not change the situation; the giving of compensation would not change the situation; unless we can be assured of success in this matter of training, of discipline, of fitting the men for soldiership, we can not justify ourselves in incurring an expenditure of from fifty million to seventy-five million dollars a year, when the millions which will be essential and indispensable will be all that the taxpayers of this country can afford to pay.

Not only have we in our support the history of the country, but we have an almost unanimous concurrence of opinion upon the part of those who have studied this question. We have the view of ex-Secretary Root, ex-Secretary Stimson, ex-Secretary Garrison, and, as I understand, Secretary Baker, of Gen. Wood, of Gen. Scott, and, so far as I know, of all who have studied or given consideration to this question as against the precedent which we are about to establish.

Ex-Secretary of War Root has said:

An effective army must be built up on the principle of national control. This can never be attained by developing 48 different bodies, under officers appointed by 48 different governors, and up to the time of war under the direction of 48 different commanders in chief.

Ex-Secretary of War Stimson declares:

No effective national citizens' army can be created out of a force dominated by 48 State sovereignties. History and statistics show this beyond peradventure. It would be trying to force the militia to serve two masters, to create a national army out of what is primarily a State or local force. * * * It can not be done. It works evil in both directions.

Ex-Secretary of War Garrison, when before the committee, said:

The Constitution absolutely vests in the State the right to govern these troops, excepting when called out by the Federal authorities, to officer them and train them.

It has very often happened in the history of the country that the States have prevented their troops from responding to the call of the National Government; they have even ordered their disbandment to thwart the Federal Government. At all times, therefore, excepting when these forces are actually in the service of the Federal Government, under a call for one of the three purposes specified, they are under the exclusive control, government, and command of the State authorities, who raise, recruit, officer, and train them. In my view, it is utterly impossible, so long as the Constitution remains as it is, for the Federal Government to obtain the right to do anything else than the Constitution specifies, or for the State authorities to surrender legally any of the powers and rights vested therein. It is, of course, true that the Federal Government can make appropriations of money for and on behalf of the National Guard, and can annex conditions thereto so that the National Guard or the States in which such Guard exists can only obtain the money by fulfilling such conditions, but this does not and can not alter the legal situation existing under the Constitution. It may result, as long as it is acquiesced in by all parties, in a much greater participation by the Federal Government in the control, command, officering, and training of these troops than the Constitution warrants, but it would not stand the slightest legal test or strain, and there is, in my view, not the slightest doubt that no enforceable obligation can arise out of any such legislation—that is to say, any legislation which seeks to give

greater right or power to the Federal Government over these forces than the Constitution warrants. It is absolutely axiomatic that jurisdiction can not be acquired by consent, and can not, of course, be any more successfully acquired by purchase. Wherever a constitution fixes the limits of jurisdiction, there they must stand until the constitution is changed.

This situation has been recognized by every attentive student of the matter almost from the very beginning of the practical operation of the Government under the Constitution. Innumerable attempts have been made to obviate the difficulties. They have usually taken the form of what is termed federalizing the militia or federalizing the National Guard. All such attempts have failed for the reason which, in my judgment, makes it certain that all such attempts will fail. So long as these troops are those raised by the States, under the Constitution they can not be governed, officered, or trained by any other authority than the State—that is, no other situation can be constitutionally produced.

May I read a single line also from one of the President's addresses bearing upon this question? He said:

You know, gentlemen, that under the Constitution of the United States the National Guard is under the direction of more than two score States; that it is not permitted to the National Government directly to have a voice in its development and organization; and that only upon occasion of actual invasion has the President of the United States the right to ask those men to leave their respective States. I, for my part, am afraid, though some gentlemen differ with me, that there is no way in which that force can be made a direct resource as a national reserve under national authority.

That statement of the President is borne out by those who, in connection with this subject, have given their time and their thought to it.

Mr. President, I had intended to call attention at some length to some of the expenditures which have taken place upon the part of the State militia under the Dick law, but shall endeavor to curtail to get to more vital matters. But if Senators have not already familiarized themselves with the facts, I suggest they examine into the method and manner of the distribution and the utilization of the fund known as the Dick law fund, what has become of it, how it has been used, how it has been wasted, how it has been lost. I will not use a stronger term, although in one State one of the parties is charged with the embezzlement of some $20,000; but that might happen in any instance; I care nothing about that; but this matter shows the manner in which they have taken care of arms and ammunition and accouterments which have been given to them, the manner in which they paid the officers compared with the small amount which they have given the enlisted men. It has been practically used in that way.

When we began operation under the Dick law it was estimated that the expenditure would be about two and a half million dollars a year. It is now between seven and eight million dollars a year. These are some of the interesting items showing the manner in which this fund has been utilized. In 1915, 564 officers and 19,382 men were absent from the annual inspection. During the year 1914 the average number of men absent from each weekly drill of instruction was 63,201, or nearly one-half of the entire strength, or supposed strength, of the Organized Militia. There is a total shortage of the property furnished by the National Government to the respective militias of $1,352,761.14. In a recent investigation in one of the States it was disclosed that there was a shortage of Federal property and that the quartermaster had embezzled to the amount of $30,743.

At camp instruction in one of the States in 1912 the troops in attendance were never in excess of one regiment and the duration 20 days. The amount of money paid to the staff departments of its States who were not members of the regiments participating at all was $2,822.12.

In another State at the camp of instruction the enlisted men participating were never in excess of 200, while the total payments to officers of staff departments only was $1,999.45. The duration of the encampment was 20 days. In another State the total funds disbursed during the latter part of 1911 was $11,893.77. Of this amount $9,754.47 was paid to officers and $694.44 to enlisted men.

In another State at the national rifle match of 1911 there was an expenditure of $13,892.07 on the rifle team, all of whom were officers. In the same State from July, 1911, to September, 1912, one officer, a colonel, drew pay to the amount of $1,411.18. In the period from July 1, 1911, to September 15, 1912, another officer, also a colonel, drew pay to the amount of $1,610.95. In the period of July 30, 1911, to September 1, 1913, in the same State, a third colonel drew pay to the amount of $1,299.87.

In another State a general officer drew pay to the amount of $1,286.93. In another State the Federal funds expended from July, 1911, to July 30, 1912, was $8,414.40. Of this amount $2,070.96 was expended for officers and $4,998.93 for State rifle teams of which 12 out of a total of 18 members were officers.

There is more of the same material. We started with an appropriation, as I have said, of two and one-half millions. It has grown under these expenditures to $8,000,000, and now we propose to donate $50,000,000 to be turned over to the same class of men and officers. Does it not seem like a shameless waste of public funds?

All this results, putting the most charitable view on it, from the fact that this question is an incident to their real life. It is a mere incident to their civil life. They go once or twice a week or once or twice a month to the armory. It is not a serious matter with the majority of them. There are exceptions, of course. There are some splendid men in the National Guard. They would be splendid men and take an interest in these affairs if there were no National Guard, because they have that taste, that disposition; but take them as a body and it is a mere incident to their life; they do not look upon it with that seriousness with which they should look upon a matter of that kind; they waste property, remain away from drill, and the officers draw unreasonable salaries for little service.

Mr. President, all these things, unfortunate and unwise as I believe them to be, are not to my mind the worst feature of the State militia and the undertaking upon our part to federalize it. Let us never lose sight of the fact that the State militia is the police force of the States; that it never can be relieved of that duty except upon the action of the respective States; that we are building up and accentuating and extending the power of the police force of the respective States, and putting them upon the Federal pay roll. We must take into consideration things which may occur in this country after the present European war shall close; we must realize that we will have some domestic concerns with which to deal; and we should be sensitive of the precedents which we are establishing or indorsing by building up and strengthening and putting upon the national pay roll the police force of the States.

For the first time in the history of this Republic, or in the history of any country with free institutions that I know of, you are going to put upon the national pay roll 300,000 civilians and leave them in the business and in the politics of the respective States, and at the same time give them leave to organize as a military authority and in the respective States to utilize and exercise the power of military organization. We are going to build up a dominant and aggressive military organization in the States, and while they may never be useful in war, judging by past precedents they will be a source of profound concern to the communities in which they are situated.

Let us go back a little. A few years ago we passed the Dick law. Have you stopped to reflect how many precedents have been established with reference to the military domination of civil authority since the passage of the Dick law? Do you know how many States have called into service in times of strife or riot their State militia and have supplanted by the State militia the civil courts and civil authorities since the passage of the law known as the Dick law? It is coming to be a common practice not only to call them out to maintain order, to which no objection could be raised, but to take the place, through their improvised courts-martial, of the civil courts and to supplant the constitution and the statutes of the State adopted by the people, by the orders and proclamations of an adjutant general. It is worth our while, Mr. President, to stop and reflect upon that proposition. Take, for instance, a late incident occurring in West Virginia. The most startling record anywhere to be found of military domination is that of the National Guard, so called, or the State militia in the coal strikes in West Virginia. I read you the order which was issued by the National Guard of West Virginia, in which the constitution of the State, the Constitution of the United States, and the statutes were suspended until such time as the adjutant general of the State of West Virginia should declare that they were again in effect. It abrogates all statutory and constitutional law and sets at naught every safeguard of individual liberty. Here is the order:

The military commission is substituted for the criminal courts of the district covered by the martial-law proclamation, and all offenses against the civil laws as they existed prior to the proclamation—

Observe that—

all offenses against the civil laws as they existed prior to the proclamation of November 15, 1912, shall be regarded as offenses under the military law, and as a punishment therefor the military commission can impose such sentences, either lighter or heavier than those imposed under the civil law, as in their judgment the offender may merit.

2. Cognizances of offenses against the civil law as they existed prior to November 15, 1912, committed prior to the declaration of martial law, and unpunished, will be taken by the military commission.

In other words, when the strike occurred the adjutant general of the State proceeded to suspend those fundamental principles embodied in State and National Constitutions upon which this Republic and these States are organized. The right of trial by jury, the right to have a complaint presented against

you upon the oath of some responsible citizen, the right to have an attorney and to produce witnesses, every semblance of common-law right was abrogated and annulled by the action of the adjutant general. Was it a mere official announcement? Did it die with the ostentatious display of power upon the part of the adjutant general? Not at all. After the riots had been going on for some 10 days and difficulties occurred and shootings had taken place between the rioters and the militia and one or two what they called battles had occurred, they proceeded, then, after having finished their shooting and their clubbing, to organize a court-martial, composed of the men who had been using the guns, and proceeded to try the rioters, and tried them and sent them to the penitentiary for crimes unknown to the laws of West Virginia, imposing punishment unknown to the laws of the State—tried them in groups of ten, fifteen, twenty, and a hundred.

When we asked the captain of one of the regiments if he felt that they had the power to have executed these men, he said they had. We asked him if a man committed perjury and he thought it was worthy of death, did he have the power to punish him accordingly, and he said, "Of course, we would not have done so, but we had the power to do so." When he was asked where were the Constitution of the United States and the constitution of the State of West Virginia, he said they were suspended during the time of the operation of martial law. When he was asked who would put them into force again, he was not certain of that, but thought that they would come back automatically upon the revocation of the order of the adjutant general.

So they tried two men for crimes committed before martial law was declared and sent them to the penitentiary, and each and every one of the men tried was tried without any warrant, without a hearing before a jury, or without any of those rights and privileges which are guaranteed by the laws of West Virginia and the laws of every Commonwealth in the Union.

Mr. President, if that case stood alone, if that was a single instance, you might credit it to the fact that the young men who were at the head of these regiments and had bestowed upon them such unusual power had lost their heads; but there are numerous other instances before and since, all of which show this state of facts; and that is, that it is dangerous to bestow upon men this kind of power when they come from a community where they imbibe the same prejudices and feelings, the same hatred, and the same bias that the community may have.

Mr. REED. Mr. President——

The VICE PRESIDENT. Does the Senator from Idaho yield to the Senator from Missouri?

Mr. BORAH. I yield.

Mr. REED. The Senator has spoken of this outrageous order issued by the adjutant general. He will remember that in the debate on the West Virginia episode I concurred with his view Indeed, I think there was a general concurrence that the conduct there of these militia officers was indefensible. But does not the Senator think that it ought to be stated, in fairness, that back of the order of the adjutant general and back of the action of the court-martial lay the order of the governor undertaking to confer this extraordinary power upon the militia?

Mr. BORAH. Mr. President, I agree perfectly with the Senator; but with all——

Mr. REED. So that, if that be true, when an indictment is brought for this misconduct against the militia officers, it might equally be brought against that system of law which permits the creation of a governor who will so far forget the Constitution as did the governor of West Virginia.

Mr. BORAH. Mr. President, I am only concerned in one thing to-day, and that is to show that by reason of this condition of affairs, whatever else may be true or false, you never can make a military force efficient and sufficient for the National Government. If the governor of a State saw fit to give this order, and the militia of the State obeyed, may we not look for just such conflicts between the National Government, the governor, and the President constantly in regard to these matters? Will not the governor use our fifty-million-dollar militia as quickly as our eight million, and if he does use them, will the guard not drop to mere policemen, kicked about in the passion and politics of the State and be constantly mobbed in the local troubles? May we not see recurring again what occurred in Illinois in 1894, when there was a decided conflict between the governor and the State militia, representing the governor, and the Federal forces, representing the President? Whoever is to blame, it destroys that unity, that aloofness from politics, that aloofness from prejudice upon the part of the local authorities which is indispensable to building up a really efficient military force for national purposes.

It is immaterial to me whether the governor ordered them or not. If he did order them, and they obeyed, and must have obeyed, if they were compelled to obey or if they voluntarily obeyed, it presents this anomalous condition here—that we are undertaking to make a national force out of that which will always be connected with the politics of the State. They may profess not to be in the politics of the State, but they are there unconsciously, because those things which happened in West Virginia raise the most acute political issues the State can experience.

The National Guard, under such circumstances, is the issue around which the political fight is waged. I have known, in States of the West, the National Guard to be disbanded at different times on account of the political issues raised in regard to their action. I have known governors to make a campaign on curtailing the activities and disbanding entirely the Guard. I know of a State where armories built up under the enthusiasm of one administration have become rookeries, a rendezvous for owls and bats, under other administrations, all because the Guard had been called into matters that aroused feeling against them throughout the State. On the other hand, I recall an instance when the Guard, sympathizing with the strikers, turned their arms over to them, and for that reason raised an ugly fight against them.

Will you say that you can afford to spend seventy-five or one hundred million dollars upon a force which may be called into such transactions as that, and thus be tied up with the bias and prejudice of the political fights of the State, trained or not trained according to the feelings of the State, disciplined or not disciplined according to the feelings of the State, taking part as a part of the political fight? In my judgment, that is the one conclusive reason why the militia can not be made a national force, to wit, because the governor of the State has charge of them under these circumstances, and may use them to their utter demoralization and disband them.

Mr. BRANDEGEE. He could disband them.

Mr. BORAH. Yes; he could disband them, as governors have done.

But let me call your attention to another illustration, more deliberate, and to my judgment more interesting, for it indicates more thoroughly the trend of things.

They had a constitutional convention in the State of New York last summer, in which great lawyers and reputable citizens from all parts of the State were engaged in forming a new charter for the State. The committee on the bill of rights reported to that convention a provision as follows:

> Nor shall any military tribunal exercise jurisdiction over a civilian while the regularly constituted State courts are open to administer justice.

Can anyone conceive of opposition to a principle so thoroughly grounded in the traditions and principles and jurisprudence of our Government and of our history? Mr. President, in 1322 the Earl of Lancaster raised a rebellion against King Edward II, and was afterward captured at the head of his troops, court-martialed, and executed. A short time afterwards they tried the members of the court-martial and hung them for murder, for the reason, as the Parliament declared, that when the common-law courts are open the Kingdom is in a state of peace. Six hundred years ago that precedent was established, and the first time we find a precedent against it is in West Virginia and the second time we find it controverted is in the constitutional convention of New York. For centuries our ancestors in Anglo-Saxon civilizations have fought and sacrificed to make the military subordinate to the civil authorities. They guarded well the principle upon all occasions. But now, in the morning of the twentieth century, we are trying to solve our conflicts between labor and capital by inaugurating a system condemned by the common judgment of enlightened mankind. And it is spreading with marvelous rapidity throughout the land.

What became of this amendment? Why, the State militia or National Guard of the State of New York immediately initiated a fight against it. The major general commanding the militia wrote a letter, which was read by the chairman of the military committee to the convention, in which he said:

> The proposed amendment would seriously trespass upon the jurisdiction, established by necessity and custom, of two classes of military courts, namely, military commissions and courts-martial.

The only fight made in the constitutional convention against that well-established principle of American Government was made upon the basis that it would interfere with or hamper or circumscribe or embarrass the National Guard of the State of New York. What was the result of the contest? It was defeated; and the constitutional convention of New York, yielding

to the argument—shall I say "argument"?—yielding to the influence—perhaps I had better say the commanding reason—of the adjutant general of the State of New York, left out from the great charter of a great State the fundamental and indispensable principle that when the common-law courts are open every man has a right to a trial by a jury and before the civil tribunals.

Mr. SUTHERLAND. Mr. President——

The VICE PRESIDENT. Does the Senator from Idaho yield to the Senator from Utah?

Mr. BORAH. I do.

Mr. SUTHERLAND. I see no reason why the amendment which the Senator has just read should not have been incorporated into the proposed constitution of the State of New York; but my recollection is that the principal reason which was given for not incorporating that provision in the constitution was that it was wholly unnecessary. I think the Senator from Idaho will agree that it would not have altered the rule. It would have been simply declaratory of the rule, which, as the Senator has very clearly indicated, began 600 years ago in English law. It began in fact with Magna Charta, and it has found expression, as I understand, in the due-process-of-law clause of the Constitution of the United States. So I ask the Senator whether or not he thinks the omission of an express statement of that character would have altered in any way the constitutional rule that precludes the military courts trying a citizen for a violation of law at a time when the civil courts of the State are open?

Mr. BORAH. Mr. President, I am going to answer the Senator's question; but before I do so I want to say, with all due respect to the Senator, that that is aside from the question which I am arguing. The point I want to stress is the fact that these State militias have, by practice and by principle, entered upon the proposition that the military courts of which they are in control are superior to the civil courts of the State. Now, I am willing to concede for the sake of the argument that the Senator is correct in his proposition; but what has the Senator to say to the fact that the State militia appeared there and opposed it because it would hamper and embarrass their jurisdiction?

Mr. SUTHERLAND. Mr. President, if the State militia did that—I was not aware of that until the Senator had read it—I have no excuse to make for what they did. I think they were utterly wrong in advancing any such reason for rejecting this proposition; but I call the Senator's attention to the fact——

Mr. BORAH. Mr. President, I do not want to lose the floor.

The VICE PRESIDENT. The Senator pretty nearly lost it.

Mr. BORAH. I know the Senator from Utah did not intend to have that happen.

Mr. SUTHERLAND. No; I did not intend to take the Senator from the floor, of course.

Mr. BORAH. I do not want to be discourteous; but I am rather anxious to support the President.

Mr. REED. Mr. President, I do not want the Senator to lose the floor, but I want to ask him a question. The Senator has referred to a New York convention that refused to put in this constitutional safeguard. Was that the convention presided over by Mr. Root?

Mr. BORAH. That is the only convention, I understand, that they had there last summer, and I understand Mr. Root presided over it.

Mr. REED. Is it not true that when they submitted the constitution with that provision left out—and I do not say simply on that account—it was defeated by close to half million votes by the people?

Mr. BORAH. Yes. Judge Parker and Mr. Root were not able to stem the tide of public opposition.

Mr. REED. Was Judge Parker a member of that convention?

Mr. BORAH. He was a very able advocate in the campaign for the adoption of the constitution.

Mr. REED. And not for the first time was out of harmony with his party, I believe?

Mr. BORAH. Well, I do not know. There may be periods when he is not in harmony with his party, but that is nothing to his discredit.

Mr. President, all these matters, while they are interesting, are aside from the proposition which I want the Senate to consider, and that is the disposition of the State militia, with reference to its relationship to the civil authorities and the civil courts, its attitude, its frame of mind toward the proposition. This most extraordinary doctrine finds its resurrection from a long sleep under the resuscitating powers of the so-called National Guard. Before I vote to turn over $50,000,000 to them I want it made clear that they are in harmony with American institutions.

Now, I want to refer to the suggestion of the Senator from Utah. I want the Senator from Utah to keep in mind the fact that the Supreme Court of West Virginia sustained the court-martial proceedings of the State of West Virginia. It seems incredible, but they sustained the action of the State militia in trying and condemning and punishing those dozens of men whom they tried as they did try them.

Mr. SUTHERLAND. There was a very vigorous dissenting opinion.

Mr. BORAH. There was a very vigorous dissenting opinion, but the Senator and I know how little consolation there is for our client in a dissenting opinion when he is in the penitentiary.

I want to say to the Senators here, as was so well said by Judge Cullen in his presentation of this matter to the people of New York, that if this proposed amendment had never been offered in the constitutional convention that would have been one thing, and the law may be well established aside from any special provision with reference to it. But, said Judge Cullen, when we realize that the Supreme Court of West Virginia has sustained such a precedent, and then when we realize that it has been presented to the constitutional convention of New York and rejected for the reason that it would embarrass the State militia in holding its court-martial trials, who can estimate the influence of that kind of a proposition upon a court disposed to find a way to sustain court-martial proceedings? They did sustain them under the West Virginia constitution, and the West Virginia constitution is one of the best drawn of the constitutions that I know of upon that subject. That constitution was drawn just after the Civil War, and in the convention which drew it sat many men who had been made acquainted with court-martial proceedings during the Civil War, and they threw every possible safeguard around military trials in time of peace. They had in it this provision which it was attempted to put into the constitution of New York, and they had other provisions, all of which seemed to surround the proposition with ample safeguards; but the court seemed to wind up all at last by saying, as the adjutant general said, that really the constitution of the State of West Virginia was suspended for a season.

Mr. President, when such precedents find lodgment in the minds of men who have been selected for the highest judicial office of the State, and find themselves embedded in the precedents of a great State, it is worth while for the Senate of the United States to stop and ask, "Shall we feed that spirit by putting the court-martial officers upon the pay roll of the National Government?"

So far as I am concerned, I will never vote to add one iota of power or influence to the police force of the State as against the complete action and control of the State so long as that police force assumes to contend against the fundamental principles upon which this Government was organized. I will give no aid and comfort for organizations which entertain anywhere such an infamous, treasonable doctrine. Let the National Guard as a body repudiate such vicious principles before they come professing a desire to serve their country. It will serve us to little purpose to reject a foreigner and fall within the malediction of Macaulay.

Mr. President, in one of the Western States only a short time ago they had trouble in enforcing the prohibition law in one of the counties. A little disturbance having arisen, the governor of the State declared martial law and sent the militia down there and took possession of the county and the town and began to punish men for the violation of the prohibition law. Precedent after precedent can be found to support the proposition that this spirit, which seems to be a part of the military spirit, is reaching out for power as against the civil courts and the civil authorities of the State.

If we ever establish in this country anything like a rule of conduct such as that which obtained in West Virginia and was supported by the courts of West Virginia, we will have a more pronounced menace to contend with in this Government than any foreign army which will invade our shores in the coming century. We can take care of the foreign enemy, but it requires some considerable courage to take care of precedents which have been thoroughly established in your Government and supported by large bodies of voters upon the pay roll of the National Government interested in accentuating and extending that influence and enlarging their jurisdictions.

Under the Dick law we started with two and a half million dollars and in eight years it increased to $8,000,000 a year. If we may judge the future by the past during the time in this Senate of Members now serving their terms, it will be increased from $50,000,000 and $75,000,000 to $100,000,000 or $150,000,000.

Mr. LEWIS. Mr. President, will the Senator from Idaho yield?

Mr. BORAH. I yield.

Mr. LEWIS. I wish to ask the Senator that upon principle, if he contends that the exercise by a State guard of proceedings under court-martial is equivalent to taking a man's liberty while the civil courts are open, and therefore contrary to the Constitution, which in the abstract we all admit, is it not true that by the same argument does he not necessarily condemn the National Army or the United States Army officials in the exercise of any court-martial on their part, taking the liberty from any soldier while the United States courts or the civil courts of the State are open?

Mr. BORAH. From any soldier?

Mr. NORRIS. Soldier or citizen, wherever a trial arises involving the National Army.

Mr. BORAH. Of course the right to try a member of the Army by a court-martial is recognized in the Constitution. He is a part of the military force and subject to military discipline.

Mr. LEWIS. I am assuming a court-martial declared by the National Government independent from the civil court. I could take the Colorado case, but I will not illustrate. I put the question to the Senator, would not his argument, in the nature of things, by principle, condemn likewise the exercise on the part of the Army of the United States of the right to try any person at any time by a declaration of martial law by the Federal Government in any particular locality where the civil courts are open?

Mr. BORAH. Not at all, except as to civilians, and I am not aware that since the Civil War any such attempt has been made. If so it should be condemned.

Mr. LEWIS. What distinction does the Senator make on principle?

Mr. BORAH. If I understand the Senator correctly, he is assuming that if the Regular Army assumes to try one of its members that that is in violation of some principle which I claimed was violated when the State militia tried a civilian.

Mr. LEWIS. No; I do not.

Mr. BORAH. I do not know of any instance in which the Regular Army has tried a civilian when the courts were open except in the Milligan case, which the Supreme Court of the United States set aside.

Mr. LEWIS. I was not calling the attention of the Senator, if I may be pardoned——

The VICE PRESIDENT. That is just as the Senator from Idaho chooses.

Mr. LEWIS. I have asked the question—I understand there has been a ruling made under which I might more or less embarrass the Senator's right to the floor. I do not wish to do that, and I will not interrogate the Senator further.

Mr. BORAH. Mr. President, of course all military organizations may be disposed to find fault with the civil authorities in their not being sufficiently speedy in the administration of justice. We had an illustration of that at the close of the Civil War, and it illustrates how cautious the American people should be. Court-martial proceedings were had against an individual who lived in Indiana. He was sentenced to be shot, and one of the greatest of men approved of the court-martial proceedings. The public sentiment of the country approved of the court-martial proceedings. Old Thad Stevens said it was right, and that the decision of the Supreme Court of the United States in the Milligan case was more of a menace to this Republic than the Dred Scott decision. Public sentiment was all in favor of the court-martial proceeding. I recognize the fact that that is liable to happen. But the Supreme Court of the United States established beyond peradventure the fact that the proceeding was wholly void and released the man to his liberty. But that was at the close of a great Civil War and under the claim that the individual was aiding the enemy.

But we have, Mr. President, an entirely different proposition. War did not exist in West Virginia. It was not a state of war such as the Regular Army based its proceedings upon in the Milligan case. It was simply a riot, a local disturbance, a labor trouble. The courts were open, the grand jury was sitting, the judges were there, all the machinery of the State was in operation as the proceedings show, and yet, notwithstanding that fact, the court-martial proceeded to try civilians for crimes committed prior to the court-martial law, as well as crimes committed after the court-martial, upon the theory that they could suspend the Constitution of the United States and the constitution of the State.

Mr. President, I am not going further into these details. The matters of which I have spoken and a multitude of other similar matters are of record. Others may investigate and come to what conclusion they may. But I can not vote for this attempt to federalize the National Guard. It is wrong in theory, wrong in principle, will be vicious in practice, and practically futile in supplying any real defense to the country in time of need. If I have an opportunity, I shall vote to strike it from the bill. If I do not, I shall likely be compelled to vote against the bill as a whole. I realize the necessity of some preparedness, and I would be anxious to vote for what I deem to be real and efficient preparedness. But if this remains in the bill I shall have to weigh the postponement of the bill for a season as against assisting in establishing a precedent unwise and to my mind full of menace to our institutions and to the personal liberties of the American people.

Mr. LODGE. Mr. President, I desire to say a word in regard to the proposition to strike out section 56. The purpose of this bill is to improve the military defenses of this country in the direction of the Army. I shall not spend any time in meeting what may be called the argument of the pacificists in regard to national defense. If their argument is sound, it applies to the use of force for the maintenance of law or the maintenance of national security by every community and every nation. There is no difference in principle between the force which a nation puts behind its own security and its own peace and the force which a State puts behind its own laws or a municipality behind its police. The people who are resisting the preparation of this country for defense or the upbuilding of the national defense ought logically to be just as much opposed to the police force in cities, the militia of States, and to any soldiers or any ship, as they are to the increase which it is now proposed to make. It may be said in passing that I know no people who would cry out more against the withdrawal of police protection from their homes and persons than those who favor peace at any price and would keep the Nation defenseless. For my part I believe most thoroughly that not only order but civilization rests upon the capacity of a community to put force behind its laws. In the same way the safety of a nation rests in its power to put an adequate defense behind its own security, its own peace, and its own policies.

At this moment this country is practically undefended. Our defenses now go just far enough, if we were invaded by a formidable modern army well equipped, to insure the sacrifice of many brave and noble lives, and nothing else. It does not go far enough to insure in any way the defense or safety of the country.

Of the two branches of defense that which can be most quickly provided for is the defense by land—the Army. Of course, if we had a Navy competent to meet an attack from the navy of any nation in the world, the defense by land, though important, would be less important than it is to-day. We have no such Navy to-day, and there is no use in dwelling in a fool's paradise and telling ourselves that we have.

As to our defense by land, what we need, stated broadly and simply, is that we should have a force sufficient to meet the first rush or attack of an invading foe, and to hold it long enough to enable us to call out our resources and train additional men. The lowest estimate of such a force as that is 500,000 men; and the one object that I think ought to be pursued is to see to it that we have that force and more, because we must allow for casualties and for the failure of men to respond in the organizations already made.

The House bill is to my mind practically worthless; it really does nothing. The Senate committee bill is a most excellent bill. I regard it as valuable so far as it goes. It does not go nearly far enough, in my opinion. It is inadequate. I think, to begin with, that we ought to have at least 250,000 men in the Regular Army. I do not mean the power of the President, as given by this bill, to fill the Army to 250,000, but an actual force of 250,000 Regulars.

The next most important thing is to have a reserve, or whatever you please to call it, a force that can be quickly mobilized and put in immediate cooperation with the Regular Army. That is the essential thing for our defense by land.

I agree with the chairman of the Committee on Military Affairs that universal compulsory training is what we ought to have, and that the country must sooner or later come to it. But we are dealing now with things as they are. The provisions of this bill, and probably the provisions in any bill, to judge from the resistance that even this bill is meeting, in a more or less makeshift way endeavor to give us a force to put behind the Regular Army.

What have we got at this moment? We have a nominal Army of 100,000 Regulars. We have a mobile force of about 25,000 men. We have a militia of which in Infantry the prescribed strength is 120,000 men, and there were only 99,000 on the rolls at the date of the last inspection. Of those men we can hope to get but a portion. I do not mean to say it will be as it was in 1898, when in the response from the militia of those borne on the company rolls 25 per cent were rejected prior to muster,

and 25 per cent were rejected on physical examination, and many refused to volunteer on reasonable grounds; but even with the improvements we can only expect a portion. The officers of the War College estimate 75,000 men. If you double the militia, as the bill expects to do, you can count on 150,000. Your mobile force of Regulars, I suppose, may be enlarged to 50,000 under this bill, and thus with the militia you will get at the outside 200,000 men of a mobile force. It may be a little larger than that. If I am wrong, the chairman of the committee will correct me. I mean by 50,000 the mobile force of the Regular Army.

Now, you must have at least 300,000 men more to meet the first attack of a well-equipped invading enemy, and I want to draw on every possible resource. I am ready to sustain the militia clauses. I believe that we can get certain great advantages from the militia. We can get men with a certain amount of training, and any training is of some value. But it is unwise to exaggerate the militia training. The last returns I have been able to get show that at the armory drills of the last year 56.6 per cent were present; a little more than one-half present at the armory drills; at camps of instruction 66.6 per cent, not two-thirds, were present. The regulations require, in order to get the Federal pay under existing law, that there should be 24 drills of 1½ hours each and 5 days in camp.

That means that a man would receive about 60 hours' instruction in a year and that in his three years he would get 180 hours' instruction, while the best judgment of the most highly trained officers is that a man, to be an efficient soldier, with intensive training under experienced officers and noncommissioned officers, should have 1,500 hours. It is easy to see from this that the militia is not, and can not in the nature of things, be a fully trained force. I believe that it can be of great service, and I want to use it; I wish to encourage it as a source of men for the hour of the defense when the stress comes, but what I can not comprehend is why those who appear to be peculiarly friendly to the militia seek to prevent our getting supplies of men from any other source.

Mr. POMERENE. Mr. President, will the Senator from Massachusetts pardon me for an interruption?

The VICE PRESIDENT. Does the Senator from Massachusetts yield to the Senator from Ohio?

Mr. LODGE. I yield.

Mr. POMERENE. The Senator from Massachusetts has referred to the lack of discipline which has existed, at least during a part of the time, in the militia.

Mr. LODGE. I have not referred to the "lack of discipline." I have not used the words.

Mr. POMERENE. Well, not the lack of discipline, but the fact that the militia do not attend their drills.

Mr. LODGE. I am simply giving statistics.

Mr. POMERENE. I am trying to get, if I can, at the cause of this. May not the cause be attributable just as much to the failure of Congress to provide the necessary discipline as it is to the militia themselves?

Mr. LODGE. Mr. President, I am not blaming anybody; I am taking the facts. I am not interested in who is to blame. What I am interested in is in getting men who will furnish the necessary force to protect the United States when invasion shall come. If that force can be supplied from the militia, well and good; but there is not the slightest indication in the facts to-day that it can be supplied from the militia alone.

Now, it is proposed to add another source of supply in the volunteer force. The provision is very much injured by the amendment, which it was said in debate had been put on, limiting it to a 30 days' period in camp. That was referred to by the Senator from Connecticut yesterday as having been placed in the bill. I myself was not here when it was done. But even those 30 continuous days in camp would make more hours of training than we get for the militia, and those men would also have a certain training and a certain value.

Mr. WILLIAMS. Mr. President, will the Senator pardon me to ask a question?

The VICE PRESIDENT. Does the Senator from Massachusetts yield to the Senator from Mississippi?

Mr. LODGE. Yes.

Mr. WILLIAMS. Is it not also true that the militia, being trained in armories, can be trained only in company drills; that there can be no skirmish drills because there is no room for them; and that the men who go through these 30 days, even if they have only 30 days drilling for 8 or 10 hours a day, will receive instruction in skirmish drill, and practically in regimental drill, as well as in company drill?

Mr. LODGE. That is very true; and the men in their 30 days, calling for an 8-hour day, would get 240 hours, while the militiaman who would qualify under the Dick Act, with pay, gets 180 hours in three years. Then the time of his discharge comes; and it is calculated he has had, on the average, about 90 hours. I am not saying this to find fault with the militia, but to show that we certainly can not rely on them alone for the defense of the United States. We must have other sources of supply, and section 56 gives us another source of supply.

I do not myself believe that the great body of the militia throughout this country, who are patriotic and public-spirited men, and who show it by being in the militia, are desirous of crippling other sources of supply. I can not believe that they want to kill the clause in this bill which recognizes the Plattsburg camps. Such camps will do most valuable work; they have done valuable work. They were tested last year, and it is believed by those who are most interested, that, with this recognition of the camp, they will get 30,000 men into those camps for 30 days at least, and in many cases 60 days of training. I know that there was hard, practical training in the camps and in the open air, and not in armories.

The Plattsburg camp and the volunteers appeal to me simply because they are other sources for a supply of men fit to cooperate with the Regular Army in the hour of danger; and I object to any plan that would shut us up and narrow our resources, at best very defective under existing law. We shall have none too many men in the reserve force to come to the support of the mobile army of the United States. However much we do here, we shall have none too many, because none of these measures go to the root of the difficulty. Therefore, I want to draw from every possible source. If we can get men from the militia, as we hope to do under these provisions, I am for these provisions, so far as they can be made constitutional. I hope we shall get good results from them, and I hope we shall encourage and train and discipline our militia even better and more effectively than it is done to-day. I have no doubt we shall. The militia is extremely good in many States now.

I also desire earnestly to have the volunteer provision, because I believe we can get something from that source. For the same reason I am most anxious to retain the Plattsburg provision.

Mr. JOHNSON of South Dakota. Mr. President——

The VICE PRESIDENT. Does the Senator from Massachusetts yield to the Senator from South Dakota?

Mr. LODGE. I yield to the Senator.

Mr. JOHNSON of South Dakota. I understand that in order to enable the Government to use our National Guard or militia, it is necessary to get the permission of the different States. Is that correct?

Mr. LODGE. Well, that opens a very large and somewhat painful question. The President has the right to call out the militia under certain conditions, of course.

Mr. HARDWICK. If the Senator will pardon me, it is Congress and not the President.

Mr. LODGE. Yes; Congress provides for it. The President issues the call.

Mr. JOHNSON of South Dakota. The point I want to understand is this: If I understand it correctly, the National Guard receives permission from Congress to organize——

Mr. LODGE. They have to be called out under the Constitution in the well-known cases of invasion and domestic insurrection. If they are called out, they must respond. That is the theory which I have held, though at one time—I do not want to go back to painful periods—but at one time the governors of Massachusetts and Connecticut, and later on the governors of Vermont, Virginia, North Carolina, Kentucky, Tennessee, Arkansas, and Missouri refused to call forth the militia in response to the President's request. That is one of the difficulties which have arisen about the militia; but I did not mean to go into the constitutional aspect of the question.

Mr. JOHNSON of South Dakota. The thought I had was that if Congress must give permission to organize a national State guard, then the question arising as to a conflict between them and the Army, whether Congress would not also have the power to make restrictions as to what their duty shall be in case of need before giving that permission? I do not mean these questions to apply to my own State, because I know the National Guard would respond promptly, if called, unless restricted by the State constitution. As I infer from the arguments I have heard here of several Senators that that condition might happen generally in various States.

Mr. LODGE. Well, Mr. President, that opens up many legal questions, which I do not think it is necessary at this moment to discuss. We have a right to prescribe the discipline under the Constitution; and that is all practically that we have the right to do.

Mr. HUGHES. Mr. President, will the Senator from Massachusetts permit me to ask him a question?

The VICE PRESIDENT. Does the Senator from Massachusetts yield to the Senator from New Jersey?

Mr. LODGE. I yield.

Mr. HUGHES. The Senator from Massachusetts made a statement a moment ago that the provisions of this bill had not gone to the root of the difficulty. That is also my belief. I ask the Senator what he regards as the great difficulty in the way of enabling us to have an army, if we desire one?

Mr. LODGE. Mr. President, I said when I began that I agreed with the chairman of the Committee on Military Affairs, that we ought to have universal military training—I did not mean conscription or anything of that kind, but training, which is a very different thing, and then you have the material from which you can draw an army at any time.

Mr. HUGHES. Does not the Senator think there is something extremely significant in the fact which he stated a while ago, that we are not able now to secure for the Regular Establishment the number of men authorized by law?

Mr. LODGE. I did not say anything on that point; but the Senator refers, of course, to the difficulties of securing enlistments?

Mr. HUGHES. Yes. Does it not seem to the Senator that there must be something radically wrong with the manner in which our Regular Army is organized or with the inducements that are held out for enlistment, or with the treatment that is accorded the men which prevents men from enlisting?

Mr. LODGE. I am not speaking of the Regular Army. The Regular Army will always be a comparatively small force. There is no need of a great Regular Army. By that I mean in constant service under the National Government, and doing nothing else. Everybody knows what a Regular Army means.

Mr. HUGHES. I was speaking of the Regular Army.

Mr. LODGE. It is not a part of my plan to make a great Regular Army. I do not believe in that at all.

Mr. HUGHES. It is not part of the Senator's plan to make a great Regular Army, but it is part of everybody's plan to have an army, and we should surely like to have the Regular Army recruited up to its authorized enlisted strength.

Mr. LODGE. Certainly. I said in the beginning that we ought to have a Regular Army of at least 250,000 men.

Mr. HUGHES. That is about the figure I would suggest.

Mr. LODGE. I think such a Regular Army necessary in times of peace—indeed at all times.

Mr. HUGHES. It does not seem possible to get such an army under present conditions, and it occurs to me that that is the question we should deal with and solve, and then consider the question of the volunteers and the National Guard.

Mr. LODGE. Mr. President, we can not fill the Regular Army in a month by enlistment, but a Regular Army of 250,000 men can be raised, according to those who are best able to judge from recruiting experience, in the course of two or three years or, at any rate, in three or four years. They can recruit the Army up to that stength.

But all I rose for, Mr. President, was to show that, in my opinion, we can not afford to rest the defense of the country on the militia alone. I want to strengthen it; I want to improve it to the highest possible point; but it is impossible to rest the defense of the country on them alone for men who can be called to the colors to support the Regular Army when actual invasion occurs. We can not rely on the militia alone for that, and I do not wish to have the country deprived of these other sources of supply which are proposed in section 56 and in the Plattsburg Camp section by striking out those paragraphs, because I think they are two of the most valuable features of the bill.

Mr. BRANDEGEE. Mr. President, if the Senator will permit me, I will state that I have seen it stated in the public prints within the last two days that the rate of voluntary enlistments under our recruiting system has doubled in the last six months. It was not satisfactory a year ago, but it has doubled in the last six months.

Mr. CURTIS obtained the floor.

Mr. LEWIS. Mr. President, may I take the liberty to ask the Senator from Kansas to yield to me while I may have sent to the desk an amendment which I said yesterday I had sent, but which I find was not sent to the desk? It was a motion to strike out section 56. It should have been in writing, and I thought I had sent it up to the desk on Saturday last.

The PRESIDING OFFICER (Mr. HITCHCOCK in the chair). Such an amendment is now pending, the Chair is advised.

Mr. LEWIS. Mr. President, if the Senator from Kansas will pardon me, on Saturday I made the motion. I had prepared it, but for some reason I did not send it to the desk. Yesterday I called the attention of the Chair that such had been omitted, and asked consent to have it sent to the desk then. I am merely sending it to the desk now in compliance with the consent that was granted me yesterday. It will have to take its place, of course, in the ordinary course of things, but I should like to have it take its place as of Saturday, at the time I made the motion. I thank the Senator from Kansas for allowing me to make this request.

Mr. HUGHES. Mr. President, I simply wish to state that I happened to be in the chair yesterday when the Senator from Illinois made his request. A verbal motion was made by the Senator from Maryland [Mr. LEE] to strike out section 56. I merely wanted to get the parliamentary situation straight. I understand that such a motion is now pending.

The PRESIDING OFFICER. The Chair assumes there is no objection to having the amendment presented by the Senator from Illinois printed. A similar motion is the pending question before the Senate.

Mr. HUGHES. There is no objection on my part. I simply wanted the Chair to understand what happened yesterday when I was temporarily occupying the chair.

Mr. BRANDEGEE. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. BRANDEGEE. As matters stand, if a motion to strike out section 56 is the pending amendment, who offered it? Whose amendment is it?

The PRESIDING OFFICER. The amendment was offered by the Senator from Maryland [Mr. LEE].

Mr. BRANDEGEE. Therefore, if the Senator from Illinois has offered the same amendment, it is not in order at present.

The PRESIDING OFFICER. The Senator from Illinois is simply asking to have it printed at the present time.

Mr. BRANDEGEE. He is asking to have printed an amendment which is already pending?

The PRESIDING OFFICER. That is what it amounts to, in substance.

Mr. BRANDEGEE. I do not object to the printing of the amendment, but of course it has no parliamentary standing.

Mr. HUGHES. Mr. President, on yesterday the Senator from Illinois asked unanimous consent that he might have printed and pending a motion which he had made some time prior to that time, but which he failed to reduce to writing and send to the Secretary's desk. Unanimous consent for that purpose was given while I was in the chair.

The PRESIDING OFFICER. The Chair is informed now that there was another amendment pending at that time, so that the amendment of the Senator from Illinois could not have been pending.

Mr. SMITH of Georgia. Mr. President, the truth about it is that at least three Senators had amendments to strike out paragraph 56; each had given informal notice to that effect without knowledge of the fact that the others had similar amendments to present. I know, however, that the motion of the Senator from Maryland [Mr. LEE] really was the first one that reached the desk.

Mr. LEWIS. Mr. President——

The PRESIDING OFFICER. The amendment will be printed as requested by the Senator from Illinois; but the RECORD shows that the pending amendment is the amendment of the Senator from Maryland [Mr. LEE].

Mr. LEWIS. Mr. President, if the Senator from Kansas will permit me just a word, let there be no misunderstanding. I seek to make no contention as to whether the present argument is upon my motion, upon the motion of the Senator from Maryland, or upon the motion of any other Senator. I am contending that the RECORD should remain in its natural precedence, and I am only desirous of having in the RECORD, as would be customary, the fact that I have made the motion, to take its place in such chronological order as in the nature of things it should. I make no contention whatever with any Senator as to precedence.

Mr. CURTIS. Mr. President, I merely desire to say a few words on behalf of the motion to strike out section 56, embodying the so-called continental-army plan. It has been stated by the chairman of the committee and by other Senators who have spoken on behalf of this section that it is an experiment. I agree with those Senators that it is an experiment; but, in my judgment, it will prove to be a very expensive and very unsatisfactory experiment. The report of the committee shows that the first year this experiment will cost $24,944,938; the second year, $31,536,177; the third year, $39,311,975; the fourth year, $47,413,567; the fifth year, $27,609,067; and annually thereafter, $27,609,067. I do not believe, under existing conditions, in view of the amendment limiting the training of the men provided for in this section to 30 days in a year, that any good can come from the provision.

It has been stated on the floor of the Senate that it takes from a year to two years to make a soldier; in other words, that much training is requisite to make a soldier. If that is so, and if these men are trained 30 days a year, it would take at least 12 years to make a soldier. If that is so, how are we to secure the 500,000 men that the junior Senator from Massachusetts [Mr. WEEKS] yesterday said were required, and the 500,000 men that the senior Senator from Massachusetts [Mr. LODGE] said this morning would be required for service?

It seems to me that the two Senators from Massachusetts, and the other Senators who are in favor of this section, have overlooked a very large body of men who could be called into the service, and called into the service in a very short time; and I want to call the attention of the Senate to those men.

During the 17 years ending June 30, 1915, there were 393,767 enlistments in the Regular Army. This does not include reenlistments. From 1901 to 1915, inclusive, it is estimated that 743,505 men received some training in and were discharged from the Organized Militia in the several States. To-day the organization numbers 129,000. It is estimated that 50,000 of these men have died. The number of students under military instruction in civil institutions of learning at which officers of the Army were detailed as military instructors from 1905 to 1914 amounts to about 267,000 men. The number of military students graduated in that time was 39,430. The enrollment in military drill in 262 colleges and schools in 1914 amounted to 49,287, and in 1915 over 300 institutions reported about 55,000 students in military drill.

This gives us a reserve force, allowing for those who have died in the meantime, of over 1,300,000 men who have had training, men who have had some experience, men who have had just as much or more experience than the men will receive under section 56, the so-called continental army section. Those men, I venture to say, 500,000 or 1,000,000 of them, could be called into the service, if their services were needed, within 30 days.

If all we need is the 500,000 men suggested in the debate yesterday and to-day, why not call upon those trained men instead of organizing a new force, for which it will take from 6 to 12 years at least to get men?

I was sorry to hear the criticisms of the Senator from Idaho [Mr. BORAH] this morning of the State militia and of the officers appointed by the governors of the States. I can remember that in 1898 there were a few organizations sent out from the State of Kansas. The governor of that State appointed the officers. I appeal to the Senate, and I ask you to-day to find any regiment that did greater service or reflected greater honor upon the Army than did the Twentieth Kansas Regiment. I ask you, furthermore, to go back to the Civil War and recall the men who were called out from the State militia to repel Price's raid. They did not serve long, but history tells us that the service rendered by those State militiamen from the State of Kansas equaled that of any organization in the service, and so great and so valuable was the service that the good people of the State have erected monuments to their memory.

It may be true that some of the State militia of the different States have not come up to a high standard; but, Senators, whose fault is it? If they have not been drilled as they should have been, if the discipline does not come up to what we think it should be, whose fault is it? Why, under the Constitution, Congress is to prescribe the discipline; and if Congress has neglected its duty, why blame the States? Why blame the State organizations?

So far as I am concerned, I do not believe any good can come from section 56, the section providing for the so-called continental army; and it is my purpose to vote against it, and I hope it will be voted out of the bill.

Another thing that I think has been overlooked by the Senators who have framed this measure and those who advocate section 56 is that the great citizen soldiery of this country have always been dependable. Never has the country appealed to the citizen soldier in vain; and if the services of the citizens of this country were needed, you would find them answering the call from every section of the country, and every man in this country able to carry a gun would respond to the call and uphold the honor of our common country.

Mr. VARDAMAN. Mr. President, it is not my purpose to discuss this bill at any length this afternoon. I confess, however, to some surprise at the remarks derogatory to the State militia which have been made upon the floor of this Chamber to-day.

Thomas Jefferson regarded the State militia as "our best reliance in time of peace and for the first moments of war." I regard Jefferson as pretty good authority on such matters.

George Washington, whose brilliant record on the field of battle as well as consummate ability as a statesman qualified him preeminently to speak with authority on such a subject, said:

> The militia of this country must be considered as the palladium of our security and for the first effectual resort in case of hostilities.

The opinions of Jefferson and Washington are worth just as much in this year of our Lord 1916, and the principles and policies supported by them just as applicable to conditions to-day as they were a century ago.

In my own State, while the National Guard has not been organized and drilled to a very high degree of efficiency, it has been very useful in local matters, and when war was declared against Spain the members of the guard responded promptly to the call of the Nation to defend the flag. As the governor of Mississippi, on quite a number of occasions I found them trustworthy, courageous, and always patriotic, and it affords me pleasure at this time to testify to their worth and efficiency.

When the unfortunate differences between the States arose more than half a century ago the value of the training received in the State Militia was manifested in the service rendered the Confederacy by the volunteers of the southern army.

He reads history to no good effect who would deny the efficiency of the individual soldier of the army that followed the fortunes of the ill-fated Stars and Bars in that unfortunate conflict.

We are all concerned just now about "preparedness," a phrase coined by the advocates of a large Standing Army and big Navy, and used to good effect upon the mind to fire the patriotic zeal of the slow-thinking, home-loving multitude. But we are not all agreed as to what is real "preparedness," but I shall not dilate upon that question at this time.

I have no doubt, however, about the American people being able to resist successfully any power that may attack this country now or in the future. I do not share the apprehension of danger of foreign invasion which seems to have aroused the patriotic spirits and pestered the souls of the manufacturers of munitions of war.

I am inclined to agree with President Wilson that we are "at peace with the world." And I am quite sure that if we attend to our own affairs there is not the remotest possibility of our becoming involved in war with any foreign country in the very near future, at any rate. And when war shall come, whether in the remote future or immediate present, I have no more fear of our ability to meet any contingency that may arise than I have dissatisfaction with the splendid way in which the armies of the United States have conducted themselves in the past.

But I did not rise to discuss that phase of the question.

But there is something about section 56 which vitally concerns the people of my State. It touches an issue of vital moment to them, and one which they must always be prepared to meet. Mr. President, we are living in an age of change—marvelous mutations have taken place that were not dreamed of two years ago, and the most marvelous change of them all is the change that has taken place in the minds of men of mature years and the change in the attitude which those men maintain toward some of the problems which confront the civilization of our people.

If the enactment of the measure which we are considering to-day, a measure which, I think, marks a change in the life of this Republic—probably the beginning of a system which will lead us to military despotism—had been promised by the Democratic Party in its platform of 1912, I am very sure that the present occupant of the White House would not be there to-day. I do not believe any political party could have carried it through a campaign. It involves a departure from the policy of the Democratic Party and the policy of the Nation which has existed for more than 100 years. It is at variance with the teachings of the fathers of the Republic and the men who have made this country strong and great.

We should consider well every phase of this bill—the possibilities, contingencies, exigencies that may arise out of it.

I do not know who is going to succeed the present occupant of the White House. I hope he may succeed himself, but I would not hazard a prediction of what is going to happen. If a man should be elected President who is so color blind on the race question and whose olfactories have become so desensitized, if I may use that word, that he could not distinguish between a white man and a negro, and who is so politically antagonistic to the South that he would be willing to use the power conferred upon him by section 56 of this bill for partisan political purposes, he could order negro regiments and mobilize them for military training in every congressional district of the State of Mississippi.

Now, of course, that would be very offensive to the white people of Mississippi, and what could be done in Mississippi

could be done in every other State of the South. It would therefore be very disastrous to the interests of the entire South. I do not charge that any man who could be elected President would be guilty of such a monstrous act, but I am not willing to take any chances. I am not willing to permit a peril so grave as that involved in the enactment of such a law as this to pass without at least calling it to the attention of the Senate.

I do not propose to enter upon a discussion of the race question generally. I understand that under the leadership of white men negroes make fairly good soldiers. A negro may become an obedient, effective piece of machinery, but he is devoid of the initiative and therefore could not be relied upon in an emergency.

It is a peculiarity of the negro character that he can be taught to take orders, to imitate, to obey, but he can not be trusted to "carry a message to Garcia." If I could have my way about it, I should prohibit the use of negroes in the Army in any way except in positions of menials, but I am not going to discuss this question now. I hope to have more to say about this bill at a later day during its consideration and shall content myself this afternoon with simply calling attention to the danger involved in section 56.

Mr. REED. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst	Hardwick	O'Gorman	Sterling
Bankhead	Hitchcock	Overman	Sutherland
Beckham	Hollis	Page	Taggart
Brady	Hughes	Pittman	Thomas
Burleigh	Husting	Poindexter	Thompson
Catron	Johnson, Me.	Pomerene	Townsend
Chamberlain	Johnson, S. Dak.	Reed	Underwood
Chilton	Kenyon	Saulsbury	Vardaman
Clapp	Lee, Md.	Shafroth	Wadsworth
Clarke, Ark.	Lewis	Sheppard	Warren
Cummins	Lippitt	Sherman	Weeks
Curtis	McCumber	Simmons	Williams
Dillingham	Martine, N. J.	Smith, Ga.	Works
du-Pont	Myers	Smith, Md.	
Gallinger	Norris	Smoot	

The PRESIDING OFFICER. Fifty-eight Senators have answered to their names. A quorum of the Senate is present.

Mr. REED. Mr. President, I desire to make a few observations partially in reply to the argument made by the distinguished Senator from Idaho [Mr. BORAH]. Epitomized, his contention is that the increase of our defense forces will involve expense and that whatever money is appropriated should be wisely expended. Of course no one will controvert that proposition. We all agree that the money appropriated ought to be so expended as to give the best possible result.

But the Senator then proceeds to make a somewhat unique argument. It is that by spending some money for the maintenance of the National Guard we are putting upon the Government pay roll 200,000 men in civil life, and that these 200,000 men in civil life will exercise some kind of sinister influence upon the Government of the United States. If I followed the logic of the Senator correctly, he insisted that what we ought to have in this country as our defense force is not men who are surrounded by the "dangerous environment of civil life," but who are engaged in the business of professional soldiering, and are entirely separated and cut off from the civil influences of the country.

It is to me a remarkable thing that the Senator from Idaho should raise his very potent voice against the National Guard upon the theory that they are too closely identified with the influences of the civil life of the country and that he seems to prefer the professional soldier to the citizen soldier.

I believe that upon sober reflection the Senator will not want to remain in that attitude. History does not afford an instance of the liberties of the people being destroyed by the people themselves. It affords many bloody instances of the liberties of the people being subverted by an armed force, trained simply for the purpose of fighting, and accordingly being out of sympathy with the commonalty of the country, absolutely subservient to the command of some executive officer.

I have always thought it a part of the very warp and woof of our political philosophy that this country should rely for its defense upon the valor of its citizens. It has been generally regarded that in a republic it is always unsafe to create a vast professional soldiery lest in some precarious hour an evil genius might employ them for the destruction of the freedom of the people.

Mr. VARDAMAN. Mr. President——

The PRESIDING OFFICER. Does the Senator from Missouri yield to the Senator from Mississippi?

Mr. REED. I yield.

Mr. VARDAMAN. If the Senator will pardon me just at this point in his speech, I will quote from Madison. He says:

> The greatest danger to liberty is from large standing armies. It is best to prevent them by an effectual provision for a good militia.

Mr. REED. I thank the Senator.

In my judgment the argument the Senator from Idaho advances against the militia is the strongest possible argument for the establishment and maintenance of a militia.

I want a great military force in this country. I want that military force to be strong enough to maintain peace within our borders and to defend our country against all possible assaults. But I want the greater part of that military force to be so tied and united and bound up with the common life of the country that it never can be employed to wrest from the American citizen the liberties the Constitution guarantees.

I have always believed that it is necessary to have a standing army to be employed for emergencies, to be employed for those occasions when there is not time to call into the ranks the citizen soldiery; but I am irrevocably opposed to the creation of a body of trained fighters who are disassociated from the common life of the country and who are so powerful that in some tragic moment of our Nation's life they may be employed against the Nation itself.

I make no attack upon our standing army, but every man in this world is influenced by environment. You may train men in the operating rooms of hospitals until they lose that sense of sympathy which the ordinary person feels. You may train men as police officers until they gain so prejudiced a viewpoint of life as to be unfit to sit upon juries to try questions of personal liberty or of life, not because they are consciously cruel, but because they are unconsciously influenced by their business and environment. You can train men even in trades and avocations until you have given them so narrow or peculiar a view of life that they are incapable of passing a fair judgment upon matters of ordinary concern. I call attention to the fact that for many years, if not now, the common law would not permit a butcher to sit on a jury in a capital case.

I need not enlarge upon this line of argument. The mere statement of the position is enough. I desire to apply it. When you place a young man in his teens in a military college, what follows? You teach him by example, by precept, by environment the one eternal, everlasting lesson of obedience, blind obedience to the authority above. You train him to the use of arms. He studies the deadly results of certain projectiles. His entire mind is concerned in the question how best to kill an antagonist. You graduate him. You place him in charge of other men. He continues this training and environment throughout the years of his life. He learns to regard killing as a profession and a calling. Inevitably there is born in a man so environed such a disposition of obedience and command, such a disregard of those civil rights which we so much cherish, that he ceases to be the kind of force I desire to have dominant in this Republic. Some of him is all right, too much of him is all wrong, if I may so outrage the English language.

Therefore I desire to see created a military power which is not separated from the civil life of the country. The argument that the National Guard is in sympathy with the civil life of the country is the best and highest argument in its favor. I am in favor of the National Guard because it is a force that will only fight when it fights for the salvation of the country, and because it will not fight to oppress and destroy the liberties of the people.

The only criticism I have to pass upon the National Guard is that it has been too often employed and has been too ready to obey the commands of those who have perpetrated such outrages as occurred in West Virginia, to which the Senator from Idaho so forcibly referred.

Let me remark by way of preliminary to what I am going to say in a moment that the most fallacious reasoning in the world is that which proceeds from a single instance. Proceeding by that sort of theory, you can destroy or prove to be inadequate or oppressive any system of government ever devised in the brain of man or any instrumentality of government ever conceived.

Why, sirs, that course of logic is easily shown to be unsound, because I can point you to an occasional decision of a court that overrides the Constitution, that has destroyed the law, that has been wicked, and yet, because of such a single instance, we do not lose faith or confidence in our courts. I can point to great outrages that have been perpetrated by the chiefs of police of cities, and yet for that reason we do not disband our police forces. I can point to great crimes that have been committed in the name of the Christian religion, and yet for that reason we do not assail the religion that was handed to us from our fathers and to them by the inspired writers. I can point to Members of this body in the past who have been derelict, yet

we do not therefore seek to abolish the Senate. So I might extend the illustrations indefinitely. Single instances argue nothing but the frailty of the human heart and mind. They prove nothing except that there are occasionally bad or wicked or foolish men.

Now, applying the foregoing to the argument made by the Senator from Idaho. He undertakes to condemn the militia system of the United States because the adjutant general of the State of West Virginia organized a court-martial and undertook to send men to prison in violation of their constitutional rights. If the conclusion is a sound one, if the single wrongful act of one adjutant general ought to condemn the militia as a whole, then by following the same line of reasoning we must condemn our entire system of civil government, and why? Because back of the orders of the adjutant general, back of his order issued in disregard of the Constitution, the common law, the Bill of Rights, and the Magna Charta, all of which were so eloquently referred to by the Senator from Idaho—back of the adjutant general stood the governor of the State commanding the adjutant general to perpetrate every outrage by him committed. If we are to condemn the militia system because the adjutant general summoned a court-martial contrary to the Constitution, we must condemn our system of constitutional State governments because they have conferred upon their respective governors powers which were by the governor of West Virginia grossly abused. The argument of West Virginia is more an argument against the civil government of West Virginia, against the very right of the people to select a governor to rule over them or to serve them, than it is an argument against the adjutant general or against the militia system of the State.

In the instance referred to before the militia could do one thing that was wrong, before they could lay or did lay one finger upon the rights of the people of West Virginia it was necessary for the governor of the State to issue the order for the militia to act as it did. The governor, therefore, was the moving force in and responsible for all that thereafter occurred.

Moreover, if we were to proceed along the line of argument advanced by the Senator from Idaho, namely, to condemn the militia system as a system because it was misused by the governor of West Virginia, we by the same process of reasoning in an equally marked case condemn the Volunteer Army of the United States in time of war, condemn the Regular Army of the United States in time of war, and condemn the President of the United States as Commander in Chief of the Army, and thus condemn our entire system of National Government, military and civil, and this because of the very instance to which the Senator referred, the case of ex parte Milligan. It appears that we might go further and condemn the Congress of the United States, because Congress enacted the law under which the military authorities sought to act in the celebrated Milligan case.

Now, what were the facts in the Milligan case? Milligan was haled before a court-martial, the charges against him being conspiracy against the Government of the United States, affording aid and comfort to rebels against the authority of the United States, inciting insurrection, disloyal practices, and violations of the laws of war. Indiana was in a state of peace; the civil courts were open. Congress had passed a law which provided that the writ of habeas corpus could be set aside by the mandate of the President of the United States in any cases where there was rebellion, and so forth. Acting under that authority the President assumed to abolish the right of the writ of habeas corpus. Acting under that supposed authority a military tribunal proceeded to try Milligan upon the charges referred to, and acting under that supposed authority the court-martial sentenced Milligan to be hanged. And yet, as a matter of fact, there was not a state of war in Indiana. As a matter of fact, the civil tribunals were open. As a matter of fact, all of these officers of the Army who proceeded to sit and condemn Milligan to death were proceeding without law, without authority, and in violation of the Constitution.

Aye, more, when the President signed the order suspending the writ of habeas corpus he was violating the Constitution of the United States. And more than that, when in 1865, on the 19th day of May, I believe it was—it is impossible to fix the date exactly from this record before me—the President signed the warrant of death for Milligan he was proceeding without authority of law, in violation of the Constitution, and was doing the very thing for which the Senator from Idaho condemns the militia of the country because, forsooth, down in West Virginia one violation by militia officers occurred. The Supreme Court of the United States declared that the trial of Milligan was illegal; that the court-martial could not condemn him to death; that the writ of habeas corpus still lived; and the justices of the Supreme Court rescued him from death.

So, if you argue that the militia ought to be condemned as a whole because it was once wrongfully employed by the adjutant general of West Virginia, acting under the orders of the governor, I reply that that argument applied to the Army of the United States would condemn it, and applied to our system of civil government would condemn it, and applied to the presidential office would condemn it. Hence, it would appear to follow that we should abolish our entire system of government because in one instance its officers failed to properly construe the Constitution.

Mr. President, I say this because I think I ought to say it in order that we may get to the proper viewpoint in considering questions of this kind. I frankly admit, and herein I agree with the Senator from Idaho, that the State militia has been too often employed by governors where the civil authorities should have been employed. Whatever can be done to limit within reasonable bounds the employment by State governors of the National Guard I want to see done. I do not believe it is consistent with the genius of this Republic that every time there is a disturbance which ought to be settled by the ordinary constabulary or the posse comitatus of a community, that the militia should be called out.

Mr. BORAH. Mr. President——

The PRESIDING OFFICER (Mr. HITCHCOCK in the chair). Does the Senator from Missouri yield to the Senator from Idaho?

Mr. REED. I do.

Mr. BORAH. I have been listening to the Senator, and I do not think the Senator and I disagree very much. What I undertook to contend was that so long as they can be employed as a police force they always will be employed in that way, and thereby render them unfit for the other service which we seek to impose upon them.

Mr. REED. I understand, I think, the Senator's position. I am not trying to put him in a false position. He knows I would not do that. I am admitting frankly that there is a difficulty which I think ought to be considered and which I think can be in some way met. But I am at the same time insisting that whatever is wrong with the system of the National Guard is not a thing that inheres in the system, but inheres in the misuse of the National Guard by governors of States.

Mr. BORAH. Will the Senator permit me to ask him this question, then? So long as the governors of the States have the authority to use the National Guard in this way, must we not assume, in view of what has happened, that it is liable to happen again?

Mr. REED. I do not think so; I do not think the condition is irremedial.

But now I am going to call attention, while I am speaking to this point, to the further fact that whenever riots occur, whenever property is being destroyed, whenever the condition gets bad enough, there will be an armed force called out; we might as well understand that; and if it is not the militia it will be the Regular troops. They were employed in Chicago a few years ago; and I do not want to see the Regular troops sent into the States unless there be some grave reason for it.

Mr. SHAFROTH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Missouri yield to the Senator from Colorado?

Mr. REED. I do.

Mr. SHAFROTH. Does not the difficulty arise, very largely, by reason of the fact that the governors do not understand the law? As a matter of fact, the right to declare martial law is extremely limited. There is hardly one case of disturbance out of a great many where that course is justified under the law. It is not the position of rioters upon one side and another body upon the other that constitutes the right to declare martial law, but it is only where there is in fact an effort to attack the State, to kill an officer, to prevent arrests—those are the instances, and the only instances, where the right to declare martial law exists.

The PRESIDING OFFICER. The Chair cautions the Senator that, under the strict enforcement of the rules now in effect, only an interruption for the purpose of asking a question is permissible.

Mr. SHAFROTH. I should like to have the Senator's opinion with relation to what are the defects in the declaration of martial law?

Mr. REED. I think I have covered it, and the Senator has covered it. I do not exactly agree with his definition. I hardly think it is technically right, but it is substantially right.

The whole trouble comes from governors of the States misusing their authority or going beyond their authority. I have thought, and I yet think, that something can be written in this bill that will minimize the difficulty that I have been discussing,

namely, the too frequent use of soldiers when the constabulary ought to be employed; but I do not care to go into that at great length to-day.

Mr. VARDAMAN. Mr. President, I should like to ask the Senator a question at this point.

The PRESIDING OFFICER. Does the Senator from Missouri yield to the Senator from Mississippi?

Mr. REED. Yes.

Mr. VARDAMAN. The power to use the National Guard belongs to the governors of the respective States, and I can not see how that could be interfered with by an act of Congress.

Mr. REED. I think I can suggest something while I am on my feet—although I do not offer it as any complete plan—but I suggest that the equipment, which we are proposing to furnish the National Guard, is the Government equipment. If we want to do so, we can provide in this bill that the equipment supplied by the National Government shall not be employed until the President of the United States has given his permission; such a provision might at least put a check on the abuses we are discussing.

Mr. President, I do not think that the argument made by the Senator about what happened in the New York constitutional convention is very potential. One man out of 100,000,000, who happened to be the commander of the National Guard, protested against a certain limitation upon the powers of courts-martial being placed in the constitution of New York. What his grounds or reasons were, whether they were good or bad, I do not care. The Senate of the United States can not pass laws in a certain way because one individual at some time or in some place advocated something that was unsound.

Moreover, the New York constitutional convention was presided over by the great constitutional lawyer, Mr. Root. He gave his approval to its work. I do not understand that he is a man who is at all in favor of wiping out the Constitution of the United States. I apprehend that if the whole truth were known, the real argument that prevailed in that constitutional convention was that it was unnecessary to reiterate in the constitution of the State of New York a principle that is graven in the Constitution of the United States itself and which has remained steadfastly unimpaired, so far as the Federal decisions are concerned. But if the Senator prefers to say that the great Elihu Root ran from the adjutant general of the State of New York and abandoned the rock of the Constitution before the bayonet of that gentleman's awful disapproval, he is, of course, privileged so to maintain. He may thus catalogue and classify Mr. Root if he so desires.

Mr. BORAH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Missouri yield to the Senator from Idaho?

Mr. REED. I do.

Mr. BORAH. I am under the rule obliged to put my statement in the form of a question.

Mr. REED. Oh, Mr. President, I do not think there is any such rule. Somebody dreamed that rule the other day and we have since been pestered a good deal with it.

The PRESIDING OFFICER. It is the rule under which the Senate is now operating.

Mr. BORAH. I will put it in the form of a question. I will ask the Senator from Missouri to read the debate, and then to tell me privately whether or not he thinks it turned upon the question that that provision was not necessary?

Mr. REED. Well, I shall try to read the debate, but I can see nothing but one of two alternatives: Either the argument that it was unnecessary to repeat in the constitution of New York a guaranty already reserved in the Federal Constitution prevailed, or the great Republican Party, assembled to write a constitution, headed by one of its most distinguished sons—I will not say its most distinguished son, but one of its most distinguished sons—ran away from its duty, retired in the face of the charge of this adjutant general, and abandoned the constitution to its fate; either that or they concluded that it was not necessary to have a controversy about the matter, because it was already safeguarded.

Neither do I want the National Guard of the country judged by what the adjutant general of New York did. Again, it is a single instance and a single man. I am not acquainted with all the adjutant generals or all the generals in the National Guard, but the commander of the National Guard in my State I do know. I know that he is as sound a constitutional lawyer as we have in the State. I know he is so sound a constitutional lawyer that if the governor of the State ordered him to try citizens for nonmilitary offenses by court-martial when the civil courts were open and the State at peace he would tell the governor of the State to go and get a lawyer to advise him as to his powers.

I know many officers of the National Guard. They are from among our lawyers and our business men. They represent that class of our citizens who have always felt that it is necessary to maintain some sort of military force in this country if the country is not to be left in a helpless condition. They have been more patriotic than the average citizen of the community. They have given their time, therefore, to this organization for the general public weal. I say the Constitution is mighty nearly as safe in their hands as it is in the hands of the Senate, for I have heard Senators on this floor say that where the constitutionality of a bill was doubtful it was all right to pass the bill and to let the courts take care of it. If I were to cite the single instances where that has been said, I might thereby, according to the "single-instance logic," prove that the Senate is not itself a fit custodian of the Constitution.

Mr. President, with this preliminary, I am coming to discuss that phase of the bill which relates to the so-called Volunteer Army. I am sorry that I can not get enthusiastic over that proposition. A little bit of experience is all that is necessary to fix firmly in the mind the fact that the plan is doomed to failure.

I do not pose as a military expert, but I once belonged to the National Guard, and the defects and troubles of the National Guard then developed furnished to me sufficient evidence to convince me that your summer camps will disappear just as soon as the smoke of European battles has blown away and the enthusiasm of the hour and the excitement of the day is gone.

Mr. President, less than three years ago everybody was going around singing, "I didn't raise my boy to be a soldier." It was dangerous for a man to stand up in almost any community and intimate that there ever would come a time in our history when we would need a single gun or a single soldier. The individual who talked about matters of that kind was regarded as a sort of barbarian. Our ears were attuned only to listen to the sweet harmonies of "Peace on earth, good will toward men." The very individuals who are loudest now in their clamor for great armies and mighty navies were then the gentlemen who were attending The Hague peace convention. The other day Mr. Root stood up in the State of New York before a great convention and, in substance and effect, said the United States ought to have broken off diplomatic relations, if indeed she should not have gone to war when Germany crossed the red line of the map that separated her from Belgium. Yet I remember that only two years before that time he had taken down the $40,000 Nobel peace prize in recompense and acknowledgment of his great labors in the cause of universal peace!

I recall that the warlike Roosevelt, who goes about the earth gnashing his teeth, breathing forth fire, blood, and smoke, was a delegate to The Hague Peace Convention. I remember with great distinctness how these gentlemen told us that all controversies were hereafter going to be settled in the amicable councils of great international courts, and how the golden sun of the millennium was to pour the flood of its wonderful light over a regenerated earth. And now we find the same gentlemen, with myriads of others, working themselves into an excitement, which leads some of them to believe that they can already hear the tramp of the Teutonic legions and the scream of the double-headed eagle of Austria and Germany, in fancy they behold New York City in flames, and San Francisco quaking with the thunders of mighty cannon. So under these circumstances men who six months or a year ago were preaching eternal peace have suddenly exhibited a wonderful enthusiasm for preparedness.

Why, I saw a convention of a society—I think it calls itself a national society for preparedness, or something of that kind—meet out in Chicago. I saw the delegates who had been selected. I will not say anything about any of them, except those who came from my own community. In my own community six months ago they were the most peaceful, tame specimens of the human family then running at large, but when I beheld them in this convention they were getting ready for war; they bore the front of Jove and the spear of Mars, their eyes "in fine frenzy rolling" surveyed fields of carnage. When one looked at them he wondered if they were not laboring under the stimulus of some drug which had taken possession of their brains.

When men feel that way, when a sentiment of that kind is sweeping over the country, when everybody has quit singing "Peace on earth and good will to men" and all are shouting, "Johnny, get your gun," why, of course, you can get up a summer camp. It is a kind of picnic excursion, very earnestly indulged in by men acting in splendid good faith, very speedily rushed to by men who are acting with the best motives; but let the occasion pass by, let the hour come when "grim-visaged war hath smoothed his wrinkled front" and you will observe these warlike gentlemen "capering nimbly to the lascivious

pleasing of a lute." They will not be at the camp. You may expend $25,000,000 or $30,000,000 or $40,000,000 and they will not be there—and this not that they lack patriotism, not that they would not fight if the fight were upon us, for they would, I doubt not, display good red-blooded valor, but because they are just like the average American citizen when the danger is gone, when the enthusiasm is spent, they are going back to attend to their business. When that time arrives and you ask them to give 30 days of their time out of the hot summer months to leave their business and go into camp you will find most of them are taking passage to Europe; that they have an ambition to behold the scenery of the Alps, or they prefer going out West to shoot jackrabbits or North to fish for small-mouthed bass. That is what you will come to. You can not get men, busy men, grown-up men, to give their time for 30 days or 60 days out of the summer. Which one of us has not from year to year planned his summer vacations, and how many of us have been able to take them? What one of these busy business men in a great city will give his time from his countinghouse, from his factory, or from his mercantile establishment and go into a military camp for 30 days in the summer year after year? It is not by such men that you will ever build up an army that will be ready to march when the order is given.

The Senator from New York [Mr. WADSWORTH] asked a question here yesterday which had a great deal of sound sense in it. He inquired whether this was going to be a real army, really organized, really ready to take the field. I do not think the chairman of the committee made the situation exactly plain, but I will make it plain. No body of men that voluntarily comes into a camp for 30 days once a year, that is without headquarters, that does not have arms and equipment set aside is ready to march. It disintegrates, it dissolves, it goes back into the body of the people. Its individuals may ultimately be gotten together, but they can not be rendezvoused in a very short space of time.

I started to say that I had some experience in the National Guard—just a little; just enough to learn this fact, that you could enlist a hundred of the brightest, keenest young men in a community, they would enlist with every intention of attending drills; they would be buoyed up with the hope that their company was going to be the best in the regiment; but as you proceeded with your drills from night to night you began to find absentees, and then more and more. When you began to inquire the reason, you did not in most instances find that these men had voluntarily stayed away. Here, however, was a plumber who had to fix a pipe which had broken that night; here was a young lawyer who had to go out of town to attend to some business; here was a medical student who was called to witness a clinic; and so it went until you found that, even meeting at night, even where the place was convenient, it was extremely difficult to get a full attendance of your members. That argues somewhat against the efficiency of the National Guard, but it argues with a thousandfold more force against the efficiency of one of these bodies of men who are to be brought together once in 12 months, and who are to come voluntarily.

Mr. HITCHCOCK. Mr. President——

The VICE PRESIDENT. Does the Senator from Missouri yield to the Senator from Nebraska?

Mr. REED. I do.

Mr. HITCHCOCK. Does the Senator not lose sight of the fact that in the proposed volunteer army the men and officers are regularly enlisted, under the full pay of the United States during the time they are called out, and that absence would mean court-martial?

Mr. REED. That simply means that you are putting up a bar that will keep the men from joining at all, for who is going to agree that every year for two, three, four, or five years, at a given period, he will report at a certain camp for 30 days; and, if he does not do so, that he can be court-martialed, tried on a drumhead, and sent to jail? You will not get enough men under that sort of system, in my opinion, to ever accomplish anything.

When we come to the National Guard, however, a different case is presented. I want, in the first place, to tell you what I think has been the trouble with the National Guard. The trouble with the National Guard has been the National and State Governments.

When I belonged to the National Guard, which was about 15 or 16 years ago—I only belonged a little while but long enough to find out some things—the best arms we were able to get were the old Springfield rifles, which had been used during the late rebellion. I do not say that the National Guard in all parts of the country are armed in that way, but that is the kind of arms we had in the State of Missouri. We received inferior equipment of every character. Our batteries had obsolete cannon that would not have been permitted in a Spanish fortress a hundred years ago. We received no pay. The State furnished an inadequate sum for the armory and the officers of the regiment had to regularly get together and guarantee the rent. We had the blessed privilege of turning out once a week, or as often as we saw fit, and drilling in quarters that were utterly insufficient. If we went to camp we paid our own expenses. The officers sometimes helped out the younger boys who could not afford to pay their own way. It was under such circumstances as those that we were required to keep up companies. There was no law by which you could punish a man who did not come to drill; there was no way by which you could reward him if he did come to drill. All the Government gave to us were these old guns, and if one of them was lost the captain of the company had to pay for it. Under such circumstances as these it is impossible to keep up an organization. To condemn a system because it was not a success under such circumstances is as absurd as it would be to condemn a child for not being fat and at the same time starving it to death.

Since the time I am speaking of a great improvement has taken place; more money has been furnished by the States, and, indeed, during all this time some States have more generously provided for their guard. Since that time modern arms have been provided in most instances, and, better than that, since that time the officers of the National Guard have been required to pass examinations before they are permitted to become officers, so that it is an absolute truth that many officers of the National Guard to-day, while not military experts in the higher sense of the term, are nevertheless very well qualified men.

I follow this by saying that sneering at the National Guard, sneering at its efficiency, is an absolutely unjust thing. A few days ago they had a riot in East Youngstown, Ohio. I read in the newspapers at that time that the governor had called for troops. I believe that the circumstances of that strike were of an exceedingly exaggerated and aggravated character, but I do not desire to discuss the merits of the strike. The governor saw fit to call for troops. This is what I read in the paper of that date, the Cincinnati Enquirer of January 8, 1916:

> Upon formal request of Sheriff J. C. Umstead, of Mahoning County, the telephone and telegraph pleas of scores of citizens, and the suggestion of Brig. Gen. John C. Speaks, Gov. Frank B. Willis to-night ordered the entire second brigade of the Ohio National Guard, with a strength of 2,412 men, to move at once to Youngstown to aid the civil authorities in enforcement of law and order.

And at 11 o'clock that night four companies were reported on their way with ample medical supplies and officers; and as I understand the fact, they had substantially 2,000 men in that town inside of 15 hours.

Mr. POMERENE. And, Mr. President, a goodly portion of them were there before daylight the next morning.

Mr. REED. The Senator from Ohio states that a goodly portion of them were there before daylight the next day. Now, I assume that in this instance the governor was right in calling them out, but I do not stop to argue that question. What I insist on is that it is a complete answer to the charge that the National Guard is inefficient, that it can not be mobilized, that it does not amount to anything; and if I read this paper aright, if I understand the Senator from Ohio aright, substantially every man called out responded at once, and got to the ground practically as soon as a company of Regular soldiers would have arrived.

How did they demean themselves when they were there? Was there any complaint as to their discipline? Were they not well held under command? Did they not perform their duty? Did they not restore order? Did they not save property?

Mr. President, the experience of Ohio has been repeated many times in many places. Even in the days to which I referred, when our National Guard was not equipped, when it was not supported, I remember one illustration that I shall never forget. We had a great flood in Kansas City. It swept through an immense portion of the business district of the city. One part of that business district lay in Kansas City, Kans. The greater part of it lay in Kansas City, Mo. I called—for I happened to be mayor of the city—for the assistance of the Third Regiment of the National Guard. They patrolled the city for a week. They prevented theft. They maintained order. They did not shoot or shoot at, they did not injure or kill, a single man. On the other side of the line the Regular troops from Fort Leavenworth were called out, and a number of men were killed, and they did not maintain as good order as the militia did on the Missouri side.

What is necessary to build up the National Guard? Money and some sensible regulations; that is all. You can not ask a boy—and these guards are composed of young men—to leave his home and attend drill and spend some of his money, for it always costs them a little—you can not ask him in the summer time to go out to the camps and drill in the broiling sun and spend his own money. You can not expect him to do all that

without some compensation. If you offer him even the small stipend that is provided in this bill and hold back his pay until the end of a six months' or a year's period, and if his failure to come to drill cuts him off from his pay, and if the pay when he does come compensates him for the loss occasioned by his coming, you will do a very great deal toward building up the National Guard.

If you will pay the officers something to compensate them for the time consumed in study you will make it possible for them to devote to their work that time which is necessary. If you accompany that by regulations which compel them to know their business and to pass examinations you will have officers of the National Guard who are competent.

Mr. President, who are these men constituting the National Guard? Are they people apart? Answer me this question, some advocate of this army plan. The name by which you call the organization does not make any difference. Who is to compose these two organizations? Plainly, they are to be composed of citizens of the country, of men who work in the trench, or of men who work in the bank, or of men who work somewhere between. In each instance they have to be the citizens of the United States.

If you can not get them out to drill once a week in an armory in their own town, where they have their own officers, where they have some social entertainments, where they have something to draw them together and to give them a cohesiveness, then you can not get those same men to go into a camp once a year, where there are none of the advantages just referred to to be enjoyed. When you argue that you can not fill up the National Guard, you prove that you can not fill up your volunteer army; you demonstrate it, because the National Guard offers much the greater inducement.

There has been a good deal of talk to the effect that we can not depend upon anybody but professional soldiers. That is the meaning of a good deal of the talk that we hear here, although it is not said in that blunt way. I believe as much I think as anybody can that you can not take a body of the bravest and best men on earth, without any training or discipline whatever, and make them stand fire. The reason is not that the individual is lacking in individual courage, but because that individual knows that the man beside him has not been trained, and he does not know what he is going to do, and consequently a shiver runs down the line and everybody is afraid of disaster, whereas if you put the same man in a line of battle along with men that he knows are going to stand he will stay there as long as the best of them.

Mr. President, it is strange how opinions shift and change on this question of the value of volunteers. For my part, I believe that the National Guard can be put in condition so that with a Regular Army of reasonable size to form the first line, the National Guard in a very few weeks' time can be made into efficient soldiers. It already exists. Why try to tear it down? Why try to discriminate against it? Why try to set up a rival organization that has not a single element of virtue that the National Guard does not already possess?

Now, I am going to say a word, with the permission of the Senate—and I have talked too long—on what I think is necessary in order to fit this country for its defense.

I do not believe we will ever have a standing army in this country big enough by itself to protect our shores against a serious and prolonged attack. Neither do I believe our standing army is organized along the right lines. The army of France is not really a standing army. Nearly every citizen in France has been trained, and a certain proportion of them are in the army all the time. Germany's great army is not really a standing army. All her citizens are trained, and a certain number of them constitute the army to-day, and to-morrow others take their places. So that when a great war came practically every citizen of France was qualified to be a soldier, and every citizen of Germany was qualified to be a soldier. They adopted a system of universal training, which, of course, from the military standpoint is the ideal thing. I do not think we have arrived at a period in our country where we can do that, but I do believe that we can approximate it to a certain degree; but if we are to approximate it we must train our soldiers at a time prior to their engaging in the ordinary activities of life.

After a boy has obtained a job and is earning a living you can not expect him to sacrifice that job for the sake of going into a military camp for 30 days. There is no use in trying to deceive ourselves. If the employees of any of the great factories of this country were in great numbers to go to their employers and say, "We want to join a volunteer army, and every July we want to quit our jobs and go out and drill in that army," I undertake to say that in most instances they would be told that they could go and drill for 30 days and they could continue to drill for 30 years if they want to; that they need not come back to their jobs. We might as well face things in this world as they are. I do not mean to say that our business men are altogether unpatriotic, for they are nearly altogether patriotic; but men are selfish and look to their own interests, and when you propose to make up a great army of men by taking them from their vocations in life and drilling them after they have adopted vocations in life you are going to make a failure. You can not help but make a failure.

You may take the young lawyer; you may take the clerk in the store; you may take the young doctor; you may take the man who is a brick mason; you may take the hod carrier—and the hod carrier is just as likely to stand on the field of battle and fight as the college professor, and a little bit more so; those men can not quit their employment; they can not quit their work. They surely will not quit their work after the enthusiasm created by the great world cataclysm has passed away. But if you can reach the boy before he has entered upon the duties and business of life, if you can get him at a time when he has time to devote to military training, you can produce in this country military knowledge and military genius in abundance.

Mr. President, according to the estimates, it will take $25,000,000 a year to maintain this Volunteer Army of men, who will never volunteer, or who, if they do, will volunteer only the one time; men who may volunteer just now, when there is a possible danger, but who, when peace folds her gentle wings, will lose all their enthusiasm. You can take that $25,000,000 of money and employ it so among the students of this country as to train every year 100,000 men.

Mr. HITCHCOCK. Mr. President——

Mr. REED. I yield to the Senator from Nebraska for a question.

Mr. HITCHCOCK. I should like to ask the Senator how he can reconcile those two statements—that men will not volunteer, and therefore there will be no Volunteer Army, and yet that it will cost $25,000,000 annually? Does not the Senator realize that if they do not volunteer the money will not be expended?

Mr. REED. Oh, yes; I do. Of course I do. I realize perfectly that if nobody volunteers it will not cost anything; but if they did volunteer it would cost $25,000,000, and you would have 30 days of work from these men. I maintain that we can spend that money so that we will get an actual result.

I have not given to the amendment of the Senator from Georgia [Mr. HARDWICK] any careful study as to its details, but that he is on the right track with that amendment I have not the slightest doubt.

Let us think about it a moment. Suppose this $25,000,000 were to be expended annually through the various public and private schools of our land. It would mean, on an average, $500,000 a year to each State. I maintain that with that amount of money you can so expend it as to pay a large portion of the expense of students in all the agricultural colleges of the country, in all the small military schools of the country, and in those high schools and other educational institutions and colleges where there are sufficient groups of boys brought together, and that if you pay each student $100 a year who really enlisted, really put himself under discipline a certain number of hours every day, and really enlisted so that he could be called upon for a reserve, that inducement of the $100 a year to these students would be such a blessing to the boy of limited means who has to work his way through school, or whose parents find his education a burden, that you could secure a sufficient number of men in every State so that you would have in training 100,000 men at all times.

Mr. President, that is not all. You would be getting the pick of the young men of the country. You would be getting an entirely different class of men than enlist now in the Army. You would not be getting the derelict who went into the Army because he could not make a living. You would not be obtaining the boy who had learned no trade and who had no ambition, and who went into the Army because it afforded a bed at night and food during the day. You would be getting young men of keen and active minds, of ambition, of hope. You would be getting men some of whom would develop into officers. Besides the inducement referred to, we ought always and forever to hold before the rank and file the chance of promotion. Any system that omits that will be a mistaken system.

Here I want to pause long enough to remark that I believe our whole military system in this country is on the wrong basis. I believe we have built it along the lines of the old Prussian system as it existed in the days of Frederick William, where the man was a slave and the officer was all-powerful.

But, not to digress, I believe—and before the consideration of this bill is ended I propose to offer an amendment to that effect—that this Government can afford to establish a number of military academies. I distinguish between the kind of academy to which I now refer and West Point or Annapolis.

Mr. HARDWICK. Mr. President, if the Senator will pardon me just a moment for the suggestion, it will be absolutely necessary, if we put training into the schools, to have the necessary halls for training to carry out his ideas.

Mr. REED. Yes. To my mind West Point and Annapolis ought to be two great military universities from which men practically never graduate. They ought to be the great schools to which our war and naval colleges should be attached, and they should be places where the highest qualities known to military science are acquired. But I believe that we could well afford to establish in this country a number of military academies which might be entered by every boy who could pass a physical and mental examination. They should be open to boys of the age of 15 or 16. A liberal general education should be afforded, especially along practical lines, and at the same time the student could be carried far enough in military science so that he would be competent to handle a company and the best of them could command a battery. The flower of these schools ought to be graduated into West Point and Annapolis. We ought to pick our Army officers by the process of selection and competition rather than by political favoritism.

Now, you say that will cost some money. It will not begin to cost as much money as it will to maintain a large standing army. It ought to turn out in this country every year ten or fifteen thousand men; for I would not put the general graduate of that school into the Army. I would equip him for civil life, and let that be his recompense and his reward. I believe that by following such a plan as that you could fill this country with men of military knowledge. I believe in that kind of a school, because I believe in this proposition—that you can give a discipline there, a genuine Army discipline, which is invaluable in time of war.

Mr. President, if you speak of the cost, I make you this answer—that there never yet was a dollar expended in education that was wasted, and that it is utterly immaterial whether the township, the city, the State, or the Nation pays the tax for education of this character, because in the last analysis the people have to bear the whole burden anyway.

So I hope that instead of spending our money on these transitory and evanescent camps, in this experiment, we shall support the National Guard, we shall safeguard it against the abuses which have been referred to, and that the rest of our money will be expended in the promotion of education along military lines in the schools of this country. Thus you shall reach a class of people who have the time to spend, and who have the intellect and the willingness to work.

Mr. SMITH of Georgia obtained the floor.

Mr. CLAPP. Mr. President, will the Senator yield a moment while I suggest an amendment?

Mr. SMITH of Georgia. Certainly.

Mr. CLAPP. The Senator from New York [Mr. WADSWORTH] yesterday suggested that there might be a question as to whether, under this annual training-camp provision called the volunteer army, the reserves were entitled to any compensation. I call the attention of the chairman of the committee to the matter, and suggest that after the word "army" on line 23 we insert the words:

Provided, That as reserves no compensation shall be paid except for actual services."

I do not think they would be entitled to it anyway, but that would put it beyond any question.

Mr. CHAMBERLAIN. I do not know that it is in order now, as there is another amendment pending, but so far as I am personally concerned I see no objection to it, because it carries out the purpose the committee had in view.

Mr. CLAPP. It would be in order to amend the amendment.

Mr. CHAMBERLAIN. I have no objection to it so far as I am concerned.

Mr. SMITH of Georgia. It is to perfect section 56 before the question is taken on the motion to strike it out.

Mr. CLAPP. Yes; I make a motion to perfect the section.

Mr. SMITH of Georgia. Mr. President, yesterday the chairman of the committee replied to certain criticisms that I placed upon the treatment of private soldiers. At the time I was out of the Chamber, having gone to lunch. It was suggested that citations of cases should be given. My criticism, at least that part of the criticism which was severe, had reference to sentences which I termed extremely severe, placed upon private soldiers for trivial offenses. The vigorous language which I used with reference to those sentences was limited to that class of treatment of the Men. The Senator wanted instances. I will cite the Senator to an article by Charles Johnson Post, which appeared February 21, 1914, on page 14 of Harper's Weekly, and for three weeks following, each successive week, this writer furnished a number of illustrations of what I considered harsh and cruel sentences placed upon private soldiers for trivial offenses. I understand that the accuracy of the description of those sentences has never been questioned in any response to these articles, and that they are accurate. The articles furnish a number of illustrations of sentences which are, I think, inexcusably harsh for trivial offenses and calculated to deter enlistment in the Army, and when compared to the sentences placed upon officers they are very severe.

I believe there ought to be a reformation in this respect in the Army, and I believe it will help to bring it about to mention the necessity for it.

Mr. CHAMBERLAIN. In answer to the Senator from Georgia, I rather inferred from what he said yesterday that he had reference to cruelty practiced by officers against enlisted men. It was instances of that kind of cruelty that I desired to have the Senator call to my attention. There is no question but that there are cases where courts-martial have imposed severe sentences just as there are instances where courts have imposed very severe sentences for very small crimes.

I wish to call the attention of the Senator to this fact, however: An effort was made by Congress at the last session to correct that, and we embodied in the appropriation bill a provision which did away with the imprisonment and the dismissal of enlisted men from the Army without having a chance for the future by providing for detention camps in barracks instead of sentencing them to prison. Now young men go into these detention camps which were provided by the last military appropriation bill, and if the crime was slight they have a chance by good conduct to restore themselves to the colors and not be dismissed from the Army.

Mr. SMITH of Georgia. The exact language I used was the following:

If we will put a stop to some of the cruel and barbarous sentences that are put upon the private for trivial offenses.

That was the language.

Mr. CHAMBERLAIN. May I call the attention of the Senator to that provision of the law which was adopted at the last session?

Mr. SMITH of Georgia. I simply wish to say that there can not be in the Senate or anywhere else a man with a broader spirit or a more complete love of justice and of his fellow men than the chairman of this committee of ours; and that anything which can be done by one man will be done by him to help improve conditions; and I am not surprised to learn from him that he has already been at work upon that line.

Mr. CHAMBERLAIN. I appreciate the words of the Senator, I assure him; but the appropriation bill that was passed at the last session of Congress amends chapter 6, Title XIV, of the Revised Statutes of the United States in the particular to which I called attention. It covers that provision and provides for the complete restoration of these young men to the colors by good conduct, with the result that some of the young men who have been sentenced to detention camps have made better soldiers than they were before; they have gone back to the colors and are now serving out their enlistment. Section 2 of the act to which I refer, approved March 4, 1915, is as follows:

SEC. 2. That chapter 6, Title XIV, of the Revised Statutes of the United States be, and the same is hereby, amended to read as follows:

"1. The United States Military Prison, Fort Leavenworth, Kans., shall hereafter be known as the United States Disciplinary Barracks.

"2. Persons sentenced to confinement upon conviction by courts-martial or other military tribunals of crimes or offenses which, under some statute of the United States or under some law of the State, Territory, District, or other jurisdiction in which the crime or offense may be committed, are punishable by confinement in a penitentiary, including persons sentenced to confinement upon conviction by courts-martial or other military tribunals of two or more acts or omissions, any one of which, under the statute or other law hereinbefore mentioned, constitutes or includes a crime or offense punishable by confinement in a penitentiary, may be confined at hard labor, during the entire period of confinement so adjudged, in any United States, State, Territorial, or District penitentiary, or in any other penitentiary directly or indirectly under the jurisdiction of the United States; and all persons sentenced to confinement upon conviction by courts-martial or other military tribunal who are not confined in a penitentiary may be confined and detained in the United States Disciplinary Barracks.

"3. The government and control of the United States Disciplinary Barracks and of all offenders sent thereto for confinement and detention therein shall be vested in The Adjutant General of the Army, under the direction of the Secretary of War, who shall from time to time make such regulations respecting the same as may be deemed necessary, and who shall submit annually to Congress a full statement of the financial and other affairs of said institution for the preceding fiscal year.

"4. The officers of the United States Disciplinary Barracks shall consist of a commandant and such subordinate officers as may be

necessary, who shall be detailed by the Secretary of War from the commissioned officers of the Army at large. In addition to detailing for duty at said disciplinary barracks such number of enlisted men of the Staff Corps and departments as he may deem necessary, the Secretary of War shall assign a sufficient number of enlisted men of the line of the Army for duty as guards at said disciplinary barracks and as noncommissioned officers of the disciplinary organizations hereinafter authorized. Said guards, and also the enlisted men assigned for duty as noncommissioned officers of disciplinary organizations, shall be detached from the line of the Army, or enlisted for the purpose; and said guards shall be organized as infantry, with noncommissioned officers, musicians, artificers, and cooks of the number and grades allowed by law for infantry organizations of like strength: *Provided*, That at least one of said guards shall have the rank, pay, and allowances of a battalion sergeant major.

"5. The commandant of the United States Disciplinary Barracks shall have command thereof and charge and custody of all offenders sent thereto for confinement and detention therein; shall govern such offenders and cause them to be employed at such labor and in such trades and to perform such duties as may be deemed best for their health and reformation and with a view to their honorable restoration to duty or their reenlistment as hereinafter authorized; shall cause note to be taken and a record to be made of the conduct of such offenders; and may shorten the daily time of hard labor of those who by their obedience, honesty, industry, and general good conduct earn such favors—all under such regulations as the Secretary of War may from time to time prescribe.

"6. The Secretary of War shall provide for placing under military training those offenders sent to the United States Disciplinary Barracks for confinement and detention therein whose record and conduct are such as to warrant the belief that upon the completion of a course of military training they may be worthy of an honorable restoration to duty or of being permitted to reenlist; may provide for the organization of offenders so placed under military training into disciplinary companies and higher units, organized as infantry, with noncommissioned officers, except color sergeants, selected or appointed from the enlisted men assigned to duty for that purpose pursuant to the provisions of paragraph 4 hereof; and may provide for uniforming, arming, and equipping such organizations.

"7. Whenever he shall deem such action merited, the Secretary of War may remit the unexecuted portions of the sentences of offenders sent to the United States Disciplinary Barracks for confinement and detention therein, and in addition to such remission may grant those who have not been discharged from the Army an honorable restoration to duty, and may authorize the reenlistment of those who have been discharged or upon their written application to that end order their restoration to the Army to complete their respective terms of enlistment, and such application and order of restoration shall be effective to revive the enlistment contract for a period equal to the one not served under said contract.

"8. The Secretary of War may, from time to time, designate any building or structure or any part thereof under the control of the Secretary of War and pertaining to the Military Establishment as a branch disciplinary barracks for the confinement and detention of offenders whom it is impracticable to send to the United States Disciplinary Barracks at Fort Leavenworth, Kans.; and all branch disciplinary barracks and all offenders sent thereto for confinement and detention therein shall be subject to the laws respecting the United States Disciplinary Barracks at Fort Leavenworth, Kans., and the offenders sent thereto for confinement and detention therein."

The VICE PRESIDENT. The Secretary will state the amendment offered by the Senator from Minnesota [Mr. CLAPP] to the amendment.

The SECRETARY. On page 160, line 24, after the word "Army" and before the period, insert a comma and the following proviso:

Provided, That as reserves no compensation shall be paid except for actual services.

The VICE PRESIDENT. Without objection, the amendment to the amendment is agreed to. Now, the pending question is on the motion of the Senator from Maryland [Mr. LEE] to strike out section 56.

Mr. STERLING. I offer an amendment to section 56.

The VICE PRESIDENT. The amendment to the amendment will be stated.

The SECRETARY. It is proposed to add to section 56 as a separate paragraph the following:

In case it shall become necessary by reason of actual or threatened war to employ or order into the service armed forces of the United States in addition to the forces constituting the Regular Army, the National Guard, as organized under the provisions of this act, shall take precedence and next after the Regular Army organization shall be the first of said armed forces to be mobilized and employed in active service in the field.

The VICE PRESIDENT. Let the Chair inquire, is this an amendment to section 56 or a new section?

Mr. STERLING. It is an amendment to section 56. It is proposed as a separate paragraph, but is an amendment of the section.

The VICE PRESIDENT. The Chair is a little in doubt about how far the right of amendment goes in offering a separate paragraph rather than a new section.

Mr. STERLING. I had not thought of introducing it as an amendment at this time, but in view of the fact that an amendment was offered by the Senator from Minnesota [Mr. CLAPP] to the amendment I thought any amendment offered at this time to section 56 would be proper to perfect the section.

The VICE PRESIDENT. The Chair presumes that it is in order.

Mr. CHAMBERLAIN. I should like to hear the amendment to the amendment read again.

The Secretary again read the amendment to the amendment.

Mr. STERLING. Mr. President, I have hesitated somewhat in regard to the proposition to strike out section 56, providing for the volunteer army, and yet on reflection I have concluded that this section should not be stricken out of the bill. My belief is that with section 56 and the provision it makes for a volunteer army, together with the provision made for the National Guard, we shall then with the two together have provided for no more than a reasonable state of preparedness.

Mention has been made, Mr. President, of the fact that there is no need for section 56, because of the great number who in our military schools, academies, and our State agricultural colleges and State universities are getting military training, and who will be available for service in case of war, actual or threatened. But, Mr. President, these men, competent and qualified as they may be, will belong to no organization available for service, and it seems to me the volunteer army will in and of itself open up a field and opportunity for the young men from the military schools other than West Point and from the State institutions which give a course of training in military science or tactics. There will be the chance for promotions within that volunteer army, a chance for the man who is competent and qualified to receive a commission in that army, and I think because of the opportunities thus afforded, and because we shall have in the volunteer army itself a trained citizen soldiery, with opportunities for competent and able officers, we should retain the provisions of section 56 in the bill.

But, Mr. President, my amendment, just read, has reference to the place of the National Guard in the system we are providing in this bill. I can not sympathize with many of the criticisms made of the National Guard. I think the National Guard constitutes, as it exists to-day and as it is organized to-day, a splendid force upon which this Government may rely in case of an emergency.

Reference has been made to the State militia as it was constituted many years ago, as it was organized then, as it was trained then. There is no comparison between the conditions as they were then in all these respects and the conditions as they are to-day, so far as the National Guard is concerned. There is a new spirit and a new pride on the part of those who belong to the National Guard and new interest in making of it an efficient military force.

I want to say Mr. President, as to the national guardsman, be he enlisted man or be he officer in the guard, the prime and animating motive for his being there is not, in the first instance, that he may suppress or engage in the suppression of any particular disorder within the State or that he may help execute the laws of the State, but his primary motive in belonging to the National Guard is that he may render service at some time to the National Government.

I imagine that in former times a different spirit actuated the State militia, and that its members were there purely as State militia for the purpose of protecting the State or the people of the State against domestic disorders or violence or on occasion to assist in executing the laws of the State. But that is no longer the primary motive for enlistment in the National Guard.

I want to call attention to a little of the testimony adduced before the Committee on Military Affairs in respect to the National Guard. Maj. Gen. J. Clifford R. Foster, chairman of the executive committee of the National Guard Association of the United States, has this to say on page 785 of the hearings:

It is a cause for wonder that in a Government which proclaims its dependence for defense upon the citizenry of the country, and makes a direct appeal to the patriotic impulses of the people to sustain it, an institution such as is the National Guard, a force designed to stimulate and to develop those qualities which are the highest attributes of American citizenship, should have to fight, constantly to fight, not only to maintain but to justify its existence.

And this fight always commences with the happenings of 1812.

We have heard that reiterated again and again in this Chamber and during this discussion. The critics of the National Guard go back to the time when the primary notion in regard to a State militia was the State defense. They hark back to Queenstown and the refusal of some of the State militia to cross the border line for the purpose of engaging in battle on Canadian soil, with the resultant defeat of the American forces at that time.

But, as I said, the guardsmen are not inspired by any such narrow or provincial feeling in these days. Their interests are not confined to State interests. They are as broad as the Nation itself, and they feel when they enlist as guardsmen that their greatest privilege will be to engage in the service of the Federal Government.

Gen. Foster goes on to say further:

The present Organized Militia forces bear as much relation to the enrolled militia of that time as do the electrically propelled cars of our modern railroads to the stage coaches of the long ago. But we are arbitrarily constituted hereditary legatees to the inefficiency which

distinguished the minute men of the revolutionary period, and, despite our earnest endeavors, are still held responsible for the burning of Washington by the British.

So I think much of that same sentiment has most unjustly been injected into this discussion and in opposition to the National Guard as an efficient military force in case of war.

Mr. President, in my own time I have witnessed something in regard to the progress and development of the National Guard. I have known it when I thought it did not, perhaps, amount to much and that it was hardly to be relied upon as an efficient force; but I have seen it in these latter years, and I know something of the pride taken by the officers and the men in drill and in the work of the encampment; and I have seen, too, the energy and enthusiasm with which they did their work.

No longer ago than last summer I attended the encampment of the National Guard of the State of South Dakota, consisting of about 700 men and officers. I visited the camp and every part of it. I visited the company cook tents, and if there can be perfect cleanliness and perfect sanitation in a military camp it was exhibited there. I saw drills, the various maneuvers. I stood on the firing line in the midst of a mimic battle and there had a fine view of both the attacking force and the defense. I heard officers, competent military critics, as I believed them to be, criticize the movements of the men and say whether or not they thought this or that particular feature of the attack or resistance was, according to military rules, justified or not, or justified up to the point to which it was carried. That was the kind of training they were undergoing there.

As I said, I have witnessed during the last few years this increasing interest and this increasing efficiency in the work of the National Guard, and this notwithstanding the discouragement in the way of lack of compensation and other hindrances to which the National Guard has been subjected during all these years.

They are the men from the farm, the men from the stores, the men from other businesses, sacrificing in time and sacrificing in money in order that they may maintain a creditable National Guard in the State, and that not for State purposes alone, such as quelling a riot or putting down a coal-mine strike or something of the kind, but with the expectation and purpose of answering their country's call in case of need; and this is their greatest inspiration in becoming members of the National Guard.

Believing this, I can not help but say, All honor to our National Guard. Just as it is in my own State, so, I think, much the same spirit animates the National Guard as it is formed in the 48 States of the Union.

This bill, Mr. President, makes elaborate provision for the National Guard. There is this one comparatively short section in regard to the Volunteer Army. Of course, in its effect it embraces the law of 1914 providing for a volunteer army, one that may be called on in case of actual or threatened war, but until war is threatened or war actually exists it is a volunteer army for training purposes only.

When we come to compare the two, the Volunteer Army and the National Guard, the latter will surely be more efficient. Its traditions, its training, its spirit will make it so. My amendment provides for simply this, namely, that when, in case of war, actual or threatened, it becomes necessary to call upon the armed forces of the United States, aside from the Regular Army, for the purposes of mobilization and for active service in the field, the National Guard shall take precedence and shall be the first to be mobilized and assigned to or employed in that actual service.

I think it a good thing that we know the status, respectively, of the Volunteer Army for which we provide and the National Guard as it now stands in this great scheme, and hence I have offered this amendment.

To give it first place in actual service is an honor and a recognition justly due the National Guard, and it will be a stimulus and an incentive to the officers and men of the Guard to be recognized as having the right to this place in the mobilization of troops outside of or in addition to the Regular Army forces.

Mr. CHAMBERLAIN. Mr. President, I wish in just a moment to call the attention of the Senator from South Dakota to the fact that that law is already in force. Section 5 of the Dick bill approved May 27, 1908, amending the original section, provides as follows. The Senator will find it on page 2 of the copy of the laws.

Mr. STERLING. I find it, although I had not seen it before. I think the Senator has reference to this provision:

Provided further, That when the military needs of the Federal Government arising from the necessity to execute the laws of the Union, suppress insurrection, or repel invasion, can not be met by the regular forces, the Organized Militia shall be called into the service of the United States in advance of any volunteer force which it may be determined to raise.

Mr. CHAMBERLAIN. Yes; I call the Senator's attention to a further provision so that it will remove any doubt the Senator has in mind. He referred to the domestic uses to which the guard might be put.

Mr. STERLING. Yes.

Mr. CHAMBERLAIN. If the Senator will notice section 3 of the Volunteer Army act approved April 25, 1914, he will find a further provision on the same subject, which is as follows:

Provided further, That when three-fourths of the prescribed minimum enlisted strength of any company, troop, or battery, or when three-fourths of the prescribed minimum enlisted strength of each company, troop, or battery comprised in any battalion or regiment of the organized land militia of any State, Territory, or the District of Columbia, organized as prescribed by law and War Department regulations, shall volunteer and be accepted for service in the Volunteer Army as such company, troop, battery, battalion, or regiment, such organization may be received into the volunteer forces in advance of other organizations of the same arm or class from the same State, Territory, or District, and the officers in the organized land militia service with such organization may then, within the limits prescribed by law, be appointed by the President, by and with the advice and consent of the Senate, as officers of corresponding grades in the Volunteer Army and be assigned to the same grades in the said organization or elsewhere as the President may direct.

That authorizes this organization upon a footing to be received as a body. If the Senator will examine section 3 of the Volunteer Army act approved April 25, 1914, he will also find this provision:

That when the raising of a volunteer force shall have been authorized by Congress, and after the organized land militia of any arm or class shall have been called into the military service of the United States, volunteers of that particular arm or class may be raised and accepted into said service in accordance with the terms of this act regardless of the extent to which other arms or classes of said militia shall have been called into said service.

It seems to me, taking these statutes together, the amendment of the Senator is provided for.

Mr. STERLING. I am much obliged to the Senator from Oregon for pointing out those provisions, and I think they are reasonably clear in connection with the other provisions of the statutes to which he refers. But we are here providing for a new volunteer army, a volunteer army that may be raised in time of peace at any time under the language of the bill itself. Then you make elaborate provision, as I stated, for the organization of the National Guard, for the training of it, for the officering of it, so far as it can be officered by Federal forces; it is a new National Guard law and a new volunteer army law you propose to enact, and in order to avoid any doubt or misunderstanding the amendment I have proposed should be added to section 56.

Mr. DU PONT. Mr. President, as everyone knows, there is a general feeling throughout the country that steps should be taken to prepare for a more adequate defense than now exists. This feeling is practically unanimous in some portions of our country, and there are hundreds of thousands of the youth and manhood of the United States who are anxious to have some personal participation in the measures which they think should be adopted.

Mr. President, if we strike out section 56, we are confronted with the proposition that the Senate says practically to the young men of the country and to the manhood of the country that they can not personally participate in its defense unless they choose to enlist in the Regular Army or to enlist in the National Guard.

It seems to me that the Senate can not afford to take such a position. It is not democratic; it is not fair. It is largely in the interest of a particular class, and of a class, be it remembered, whose status under the terms of the bill is disputed, so far as its constitutionality is concerned. I believe that the practical workings of section 56 are not thoroughly appreciated, and I think that some of the remarks which have been heard on the floor of the Senate during the last few days will bear out the statement.

I shall not attempt to analyze and discuss at this time the general features of the section, but I will say that I notice the junior Senator from New York [Mr. WADSWORTH] in his remarks spoke of horses and of mounted troops, which he seemed to think were a part and parcel of the Federal volunteer system. There is nothing of the kind prescribed in the bill, and it seems to be intended in the main for the organization of Coast Artillery companies and of Infantry. No fair-minded man ought to dispute the proposition that the organization and instruction of, say, two or three hundred thousand Infantry and Coast Artillery is not in the nature of a sensible contribution to the national defense.

The scheme of our coast-artillery defense, as is well known to all, provided that half of the guns now actually mounted and

ready for service should be manned by the Regular Coast Artillery and that the other half should be manned by the Militia Coast Artillery; but, unfortunately, the Militia Coast Artillery have been forthcoming only to a limited extent, which is the cause of a sensible weakness in that particular item of national defense.

It may be said that if we raised this Federal volunteer force, it should have its proportion of Cavalry and Light Artillery. That would probably be much better if it were practicable, but still we must remember that in the defense of our seacoast fortifications a large body of Infantry is required to protect them from land attacks from the marines of a hostile fleet, which would seek to take them in the rear. Our fortifications must be defended and, in my opinion, the organization of these Federal volunteers will amply meet this contingency as well as many others.

The scheme, in short, provides for the organization in time of peace of companies, battalions, regiments, and Coast Artillery batteries—whichever the President may decide to be the best—that the officers shall all be appointed upon examination as to their capacity, and that the Federal volunteers shall be ready at any time to be called into the service of the United States as completely organized bodies. Under the terms of the volunteer law, as provided for in the bill, they will have an effective organization—machine-gun companies, staff officers, and everything that is necessary. It is true that their instruction may not be as great as that of troops who have had longer periods of service, but the bill never contemplated that their efficiency for all purposes should be on an equality with the Regular Army. I think, however, that it fills a place in our scheme of national defense which is greatly needed, and I trust that the paragraph may not be stricken out.

Mr. WEEKS. Mr. President, I think the law to which the chairman of the Committee on Military Affairs [Mr. CHAMBERLAIN] called the attention of the Senator from South Dakota [Mr. STERLING] would hardly apply in this case, but it seemed to be justified in the case to which the chairman referred.

The Government has been supporting a Regular Army and assisting in the support of the militia or the National Guard, and very naturally, under those circumstances, it would call on those forces to which it had given its support before calling for volunteers. We are now, however, providing a different kind of force—a volunteer army. I am entirely in sympathy with what the Senator from South Dakota has said about the desire which men have when they go into the National Guard. My judgment is that, generally speaking, they want national service. Pretty nearly the only service the State has for them to perform is that connected with strike or riot duty. My judgment is that the militia should never be used for that purpose. I think every State—and I would be glad to see a provision for that purpose made a part of this bill—should provide a State constabulary, which should be used in case of strikes and riots.

Mr. HARDWICK. If the Senator from Massachusetts will yield to a question, I desire to ask what power have we to prescribe any such rule of conduct as that for the States?

Mr. WEEKS. We may enact that unless the States do provide such force that part of the appropriation for the National Guard shall not go to the State for the maintenance of the National Guard.

Mr. HARDWICK. Oh, well, of course we can limit the appropriation which is to go to the States.

Mr. WEEKS. That would be the only method in which we could accomplish that purpose. The National Guard is not an entirely efficient force in connection with strike and riot duty.

Furthermore, there is always a conflict in men's minds about what they ought to do and how far they ought to go in such cases. They themselves very frequently sympathize with the strikers. Men sometimes even hesitate about going into the National Guard because they may be called upon to do such duty. In every case, however, in my judgment, Mr. President, the State should provide a constabulary force similar to that which is maintained by the State of Pennsylvania, which everyone knows is infinitely more efficient in performing riot duty than the National Guard forces can possibly be.

We have in the Commonwealth of Massachusetts a very strong militia organization. The best young men in the State have for a long time gone into the service, and I am confident in saying that generally they go into the militia for the ultimate reason that they hope their service may be connected with the National Government. I have before me a letter from a former adjutant general of the State, James P. Parker, one of the best soldiers we have had for years, in which he says that his investigation convinces him that a great majority of the National Guardsmen of Massachusetts would transfer to the volunteer forces which section 56 provides for if the opportunity were given.

Last year we had in operation in Massachusetts a commission composed of three retired general officers, several leading citizens of the State, including the presidents of Boston College and of Amherst College—a special commission on military education and the reserves. Without any consultation with the War Department that commission came practically to the conclusion that it was most desirable that every part of the volunteer forces, including the National Guard, should be federalized so far as possible; and it is clearly demonstrated that there was a desire to perform national service, to exchange the "M. V. M." for "U. S.," and in that manner be useful in the ways that every real soldier desires to be.

Mr. BRANDEGEE. Mr. President, will the Senator from Massachusetts let me ask him, as to these young men who have joined the State militia, and who, the Senator says, do so with the idea and hope that they may be given national service—does he think that they would want to go out of the country, out of continental United States, on that kind of service?

Mr. WEEKS. Mr. President, I think they would. I think there is a strong desire that there should be cooperation between the State forces and the National Government; that the National Guard should be federalized; and that, if necessary, a constitutional amendment should be passed, so that they might transfer bodily into the volunteer force for which section 56 provides, and thus become a real national organization.

Mr. BRANDEGEE. If that is so, why do they not enlist in the Regular Army?

Mr. WEEKS. Because they are employed in all the varied pursuits of civil life, and they do not want to become professional soldiers. They are perfectly willing, however, to be trained so that they may be useful in case of necessity to supplement the Regular Army. A bill is now pending in the Massachusetts Legislature which, in substance, provides that the National Guard of Massachusetts may transfer itself bodily or individually into this volunteer army in case it can do so; and I understand that that bill is about to be reported favorably from the military committee of the House of Representatives of Massachusetts as a unanimous report. Undoubtedly the sentiment, in Massachusetts at least, is that so far as may be this force shall be federalized.

Mr. WORKS. Mr. President, the Senator from Massachusetts refers to the necessity of amending the Constitution of the United States in order to federalize the State militia. Does the Senator think that would be a wise thing to do?

Mr. WEEKS. Mr. President, I suggested yesterday that I would leave the constitutional phases of this question to the lawyers of the Senate. I am not confident that that would be a wise thing to do; but I very much doubt whether we can federalize the National Guard without an amendment to the Constitution, so that there will not be some kind of a string retained by the States over those forces.

Mr. WORKS. I am sure the Senator is right so far as the legal question is concerned. I was not, however, asking him about the legal phases, but about the wisdom or the propriety of doing it, if it is necessary to be done for that purpose.

Mr. WEEKS. Mr. President, I have just stated that, in my judgment, the only real use to which the National Guard is put in these days is in connection with strike and riot duty, and I do not think it should be used for that purpose at all. I think a State constabulary should take its place in connection with such duty. Therefore if we are going to maintain these organizations and spend forty or fifty million dollars annually for that purpose, I think they ought to be available under every possible circumstance for national service.

What I particularly arose to address myself to, Mr. President, was the amendment offered by the Senator from South Dakota—not that I wish to discuss it for any length of time, but because it seems to me to provide very bad military law. It proposes that the President of the United States, who is the constitutional commander of the Army and Navy, shall be limited in the forces which he shall call to the aid of the Government in time of necessity.

Suppose this proposed volunteer force does develop and become a thoroughly trained and useful force, better in every respect for the uses of the National Government than is the National Guard, then would it be desirable or wise to have on the statute books a limitation that in case of need the President should call on the National Guard before calling on the more efficient force which the Government had been supporting and developing? I think that is bad military law and bad military precedent. I do not think it should go on the statute books, and I hope that the amendment will not prevail.

Mr. CHAMBERLAIN. Mr. President, if I may interrupt the Senator, I desire to ask did the Senator notice that section 56 adopted the act of 1914 as the law upon which it is framed and that section 3 of it carries that provision?

Mr. WEEKS. Mr. President, I had overlooked that; but I am sorry to say it does. I do not think it should do so, and, if it were possible, I think it ought to be eliminated from the section.

Mr. BRANDEGEE. Mr. President, has the Senator from Massachusetts concluded?

Mr. WEEKS. I have finished; yes.

Mr. BRANDEGEE. I want to ask the Secretary to read the proviso in section 3 of the act of April 25, 1914, to show that, in my opinion, if I caught correctly the idea of the Senator from Massachusetts, the act of his legislature is unnecessary, because it is practically contained in the act I have named, the marked part of which I ask the Secretary to read.

The VICE PRESIDENT. In the absence of objection, the Secretary will read as requested.

The Secretary read as follows:

Provided further, That when three-fourths of the prescribed minimum enlisted strength of any company, troop, or battery, or when three-fourths of the prescribed minimum enlisted strength of each company, troop, or battery comprised in any battalion or regiment of the organized land militia of any State, Territory, or the District of Columbia, organized as prescribed by law and War Department regulations, shall volunteer and be accepted for service in the Volunteer Army as such company, troop, battery, battalion, or regiment, such organization may be received into the volunteer forces in advance of other organizations of the same arm or class from the same State, Territory, or District, and the officers in the organized land militia service with such organization may then, within the limits prescribed by law, be appointed by the President, by and with the advice and consent of the Senate, as officers of corresponding grades in the Volunteer Army and be assigned to the same grades in the said organization or elsewhere as the President may direct.

Mr. BRANDEGEE. I am informed, Mr. President, that while I was not on the floor of the Senate the Senator from South Dakota [Mr. STERLING] proposed an amendment providing in general terms that the militia shall have preference if a call for troops is made under section 56. I wondered whether the provision just read did not also cover substantially the point raised by the amendment offered by the Senator from South Dakota.

Now, I will ask the Secretary to read also the first paragraph on page 2, at the top of the page, as rather reenforcing what he has just read.

The VICE PRESIDENT. In the absence of objection, the Secretary will read as requested.

The Secretary read as follows:

That when the raising of a volunteer force shall have been authorized by Congress, and after the organized land militia of any arm or class shall have been called into the military service of the United States, volunteers of that particular arm or class may be raised and accepted into said service in accordance with the terms of this act regardless of the extent to which other arms or classes of said militia shall have been called into said service.

Mr. WEEKS. Mr. President, the bill pending in the Massachusetts Legislature, to which I have referred, is very short, and I should like to read it. First, I will say that the report of the commission recommends that the militia be "actually a Federal force and nothing else," and states:

To accomplish this result three things must concur:
1. An act of Congress under authority of its constitutional power "to raise and support armies."
2. Consent of the State legislature.
3. Consent by reenlistment of members of the militia.

Now, the bill pending in the Legislature of Massachusetts provides as follows:

SECTION 1. The governor may, without expense to the Commonwealth, and upon such terms to secure the Commonwealth against expense or damage as he may approve, lend to or permit to be used by any Federal military force organized under the laws of the United States any military property provided for the use of the Organized Militia of the Commonwealth, including camp equipage, camp grounds, parade grounds, drill grounds, ranges for target practice, armories of any class, uniforms, arms, and equipment, except that in case of any such military property which has been provided for the particular use of any particular military unit of the Organized Militia it shall first appear to the satisfaction of the governor that, by vote of the enlisted men composing such unit, they shall have manifested their intention to join such Federal military force.

SEC. 2. Any military unit of the Organized Militia is hereby authorized to join in a body any Federal military force organized under the laws of the United States by vote of the enlisted men composing such unit. Service as prescribed by the laws of the United States in any such Federal military force on the part of any enlisted man in any company or corresponding military unit of the Organized Militia which shall have voted to join such Federal military force shall be accepted by the Commonwealth as full discharge of all claims by the Commonwealth for active militia service.

Mr. BRANDEGEE. Mr. President, inasmuch as the Chamberlain bill, which is now under discussion, is being considered as a substitute for the Hay bill, the bill which passed the House, I ask the Secretary to read the letter of Maj. Gen. Edward C. Young, including his criticism of the Hay bill. I will ask the Secretary to read the portion I have marked. It seems to me it touches the weak points in the Hay bill in such a manner as should satisfy the Senate that certainly the Hay bill ought not to be the measure finally to be passed.

The Secretary read as follows:

"The Hay bill fails utterly to provide for an adequate preparedness.

"It makes no substantial increase in the Regular Army and would be a positive menace to the National Guard.

"Militia legislation up to this date has been based upon the theory that the militia is primarily a State force to be used by the National Government under conditions as specified in the Constitution of the United States. This bill is framed upon the theory that the militia is primarily a national force, the use of which is granted to the State in times of peace.

"The bill assumes that Congress has power to organize, arm, and discipline the militia, call it into the service of the United States at any time, or under any conditions, to govern it either when in the service of the State or the United States, to directly train it under command of Regular Army officers, and to provide rules and regulations and conditions for the appointment of the officers. All of which is clearly contrary to the provisions of the Constitution. The power to provide is very different from the power to directly execute.

"The bill, therefore, fairly bristles with unconstitutional and impracticable provisions. Among these the following more important ones may be noted:

"Sections 36, 37, and 38 provide conditions and limitations for the appointment of officers. The examination to determine qualifications for commission is to be conducted by a board of commissioned officers appointed by the Secretary of War, consisting of officers of the Regular Army or the National Guard. By what constitutional authority can the Secretary of War give an official status to a board of National Guard officers when the National Guard is not in the service of the United States? What authority can a board of Regular Army officers have over the appointment of officers to the National Guard? What right has the Secretary of War to interfere with the States in the appointment of officers when this right is specially reserved to the States by the Constitution?

"All of the provisions in relation to the appointment of officers is clearly unconstitutional, and some of the provisions might easily be carried out to the detriment of the orderly government of the State troops. Any officer of the National Guard not acceptable to a board of Army officers, no matter what may have been his previous service or his ability or the desire of the governor of the State to appoint him, could be denied a commission.

"Section 39 is of similar character, providing for the dismissal of officers of the National Guard. This section, however, fails to designate the authority for the appointment of the efficiency board. It would probably be claimed by the Secretary of War following the provisions in section 37.

"Section 30 provides for the assigning of the National Guard to divisions, brigades, and other tactical units, and the detail of officers from the National Guard or the Regular Army to command such units. These tactical units would undoubtedly have to be made up of the National Guard from different States. The only assumed authority which the officer detailed to command could have would be derived through his detail by the President. This is clearly a question of government. By what authority can the President govern the National Guard except when it is in the service of the United States? What authority can an officer of one State exercise over the National Guard of another State? Indeed, it is a serious question whether any laws governing the National Guard are effective outside of the State to which the National Guard belongs, except, of course, when it is in the service of the United States. The only laws which can govern the National Guard in time of peace are the State laws, and these laws are not operative beyond the limits of the State. It may be contended in this connection that National Guard organizations have taken part in joint encampments under the command of Regular Army officers and National Guard officers of other States. This, however, is purely a question of courtesy, and no attempt has been made to enforce a legal control or government.

"Section 54 provides 'that the President may call into the service of the United States the National Guard, or any part thereof, to participate in encampments,' etc., 'for at least 15 days each year.' This is clearly unconstitutional, as the militia can not be called into the service of the United States except as provided by the Constitution. Even if constitutional, it would be a dangerous provision, for it might subject the National Guard to unexpected and indefinite service, thereby

greatly interfering with their civil affairs. This was the objection to the continental-army scheme. It is even more objectionable here, for in addition to all of the requirements of the State they would be subjected to indefinite service under the National Government. It should be noted that in this section it is proposed to call these organizations into the service of the United States as militia. Attention is directed especially to this, because later on a similiar authority, although derived from a different source in the Constitution, is used to transfer the National Guard to the service of the United States in time of war.

"Sections 64, 65, 66, 67, 68, 69, and 70 are all unconstitutional, for they assume the right to govern the militia in time of peace and when not in the service of the United States. Discipline, as used in the Constitution, does not mean trial or punishment; it means simply drill or training. Section 65 provides that the President may convene general courts-martial for the trial of members of the National Guard. No limitations are placed upon this, and he could detail an entire court of Regular Army officers. What jurisdiction could such a court have? Here, again, if the provisions were constitutional, they would be very dangerous to the National Guard. Every man on trial for his life, his liberty, or his property should have a jury of his peers. Under the above provisions the President of the United States, which means the Secretary of War, which means the Chief of Staff of the Regular Army, could organize a court-martial of Regular Army officers, try an officer of the National Guard, dismiss him from the service, fine him $200, and in lieu of the fine put him in jail for 200 days, and call upon the United States marshal to execute the sentence. This is the limit of injustice and unfairness.

"Section 76 is the most dangerous provision in this bill and is the real joker. Two cardinal principles have been insisted upon by the National Guard. First, that the National Guard shall have prior service—that is, next in line to the Regular Army; second, that the organizations of the National Guard and the rank of its officers be preserved when the National Guard is taken into the service of the United States, either under a call as militia, as provided by the Constitution, or under a transfer to the United States forces under the power of Congress to raise armies and provide for the national defense. This bill fails completely in both particulars. It provides for a draft of the individual member. The word 'draft' is most repugnant in this connection and does not properly express the action to be taken. From the date of the draft all persons stand discharged from the militia. In other words, there are simply so many men with no exact status; all organizations are automatically destroyed, all officers automatically discharged. No matter what may have been the length and efficiency of an officer's service, he finds himself when drafted as naked of power and position as when he first enlisted in the service. The only status given these men is that they are subject to such laws and regulations for the government of the Army of the United States as are applicable to members of the Volunteer Army. Having drafted this body of men, they shall be embodied in organizations corresponding to the Regular Army, or otherwise assigned, as the President may direct. For instance, the President could form a regiment of Infantry by taking approximately 50 men from each and every State, irrespective of whether they had been officers or enlisted men in the National Guard. Having constituted this organization, he could then appoint officers to command it from its own members. A former enlisted man might be appointed colonel and the colonel might remain an enlisted man. Moreover, there is no redress. Even a reserve officer of the Regular Army, who might have had no service whatever except in schools, or perhaps one year in a cadet corps, can not be compelled without his consent to serve in a rank lower than that held by him in the reserve corps.

"Immediately upon the draft the Organized Militia, or at least the portion drafted, ceases to exist. It is ended completely. At the conclusion of the national service, even though it might be for a month only, all the officers and men of the National Guard return to the States simply as citizens, without any position or rank.

"This bill also fails to provide for priority of service. The President may call into service as many volunteers or as many Army reserves as he may wish before making use of the National Guard. All that the National Guard has accomplished then, or can accomplish under the provisions of this bill, is to train so many citizens for service. The officer, after many years of study and sacrifice of time, may find himself divested of his rank and humiliated at the time when he may be of service to his country. The purely mechanical work of reorganizing the entire National Guard and appointing all of its officers would involve much confusion and delay. It would be even worse than it was at the beginning of the Spanish-American War.

"It might be contended that the President would not go to any unusual extremes nor deal unfairly or unjustly with the National Guard. We have before us the history of our previous wars and the effect of political influences in the appointment of officers. Unless the law protects the officers of the National Guard, what reason have we for believing that the future will be different from the past? Political influence would certainly not fail to exert itself to the maximum under such a favorable opportunity when the President alone has the appointment of thousands of officers.

"No provision is made in this bill for pensions for members of the National Guard drafted into the military service of the United States.

"No provision is made for calling forth the militia under the provisions of the Constitution for the suppression of insurrections and the maintenance of law and order in the execution of the laws of the Union.

"The bill, after having indulged in extravagant and unconstitutional provisions, unconsciously recognizes the fact that there is no means for enforcing the same, except to withdraw from the State the financial support of the National Government (see sec. 27). If, therefore, under a most objectionable bill, a State is unable to comply with all of the provisions of this law, then the National Guard of such State will be completely abandoned, except where the State, unaided, can support it.

"The appropriations made by Congress are to be apportioned in ratio to the appropriations made by the State. This is wrong in theory and will not work out in practice. The object of national support is to develop and encourage the National Guard, and this assistance is most needed in the States having the least resources. The National Guard should be developed in every State. To withdraw support from the poorer States would ruin the National Guard of such States and would throw the entire organization to the richer sections of the country. A certain portion of the national appropriations should be distributed in proportion to congressional representation, conditioned upon a minimum number which could be readily maintained by the States.

"It is a serious question whether the National Guard could be maintained under the provisions of this bill. It is extremely doubtful whether men would voluntarily enter the service under the conditions imposed.

"If we are to organize a national defense under a purely volunteer system, it would be much better to leave the National Guard to the voluntary action of the States for training and development in time of peace. A doubtful authority is repugnant to military efficiency and will necessarily lead to confusion and discouragement. The National Guard should be purely a State force in time of peace, developed by the States under liberal aid from the National Government, with proper provisions for its transfer without confusion or delay to the service of the United States.

"The Chamberlain bill, as presented to the Senate December 10, 1915, provides for the proper method for transferring the National Guard from the State service to the national service. There are many minor omissions and objections to the proposed Hay bill, but those pointed out should be ample to cause its defeat."

During the reading of the foregoing letter,

Mr. CUMMINS. Mr. President, I desire to ask the Senator from Connecticut how much more there is of this communication? I assume that he has read it.

Mr. BRANDEGEE. Yes; I have read it. There is a very little more. The Secretary can answer the Senator better than I, as he has it before him.

Mr. CUMMINS. I do not think we ought to sit and listen to a very long article or speech or argument of this sort.

Mr. LEWIS. Mr. President, if I may inform the Senator——

Mr. BRANDEGEE. There is no compulsion on the Senator. If he does not want to listen to it, nobody can compel him to do so.

Mr. CUMMINS. I intend to object if it is very much longer.

Mr. BRANDEGEE. The Senator has that right.

Mr. CUMMINS. I ask to be given some iden as to how much more there is of it?

The VICE PRESIDENT. The Chair understands from the Secretary that there is half a column more. Is there objection?

Mr. CUMMINS. I shall not object.

The VICE PRESIDENT. The Chair hears no objection. The Secretary will continue the reading of the letter.

The Secretary resumed and concluded the reading of the letter.

The VICE PRESIDENT. The question is on the amendment of the Senator from South Dakota [Mr. STERLING].

The amendment was rejected.

The VICE PRESIDENT. The question now recurs on the motion of the Senator from Maryland [Mr. LEE] to strike out section 56, as amended.

Mr. CUMMINS. Mr. President, the word "preparedness" is in grave danger of being charged with as many crimes as have sometimes been imputed to the sacred word "liberty." Whenever a legislative proposal is made in these days, it is connected in some way with preparedness. I have heard it suggested that our amiable friend from New Hampshire [Mr. HOLLIS] believes the rural-credits bill ought to pass because it is a measure of preparedness, and anyone who opposes it may be accused of a failure to protect his country in time of need. The child-labor bill, which is now receiving the consideration of the Committee on Interstate Commerce, is urged by some of its friends as a proper measure of preparedness, inasmuch as it is exceedingly necessary that the citizenship of the country shall be able-bodied. I might enumerate a score of suggestions made in the Senate and elsewhere with regard to particular propositions, and all that it is necessary to do is to declare that we must be prepared and that this is one of the necessary elements of preparedness in order to command the attention of the country.

It has been said here this afternoon that if one is opposed to this section he is opposed to preparedness. It is labeled as a part of the program of preparedness. I intend to adopt the nomenclature of the discussion, and I intend to oppose the section because I think it is unpreparedness, leads to unpreparedness, and destroys the efficiency of the system created by the bill under consideration.

The United States ought to have first, for its land defense, an adequate Regular Army composed of soldiers who render their service continuously throughout the year during the period of enlistment. I have no hesitation in saying that the force so composed and so trained is better, more efficient, than any force that can be organized whose training is but temporary or continues over a small part of the year. How many Regular soldiers we ought to have is a matter upon which there is difference of opinion; but it is very unfair, I think, to assert that any specific number is the standard of preparedness. Some may think that we ought to have a Regular Army of 500,000 men, others may honestly believe that an Army of 150,000 is adequate. I shall not discuss the question, because it is not material to this amendment, and we could not reach any conclusion upon it at this time if in any event. Whatever number is reasonably required we ought to have, and the composite judgment of Congress will determine the number.

The next element in adequate preparedness is a force of men who devote part of the time to training, a part of the time to acquiring the knowledge necessary to enable men to perform the duties of war; but they must not only be trained in this partial way, but they must be organized as well. We need a force of semitrained organized men who in time of danger, in time of war, or imminence of war, can be speedily transferred into the service of the country, not as men, not as individuals, but as organizations. They probably will not be so well prepared to meet an enemy as an equal number of organizations in the Regular Army; but they will be fairly prepared, and can quickly become efficient in the duties that the country requires of them. But remember that they must not only be partially trained, but they must be equipped; they must be organized; there must be some way, some instrumentality, through which the President can speedily send them into the service.

We need, therefore, this secondary force, and we need it just as imperatively as we need the first, although I am quite willing to admit that it will not be quite so efficient, man for man, as is the first.

This bill provides one such force, namely, the National Guard. I do not intend to consider again the character of the National Guard nor of the men who compose it. I am sure that the Senate will see the injustice of imputing to the Guard as a body of men the infirmities or the delinquencies of certain governors who have declared martial law when it ought not to have been declared. So far as I know, the Guard has faithfully obeyed the command of the governor or governors of the States to which it has belonged in those contingencies. It was the duty of the National Guard to obey; and if the argument that has been made to-day has any potency at all, it proves that we ought to readjust our form of government and ought to have no governors, ought to have no States, because the errors that have been committed are mainly the errors of civil officers of the States rather than the military officers of the States.

But, recurring to what I was saying a moment ago, this bill provides one such force, namely, fairly well-trained men, organized men, who can, when the moment comes, be sent directly in organization, with all their arms and equipment ready for war, to the point of danger; and this bill proposes to do that at great expense to the General Government. I am not questioning the propriety of the expenditure. I am not one who measures public danger with the expenditure or cost necessary to avert it. I have no criticism to make upon the bill in that respect; but it is now proposed to add another such force of men, a volunteer army, not to be trained continuously throughout the year, not to constitute a part of the Regular Army, but a force substantially like the National Guard, lacking only the material organization pointed out yesterday by the Senator from New York [Mr. WADSWORTH].

I am not opposed to section 56 because it creates an additional force. I am opposed to it because, when this war or these wars come to an end and we enter upon a period of peace, I know, and every Senator here knows, that the General Government will not maintain two forces engaged in training and which are at the same time organized for movement. There is not a Senator here but who must be impressed with the total impracticability of maintaining two such forces. In the first place, there would be a rivalry between them in enlistment that would make it impossible, in my judgment, to create either of sufficient strength and size. Moreover, it would be a wasteful method of maintaining such a force, because of the two organizations instead of one. The result of these considerations would be that in a few years Congress would dismiss one or the other. If it did not dismiss one or the other, it would maintain both inadequately, and so meagerly that the purpose sought to be accomplished would not be attained.

I believe that, looking into the future, past the present crisis, we will have more organizations fairly well trained and fully organized and ready to move upon the command of the President if we unite all our energies in the maintenance of one, rather than to divide our assistance among two.

Mr. HITCHCOCK. Mr. President——

The VICE PRESIDENT. Does the Senator from Iowa yield to the Senator from Nebraska?

Mr. CUMMINS. I yield to the Senator for a question.

Mr. HITCHCOCK. Does not the Senator recognize that there is a difference in the duties to be performed by these different organizations?

Mr. CUMMINS. I do not recognize any difference.

Mr. HITCHCOCK. Is it not a fact that one organization—the National Guard—has obligations to the State, has duties to perform to the State, which the other has not?

Mr. CUMMINS. I thought the Senator from Nebraska meant a difference in the duties owing to the General Government.

Mr. HITCHCOCK. Well, that is true also.

Mr. CUMMINS. No.

Mr. HITCHCOCK. For instance, is it not a fact that the National Guard can refuse to leave its own State?

Mr. CUMMINS. Mr. President, a National Guard can be ordered to any part of the United States in time of war or imminence of war just as fully and completely as could the volunteer regiment, if there were one. The only point of difference upon that question that has arisen in the Senate, or that could arise anywhere, is as to whether the regiment of the National Guard could be ordered into a foreign country for service.

Mr. HITCHCOCK. Is it not a fact that governors have refused to permit the National Guard to leave the State boundaries?

Mr. CUMMINS. Mr. President, treason has been committed in the United States more than once.

Mr. HITCHCOCK. I ask the Senator whether that was treason?

Mr. CUMMINS. I think it was, in a broad sense, but any officer of the National Guard under this bill or any man in the National Guard under this bill—and the Senator helped to prepare the bill—who should refuse to obey the command of the President in the event of war or threatened war would be guilty of just exactly the same offense as would a Regular soldier or as would a member of the Volunteer Army, just the same.

Mr. HITCHCOCK. That is, of course, assuming that it was constitutional legislation; but is there not a dispute right here in the Senate Chamber at the present time as to whether this legislation does not transcend the limits of the Constitution?

Mr. CUMMINS. No; I do not so understand it.

Mr. LEWIS. Mr. President——

Mr. CUMMINS. Just a moment. There are but two disputes with regard to that subject. First, it is asserted that the regiment of the National Guard—and I will use a regiment for illustration—could not be commanded or ordered into the foreign service, into a war of aggression or conquest; and, second, it is

insisted that the Federal Government can not affect in any way in time of peace the selection of the officers of the National Guard. Those are the only two constitutional questions that have been raised against the National Guard.

Mr. HITCHCOCK. Let me ask the Senator a further question. In the present emergency it is a very doubtful question whether the President would have the power, or whether he would attempt to exercise the power, of ordering the National Guard into Mexico. Is not that true?

Mr. CUMMINS. I do not think that is true; but I will ask the Senator and the Senate the question, Why are we in Mexico? What are we there for?

Mr. HITCHCOCK. That is another story.

Mr. CUMMINS. Precisely; it is another story, but it would have to be answered; and it would have to be answered with regard to the Regular Army just as it would have to be answered with reference to the National Guard. We are not making war on Mexico. We are not invading Mexico. We are, I assume, executing the laws of the United States, and defending the United States against invasion.

Mr. HITCHCOCK. I think the Senator misunderstood my question.

Mr. CUMMINS. Now, if that is our mission in Mexico we could send the Guard there just as clearly as we could send the Regular Army.

Mr. HITCHCOCK. The question I put to the Senator was not whether he thinks the President has the power to order the militia into Mexico three or four hundred miles in the present juncture. The question I ask is this: Is there not grave doubt on that point, and do not eminent lawyers disagree as to whether the President has that power?

Mr. CUMMINS. I do not think so. The points upon which eminent lawyers disagree relate to an entirely different matter. I do not believe eminent lawyers disagree with regard to this—that we have the same right to send the National Guard into Mexico that we have to send the Regular Army into Mexico under the present conditions.

If we were to declare war on Mexico, not to repel an invasion, not to execute our laws, then there would be doubt with respect to our right to send the National Guard into Mexico; but there can be no such doubt so long as we are simply executing a police duty—for that is all we are doing in Mexico. We are doing nothing more than to vindicate the laws of the United States and to arrest and punish a transgressor against those laws. If the Senator from Nebraska can offer any other reason for our being in Mexico I should like to know what it is, but of course not in my time, because I have a few more words to say.

Mr. HITCHCOCK. I ask the Senator a few specific questions. Are we sending the soldiers into Mexico at the present time to repel an invasion? I ask that question.

Mr. CUMMINS. I say yes.

Mr. HITCHCOCK. To repel an invasion?

Mr. CUMMINS. I say yes.

Mr. HITCHCOCK. I understood the Senator just disclaimed that a moment ago—that we were not sending them into Mexico to repel an invasion.

Mr. CUMMINS. I said we were sending them into Mexico to arrest an offender against our laws.

Mr. HITCHCOCK. That is not to repel an invasion.

Mr. CUMMINS. It is to repel an invasion, because it was through an invasion that our laws were violated. What did Villa do? He came into the United States not as the representative of the Government of Mexico but as a marauder, a murderer, a bandit. He might just as well have been a citizen of the United States. He came into our country and killed a number of our people, and we are undertaking to punish him for doing it. We can not apprehend him through the ordinary instrumentalities of the police, and therefore we take the Army. I have no doubt about the right of the President of the United States to employ our Army for the purpose of executing our laws and apprehending offenders under such circumstances as surrounded the Columbus incident. And if I correctly apprehend our mission into Mexico it is one that may be executed by the National Guard with the same sanction of the law that surrounds the Regular Army in performing the same function.

Mr. President, in order that we may be prepared I want just as large a force as is practicable of these partially trained men in full organization ready for the service of the country whenever danger presents itself. I fear, and it is no fancy, that the attempt to support two organizations, the purpose of both of which is simply to train for a limited period in each year our citizenship in arms and in the science of war, will result in having neither force competent, efficient, and of numbers that will meet the emergency, whatever it may be.

My sole reason for voting in favor of the amendment offered by the Senator from Maryland is that we will be better prepared, if war should ever unhappily come upon us, in depending upon the National Guard, with full, generous support to that organization, than we will be if we rely partly upon the Guard and partly upon the so-called volunteers.

I know what is intended by section 56. It has been stated, I think, by the Senator from Delaware [Mr. DU PONT], and possibly the Senator from Oregon [Mr. CHAMBERLAIN], too. Last year we had at Plattsburg a camp, one of the most inspiring spectacles of the time. I admire the spirit of the men who gathered there. I have nothing but commendation for their purpose. I do not look upon a camp of that kind as a great auxiliary in time of need, but it was an exhibition of patriotism that has rarely been surpassed in this country, and it indicated instantly that we are not a Nation of poltroons and cowards, indifferent to our national danger and national need. But who would expect any considerable number of the men who gathered at Plattsburg to be ordered into the service of the country in the event of war? I am merely surmising, for I have no authentic information on the subject; but I venture to say that the average age of the men who exhibited so much patriotism at Plattsburg was above 40 years. There is no Senator so blind to the necessities of military life as to doubt that the wars of every country are fought by the young men, not the old men, not the men of middle age. It is not until the country is in its last extremity and until its boys have all been killed or disabled, until the youthful supply of vigor, strength, and endurance is exhausted, that any country calls upon its old men for defense.

It was just so at Fort Sheridan. The good done by these meetings was incalculable, and it must not be understood that I am discouraging them or criticizing them in any way. I would be perfectly willing to lend the aid of the Government in some fashion or other to encourage just such meetings. There may be a half dozen more of them in the coming year. If the war that is now affecting the world continues we shall have more of them; but the moment peace dawns there will be no such camp as that held at Plattsburg or Fort Sheridan. Then we will settle down into the normal way of the Republic, and we will need the consistent and the persistent enlistment of young men in some organization that will continue, not for a year, not for five years, but during the whole life of the country. I predict that when that time comes it will be seen more clearly than it can possibly be seen now that the National Guard, with its traditions, with its present development, with its tendency, is the organization upon which we must depend for the secondary force to which I have referred.

There is a third element in the program of preparedness that ought not to be overlooked. In addition to the Regular Army always in service, in addition to the force that is gathered simply to train and to organize, it is necessary to give the young men who are unorganized some military training and education. They will not be called into the service of the country save as volunteers, for they are and will be unorganized men who have acquired some knowledge of military science. I am very much in favor of some such proposition as has been made by the Senator from Georgia [Mr. HARDWICK] with regard to utilizing the natural disposition of the young man who is at school to become familiar with the military affairs of the country and be ready and efficient when danger comes to volunteer in defense of the Republic.

For these reasons, Mr. President, I feel that in performing my duty toward preparedness I must vote to strike out section 56.

Mr. THOMAS. Mr. President, I have taken no part in the discussion to-day of the amendment proposed by the Senator from Maryland [Mr. LEE]. I have, however, subject to some unavoidable interruptions, endeavored to pay close attention to the debate, which has been extensive and illuminating.

I have not, however, heard anything which convinces me that I should do otherwise than stand by the committee report and vote against the proposed amendment. This section was inserted by the committee after weeks of very careful consideration, and because of the convictions of some of us that the State militia should be resorted to for the purpose of providing a national reserve. Hence, the section entitled the "Volunteer Army."

Mr. President, I do not profess to be very familiar either with the military history of the United States or with the requirements in detail at least of a plan of military organization, but it seems to me to be a self-evident proposition that in all martial affairs there must be unity of control and unity of purpose, with-

out which efficiency in a military organization I will not say is impossible, but it is extremely difficult of accomplishment.

The Constitution of the United States was framed by a body of men whose purpose was to create a General Government and at the same time leave the States in possession as full as possible of their powers and their sovereignty. At that time the dread of a standing army was a very real thing. The people of that generation were very mindful, largely from personal experience, of the dangers consequent upon a permanent armed force in a community of freemen, and very naturally the States desired to reserve, and did reserve, to themselves the practical control of their own military strength, subject only to the necessary power of Congress to raise and support armies, and also to provide for the discipline and organization of the militia. That necessitated—in fact, I can not reach any other conclusion than that it necessitated—the existence contemporaneously of one general Military Establishment, accompanied by as many possible separate ones as there were or might be distinctive States in the Union.

Much has been accomplished by way of construction and very considerable by way of amendment of our Constitution, so that it might be made to fit new conditions as the future might bring them to the front, but there has been less, I will not say discussion, but less real interference with or change of the particular sections of the Constitution which relates to military and naval affairs than perhaps to any others. Of course, Congress has legislated from time to time with regard to the State militia, what is known as the Dick bill being the last general expression of the National Legislature upon this subject, the design being among other things, the principal design I may say, to make it an effective arm of the public service, and therefore efficient should the exigencies of the national authority require it to call upon some other than the Regular Army in the discharge of the national function.

Mr. President, this bill and the Hay bill with regard to the State militia has been framed, and I think has been carried to the extreme in some instances, so as to extend or at least so as to assert the power of the National Government over that class of troops. No doubt the committee have profited by the experience of the Dick bill, whose defective operation in many respects is conceded. I have no doubt that they have stretched the limit of their power and of their sense of duty in carrying the jurisdiction of the National Government as far as possible over the entire subject.

But there are some recitals of the Constitution which can not be avoided by any sort of statutory expression. We may disregard them in practice, we may offer an inducement by appropriations from the National Treasury through the operation of which they may be minimized and possibly ignored at times, but we can not escape the conclusion or the effect, Mr. President, and that effect may appear sometimes at the most unfortunate moment. We can not escape the direct provisions of the Constitution which endow the governors of the States with power through the appointment of officers and through the control, which they may exercise as commanders in chief in their respective Commonwealths. We can not deprive them of the operation of these provisions of the Constitution no matter what form our legislation may take, provided that those who are endowed with it see fit at any time to assert it. They may not do so. Far be it from me, Mr. President, to even imply that there would be at any time so little patriotism in the average executive of any State as that in a period of great emergency they would interfere with or attempt to obstruct the operation of the national authority, but the fact that it can be done and the fact that it has been done are the best guides which we can use in determining what our legislation shall be, experience being the dearest and sometimes the only standard by which we can judge of the future.

The National Guard as it at present exists is a virile force. It is in a much better condition than it ever was before, and it unquestionably would respond not to the maximum of its force, but it would unquestionably respond, and respond enthusiastically, to any requisition made by the President of the United States in the event it became necessary to call out additional forces.

This, Mr. President, suggests, however, another provision of the Constitution which might become exceedingly embarrassing, even in the situation which may confront us in the course of a short time in the Republic of Mexico. I refer, of course, to those three subjects, the occurrence of either of which endows the President of the United States with authority to mobilize the militia. They are "to execute the laws of the Union, suppress insurrections, and repel invasions."

There is nothing, Mr. President, in my judgment, either in the inherent nature of things or in any well-reasoned opinion or expression upon the subject which I have seen, that can justify the conclusion that the President of the United States has power to summon the National Guard for any other than one or more of these three purposes. Of course, the theory of preparedness is based very largely, as I had occasion to say the other day, upon the menace of an invasion, in which event the militia forces would be available under the Constitution; but a system of preparedness that is based merely upon one condition, is no system at all. If it is to be made effective, it must be such as can be efficient under all possible conditions as they may arise.

Mr. President, the history of the country, as stated by the Senator from Idaho [Mr. BORAH] this morning, is replete with instances in which this Army, no matter how patriotic, how desirous of performing its duties, how enthusiastic in the cause of the Union, nevertheless fails at the critical moment, and for reasons which were so much better expressed by the Senator than I could possibly expect to express them. It seems, therefore, Mr. President—and I shall speak but a very short time upon the subject—that the three things which this bill has in view are each of them desirable, and that the committee is justified in the bill which is now under consideration in making provision for them all: First, the increase of the Army; second, the strengthening of the National Guard; and, third, provision for an additional force, distinct from both, wholly under the authority of the Government of the United States, and which should be, in conjunction with the other two, a sufficient guaranty to all concerned that Congress had taken such steps as were necessary in view of the existing exigency.

Now, should the contest come, which, of course, is a matter of conjecture, it would be much better to have the three provisions—the standing army or the Regular Army; the reserve force, under the complete control of the national authorities; and the reserve force, under the partial control of the national authorities—as reservoirs from which to draw in time of need.

The use of the Regular Army plus the National Guard in wars of the past has, at least during the initial periods of difficulty, been inefficient. In no instance in which this country has been engaged in war has the National Guard, by whatever name you may call it, together with the Regular Army, been for the time being efficient. It is only when the former has been hardened into service, and when its members have become veterans through actual experience—and it is due to them to say that that process is extremely rapid, or it has been extremely rapid, and will be again—it is only, however, after that transformation has taken place that the Nation has been in a position to meet its enemies and to overcome them.

I believe that whenever the National Guard are called upon, as I said before, the response is going to be all that could be desired, their numbers considered, their discipline considered, and the embarrassments consequent upon this so-called dual control—which is hardly a correct expression—are also considered.

There is no question but what the great war in Europe is going to leave the world in a very different situation from what it was before. Somebody has said that after a war no nation ever occupies the position that it did in any respect—economically, socially, or politically—that it did before. It may be that this is the last war which will ever curse humanity. God grant that it may be so! It may be that the fierce conflict and commercial competition that will inevitably spring into existence when the war is over will confront us with crises which at present are not even imagined. I do not think so. Nevertheless these are possibilities. It may be that the growing power in the Orient is as great a menace to American institutions and to the American future as so many declare, and as perhaps so many more actually fear. I do not think so. But upon the assumption that preparation is essential to meet what are called actual as well as what may be called contingent dangers, let us supplement, by the experiences which we have had in the past, the military force of the Nation by an additional reserve, a separate reserve, a distinct reserve, absolutely under the control of the President of the United States, owing its origin, its support, and its continuance to the national as contradistinguished from the State authority.

Mr. President, I think that it is not too much to say that, but for the opposition of the representatives of the National Guard, who fear that the development of another parallel line of preparation may interfere, in whole or in part, with its own development, there would be no serious discussion or difficulty concerning, or opposition to, section 56 of this bill. Of course, this is my own conclusion, based simply upon what I have heard from those who have consulted me personally with regard to it. Gentlemen connected with the National Guard have said to me, as they doubtless have said to others, that the establishment of

the Volunteer Army will practically deprive the National Guard of the assistance and the support of the General Government. I am not able to agree with them; but even if it were so, Mr. President, I would still be for this provision for reasons which have been so well stated to-day, and to which I have heretofore adverted.

It may be that we do not need all of the force which would be represented by the State militia, by the Volunteer Army, and by the Regular Army; but when we consider the extent of the country, our present enormous population, and the possibilities of a given number of troops, certainly it is the part of wisdom to make provision for drafting men—and, of course, I use the term in a general sense; for mobilizing men I prefer to say—men of experience, men familiar with arms and with tactics, not alone those under the control of the States, but those for whom we have made provision in this bill; and I do not believe, Mr. President, that we are going to meet the views of the sober-thinking masses of the country unless we do make this provision.

It may be that so far as some of the details of the section are concerned they are not satisfactory. So far as that is concerned, I confess my inability to say anything, because my own familiarity with the details of the section is not what it should be as a member of the committee, due to causes which it is not necessary here to elaborate upon. The confidence which I feel, however, Mr. President, that this is going to be an aid to, instead of something in antagonism with either of the other branches of the Army, the fact that it has been well thought out, that it has been considered from every standpoint, and that, generally speaking, it conforms to the view of most of the men who have advised us or who have by our invitation consulted with us in regard to what this bill should be, is the apology which I must offer at this late hour for saying anything upon the subject at all.

SEVERAL SENATORS. Vote!

The VICE PRESIDENT. The question is on the amendment of the Senator from Maryland [Mr. LEE].

Mr. LEE of Maryland. On that I ask for the yeas and nays.

The VICE PRESIDENT. The Senator from Maryland asks for the yeas and nays.

Mr. HITCHCOCK. I suggest the absence of a quorum.

Mr. LEWIS. I suggest to the Senator that the presence of a quorum will be developed by the yea-and-nay vote.

Mr. HITCHCOCK. I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst	Hitchcock	Nelson	Sterling
Bankhead	Hollis	Norris	Sutherland
Beckham	Hughes	O'Gorman	Swanson
Brandegee	Husting	Overman	Taggart
Catron	Johnson, S. Dak.	Page	Thomas
Chamberlain	Jones	Pittman	Vardaman
Chilton	Kenyon	Pomerene	Wadsworth
Clapp	Lee, Md.	Shafroth	Warren
Cummins	Lewis	Sheppard	Weeks
Curtis	Lippitt	Sherman	Williams
Dillingham	Lodge	Simmons	Works
du Pont	Martin, Va.	Smith, Ga.	
Gallinger	Martine, N. J.	Smith, S. C.	
Hardwick	Myers	Smoot	

The VICE PRESIDENT. Fifty-three Senators have answered to the roll call. There is a quorum present.

Mr. CHAMBERLAIN. Mr. President, in view of the fact that quite a number of Senators are not present who desire to vote on this amendment, I am going to suggest that the Senate take a recess until to-morrow at 12 o'clock.

Mr. VARDAMAN. Mr. President, before the Senator makes that motion, will he permit me to make a request for unanimous consent for the present consideration of a short bill?

The VICE PRESIDENT. The Chair desires to lay before the Senate certain messages from the House of Representatives.

Mr. VARDAMAN. Very well.

INDIAN LANDS IN ARIZONA, NEW MEXICO, ETC.

The VICE PRESIDENT laid before the Senate the amendment of the House of Representatives to the bill (S. 3391) to amend an act entitled "An act for the relief of Indians occupying railroad lands in Arizona, New Mexico, or California," approved March 4, 1913, which was on page 1, line 8, after "sixteen," to insert: ": *Provided*, That there may be exchanged under the provisions of the act named herein a total area not exceeding 10,000 acres in Arizona and 25,000 acres in New Mexico."

Mr. CATRON. I move that the Senate concur in the amendment of the House.

The motion was agreed to.

HOUSE BILLS REFERRED.

The following bills were severally read twice by their titles and referred to the Committee on the Judiciary:

H. R. 6099. An act to amend section 72 of an act entitled "An act to codify, revise, and amend the laws relating to the judiciary," approved March 3, 1911;

H. R. 6914. An act to amend section 82, chapter 231, of the act to codify, revise, and amend the laws relating to the judiciary;

H. R. 9819. An act to amend the act of March 3, 1915, providing the time for the holding of United States court at Aiken, S. C.;

H. R. 11792. An act transferring Chariton County from the northern division of the eastern district to the western division of the western judicial district of Missouri; and

H. R. 12195. An act to amend section 17 of the United States bankruptcy law of July 1, 1898, and amendments thereto of February 5, 1903.

The following bills were severally read twice by their titles and referred to the Committee on Indian Affairs:

H. R. 6417. An act to provide for the selection by the Omaha Indians and the setting apart of reservation lands for tribal cemetery purposes; and

H. R. 10307. An act authorizing the Secretary of the Interior to pay and to distribute the balance now in the Treasury to the credit of the Alsea and other Indians on the Siletz Reservation.

The following bills were severally read twice by their titles and referred to the Committee on Commerce:

H. R. 9923. An act granting the consent of Congress to the county of Mitchell, or to the county of Baker, both of the State of Georgia, acting jointly or separately, and their successors and assigns, to construct a bridge across the Flint River;

H. R. 10139. An act to authorize the city of Fairmont to construct and operate a bridge across the Monongahela River at or near the city of Fairmont, in the State of West Virginia; and

H. R. 13006. An act to authorize the reconstruction of an existing bridge across the Wabash River at Silverwood, in the State of Indiana, and the maintenance and operation of the bridge so reconstructed.

The following bills were severally read twice by their titles and referred to the Committee on Public Lands:

H. R. 177. An act authorizing the Secretary of the Interior to accept the relinquishment of the State of Wyoming to certain lands heretofore certified to said State, and the State of Wyoming to select other lands in lieu of the lands thus relinquished;

H. R. 228. An act to amend the United States homestead law in its application to Alaska, and for other purposes;

H. R. 540. An act for the relief of settlers within the limits of the grant to the New Orleans, Baton Rouge & Vicksburg Railroad Co; and

H. R. 2744. An act to correct the title to certain lands in Colorado.

H. R. 8356. An act to amend sections 28 and 30 of an act entitled "An act to amend and consolidate the acts respecting copyright," approved March 4, 1909, was read twice by its title and referred to the Committee on Patents.

The following bill and joint resolution were severally read twice by their titles and referred to the Committee on Appropriations:

H. R. 13769. An act to authorize the Secretary of War to supply tents for temporary use of the sufferers from the recent conflagration in Paris, Tex., and for other purposes; and

H. J. Res. 171. Joint resolution to continue in effect the provisions of the act of March 9, 1906.

RELIEF OF SUFFERERS BY FIRE AT PARIS, TEX.

Mr. MARTIN of Virginia. From the Committee on Appropriations I report back favorably without amendment the bill (H. R. 13769) to authorize the Secretary of War to supply tents for the temporary use of the sufferers from the recent conflagration in Paris, Tex., and for other purposes. I call the attention of the Senator from Texas [Mr. SHEPPARD] to the bill.

Mr. SHEPPARD. Mr. President, I ask unanimous consent for the present consideration of the bill. It is an emergency matter. It authorizes the use of tents, cots, and such supplies as may be found necessary for the destitute at Paris, Tex., where one of the most disastrous conflagrations in the history of the South has recently occurred. The House has passed the bill, and immediate action is necessary if it is to serve the purposes for which it is intended.

The VICE PRESIDENT. Is there objection to the present consideration of the bill?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill. It authorizes the Secretary of War to supply for temporary use, under such rules

and regulations as he may prescribe, a sufficient number of tents to afford shelter for the sufferers from the recent conflagration in Paris, Tex., and to furnish such cots, blankets, and supplies as in his judgment are necessary to relieve the destitute persons who may require assistance.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

J. LAWRENCE LATHAM.

Mr. VARDAMAN. Mr. President, I ask unanimous consent for the present consideration of the bill (H. R. 8466) to relieve J. Lawrence Latham, postmaster at Eupora, Webster County, Miss., of the payment of cash and funds stolen from the post office. The bill has been passed upon by the Committee on Post Offices and Post Roads; it has been favorably reported by that committee, and has also been passed upon by the Committee on Claims. It has passed the other House, and is here with the indorsements, after careful consideration, of the two committees I have named. I should like very much to have it considered and acted upon at this time.

Mr. CHAMBERLAIN. Mr. President, I am not going to object to the request of the Senator from Mississippi, but I am going to object to anything else this afternoon or to-morrow afternoon until we get rid of the pending bill.

Mr. GALLINGER. I will ask the Senator from Mississippi if the bill is on the Senate Calendar?

Mr. VARDAMAN. It is No. 302 on the calendar. I ask unanimous consent for the present consideration of the bill.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill. It proposes to relieve J. Lawrence Latham, postmaster at Eupora, Webster County, Miss., of the payment of $3,098.78, or any part thereof, being the amount of cash and funds held due from him to the United States Government for moneys and stamps and other property stolen from the post office of Eupora, Webster County, Miss., on November 15, 1914, by unknown persons.

Mr. GALLINGER. Mr. President, I have not objected to the consideration of this bill; but I want to submit to those having in charge the procedure of the Senate that it would be very much better if we could have a morning hour once in three or four days if we could not have it oftener.

Mr. CHAMBERLAIN. We pretty nearly have one every afternoon.

The VICE PRESIDENT. We have an evening hour.

Mr. GALLINGER. Yes; we are getting to that; but it is favoritism, absolutely.

The VICE PRESIDENT. If there be no amendment to be proposed, the bill will be reported to the Senate.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

NEWARK (N. J.) ANNIVERSARY CELEBRATION.

Mr. BANKHEAD. From the Committee on Post Offices and Post Roads I report back favorably without amendment the joint resolution (S. J. Res. 118) authorizing the Postmaster General to provide the postmaster of Newark, N. J., with a special canceling die for the Newark Two hundred and fiftieth Anniversary Celebration, and I ask unanimous consent for its present consideration.

The VICE PRESIDENT. Is there objection to the present consideration of the joint resolution?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the joint resolution, which was read, as follows:

Whereas the city of Newark, N. J., is making extensive preparations to celebrate the two hundred and fiftieth anniversary of its founding, the celebration to begin on May 1, 1916, and to continue until October 1, 1916; and

Whereas the projected celebration in said city will include industrial and other exhibitions, pageants, national athletic games, tournaments, parades, conventions, and many other interesting features that will attract visitors from all parts of the United States; and

Whereas the citizens' committee of one hundred having the celebration in charge have widely advertised the approaching events, with the result that a great increase of incoming and outgoing mail matter is now being handled by the Newark post office; and

Whereas the size and importance of the city of Newark, N. J., and the extensive preparations being made by its citizens for the celebration of the two hundred and fiftieth anniversary of its founding give to said celebration a national character and significance: Therefore be it

Resolved, etc., That the Postmaster General of the United States be, and he hereby is, authorized to prepare and deliver to the postmaster of Newark a special canceling die to be used in the cancellation of mail matter in the post office of that city from May 1, 1916, to October 1, 1916, said die to be of such design as may be agreed upon by the Postmaster General and the Newark citizens' committee of one hundred.

The joint resolution was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

The preamble was agreed to.

EXECUTIVE SESSION.

Mr. CHAMBERLAIN. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After five minutes spent in executive session the doors were reopened, and on motion of Mr. CHAMBERLAIN (at 5 o'clock and 45 minutes p. m., Tuesday, April 4, 1916) the Senate took a recess until to-morrow, Wednesday, April 5, 1916, at 12 o'clock meridian.

CONFIRMATIONS.

Executive nominations confirmed by the Senate April 4 (legislative day of March 30), 1916.

CHIEF JUSTICE OF THE SUPREME COURT OF HAWAII.

Alexander G. M. Robertson to be chief justice of the Supreme Court of the Territory of Hawaii.

UNITED STATES DISTRICT JUDGE.

Horace W. Vaughan to be United States district judge, district of Hawaii.

JUDGE OF THE CIRCUIT COURT.

Clement K. Quinn to be judge of the circuit court of the fourth circuit of the Territory of Hawaii.

SECOND JUDGE OF THE CIRCUIT COURT.

William L. Whitney to be second judge of the Circuit Court of the First Circuit of the Territory of Hawaii.

POSTMASTER.

NEW YORK.

Jerry B. Martin, Fonda.

REJECTION.

Executive nomination rejected by the Senate April 4 (legislative day of March 30), 1916.

J. J. Thomasson to be postmaster at Carrollton, Ga.

HOUSE OF REPRESENTATIVES.

TUESDAY, *April 4, 1916.*

The House met at 12 o'clock noon.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

Our Father in heaven, incline Thine ear and hear our prayer. Let Thy holy influence guide us in the duties of the hour and all subsequent duties, that whatsoever we put our hands to we may sincerely and conscientiously ask Thy blessing upon; that our days may be full of faith and good works, and the result of our life be the fruits of righteousness. In the name of the Father and of the Son and of the Holy Ghost. Amen.

The Journal of the proceedings of yesterday was read and approved.

CALL OF THE ROLL.

Mr. HUMPHREY of Washington. Mr. Speaker, I make the point of order that there is no quorum present.

The SPEAKER. The gentleman from Washington makes the point of order that there is no quorum present. Evidently there is not.

Mr. KITCHIN. Mr. Speaker, I move a call of the House.

The motion was agreed to.

The SPEAKER. The Doorkeeper will close the doors, the Sergeant at Arms will notify the absentees, and the Clerk will call the roll.

The Clerk called the roll, and the following Members failed to answer to their names:

Abercrombie	Dent	Greene, Vt.	Kiess, Pa.
Anthony	Dewalt	Griest	Kreider
Barchfeld	Dies	Griffin	La Follette
Beales	Doremus	Guernsey	Lehlbach
Bruckner	Driscoll	Hamill	Lenroot
Burnett	Drukker	Harrison	Lever
Cantrill	Dyer	Haskell	Lewis
Carew	Eagan	Hay	Liebel
Carter, Mass.	Edwards	Hayes	Loft
Cary	Fairchild	Henry	Longworth
Casey	Ferris	Hill	Loud
Chandler, N. Y.	Finley	Hilliard	McAndrews
Charles	Fitzgerald	Houston	McCulloch
Clark, Fla.	Flynn	Howard	McFadden
Coleman	Freeman	Humphreys, Miss.	McKenzie
Cooper, Ohio	Gallagher	Hutchinson	Maher
Crago	Gardner	Jones	Mays
Crosser	Garrett	Kahn	Meeker
Dallinger	Glass	Keister	Mondell
Davis, Minn.	Godwin, N. C.	Kennedy, Iowa	Mooney
Dempsey	Gray, N. J.	Kennedy, R. I.	Moores, Ind.

Morgan, La.	Price	Snyder	Vare
Morin	Ragsdale	Stedman	Venable
Morrison	Riordan	Steenerson	Ward
Mott	Rodenberg	Stephens, Miss.	Wason
Mudd	Rowland	Stephens, Tex.	Watkins
Nichols, Mich.	Sabath	Stiness	Watson, Pa.
Oakey	Scott, Pa.	Stone	Williams, W. E.
Overmyer	Scully	Sutherland	Wilson, Fla.
Patten	Sells	Swift	Wingo
Peters	Shackleford	Taylor, Colo.	Wood, Ind.
Platt	Shouse	Tilson	Young, Tex.
Porter	Sinnott	Tinkham	
Pou	Slayden	Towner	

The SPEAKER. Two hundred and ninety-nine Members have answered to their names, a quorum.

Mr. KITCHIN. Mr. Speaker, I move to dispense with further proceedings under the call.

The motion was agreed to.

The doors were opened.

CHANGE OF REFERENCE.

Mr. DOOLITTLE. Mr. Speaker, I ask unanimous consent for change of reference of House resolution 124, providing for the appointment of a select committee to investigate certain matters relating to the meat-packing industry, from the Committee on Rules to the Committee on the Judiciary.

The SPEAKER. The gentleman from Kansas asks unanimous consent to change the reference of House resolution 124 from the Committee on Rules to the Committee on the Judiciary. Is there objection?

Mr. FOSTER. Mr. Speaker, do I understand that the resolution creates a special committee?

Mr. DOOLITTLE. It does.

Mr. FOSTER. Then it properly belongs to the Committee on Rules.

Mr. DOOLITTLE. It is already with the Committee on Rules, and I am asking unanimous consent that it be referred to the Committee on the Judiciary.

Mr. FOSTER. But that is not the proper place for it if it creates a special committee.

The SPEAKER. Does the gentleman object?

Mr. FOSTER. If it creates a special committee, I do.

Mr. DOOLITTLE. Will the gentleman withhold his objection for a moment?

Mr. FOSTER. Yes.

Mr. DOOLITTLE. A subcommittee of the Committee on the Judiciary is now considering the subject as a whole, and in particular the Borland resolution.

Mr. FOSTER. I have no objection to its going to the Committee on the Judiciary, but if it creates a special committee it properly belongs to the Committee on Rules.

Mr. DOOLITTLE. It does under the general rules of the House, and it has been properly referred to that committee, but I am asking now to have it changed.

The SPEAKER. Is there objection?

Mr. STAFFORD. Mr. Speaker, for the time being I object.

The SPEAKER. The gentleman from Wisconsin objects.

LEAVE OF ABSENCE.

By unanimous consent, on the request of Mr. OLDFIELD, leave of absence was granted to Mr. GOODWIN of Arkansas indefinitely, on account of illness.

RIVER AND HARBOR APPROPRIATION BILL.

Mr. SPARKMAN. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 12193, the river and harbor appropriation bill.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of the river and harbor appropriation bill, with Mr. SHERLEY in the chair.

The Clerk read as follows:

East River, N. Y.: For improvement with a view to providing a channel 35 feet deep from deep water in New York Harbor to the Brooklyn Navy Yard in accordance with so much of the report published in House Document No. 188, Sixty-third Congress, first session, as applies to the channel west of the navy yard, $200,000: *Provided*, That the Secretary of War may enter into a contract or contracts for such materials and work as may be necessary to prosecute the said project, to be paid for as appropriations may from time to time be made by law, not to exceed in the aggregate $500,000, exclusive of the amount herein and heretofore appropriated: *Provided further*, That nothing herein contained shall be construed as adopting the said project beyond the work to the extent and in the manner specified.

Mr. HUMPHREY of Washington. Mr. Chairman, I move to amend by striking out the paragraph.

The CHAIRMAN. The gentleman from Washington offers an amendment, which the Clerk will report.

The Clerk read as follows:

Page 4, beginning on line 23, strike out the paragraph down to and including line 12, on page 5.

Mr. HUMPHREY of Washington. Mr. Chairman, I ask unanimous consent that I may proceed for 10 minutes.

The CHAIRMAN. The gentleman from Washington asks unanimous consent that he may continue for 10 minutes. Is there objection? [After a pause.] The Chair hears none.

Mr. HUMPHREY of Washington. Mr. Chairman, I wish to call the attention of the committee to this particular item and remind them that this is the only new project in this bill. When we took up the consideration of the river and harbor bill we voted to take on no new projects. It was the understanding, and I am violating no confidence in stating it, that that was the wish of the President. After we had practically completed the bill, then this item was referred to and adopted. Every other item in the country was treated exactly the same, with the single exception of this one. There are many meritorious projects throughout the country, and every other member of the committee except the gentleman from New York [Mr. HULBERT] was willing to abide by the decision we had already made in regard to new projects.

Now, the excuse given as to why this project should be preferred over any other in the country is because it was recommended in a letter sent to the committee by the Secretary to the President. That letter was called out by a letter that was written by the chairman of the Committee on Appropriations, the gentleman from New York [Mr. FITZGERALD].

Now, I am not criticizing the President for doing this. It is not the first time that the President has interfered with the appropriations in the river and harbor bill. When President Taft was President he did the same in regard to the Anacostia project here in Chesapeake Bay, and the result was that that project, after it was adopted, was found to be without merit. President Taft was deceived in regard to that item just as President Wilson has been deceived in regard to this particular item. That item that President Taft insisted should go in the bill—and I was one of the men on the committee who refused to follow the suggestion of the President, and who voted against it in the committee—that item put on at his suggestion has now been recommended for abandonment, because it is without merit. The President is not to blame when Members go and make an ex parte presentation of their case, if he is misled in reference to some particular project. It is impossible for the President himself to have knowledge of the particular item that should go into the river and harbor bill.

Now, this item is urged upon the ground of preparedness; that it is necessary in order that battleships may reach the New York yard. This is by far the most important item in this bill that will be criticized. It is important to both sides. During all the years that I have been upon the committee, with the single exception of this item, I do not think there has been any politics or sectionalism in the bill, and my friends on the Democratic side are more interested in this item than we are on the Republican side. If there is any politics in it, it is not going to hurt the Republicans, but the Democrats, and for that reason I would like to have the attention of the committee for a few minutes, because every man who has a project in this bill, every man who wants a river and harbor improvement, is interested in knowing why his item and his project is pushed aside and this one taken up and given preference over all the others.

Now, the reason given was because it was in the interest of preparedness, so that the battleships might reach the New York yard. They brought Admiral Benson before the committee to demonstrate the necessity of this improvement. Now, I want to call your attention to the facts that were developed on that hearing by the witness that they produced—a witness that was brought for the purpose of showing this necessity. First of all, it was shown by his testimony that there are about five battleships of the larger class, the only ones for which this improvement is intended, that visit the New York yard.

He shows that they make about four or five trips each during the year or, in other words, the improvement is intended in order that battleships may go in and out of the navy yard 20 times in a year. And the evidence further shows that a battleship can go in and out of that yard any day in the year with perfect safety except perhaps for a few minutes at low tide, the evidence being that the extreme low tide lasted from 20 to 30 minutes. During all the time except at low tide, which might perhaps extend over two or three hours, these battleships can pass with perfect safety through Buttermilk Channel. I will read you what the admiral said upon that point, on page 11 of the hearing:

Mr. HUMPHREY. And all of the battleships of the Navy have gone in and out of that channel, have they not?

That was referring to the channel they want improved.

Admiral Benson answered:

No; latterly all of the big ships have been going up Buttermilk Channel on account of the great difficulty of steering in between those reefs.

So all these battleships do go up Buttermilk Channel and have been going up there, and there is no evidence that they have any difficulty in going up that channel—not a particle. And the evidence shows that while at extremely low tide there is a question, when they have strong east wind and extreme low water, there may be an hour or two when there would be some difficulty in using this channel. The evidence further shows that the bottom of Buttermilk Channel is of soft mud, and there is not a particle of danger in a battleship going through there, because if they went through when the tide was too low and stuck there would be no danger whatever because the bottom is soft mud.

But the evidence shows that of the ships that have been going up through Buttermilk Channel for several years none of them ever had an accident or struck bottom.

Now, I want to call attention to another fact. This particular channel for which they are now asking an emergency appropriation, and for which there is no necessity, has been condemned by one of the engineers. And I read from page 34 of the hearing, from a report made by Col. Roessler. He says:

On account of the great cost of suitably enlarging the channel passing between Governors Island and the Battery—

And there is the place where they want to use this emergency appropriation—

and the difficulties attending the prosecution of work in this congested part of the harbor, the district officer does not favor the enlargement of this channel; but recommends instead the improvement of the Buttermilk Channel to a depth of 40 feet at mean low water and width of 1,000 feet, believing that this route will adequately meet the needs of the Navy and be of future benefit to general commerce and navigation.

Now, there is the statement of one of the engineers, who recommends the improvement of Buttermilk Channel instead of this one, where they want this $700,000, and this Buttermilk Channel already has 30 to 31 feet, and that its bottom is of soft mud, and only takes that improvement of less than half a mile, as the evidence shows, in order to give them a channel 40 feet deep and 1,000 feet wide.

And I want to call the attention of the committee to the fact that, in addition to there not being any necessity for the improvement of this particular channel, this link that they wish now to make an exception and insert in this bill is part of the $13,000,000 project that they are seeking to have adopted at New York.

Mr. MADDEN. Mr. Chairman, will the gentleman yield for a question?

The CHAIRMAN. Does the gentleman yield?

Mr. HUMPHREY of Washington. I will yield in one moment. While it is true that this paragraph says that this shall not be considered as adopting any part of the $13,000,000 project, yet the committee knows that if we once improve a portion of that project it will be a strong argument later on to take up the entire $13,000,000 project, and, in fact, I think my friend from New York [Mr. HULBERT] was very anxious at this time to have the entire project taken on.

Mr. MADDEN. How much will it cost to improve the half mile of Buttermilk Channel to a depth of 40 feet?

Mr. HULBERT. A million and a half—twice as much as we are asking for.

Mr. HUMPHREY of Washington. If the gentleman knows what was said in the hearings, I think it was $1,300,000.

Mr. MADDEN. As against $13,000,000?

Mr. HUMPHREY of Washington. Yes; $13,000,000 for the whole project.

Mr. HULBERT. Mr. Chairman, will the gentleman yield for a question?

The CHAIRMAN. Does the gentleman yield?

Mr. HUMPHREY of Washington. In a moment. Now, the objection that our friends from New York have to taking the Buttermilk Channel is that they claim that that would be only 1,000 feet wide for commercial purposes. That is true; but they are urging this on the score of preparedness, and is not a channel 1,000 feet wide wide enough to take battleships through, when they make only 20 trips a year? I certainly would not criticize my friends from New York for trying to get this; they are not subject to criticism on either side of the aisle. But the truth is it is not a military emergency; it is not for preparedness; it is for commerce. That is the reason why they want to adopt this channel.

The CHAIRMAN. The time of the gentleman from Washington has expired.

Mr. HUMPHREY of Washington. I ask unanimous consent, Mr. Chairman, to continue for five minutes more.

The CHAIRMAN. Is there objection to the gentleman's request?

There was no objection.

Mr. HUMPHREY of Washington. Now I yield to the gentleman from New York.

Mr. HULBERT. Is it not a fact that at the second session of the Sixty-third Congress the entire East River project, involving approximately an expenditure of $14,000,000, was adopted by this House?

Mr. HUMPHREY of Washington. I think the RECORD will show, but I do not think it is material.

Mr. HULBERT. Was not the gentleman on the committee at the time, and did he not vote for it?

Mr. HUMPHREY of Washington. I probably would vote for this if it were placed on the basis of a commercial proposition, the same as every other project in the bill.

Mr. HULBERT. The gentleman had no doubt about the merits of the project at the time, and he had no doubt of the merits of the channel north of Governors Island, as against the channel known as Buttermilk Channel, at that time.

Mr. HUMPHREY of Washington. Now, I will tell the gentleman the difference, since he has sought to inject a personal element in this matter between himself and myself in regard to this improvement: I have an improvement in my own city, the city of Seattle, and in order to complete that $10,000,000 project it was necessary to have $657,000, so that that great canal might be safely opened. That was declared to be a new project, although it was for a revetment of that canal. The committee refused to take on new projects. I wrote out to the people at Seattle and told them that this item could not be included in this bill. What did they do? They did not do like little old New York; they did not attempt to set aside the ruling that had been made by the committee; they did not begin to lobby with the President; they did not ask that they be made the favorite; they did not whine, but I will tell you what the people of Seattle did. When I notified them that the committee here would not take on new projects on this bill, the people of Seattle made up the money and paid it themselves, and the contract for the improvement is going to be let in a few days. That is the difference between Seattle and New York. We can raise $657,000 to do that work—a city of 300,000 inhabitants—and New York, a city that whines and invokes the assistance of the President, is the city that has the largest commerce in the world, is the richest city in the world, but it depends on the Government and does nothing to help itself. It does not even want to be placed on the same basis in its projects with other projects, but asks that an exception be made on the pretense that it is for "preparedness." There is no ground for any such statement as that. I was perfectly willing, when the President wrote the letter, to take up that project, and we did, and after investigation the evidence showed that the President was mistaken about it. That is all there is to this case, gentlemen.

Mr. O'SHAUNESSY. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. HUMPHREY of Washington. Yes.

Mr. O'SHAUNESSY. I recall hearing the gentleman from New York speak the other day of the difficulty of bringing the battleships to the Brooklyn Navy Yard and the expression of one of the captains that he did it with fear and trembling every time he brought a battleship to the Brooklyn Navy Yard. May I have enlightenment on that subject?

Mr. HUMPHREY of Washington. Yes. That was Admiral Benson, who said he went through this particular channel that they want to improve with some fear and trepidation, because there had been some accidents there. I asked him how many had occurred, and he answered three; and I said, "All the battleships of the Navy have gone in and out of the channel, have they not?" And he said, "No; latterly all the big warships have been going up Buttermilk Channel, a different channel."

Mr. O'SHAUNESSY. Another question, if the gentleman will permit.

Mr. HUMPHREY of Washington. Yes.

Mr. O'SHAUNESSY. Does the gentleman think it is a time for a narrow view, when we want to conserve our naval strength and when we want to do everything possible to help national defense, to be squirming about an appropriation for a harbor like New York and for an entrance to the Brooklyn Navy Yard, where millions of dollars' worth of naval property is at stake?

Mr. HUMPHREY of Washington. I will say to the gentleman that I am one of the men in favor of preparedness in this House. I would like to see them take their battleships up to the navy yard at Philadelphia and the navy yard at Norfolk and——

The CHAIRMAN. The time of the gentleman from Washington has expired.

Mr. HUMPHREY of Washington. I ask unanimous consent for five minutes more, Mr. Chairman.

The CHAIRMAN. Is there objection to the gentleman's request?

There was no objection.

Mr. HUMPHREY of Washington. And then you take it at the Norfolk yard. There is just as much reason for improving that channel down there.

Admiral Benson in his testimony stated that exactly the same condition existed at Norfolk and Philadelphia, and at Charleston the condition is far worse. In all these yards they have to wait for high tides. Now, I ask the gentleman, when we have only five of these large battleships, as Admiral Benson states, and they make four or five trips a year to the navy yard, and have to wait perhaps two hours for a high tide to go up this Buttermilk Channel, what is the emergency which requires this?

Mr. O'SHAUNESSY. I am thinking of other times than times of peace, and what 20 or 30 minutes wait at low tide might mean in the matter of national defense.

Mr. HUMPHREY of Washington. Then that same condition is true at Norfolk and at Philadelphia and at Charleston?

Mr. O'SHAUNESSY. Yes; but New York is the commercial and financial center of the United States.

Mr. HUMPHREY of Washington. Now you are getting back to the real thing. It is commercial, and that is what this is.

Mr. O'SHAUNESSY. Why should there be a difference between the preparedness reason and the commercial reason? Are they not in a sense interchangeable?

Mr. HUMPHREY of Washington. Every other project in the country, where there is as great necessity as there is here, was refused consideration by the committee, and an exception was made to this one project. Now, why should Boston, if she has a greater commercial necessity, be pushed aside and New York favored? Why should Norfolk be pushed aside and New York favored? Why should every other project in the country be pushed aside and New York favored?

Mr. O'SHAUNESSY. It is better to have one port thoroughly prepared than none.

Mr. HUMPHREY of Washington. I agree with the gentleman; but why not take them all on? Why take New York alone, when New York has absolutely failed to make any showing of greater necessity? Of course, if you see fit to do this, and that is the view that the House takes of it, as I said awhile ago, it is not the Republican side of the House that is going to be hurt. If there is any politics in this proposition it is going to inure to our benefit. When I go out on the stump and go to the people in Washington and say, "Here is a project recommended by the engineers, it is meritorious, but you could not get your appropriation," they will say, "Well, why? New York got hers." "Yes, New York got hers. The President recommended it." "Well, why?" "Because the chairman of the Appropriations Committee wrote a letter and asked him to." "Why did he do that?" "Oh, well, I do not know; but it is said that there was a great deal of feeling between the President and Tammany, and that this might be a good political proposition." [Applause on the Republican side.] They will ask, "Was there any necessity for it?" And I will say, "None whatever was shown." If you think that will not make good politics for us, carry out your program.

Mr. DALE of New York. Does the gentleman from Washington know that since Tammany Hall existed it has contributed more money to charity than the appropriation that New York gets in this bill? [Applause on the Democratic side.]

Mr. HUMPHREY of Washington. Yes; and when I look at the nonpartisan and altruistic character of Tammany, I would not accuse them of playing politics. [Laughter.]

Mr. BORLAND. Will the gentleman yield?

Mr. HUMPHREY of Washington. Yes.

Mr. BORLAND. Is the gentleman really very much worried about the political fortunes of the Democrats?

Mr. HUMPHREY of Washington. No; I am not worried, and I do not think we need this in order to defeat the Democratic Party.

Mr. BORLAND. Does the gentleman think we need this to help the political fortunes of the Democratic Party?

Mr. HUMPHREY of Washington. I do not think it will help them.

Mr. GRIFFIN. Does the gentleman desire to have this House believe that the chairman of the Appropriations Committee is a member of Tammany Hall?

Mr. HUMPHREY of Washington. I do not know whether he is a member of Tammany Hall or not. I know he is a very distinguished gentleman, and I did not bring this out. My good friend from New York [Mr. BENNET] was the first one who talked about there being any feeling between the administration and certain New York Democrats. I do not know anything about it.

The CHAIRMAN. The time of the gentleman has again expired.

Mr. BENNET. Mr. Chairman, I ask unanimous consent to proceed for the same length of time that the gentleman from Washington did.

The CHAIRMAN. The gentleman from New York asks unanimous consent to proceed for 20 minutes. Is there objection?

Mr. SPARKMAN. Reserving the right to object, I think the time might be extended if the gentleman really needs it. How would it do to ask for 10 minutes?

Mr. BENNET. I will say to the chairman of the committee that I probably will not use 20 minutes, but I will speak with more ease if I know that I am not liable to be cut off, and I will stop when I am through.

The CHAIRMAN. Is there objection?

There was no objection.

The CHAIRMAN. The gentleman is recognized for 20 minutes.

Mr. BENNET. Mr. Chairman, I desire first to say that I am not a member of that charitable organization known as Tammany Hall. [Laughter.]

Mr. DALE of New York. Mr. Chairman——

The CHAIRMAN. Does the gentleman from New York yield to his colleague?

Mr. BENNET. I prefer not to yield to my colleague. He will understand why.

Mr. DALE of New York. I just wanted to ask the gentleman whether there was any question about his being a member of the Republican organization of the city of New York.

Mr. BENNET. No; I am that. I am a regular Republican.

Mr. HUMPHREY of Washington. Will the gentleman yield?

Mr. BENNET. Yes.

Mr. HUMPHREY of Washington. What about that large Democratic constituency that the gentleman so often speaks of?

Mr. BENNET. I will say to the gentleman that I do have the honor of representing the largest Democratic congressional district in the United States, and I am not ashamed of it. [Applause.] But I want to say to my friend that I represent it as a regular Republican, and they are not ashamed of that. [Applause on the Republican side.] Now let us talk about this project.

Mr. DALE of New York. Will the gentleman yield?

Mr. BENNET. No; I can not yield.

Mr. DALE of New York. I just wanted to find out——

The CHAIRMAN. The gentleman declines to yield.

Mr. BENNET of New York. I want to take up first the astounding statement of the gentleman from Washington that the State of New York does nothing to help itself in connection with commerce.

Mr. HUMPHREY of Washington. I did not say the State of New York. I said the city of New York.

Mr. BENNET. As the city of New York pays 85 per cent of the taxes of the State, it seems to me that when the State appropriates money the city pays quite a good part of it.

Mr. HUMPHREY of Washington. But the gentleman——

Mr. BENNET. I did not interrupt the gentleman from Washington when he was speaking.

Mr. HUMPHREY of Washington. I am well aware of the fact that the city of New York pays a large part of the taxes of the State, but——

The CHAIRMAN. Does the gentleman from New York yield to the gentleman from Washington?

Mr. BENNET. No.

The CHAIRMAN. The gentleman declines to yield.

Mr. HUMPHREY of Washington. I shall interrupt the gentleman when he misquotes me whether he wants me to do so or not.

Mr. BENNET. If I can have the protection of the Chair——

The CHAIRMAN. The Chair will see that the gentleman has his time.

Mr. BENNET. The city of New York pays 85 per cent of the taxes of the State.

Just at this moment the State of New York is spending $19,000,000 to take out this shoal here [indicating] and put in a terminus here [indicating] for a barge canal. As to the city of New York here [indicating] is Coenties Reef, and at this moment the city of New York without any help from the State, out of a total appropriation of $350,000 for the removal of Coenties Reef, is appropriating $240,000 of that $350,000. In the last 18 months the city of New York has put in to help out

commerce 45 acres of made land, increasing our pier space by 7 miles. That is at the expense of the city of New York without any help from the State or Nation.

Everybody knows that the States of New York, with 85 per cent of the taxes coming from the city, is spending $156,000,000 to build a canal across the State of New York without any help from the Nation.

The gentleman from Washington says this is not an emergency. One thing the gentleman forgot to state, and that is that right here [indicating] is the most active navy yard on the whole Atlantic coast. There is at present one battleship being built on the ways, one being constructed alongside the ways, and I am informed that it is the purpose of the naval authorities to double that so that the Government can be constructing at one time four battleships. That is what actuated the President. I stated to the committee on last Saturday that my colleague Mr. FITZGERALD was absolutely correct in what he did, that there was no politics in it, that by his delegation he had been chosen the chairman of the delegation and was directed to use every means to put this project through, at a meeting at which all of the Republicans were present, and 19 out of the entire 24 Members. If there is any politics in the matter I am guilty because I introduced the original bill on which the proposition is based. If there is any political tinge I am guilty again, for on the 13th of January I made a speech to this House in which I said that up to now the House had treated the port of New York fairly, and if the Sixty-fourth Congress failed to do it it would be the first time.

Now let us see the situation. Here is the chief navy yard for the repair of ships on the Atlantic coast. The gentleman from Washington says that it is a mere bagatelle, that only 20 battleships go up there a year. What does a battleship cost? I am informed that it costs about $18,000,000. Twenty times $18,000,000 is $360,000,000 of Government property that goes up here every year. "Nothing; just a trifle." It seems to me that the President and the Secretary of the Navy are quite right in striving to protect that property.

The harbor of New York is—well, to save any hard feelings, I will say one of the finest harbors in the world. As you come in through here [indicating] it is simple—anyone can bring a vessel in. Congress has been good. We have a 40-foot channel marked as clearly as the buildings on either side of Pennsylvania Avenue. A navigating officer can bring his ship up to the lower bay, through the Narrows, through the big upper bay, until he gets to Governors Island, and then he has two choices; he can go to the south of Governors Island through Buttermilk Channel. What has he got to take through there? He has $18,000,000 of Government property and 800 men on board his ship. He also has his whole professional future at stake. He has the choice. If he goes through Buttermilk Channel he has one foot of water under his keel, and any hard rock dropped from a passing barge in Buttermilk Channel—and it is full of traffic—is liable to cause an accident to his ship. That is one choice. What is the other? It is up through the channel around Governors Island, up through East River. There are two reefs up here—Coenties Reef and Diamond Reef—not directly opposite each other, but cater-cornered, and curiously enough situated like Scylla and Charybdis that we used to read about in school days. Now, the naval officer has to lie close off Governors Island, and when he gets abreast of Castle William so that Castle William and the hotel Margaret over here [indicating] nearly range, he puts his helm to port, brings his vessel to starboard at an angle of about 45 degrees, leaving Governors Island on the starboard hand. He swings in here [indicating] until he gets the range mark over here [indicating] about a mile away, on pier 10, Brooklyn, and if there is a slight mist he can not do it. The gentleman from Washington says that there is only one time in the day that he can not come up here; as a matter of fact, there is only one time in the day when he can come up.

Admiral Benson says on page 10 of the hearings:

> I have come out of there in the *Utah* drawing a little over 29 feet; 29.6 is about the most I have ever taken through there, and I have frequently gone in and out without a pilot; but it was always with a great deal of anxiety and only at the very top of the tide, when the current was practically still and not running at all, because on the south side here [indicating] toward Governors Island, is Diamond Rock, which is a very dangerous reef, and on the left going in is Coenties Reef, and it is absolutely necessary to steer between those two shoals; then, after getting over to a certain point in the river, you stand up to the navy yard just in here.

Here comes a man with an $18,000,000 Government property. He must go at least 8 knots an hour, and he is better off if he goes at the rate of 10 knots an hour, with a 45° turn, and with an opening between these two reefs not set opposite each other, but cater-cornered of about 600 feet. He proceeds along here, leaving Governors Island 126° true on his starboard quarter, on a course 78° true, until he gets away over here [indicating] opposite pier 8 on the New York side and looks directly up that pier. Then he puts his helm to port and makes another 45° turn and starts up to the navy yard, mid-channel, having gone through an opening only 600 feet wide between two reefs, cater-cornered. If that does not constitute an emergency, I do not know what does. What are the two alternatives? They could dredge out Buttermilk Channel at an expense of $1,900,000 and have a channel only 1,000 feet wide when they get through. They can take off Diamond Reef, where the water is already 25 feet over it, at an expense of $700,000, which is less than half of the other amount, and in connection with Coenties Reef, already appropriated for, will, when they get through, have a channel 2,000 feet wide at half the expense.

Mr. BOOHER. Mr. Chairman, will the gentleman yield?

Mr. BENNET. Yes.

Mr. BOOHER. Has work been commenced on Coenties Reef?

Mr. BENNET. The contracts have been let.

Mr. BOOHER. How long will it take to complete the work there?

Mr. BENNET. I do not think——

Mr. BOOHER. Estimated three years, is it not?

Mr. BENNET. Oh, no.

Mr. HULBERT. Fifteen months. The work has already started.

Mr. BOOHER. That is what I want to get at. It will take 15 months to complete it. It has been started, and you can not work on both Coenties and Diamond at the same time, can you?

Mr. BENNET. Yes, you can.

Mr. BOOHER. Does not Col. Black say that you can not?

Mr. BENNET. I can not find it in the hearings.

Mr. BOOHER. You will find it in his letter.

Mr. HULBERT. If I may be permitted to interrupt——

Mr. BOOHER. Oh, I wish the gentleman from New York would permit me to finish. Col. Black said in his letter that they can not work on Coenties and Diamond at the same time on account of obstruction to navigation. The Coenties Reef proposition was adopted as an emergency proposition, was it not?

Mr. BENNET. No——

Mr. BOOHER. As a separate proposition.

Mr. BENNET. Will the gentleman permit me to answer that?

Mr. BOOHER. Certainly.

Mr. BENNET. Not in the sense of an emergency, as I understand it. The situation was this. The city of New York was putting a subway right under Coenties Reef. The project, under Document 188 of the Sixty-second Congress, called for a 35-foot channel. The city of New York believes that some time that channel will go down to 40 feet, and the city of New York made the proposition to the United States Congress that if they would make an appropriation to remove Coenties Reef, which can not be removed after the subway goes through, the city of New York would pay the expense of taking the reef down from 35 feet to 40 feet. The Congress accepted that proposition, making an appropriation, as I recall it, of $350,000. The city of New York has already made an appropriation of $240,000, and has let the contracts, so that when the Government gets its work down to 35 feet the city of New York, at its expense, will carry the work down 5 feet more.

Mr. BOOHER. If it be true that you can not carry on the work on both sides at once, is not Coenties Reef the most important point?

Mr. BENNET. I would not want to say that. They are both important.

Mr. BOOHER. The other was an emergency for the purpose of enabling them to put the subway through so that it would not be interferred with by deepening that channel hereafter.

Mr. BENNET. Precisely.

Mr. BOOHER. They are putting the subway through.

Mr. BENNET. Yes.

Mr. BOOHER. As I understand from the argument when the emergency bill was passed, they can not deepen that channel after the subway is put through?

Mr. BENNET. The gentleman is correct.

Mr. BOOHER. Then it ought to be completed as soon as it can be.

Mr. BENNET. The work will be pushed as rapidly as possible.

Mr. BOOHER. Is it not a fact that that channel is so congested now with commerce that they can work only a very small portion of the time, even at Coenties Reef?

Mr. BENNET. I am very glad the gentleman has called my attention to that. It is quite true, according to Col. Black's testimony, that both of these channels are congested with commerce and that either removal operation will be attended with

difficulty. There is no doubt about that, but I will say to the gentleman from Missouri, who is a fair-minded man, that he will realize instantly that in order to get this dangerous obstruction out of the way the thing to do is to start it as soon as possible, no matter whether Coenties Reef is being taken away or not.

Mr. BOOHER. I agree with the gentleman on that proposition, but why appropriate this money now when you can not use it until you get through with Coenties Reef or you abandon work on Coenties Reef? You have to do one thing or the other.

Mr. BENNET. For this reason: The large thing in this item, which the gentleman from Washington [Mr. HUMPHREY] seeks to strike out, is the authorization for contracts, and the gentleman from Missouri [Mr. BOOHER], as a member of the committee and the House, is familiar with the fact that it is impossible to proceed with the letting of contracts until there is authorization to the Secretary of War to let the contract. The appropriation here is but $200,000. The authorization is $500,000, and there is a distinct saving to the Government, I might say, in being permitted to let this contract while the machinery and appliances are not only there, but while also other firms have large appliances up the river, so that we can get the work done for a less sum of money if it is permitted now while other work is in operation.

Mr. BOOHER. The gentleman thinks this is more important on account of preparedness and for a navy yard than in any other way?

Mr. BENNET. I did not intend to enter into a comparative argument about that, but I will answer the gentleman. I had no desire to bring in the commercial situation, but the gentleman has asked me.

There is no doubt at all that the removal of these two reefs will help to open up this whole section of the East River. Now, the situation in relation to commerce is this: We have run our wharves up here [indicating on the Hudson River] north 6 miles, every one of them used, and the city has bought half of the wharves and has improved them. We have improved down here all we can, and we are actually driven to a point where we are landing occasional ships, European liners and tramp vessels and ships coming from India, here [indicating] at Staten Island, and sometimes they have to lie at this anchorage over here [indicating] for two weeks before they can get a berth. Now, as a Member of the United States Congress who is interested in the defense of the country, I am frank to say I consider access to the navy yard predominant; but I am not blind to the fact that it is a great thing for this——

Mr. BOOHER. That being true, is not this a question, then, for the Committee on Naval Affairs to tell us what they need there?

Mr. BENNET. The answer to that is that the President of the United States is the Commander in Chief of the Navy, the Secretary of the Navy is the head of the Navy, Admiral Benson is the Chief of Operations, and all three of those men have told your committee that what they want is this reef taken out.

Mr. BOOHER. I want to ask the gentleman if he remembers in House Document No. 44 of the Sixty-third Congress, the report of Col. Roessler on this matter, in which he said that as a channel to go to the navy yard Buttermilk Channel was a better channel and a cheaper channel to repair?

Mr. BENNET. Mr. Chairman, the gentleman from Missouri is correct, as he usually is.

Mr. BOOHER. Thank you.

Mr. BENNET. The situation is this: The whole country is divided up into districts. There were two colonels. Col. Roessler was assigned to Buttermilk Channel, as his study. Col. Black was assigned to this channel to the north of Governors Island. Col. Black, now the Chief of the Corps of Engineers, reported that the channel between these two reefs was the better channel and the one that ought to be improved. That was the one he was studying. Col. Roessler, who was assigned to the other channel, reported that the southern channel was the better.

The CHAIRMAN. The time of the gentleman from New York has expired.

Mr. BOOHER. Mr. Chairman, I ask unanimous consent that the gentleman have five minutes more.

The CHAIRMAN. The gentleman from Missouri [Mr. BOOHER] asks unanimous consent that the gentleman from New York may have five minutes additional. Is there objection?

There was no objection.

Mr. BENNET. As between those two colonels there had to be a referee or referees, and the referees were the Secretary of the Navy and the President of the United States, and they have decided that the better channel for the needs of the Navy is the northerly channel.

Mr. BOOHER. But did not the former Secretary of War decide that Col. Roessler was right and that Buttermilk Channel was the better?

Mr. BENNET. I do not know that he did. We were talking about Secretaries of the Navy.

Mr. BOOHER. But, begging the gentleman's pardon, the Secretary of War is the man who passes on the report of the Engineers.

Mr. BENNET. It was the Secretary of the Navy who came before your committee by letter and advocated this for the benefit of the navy yard, and I submit to the House that the Secretary of the Navy knows the needs of the Navy, or ought to, better than the Secretary of War.

Mr. CALDWELL. Will the gentleman yield?

Mr. BENNET. I yield.

Mr. CALDWELL. The question has been raised as to whether or not this would obstruct the traffic if both of those reefs would be worked on at the same time. The fact that they are working on these reefs at the same time would not prevent the use of Buttermilk Channel at the same time?

Mr. BENNET. Buttermilk Channel will be there. The ships will be driven to the use of it as they are now, when they have to take an $18,000,000 battleship through there with only a foot under the keel. That is what they do, and they will be no worse off. The peril will be there—no greater and no less.

Mr. Chairman, I thank the committee for its courtesy. [Applause.]

Mr. SWITZER. Mr. Chairman, I favor reasonable preparedness, but I do not favor the use of the cry of preparedness as a ruse or device to secure undue advantages and preferences and even appropriations. The proponents of measures at this session of Congress claiming to be vital to the interests of national defense have become so numerous that they are looked upon with about as much suspicion as was cast upon the boy who cried "Wolf!" once too often.

No one will contend but that the project sought to be stricken out by the amendment proposed by the gentleman from Washington [Mr. HUMPHREY] is a meritorious one, especially in the interest of commerce and navigation. But, gentlemen, remember that ever since this letter was written, on the 21st day of December last, by Secretary Daniels, to February, 1916, it had lain before the committee; and remember that the Committee on Rivers and Harbors, at the instance of the President, by a majority vote adopted the policy prohibiting the taking on of new projects in the preparation of the bill that is now before you for consideration. And I was one of those who opposed that policy. I did not believe and do not yet feel that it was giving fair treatment to the rest of the country. The last two river and harbor bills had been made the "goat" for those who were crying for economy, and many of us believe that justice demanded that the long-waiting and meritorious projects throughout the country ought to immediately receive consideration at the hands of Congress. I say that there is no question about this being a meritorious proposition in the interests of commerce; but recollect that it goes in here upon the proposition that it is vital to national defense; not only that, but that it is urgent and that it is an emergency measure; not only that, but it is vital. You can argue that anything here is in the interest of national defense; but the question is, Is there urgent necessity for the taking on and keeping in the bill of this item?

Now, the gentlemen say that navigators go in and out of this channel with great anxiety, and all that sort of thing, but, if you read the hearings, the evidence shows conclusively that they can use Buttermilk Channel, and that they do use Buttermilk Channel. Of course, it would be to some extent in the interest of preparedness to build a lateral canal. It is simply this sort of a proposition: There is Buttermilk Channel connecting up the navy yard with the ocean, and they propose to have another channel, and so it is a matter of extreme emergency.

Why, the gentleman from New York [Mr. HULBERT], if you will all turn to your copy of the RECORD, on last Saturday, you will find, put this into the RECORD. He was not satisfied with the hearings, which show that there is no necessity for this appropriation. He knew that there ought to be more evidence here showing this urgency, and so he writes to the naval officer at the navy yard at New York, who answers him under date of March 3, 1916, and what does that officer say? He says:

UNITED STATES NAVY YARD,
New York, N. Y., March 3, 1916.

MY DEAR MR. HULBERT: I have just returned from duty in Washington for one or two days, and find your letter of February 29 asking information as to the ordinary tonnage of naval vessels passing to and from the navy yard, and this with a view of affording you data in connection with the provisions in the rivers and harbors bill for removing

Diamond Reef, off the Battery, in the channel north of Governors Island. The Diamond Reef, as you know, lies in the way of the North Channel.

The CHAIRMAN (Mr. PAGE of North Carolina). The time of the gentleman from Ohio has expired.

Mr. SWITZER. Mr. Chairman, I ask unanimous consent for five minutes more.

The CHAIRMAN. Is there objection to the gentleman's request?

There was no objection.

Mr. SWITZER. Now listen to what the naval officer in command of the Brooklyn Navy Yard says in that letter of March 3, when you want more evidence of this urgent necessity. He says:

Whereas the navy-yard ships are using the Buttermilk Channel at present, and probably must continue to use it for some time to come, and consequently I hope your interest includes the deeping of the Buttermilk Channel as the immediate necessity for providing free access for deep-draft capital ships of the Navy to and from the navy yard.

If this is an emergency, why is not the appropriation made for Buttermilk Channel, as this officer writes to Mr. HULBERT, the Representative from New York? This letter was written on the 3d day of March. If you will read the rest of that letter, put in last Saturday's RECORD, you will find that a collier was brought up there drawing 33 feet. Yet they say it is an urgent matter. Why, gentlemen, a year ago the chairman of the Committee on Appropriations [Mr. FITZGERALD] put through an independent bill here as an emergency matter to remove Coenties Reef because of the tunnels to be put into the East River at that place. Was there a whimper then about national preparedness? Did anybody say then that this was urgent for our national defense? Now they would have you believe that this is an urgent necessity, an emergency. They would have you believe that it is such an emergency when, as shown by the questioning here, brought out by the gentleman from Missouri [Mr. BOOHER], the officers who have charge of the taking out of Coenties Reef have failed to make a contract for more than a year. What reason is there to make this appropriation upon that ground? It is true that it is in the interest of 45,000,000 tons of annual commerce that goes in and out of this harbor, but it is not an emergency.

Now, something was said about the vessels of great depth going out here endangering craft worth $18,000,000. Just let us see what is said by the captain who appeared before that committee, Capt. Knapp. Listen to what Capt. Knapp says, This is the parting shot, and he seems to be in favor of Buttermilk Channel. He says:

There is one thing that I may mention that has been recommended by the General Board of the Navy, and that is that the depth for our naval vessels should be 40 feet.

Recollecting the letter of Secretary Daniels, which has been sent here to the Speaker of the House and referred to the Committee on Rivers and Harbors, indorsing a channel of 35 feet, here is a captain who says that the Board says that there should be a channel of 40 feet. You can get the 40 feet easily enough in the Buttermilk Channel, and if this is in the interest of preparedness, why was not the recommendation made in favor of Buttermilk Channel, which can be deepened in a very short time?

Gentlemen must recollect that this project that is in this bill will require three years for completion, as the hearings show, while Buttermilk Channel could promptly be dredged out for half a mile. If we are going to appropriate for that navy yard, why not take what the board recommends and what the commander of the yard that Mr. HULBERT wrote to urged, when he says Buttermilk Channel is the best channel?

The CHAIRMAN. The time of the gentleman from Ohio has again expired.

Mr. SWITZER. Mr. Chairman, may I have three minutes more?

The CHAIRMAN. The gentleman from Ohio asks unanimous consent to proceed for three minutes more. Is there objection?

There was no objection.

Mr. SWITZER. Now, Mr. Chairman, just to show you what sort of an emergency matter this has been, nothing was said about this "preparedness" feature until after this rule was adopted in the Committee on Rivers and Harbors, and then, all of a sudden, they began to bombard the President with letters—those two gentleman from New York did. Why, this emergency was discovered by the gentleman from New York, Mr. HULBERT.

Mr. FITZGERALD did not know anything about it until Mr. HULBERT jagged him up. [Laughter.] Mr. FITZGERALD, the chairman of the powerful Committee on Appropriations, is the gentleman who brought down the "meat." He wrote the President the letter that it would be impossible for gentlemen from New York to vote for the appropriation if nothing was done for the defense of the city of New York. We are all interested in the defense of New York and of the Atlantic coast, of course, but just see how urgent this was. In place of Secretary Daniels writing to the President, the Commander in Chief, and the President calling your attention to it here in the way of recommendation, Secretary Daniels writes a letter to the Speaker of the House; in other words, he introduces a bill which is referred to the Committee on Rivers and Harbors, and that bill lay there for months and months, and no hearing was demanded. If this was an emergency matter, a matter vital to defense, you know the bill would have been brought in here promptly and voted through.

The fact is that when the gentleman from New York [Mr. FITZGERALD] wanted an emergency matter here a year ago he brought in a separate bill. If this bill is enacted in the shape in which the last two river and harbor bills were enacted, lump-sum appropriations, this item will not appear in the bill. If any of you gentlemen had had a bill introduced in Congress based upon preparedness, you would certainly have appeared before the Committee on Rivers and Harbors and had some sort of a hearing thereon. That is the course that gentlemen pursue when they want emergency legislation. They bring it in as a separate bill and pass it without trouble.

The CHAIRMAN. The time of the gentleman from Ohio has again expired.

Mr. GILLETT. Mr. Chairman, I have listened to the discussion of this item, and I was very much affected——

Mr. SPARKMAN. One moment, Mr. Chairman. Can there be some arrangement made by which we can limit the discussion?

Mr. HUMPHREY of Washington. I do not think we had better try to agree upon time just now. I think we had better run for a time.

Mr. GILLETT. Mr. Chairman, I was very much touched and affected, as I am sure all the Members of the House were, by the beautiful picture that the gentleman from New York [Mr. BENNET] painted of the noble, disinterested manner in which the New York delegation, rising above all partisanship into an atmosphere of pure patriotism, had gotten together and united for this national project.

It is the old case of the flag and an appropriation, and I presume it will always unite the discordant Representatives of New York City, and I suspect it will always unite the Representatives of any other delegation and partisanship will be forgotten in the common interest.

Mr. BENNET. Will the gentleman yield?

Mr. GILLETT. Not just now. I have only five minutes. But as I saw the smiling face of the gentleman from New York [Mr. BENNET] on this side of the Chamber when he said that there was no politics in this proposition, it reminded me of the limerick for which the late Thomas Nast made one of his best cartoons:

There was a young lady of Niger,
Who smiled as she rode on a tiger.
They returned from the ride with the lady inside,
And the smile on the face of the tiger.

[Laughter.]

Mr. Chairman, the tiger has been grumbling of late. There has been no smile on his face for some time. It is said that he has not been fed regularly and that always makes him cross. [Laughter.] I suspect the grumblings have reached the White House, and as election is coming on it is quite important that that smile shall be brought back; that some sop and food shall be given to the hungry animal; and so when the gentleman says there is no politics in it I am not quite so guileless as to credit that statement. I very much fear that there is politics in it, and that one reason the President and the majority are so in favor of this project is in order that on next election day the gentleman from New York [Mr. BENNET] may come back inside, and the smile be on the face of his Tammany opponent. It seems to me that the talk about preparedness is a mere pretense so far as this appropriation is concerned, and that the real reason for it is to bring back the smile to the face of the tiger.

Now, personally I think this is a most meritorious proposition. I rather think I shall vote for it [applause], but I shall not vote for it on any flimsy pretext that it is necessary for the national defense. My criticism of the committee is that they make up their bill according to the novelty of the projects and not according to their merits. I should like to vote for this proposition, and then I should like to vote against some of the propositions in this bill which are in it just because they are not novel. I should like to vote against that old historic proposition, which we have heard of so often, and which I see is in this bill, for the river down South where the engineer officers suggested that they should dig artesian wells in order to give it water. [Laughter.] If there is an emergency this year which

demands economy, we ought to strike out some of those propositions. If this is a time for economy, why do they not bring in a bill which will let us vote for propositions on their merits. My only objection to this proposition is that it is not brought forward on its merits, which I believe are good, but that it is a discrimination and is brought here under disingenuous and unfair pretense. [Applause.]

Mr. HULBERT. Mr. Chairman, I ask unanimous consent that I may proceed for 15 minutes.

The CHAIRMAN. The gentleman from New York asks unanimous consent to proceed for 15 minutes. Is there objection?

There was no objection.

Mr. HULBERT. Mr. Chairman and gentlemen, if the geographical situation affected by this provision of the bill were better understood, undoubtedly there would be considerably less discussion of the subject in order to arrive at a proper conclusion.

The present project for the improvement of the East River was adopted in 1868, and provided for a channel 26 feet deep. The East River is a tidal streams which connects upper New York Bay at the Battery with Long Island Sound at Throgs Neck, and has a total length of 16 miles. At the present time there are just two places in the river where the depth of water is less than 35 feet. One is at Diamond Reef, indicated on this map by the red circle, and is the part which is referred to in the appropriation which the gentleman from Washington [Mr. HUMPHREY] has moved to strike from the bill. The other is a series of rocks farther up in the river, indicated on this map by the second red circle, at the point designated as Hell Gate, which is probably known to you historically, if not physically.

The removal of these rocks at Hell Gate at a cost of $2,500,000, and the removal of the reef known as Diamond Reef at the Battery at a cost of $700,000, would make the East River a 35-foot channel throughout its entire length, and would then permit any battleship heretofore or now in course of construction to leave New York Harbor either by the present route via Sandy Hook, or up the East River and out Long Island Sound. And in that connection, I merely want to digress to emphasize the fact that within the past 10 years, in the section of New York just above Hell Gate, and just on the other side of the Harlem River, which connects the Hudson River with the East River at Hell Gate, there has been a tremendous commercial development, and that section of New York City known as the Borough of The Bronx has now increased in population to that extent that to-day it would be, if an independent city, the sixth city in population in the United States, having a population greater than Pittsburg and nearly equal to that of Detroit and Cleveland.

Now, along the water front of that section of New York up to Throgs Neck, the entrance to Long Island Sound, we have a present natural depth of water of from 70 to 90 feet, so that the largest vessels afloat can secure access to the piers at that point. But in order that these vessels, which come from the State of my friend from Washington [Mr. HUMPHREY] loaded with quantities of lumber to supply the piano-manufacturing industry for instance—one-third of all of those in the United States are located at that particular point in the Borough of The Bronx—those vessels, if they draw more than 23 feet of water, instead of proceeding into New York Harbor and up through that 16-mile channel known as the East River, are compelled to go out to the east end of Long Island and then up through the Sound, making a total distance of more than 200 miles; whereas with the improvement of these two points indicated upon this map, at a total expense to the Federal Government of $3,200,000, those vessels could reduce that distance to 16 miles; and, moreover, after discharging cargo, such vessels might proceed to any other pier in New York Harbor for a further cargo and not be compelled, as now, to return by way of Long Island Sound and Atlantic Ocean to another port of the same harbor by way of Sandy Hook.

Mr. TREADWAY. Will the gentleman yield?

Mr. HULBERT. I yield to the gentleman for a question.

Mr. TREADWAY. I wanted to inquire what he meant by referring to the two points which he pointed out.

Mr. HULBERT. The first one that I referred to was Diamond Reef, off the Battery; and the second one I referred to was Hell Gate.

Mr. TREADWAY. May I further ask if we have under consideration at the present time anything connected with the Hell Gate project?

Mr. HULBERT. No; I stated that I was going to digress for the purpose of making an explanation of conditions at that point because its improvement was urged by the Secretary of the Navy.

Mr. TREADWAY. I wanted it clear in the minds of Members that the gentleman was discussing another proposition entirely.

Mr. HULBERT. Yes. The gentleman referred to the fact, at least one or two gentlemen who sat near me seem to be under the impression, that the application to the President and the securing of the letter which he wrote to the chairman of the Rivers and Harbors Committee was an afterthought on the part of some Members of the New York delegation as a means of having this particular provision included in this bill. I have here a map which is laid out on a larger scale than that referred to by my colleague [Mr. BENNET]. Here you will see is Governors Island. The channel I am pointing to at the right is the channel known as Buttermilk Channel, and the channel to the left is known as the Northern Channel, and here is the reef known as Diamond Reef, extending out from the mainland not quite half the distance across that channel. This straight line across here is the steering line, which is the course that a battleship has to steer in coming into the Northern Channel in order to secure access to the navy yard. The gentleman from New York [Mr. BENNET] described to you, with true maritime phraseology, of which he is quite capable, the course that a battleship needs to take in order to make the present 35-foot depth channel and secure access to the navy yard, describing figuratively the letter "S."

Shortly after this session of Congress convened the situation with regard to these two channels was brought to the attention of this Congress. I might say that in 1913 there were two reports made relating to the improvement of the two channels. In House Document 44 Col. Roessler, who was the district officer in the first district of New York, recommended the improvement of Buttermilk Channel, at a cost of $1,300,000. That report was approved by the Secretary of War.

In the same Congress, Brig. Gen. Black, Chief of Engineers, then Col. Black, and the district officer in the second district of New York, made a report for the general improvement of East River throughout its entire length, at a cost of $13,400,000, and that report, which will be found in House Document 188, as well as the report of Col. Roessler, was likewise approved by the Secretary of War.

Mr. SPARKMAN. Will the gentleman yield?

Mr. HULBERT. I will.

Mr. SPARKMAN. I think the report for the improvement of Buttermilk Channel to a 35-foot depth was at a cost of $1,900,000.

Mr. HULBERT. Mr. Chairman, I stand corrected; that improvement was $1,900,000 instead of $1,300,000.

I want to say in fairness to the House that the recommendations of Col. (now Gen.) Black were adopted by the House in the Sixty-third Congress at the second session, but when the bill went to the Senate it was eliminated on a filibuster which was conducted over there.

Mr. SWITZER. Will the gentleman yield?

Mr. HULBERT. I will yield to the gentleman.

Mr. SWITZER. When this work is completed with the appropriation that is asked for, there will only be a 35-foot channel?

Mr. HULBERT. That is right.

Mr. SWITZER. Does not the record show that the General Board of the Navy says that it ought to be 40 feet deep?

Mr. HULBERT. If the record shows it, it speaks for itself.

Mr. SWITZER. If this is in the interest of preparedness, why have not you followed out the recommendations of the General Board for a depth of 40 feet?

Mr. HULBERT. What recommendations does the gentleman refer to?

Mr. SWITZER. The gentleman will find it on the last page of the hearings, where Capt. Knapp says that the depth from the sea to all of our naval stations should be 40 feet. He also stated that Buttermilk Channel was the proper channel to improve. Why was not the recommendation made for a depth of 40 feet?

Mr. HULBERT. I have not seen any report from the General Board recommending 40 feet. The gentleman refers to the testimony of an officer called before the committee, who expressed an opinion. I have the recommendation of the Secretary of the Navy, and I am going to read it now in order to call the attention of the House to the fact that the recommendations of the Secretary of the Navy, acting upon the recommendations that the General Board of the Navy considered sufficient, were presented to this committee on the 31st of December, 1915, and that you gentlemen took no action in regard to it.

Mr. MOORE of Pennsylvania. Will the gentleman yield?

Mr. HULBERT. Yes.

Mr. MOORE of Pennsylvania. Admiral Knapp stated that the General Board had recommended that the depth from the sea to all of the naval stations be 40 feet, and I think that is the opinion of the board. But I want to ask the gentleman, in the matter of preparedness, how long it would take the United States

Congress to build up all of the channels to the navy yards to a depth of 40 feet, and whether we might not have a dozen wars before that could be accomplished?

Mr. HULBERT. Mr. Chairman, I hope, in view of the long service the gentleman has had in Congress and the fact that this is my first term, if he has been unable to determine, he will spare me the hopelessness of predicting what Congress will do in the matter of preparedness.

Mr. MOORE of Pennsylvania. I think the gentleman has done very well in his first term. [Laughter and applause.] The question is a serious one. Practically how long would it take Congress, at the present dribbling rate of appropriations, to make all of these waterways 40 feet deep from the sea to the navy yards?

Mr. HULBERT. If my vote was a controlling one, it would take no longer than it would require for the work to be done expeditiously.

Mr. MOORE of Pennsylvania. Would it not mean now that all of the shipping would be centralized at New York?

Mr. BENNET. Will the gentleman from New York, my colleague, allow me to answer the gentleman from Pennsylvania?

Mr. HULBERT. Yes.

Mr. BENNET. I think the question of the gentleman from Pennsylvania is a serious one, and I think the gentleman will agree with me that if the program of the Navy board was started in on it would take 25 years to complete it.

Mr. MOORE of Pennsylvania. It would mean that with every freak ship that we built every harbor would have to be dredged to accommodate it. Every time we built such a ship we would have to go all over the United States and rebuild the rivers and harbors to accommodate it. It is a question that involves such an enormous expense that at this time it is absurd to discuss it.

Mr. HUMPHREY of Washington. Mr. Chairman, will the gentleman yield?

Mr. HULBERT. I can not yield unless I get some more time.

The CHAIRMAN. The time of the gentleman from New York has expired.

Mr. HULBERT. Mr. Chairman, I ask unanimous consent to proceed for 10 minutes more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. HULBERT. I will now yield to the gentleman from Washington.

Mr. HUMPHREY of Washington. I simply wanted to say to my colleague on the committee that while, generally speaking, the statement of the distinguished gentleman from Pennsylvania [Mr. MOORE] may be true, so far as New York is concerned he is not correct, because the evidence before the committee is conclusive that by dredging through half a mile in Buttermilk Channel you can get 40 feet up to the navy yard.

Mr. HULBERT. Thirty-five feet, under the $1,900,000 project, if the gentleman will permit me to correct him, and a corresponding increase to get 40 feet.

Mr. MOORE of Pennsylvania. To undertake a uniform 40-foot channel policy at the present time would mean the wiping out of most of the naval stations of the United States if they were to be made ready for war within a year or two.

Mr. HULBERT. It would.

Mr. BENNET. And I will say, to put the gentleman's point directly before the House, that if we adopted the recommendation of the Navy board for 40-foot channels, it would simply concentrate our entire Naval Establishment in the port of New York.

Mr. MOORE of Pennsylvania. And possibly Boston for a time.

Mr. BENNET. Yes.

Mr. MOORE of Pennsylvania. And it would put out of business every other navy yard, with the possible exception of Bremerton.

Mr. BENNET. And nobody desires to do that.

Mr. MOORE of Pennsylvania. Of course not.

Mr. HULBERT. Mr. Chairman, I desire now to read to the House a letter from the Secretary of the Navy under date of December 21, 1915, addressed to the Speaker of the House, and referred by him to the Committee on Rivers and Harbors:

DECEMBER 21, 1915.

The SPEAKER OF THE HOUSE OF REPRESENTATIVES.

SIR: I have the honor to invite your attention to the serious condition existing at the navy yard, Brooklyn, N. Y., in so far as pertains to the depth of water in ship channels leading thereto.

There is not sufficient water in these channels to insure the entering or leaving of a first-class battleship at all times.

At present only one battleship can be handled per day, and then only provided the weather conditions are normal. If the winds are such as to blow the water out of New York Bay then the depth of water in the approach channel is not sufficient to safely navigate a large ship. As an illustration, the following is noted:

On November 3, 1915, the U. S. S. *Texas*, one of our new first-class battleships, was ready to leave the yard, but the prevailing northwest winds had so reduced the depth of water in the Buttermilk Channel that even at high water there was not sufficient depth to insure her leaving the yard in safety. This ship, therefore, was forced to remain in the navy yard for over 24 hours.

This condition is a serious one and might cause grave complications. I understand there are two propositions before Congress—one providing a channel 35 feet deep and 1,000 feet wide in Buttermilk Channel, and the other north of Governors Island up the East River through Hell Gate. The second would provide for ships passing from the yard to lower New York Bay or to the Sound, a condition highly desirable from a strategic point of view. Either project will provide for free access to the navy yard.

The increase in size of ships has not yet reached its limit.

Through injuries received in battle, a ship could readily be drawing more water than normally at a time when it was most necessary to dock her.

It is therefore most urgent that an approach channel to the New York Navy Yard be maintained of not less than 35 feet depth at mean low water and 1,000 feet wide, and I can not too strongly urge the serious attention of Congress to this matter.

Sincerely, yours,

(Signed) JOSEPHUS DANIELS.

After that letter had been received by the committee and the matter had been taken up at my suggestion in the committee, I had some further correspondence with the Secretary of the Navy, the concluding letter of which was the following, under date of February 10, 1916:

FEBRUARY 10, 1916.

MY DEAR MR. HULBERT: Replying to your letter of January 25, regarding the deepening of East River to 35 feet, I have to say that this question has recently received very earnest consideration by the officers of the department, and particularly by the General Board.

The value, if not the absolute necessity, of deepening East River to 35 feet and clearing the channel to Hell Gate is considered one of the most important questions now before the Navy Department. The reason for this is that a study of the strategic features of the east coast of the United States, with a view to making the best disposition of our forces for defense against a possible enemy in the Atlantic, has demonstrated the fact that Long Island Sound is probably one of the strongest natural rendezvous for a naval force that possibly could be formed, either artificially or by nature. Its value would be decidedly enhanced by having two outlets; that is so say, either through the race at the east end of Long Island Sound or through the harbor of New York and out by Sandy Hook or the Ambrose Channel.

However, having the above two outlets must not be considered as in any way decreasing the number of ships that are needed for the naval service, but it can readily be seen that with these two outlets it would require a double force of the enemy's vessels to guard both of these outlets in order to prevent our vessels from getting to sea through either one or the other.

The necessity for at least 35 feet of channel is too evident to be dwelt upon, because any engagement taking place off New York would probably result in injury to some vessels, compelling them to seek shelter and to be dry-docked as soon as possible. Naturally the draft of these vessels would be very much increased due to the injury they had received, so that from a military standpoint the deep channel is absolutely necessary. "As stated above, the question of deeping the East River and clearing Hell Gate and the channel through into Long Island Sound is of paramount importance and a pressing need, and it should receive immediate attention."

As regards the deepening of the East River between the navy yard and the entrance to New York Bay to the southward—that is, through Ambrose Channel—has been made very evident during the past winter when some of our larger ships were not able to reach the navy yard for necessary work, although only at their normal draft (and possibly a little less), and had to wait several days before they could get in, and had the same trouble to get out after getting in. It needs no argument to impress upon anyone how serious it would be should some of our large battleships, which now are all based on the New York Navy Yard, be at the yard at the time their presence is urgently needed outside and the condition of the channel should be such that they could not get out.

Sincerely, yours,

JOSEPHUS DANIELS.

It is true that there might be just as much advantage, from a naval standpoint, in the improvement of Buttermilk Channel as there is in the northern channel, but the improvement of Buttermilk Channel would give no greater advantage, and it would cost $1,900,000, whereas the northern channel will cost only $700,000, and the improvement of the northern channel at $700,000 will immediately release for pier-ship purposes on the east side of Manhattan space which will accommodate several steamship lines, and I am informed by the Commissioner of Docks and Ferries of the city of New York within the past few weeks steamship companies desiring to enter into competition in commerce with South American and Central American ports here applied for docking facilities at New York and can not at the present time be accommodated in order that they may make New York their home port, because of lack of docks and piers with sufficient depth of water.

Mr. TREADWAY. Mr. Chairman, will the gentleman yield?

Mr. HULBERT. Yes.

Mr. TREADWAY. Is the gentleman arguing the emergency of this appropriation from the commercial standpoint?

Mr. HULBERT. No; I am attempting to emphasize the fact that the improvement of this channel for naval purposes will at the same time give us an improvement which can be utilized for commercial purposes without the expenditure of another dollar, so far as the Federal Government is concerned.

Mr. TREADWAY. Will the gentleman yield further?

Mr. HULBERT. Yes.

Mr. TREADWAY. Do I understand the gentleman to be arguing in behalf of this item that is before us or of the Hell Gate proposition?

Mr. HULBERT. I am arguing in opposition to the motion made by the gentleman from Washington [Mr. HUMPHREY] to strike out the item providing $700,000 for the improvement of the river off the Battery.

Mr. TREADWAY. Then, I take it that the gentleman is in favor of the item in the bill?

Mr. HULBERT. I am.

Mr. TREADWAY. Did the gentleman so vote in the committee?

Mr. BENNET. Mr. Chairman, I make the point of order that that is in violation of the rules of the House.

Mr. TREADWAY. Oh, I think not.

The CHAIRMAN. The Chair sustains the point of order.

Mr. COOPER of Wisconsin. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. COOPER of Wisconsin. Is there a rule of the House which prohibits a question of that kind and its being answered as to what happened in the committee?

The CHAIRMAN. The present occupant of the chair could not cite any rule of the House, but thinks there is no rule of the House that would force the gentleman having the floor to reply.

Mr. COOPER of Wisconsin. The gentleman from New York [Mr. BENNET] invoked a rule of the House. I am not aware of any such rule.

Mr. BENNET. There is a rule of the House that prevents a member of the committee disclosing what takes place in the committee.

The CHAIRMAN. The time of the gentleman from New York has again expired.

Mr. HULBERT. Mr. Chairman, I ask unanimous consent to proceed for five minutes more.

The CHAIRMAN. The gentleman from New York asks unanimous consent to proceed for five minutes. Is there objection?

Mr. THOMPSON. Mr. Chairman, I object.

Mr. HULBERT. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. HULBERT. During the brief period that I have been a Member of this House and of the Rivers and Harbors Committee I have been unable to discover any general rule by which the amount of money appropriated has been regulated.

The gentleman from Illinois [Mr. MADDEN] suggested a comparison of internal-revenue receipts from districts in divers States with the appropriations made upon rivers and harbors in those States. For the purpose of the record I ask leave to put in a statement of the aggregate collection of internal revenue, by States and Territories, for the year ending on June 30, 1915:

RECEIPTS BY STATES AND TERRITORIES DURING THE LAST FISCAL YEAR.

Aggregate collection of internal revenue, by States and Territories of the United States and the Philippine Islands, during the fiscal year ended June 30, 1915.

States, Territories, etc.	Aggregate collections.

Wisconsin	11,390,243.87
Wyoming	133,509.79
Philippine Islands	193,302.08
Alaska (special fund)	11,065.06
Total	415,681,023.86

CORPORATION AND INDIVIDUAL INCOME TAX.

Supplemental statement showing, by States and Territories, the receipts under act of Oct. 3, 1913, during the fiscal year ended June 30, 1915.

States, Territories, etc.	Corporation income tax.	Individual income tax.
Alabama	$177,127.39	$84,633.40
Alaska	4,412.49	4,556.11
Arizona	74,935.76	51,624.12
Arkansas	89,149.52	38,177.09
California	1,620,250.50	1,240,501.03
Colorado	333,683.28	226,735.74
Connecticut	634,804.71	648,891.26
Delaware	143,955.10	138,835.94
District of Columbia	134,767.04	378,673.72
Florida	108,141.60	121,368.22
Georgia	320,617.52	119,983.61
Hawaii	198,610.97	45,211.04
Idaho	71,202.56	24,567.80
Illinois	2,983,527.31	2,670,630.34
Indiana	644,147.38	345,653.92
Iowa	469,173.05	264,315.61
Kansas	460,043.69	94,975.59
Kentucky	467,638.45	163,191.46
Louisiana	316,364.74	209,813.20
Maine	325,168.99	150,094.51
Maryland	385,539.58	636,340.03
Massachusetts	1,853,057.41	2,683,084.53
Michigan	1,379,478.99	1,533,829.14
Minnesota	1,202,379.50	581,949.32
Mississippi	73,516.09	34,664.57
Missouri	1,099,384.38	934,139.02
Montana	134,651.53	51,184.39
Nebraska	232,638.07	128,735.25
Nevada	51,843.57	31,246.39
New Hampshire	96,944.33	71,023.29
New Jersey	1,395,098.46	1,278,169.92
New Mexico	37,240.58	16,278.53
NEW YORK	10,221,206.65	17,417,537.60
North Carolina	257,825.38	123,553.96
North Dakota	71,340.70	26,155.98
Ohio	2,538,058.60	1,489,401.11
Oklahoma	273,203.26	133,695.76
Oregon	184,435.03	121,305.87
Pennsylvania	4,725,139.26	4,642,557.08
Rhode Island	278,658.26	432,453.37
South Carolina	118,032.23	43,369.72
South Dakota	58,966.15	15,071.31
Tennessee	244,305.05	165,904.45
Texas	622,646.15	425,631.57
Utah	216,234.83	44,975.43
Vermont	53,645.86	141,428.77
Virginia	430,379.24	197,559.27
Washington	316,322.33	198,579.39
West Virginia	357,614.85	139,188.47
Wisconsin	602,876.39	272,476.09
Wyoming	54,146.91	12,248.68
Total	39,144,531.71	41,046,162.09

I call attention to the fact that of the $415,681,023 collected and paid into the Federal Treasury, New York contributed $76,271,908.24; and of the $80,190,693.80 corporation and individual income-tax collections, New York contributed $27,638,743.25.

If the allotment in this bill were based upon that proportion, New York should receive approximately $7,000,000.

But another gentleman made comparisons of the customs duties at the divers ports of entry. The entire receipts from every source for 1915 were $209,786,672.21, and of that amount $148,536,425.81 was collected at New York City alone.

If the allotment in this bill were based upon that proportion, New York should receive approximately $25,000,000.

Now, I do not contend New York should be credited with all of those amounts. It comes from every section of the country. But, correspondingly, as every portion of the country receives the benefit, should not the whole people recognize that New York is the Nation's port, and an amendment to this bill should not be regarded as a local measure, but the whole membership of this House should favor it.

What is the basis of allotment? What should be the basis of allotment?

Is it not the commerce, or, rather, the ships which carry the commerce, to be accommodated?

The following table affords interesting study:

Port.	1913			Appropriations.
	Entered.	Cleared.	Total.	
Passamaquoddy, Me	293,353	316,201	609,554	Nothing.
Portland, Me	572,367	559,298	1,131,665	Nothing (previous total, $1,982,727).
Boston, Mass	3,069,111	1,900,308	4,969,419	$100,000 (previous total, $12,492,477).
New York, N. Y	14,464,161	14,370,619	28,834,780	$640,000 (previous total, $13,538,840).[1]
Philadelphia, Pa	2,883,975	2,274,625	5,158,600	$2,165,000 (previous total, $17,269,448).
Baltimore, Md	1,593,794	1,900,038	3,483,832	Nothing (previous total, $9,199,180).
Newport News, Va	450,252	556,191	1,006,443	Nothing (Norfolk) (previous total $4,521,782).
Norfolk and Portsmouth, Va	422,864	1,069,539	1,492,403	Nothing (previous total, $4,521,782).
Charleston, S. C	217,111	109,476	326,587	$80,000 (previous total, $5,201,966).
Brunswick, Ga	75,464	95,553	171,017	$36,250 (previous total, $1,438,150).
Savannah, Ga	289,028	449,084	738,112	$545,000 (previous total, $10,788,563).
Pensacola, Fla	369,205	502,012	871,217	$20,000 (previous total, $1,380,000).
Mobile, Ala	638,883	689,806	1,328,689	$155,000 (previous total, $7,669,230).
Pearl River, Miss	291,627	300,297	591,924	$35,000 (previous total, $311,411).
New Orleans, La	2,545,241	2,766,775	5,312,016	Not readily proportionable.
Galveston, Tex	1,443,767	1,881,693	3,325,460	$810,000 (previous total, $13,978,000).
San Francisco, Cal	1,007,796	1,270,736	2,278,532	$15,000 (previous total, $626,927).
Puget Sound, Wash	2,887,322	3,058,505	5,945,826	
All other ports	4,457,515	3,495,197	7,952,712	

[1] Not including E. R.

In 1888 the net tonnage of all of the vessels entering and clearing from the port of New York was five and one-half million tons; in 1913, it was fourteen and one-half million tons. Within the same time that this tonnage trebled what did the Federal Government do to meet the necessity thereby created? Of the $850,000,000 appropriated less than 3 per cent has been expended on New York Harbor and its connecting waters.

Meanwhile let me put before the House the extent to which local interests here cooperated:

WAR DEPARTMENT,
UNITED STATES ENGINEER OFFICE,
FIRST DISTRICT NEW YORK CITY,
New York, N. Y., July 7, 1913.

From: The district engineer officer, first district, New York City.
To: The Chief of Engineers, United States Army.
Subject: Cooperation by local interests in river and harbor improvements.

1. In compliance with directions contained in letter from the office of the Chief of Engineers, United States Army, dated January 17, 1913, Eastern Department 88106, the following report of cooperation by local interests in river and harbor improvement under the direction of this office is submitted:

(a) Locality—Hudson River Channel, New York Harbor, N. Y.

(b) Amount spent by the United States:

To June 30, 1912 (last expenditure in fiscal year ending June 30, 1877), dredging channel in Jersey City water front		$25,000.00
To Apr. 30, 1913, removing rock off Pier A		41,479.12
June 30, 1912, to May 31, 1913, dredging channel in Hoboken water front (completed)		21,064.64
Total		87,543.76

(c) Amount spent by local interests in front of shore or harbor lines: By railroad and steamship companies at Jersey City and Hoboken (for dredging) 116,737.95

Total 116,737.95

(d) Amount spent by local interests on public piers, docks, slips, behind harbor lines or equivalent:

By local authorities of Jersey City, N. J.—		
Construction of pier at Morgan Street	$61,754.11	
Dredging at pier	6,768.29	
		68,522.40
By local authorities of the city of New York—		
Construction of piers, bulkheads, etc	43,774,511.85	
Repairs to piers and cost of maintenance	11,353,775.05	
Acquisition of pier property	22,990,558.04	
Dredging between West Tenth and West Twenty-second Streets	471,375.00	
		78,590,219.94
		78,658,742.34

(d) Amount spent by local interests on public piers, docks, slips, etc.—Continued.

By private interests—		
Construction and repairs—		
In water front of New York City	$8,645,373.27	
In water front of New Jersey	18,177,434.43	
Dredging water front of New York City	12,717.90	
Dredging water front of New Jersey	9,949.11	
		$26,845,474.71
Total		105,504,217.05

(e) Reference to acts which require local cooperation: None.

(a) Locality—Harlem River, N. Y.

(b) Amount spent by the United States:

To June 30, 1912	1,567,490.00
June 30, 1912, to Apr. 30, 1913	30,000.26
Total	1,597,490.26

(c) Amount spent by local interests in front of shore or harbor lines: By the local authorities of the city of New York for removing old bridge piers between One hundred and fourteenth Street and Wards Island in 1858 3,900.00

(d) Amount spent by local interests on public piers, docks, slips, behind harbor lines, or equivalent:

By the local authorities of the city of New York—		
Construction of piers, bulkheads, etc.[1]	$3,127,679.42	
Repairs to piers and cost of maintenance	810,983.93	
Acquisition of pier property	1,642,182.72	
		5,580,846.07
By private interests:		
On public piers and bulkheads	207,825.00	
For dredging	19,724.84	
		227,549.84
Total		5,808,395.91

(e) Reference to acts which require local cooperation: River and harbor acts approved June 18, 1878, and Mar. 3, 1879.

(a) Locality—East River and Hell Gate, N. Y.

(b) Amount spent by the United States:

To June 30, 1912	5,219,141.00
June 30, 1912, to Apr. 30, 1913	125,600.59
Total	5,344,741.59

(c) Amount spent by local interests in front of shore or harbor line:

By local authorities of the city of New York—	
Removal of smaller rocks in Hell Gate in 1851	$13,861.59

[1] Includes cost of grading and paving marginal streets.

(c) Amount spent by local interests in front of shore or harbor line—Continued.		
By local authorities of the city of New York—Continued.		
Partial removal of Coenties Reef in 1861–1863	(1)	
Dredging part of Rhinelanders Reef	$7,313.20	
		$21,174.79
By local interests for dredging		52,000.00
Total		73,174.79
(d) Amount spent by local interests on public piers, docks, slips, behind harbor lines, or equivalent:		
By local authorities of the city of New York—		
Construction of piers, bulkheads, etc	$15,638,397.09	
Repairs to piers and cost of maintenance	4,054,919.66	
Acquisition of pier property	8,210,913.58	
Construction of ferry terminals	5,172,725.39	
Acquisition of terminal property	2,561,751.27	
Dredging between Rivington and East Third Streets	21,028.70	
		35,659,735.69
By private interests—		
On public ferries and docks	3,554,684.00	
In dredging	21,440.00	
		3,576,124.00
Total		39,235,859.69
(e) Reference to acts which require local cooperation: None.		
(a) Locality—Bronx River, N. Y.		
(b) Amount spent by the United States:		
To June 30, 1912		84,212.00
June 30, 1912, to Apr. 30, 1913		10,927.56
Total		95,139 56
(c) Amount spent by local interests in front of shore or harbor lines: By local interests for dredging		20,200.00
Total		20,200.00
(d) Amount spent by local interests on public piers, docks, slips, behind harbor lines, or equivalent:		
By local authorities, city of New York—		
Construction of public wharf and maintenance		8,000.00
By private interests on public docks and bulkheads		45,000.00
Total		53,000.00
(e) Reference to acts which require local cooperation: River and harbor act approved Mar. 4, 1913.		
(a) Locality—East Chester Creek, N. Y.		
(b) Amount spent by the United States:		
To June 30, 1912		142,000.00
June 30, 1912, to Apr. 30, 1913		8,096.49
Total		150,096.49
(c) Amount spent by local interests in front of shore or harbor lines: None.		
(d) Amount spent by local interests on public piers, docks, slips, behind harbor lines, or equivalent, by private interests:		
Construction of bulkheads and filling		14,500.00
Maintenance		5,000.00
Total		19,500.00
(e) Reference to acts which require local cooperation: None.		
(a) Locality—Westchester Creek, N. Y.		
(b) Amount spent by the United States:		
To June 30, 1912		5,419.00
June 30, 1912, to Apr. 30, 1913		26,593.43
Total		32,012.43
(c) Amount spent by local interests in front of shore or harbor lines, by private interests for dredging		1,875.00
Total		1,875.00
(d) Amount spent by local interests on public piers, docks, slips, behind harbor lines, or equivalent:		
By local authorities, city of New York, construction of public wharf		13,500.00
By private interests on public wharves		37,000.00
Total		50,500.00
(e) Reference to acts which require local cooperation: None.		

[1] Amount unknown.

So much is taken for granted when mention is made of New York that few persons have an appreciative realization of the greatness of the city, so I shall under my leave to extend my remarks include an article printed in the current issue of Greater New York, published by the Merchants' Association:

Here are a few facts which will make it possible for even the most casual observer to visualize New York in its various phases.

ABSORBER OF CITIES.

To bring into existence a city the size of Boston or St. Louis might well be regarded as a 10-year task for a nation. To rear such a municipality, with its streets sewered, paved, and lighted, its government organized, its police and fire departments efficient, its transportation problem solved, its various business enterprises founded in prosperity, with first-class hotels to house its visitors, theaters for their amusement, and churches for their worship, in less time would be classed as a miracle. And yet New York takes unto itself every four years a city equal to a Boston or a St. Louis.

COSMOPOLITAN POPULATION.

The wonder city of the world, New York, has a cosmopolitan population which no other community can equal. It is by far the greatest of all Jewish cities. It is the greatest Irish city, there being here 674,721 of Irish blood. In New York are 723,333 Germans, 306,422 Austrians, 543,437 Italians, and 734,577 Russians.

THE CITY'S FINANCES.

In its general administration, public-construction enterprises, interest on its debt, and redemption of bonds New York spent last year $424,662,455.06. During the same year its income totaled $424,658,320.31, leaving Father Knickerbocker more than $4,000 "in the hole"—a trifle not worth a second thought.

New York's municipal debt is $1,361,483,821.28—greater by more than a quarter of a billion dollars than the debt of the United States and six times the combined debt of Boston, Philadelphia, and Chicago. However, in spite of the immensity of its indebtedness, New York has an asset for every dollar it owes, and could liquidate to-morrow, if called upon to do so, and still have much valuable property left. Indeed, New York could borrow this year $144,062,952.36 before reaching its legal debt limit.

ITS RUNNING EXPENSES.

In no manner is New York niggardly or tight fisted. Last year it spent for educational purposes $46,436,307.70, including $6,707,756.64 for school buildings and sites. Those who believe that water is not the ordinary Knickerbocker beverage will be surprised to learn that last year the city spent $6,731,536.53 on its water-supply system.

THE WATER SUPPLY.

Few persons realize that in tapping the Catskills for water New York had to solve engineering problems equal to those encountered in connection with the Panama Canal. All manner of building difficulties had to be overcome. Where Storm King stands a tunnel was sunk 1,114 feet to solid bedrock, and at that depth below sea level pipes were driven under the Hudson.

Through 127 miles of pipes water flows in three days from the Ashokan Reservoir to the aqueduct which penetrates the full length of Manhattan Island, lying from 200 to 750 feet below the city's streets.

To feed water to New York's consumers 3,087 miles of pipe have been laid under the city. The present storage capacity of all reservoirs is 170,000,000,000 gallons. This is to be added to in the near future by the construction of another immense reservoir to impound the waters of the Schoharie, which drains 314 square miles of territory. This will mean available for New York a water storage of 250,000,000,000 gallons.

At the present time we consume daily an average of 100 gallons of water per person. Each person has stored for his use 20,800 gallons, and we can look forward to 1940 as the first year which by any possibility can threaten a water shortage.

POLICE AND FIRE DEPARTMENTS.

New York's police department cost last year for its upbuilding and maintenance $16,241,323.07. Yet with a population within its metropolitan district of 7,500,000, it has only 10,674 uniformed police, while London, with a population of 7,250,000 covering a like district, has twice that number. On its fire department, the most efficient in the world, this city last year spent $9,719,945.10.

FIVE CITIES IN ONE.

While making comparisons, attention might be called to the fact that New York is composed of five great cities. Manhattan still commands supremacy, having by itself a greater population than Chicago. Brooklyn, having outstripped Philadelphia, is rapidly approaching second rank among American communities. The Bronx is reaching for sixth honors, competing with Cleveland and Detroit. Queens is larger than Minneapolis or Toronto and is just ready for much more rapid growth. Richmond is the equal in population to Dallas or Salt Lake City and is waiting only upon real rapid transit to take on a development that will astonish even its sister boroughs.

Added to its own great stationary population, New York always has with it an army of strangers, sometimes estimated as high as half a million. Every day there enter and depart from New York railway stations 290,000 persons.

ALL ROADS LEAD HERE.

As all roads of the ancient world led to Rome, so it may be said with whole truth that all American railroads lead to New York. From the most obscure station in the remotest corner of the country a ticket for New York may be purchased. The railway systems which actually have termination in New York have a combined mileage of 45,323, or about 18 per cent of the total mileage of the country.

With its wonderful sky line, shifting almost as rapidly as the clouds, New York is building and rebuilding in a manner that astonishes even those who knew it best. Where yesterday stood a stunted 10-story structure, to-day a building of 40 or 50 stories houses hundreds of business establishments or gives office room to thousands of professional men. It has been said that it requires only 50 minutes to erect a building in New York—an exaggeration, of course, and yet so energetic are builders that a new structure is completed on an average every 50 minutes of every day of the year.

NEW CORPORATIONS.

Twice an hour a new business corporation is formed in New York and once every 45 minutes a corporation is dissolved.

Once every four minutes—more frequently than that, to be exact—a new New Yorker is brought into existence. In round numbers, 150,000 babies arrive every year to help swell the city's population.

GREATEST IN MANUFACTURE.

The greatest manufacturing center the world has ever known, New York now has about 38,000 factories, there having been a material increase in their number since 1913, when, according to the Industrial Directory, 35,849 establishments in Greater New York were turning out manufactured articles of various kinds.

These manufacturing establishments employ capital amounting to $1,800,000,000 and turn out products to the value of $2,900,000,000 annually.

In New York factories are employed 810,000 persons, including 660,000 wage earners. In salaries and wages $540,000,000 is paid annually to factory employees of all kinds.

THE BANKING CENTER.

More than 21 per cent of the Nation's bank resources are right here in New York, and it is not too much to say that during the last 18 months this city has become the world's banking center. The resources of the banks of the country, computed June 30, 1915, amount to $28,185,585,677, while the resources of the New York banks are $6,072,506,075. New York's banks have a total capital of $216,157,000 and deposits of $5,377,461,797.

In the matter of savings banks, New York is in a class by itself, having 58 such institutions, with deposits amounting to $1,231,202,000, while the thrifty depositors draw in the form of interest more than $150,000 every day, Sundays excluded.

TRANSIT SYSTEMS.

Working incessantly, night and day, New York is now building about 300 miles of street railways, including a subway system unequaled in any city except this. At this time there are here in active operation street railway systems with 1,730 miles of tracks and 11,895 cars.

Theoretically every man, woman, and child in the world had a ride in New York's street cars last year and almost 200,000,000 of them rode twice. In other words, 1,813,204,356 cash fares were paid in 1915 by passengers in New York's street cars. Every day during the year 4,967,680 persons were carried through the streets of the city—an army, greater by far, than Germany has fighting on all of her war fronts.

THE HARBOR AND COMMERCE.

As a shipping center New York is without a rival, either in amount of business transacted or facilities offered. It has a water frontage of 771 miles, which, measured around piers and along shore line, is increased to 980 miles, of which 395 miles have been developed.

An idea of the relative importance of New York as a port may be had by comparing it with nine other cities—the world's greatest. Before the war began in Europe the tonnage entering the port of New York, plus the tonnage cleared, was 27,223,000. Antwerp came second, with a total tonnage of 26,656,000. Other ports in the order of their importance were: Hamburg, 23,776,000; Rotterdam, 21,853,000; Liverpool, 21,824,000; London, 20,978,000; Hongkong, 20,491,000; Shanghai, 18,600,000; Marseilles, 16,348,000; and Singapore, 15,456,000.

Besides having the greatest tonnage in foreign trade, New York has a larger coastwise trade than any other seaboard city.

PARKS AND BEACHES.

While leading the world in business and other affairs of a serious nature, New York also knows how to play well and to give entertainment to itself and its visitors. For purposes of outdoor recreation the city has 198 parks and 25 parkways, with a total acreage of 8,615. That its children may have room in which to expand and grow physically, the city maintains 98 playgrounds, and at 13 free beaches old and young have opportunity during the summer months to breathe fresh air and bathe in the waters of the ocean.

To shelter its transients, New York has 1,500 good hotels, of which 252 are first class. Filled to their capacity limit, which most of them have been during the last five months, these hotels accommodate 150,000 persons.

CLUBS AND CONVENTIONS.

In club life New York excels. Thousands of clubs cater to the demands of their members. Of these 81 are classed as leaders, having fixed their annual dues at not less than $100. In these clubs 57,548 men and women hold membership.

New York has come to be the leading convention city of the country. More than 500 conventions are scheduled for the present year, with an estimated attendance of 400,000.

THEATERS AND CHURCHES.

There are in New York 250 theaters, each of which pays an annual license fee of $500. In addition, there are 600 smaller theaters, each with a seating capacity of less than 300, which pay a license fee of $100. In these theaters 400,000 persons are entertained at least once, and frequently twice, a day. Other hundreds of thousands of persons are entertained in theaters devoted to moving pictures.

On Sunday the city turns to worship with an earnestness for which it receives little credit and which is rarely equaled in other cities, large or small. Practically every Christian denomination is represented here, while faiths not Christian have followers numbered by the tens of thousands.

In New York there are 1,525 church edifices, most of which are filled whenever their doors are opened. The New York churches have 1,709,241 communicants and hold title to property valued at $156,052,410, against which rests an indebtedness of about $20,000,000. In the city's Sunday schools are enrolled 512,000 pupils.

THE SCHOOL SYSTEM.

Of its public schools New York is justly proud. Owing to the ever-increasing pressure of population the city has not in recent years been able to catch up with the need for room in which to house pupils while at their studies. The proportion of half-time pupils, however, is being constantly reduced.

At the present time 802,573 pupils are on register in the city, being cared for in 553 day schools. Looking after these children, leading them through the period of their education, are 20,063 teachers, exclusive of superintendents, directors, special teachers, and substitutes. In schoolhouses and school sites, New York has invested $129,066,061.

CARE OF THE SICK.

For the proper care of those who are sick New York has provided 102 hospitals, which, taken as a whole, are unequalled elsewhere in the world. In the city are 72 general hospitals, 11 special hospitals, 11 hospitals for women and children, 5 for incurables, and 3 for patients having contagious diseases. In these institutions are 21,858 beds, and under pressure at least 2,000 more beds can be set up.

In its post offices New York demonstrates, as it does everywhere, its leadership as a world community. Incidentally, there are 31 independent post offices within the limits of New York, those representing Manhattan and Brooklyn, of course, far overshadowing all others.

THE NEW YORK POST OFFICE.

The Manhattan, or New York, post office last year had receipts amounting to $30,127,062.01. Its expenditures were $10,915,212.99. During the year, of second-class matter alone, it handled 109,480 tons, on which it collected, at the rate of 1 cent a pound, $2,189,600.33. In its money-order department the post office transacted business amounting to $108,442,474.90, of which $84,894,045.07 was in the form of money orders paid, while $23,588,329.83 was in the form of orders issued. The New York postal savings bank has 121,831 depositors, whose savings total $15,678,317.

In the main post office and its branches are 9,436 employees, of whom 3,348 are carriers.

The Brooklyn post office, in the amount of business transacted, compares favorably with the Manhattan office. The Brooklyn carriers push the total for the city up to 4,636.

RECORD-BREAKING COMMERCE.

For the first time in its history the port of New York may this year (ending June 30) have foreign commerce totaling more than $2,000,000,000. A fairly accurate idea of how the business of the port is increasing may be had by comparing present records with those of three years ago.

Total exports from the port of New York for the week ending March 11, 1916, were $60,204,165; for the corresponding week of 1915 the exports totaled $40,864,337; for the corresponding year of 1914 the total was $20,945,607.

LEADER IN FOREIGN TRADE.

During the year ending December 31, 1915, New York demonstrated as never before its position of overwhelming importance to the remainder of the country in the matter of foreign trade. During the 12 months referred to the imports of the United States were valued at $1,280,069,666, and of this total $987,447,342 entered the country through the port of New York.

Our national exports were valued at $2,431,004,047, of which $1,785,101,131 were sent out through the port of New York. Of a total foreign commerce, valued at $3,711,073,713, the share falling to the port of New York amounted to $2,772,548,473—New York's export and import trade amounting to more than 74 per cent of the country's total.

Mr. TREADWAY. Mr. Chairman, I ask unanimous consent to proceed for 10 minutes.

The CHAIRMAN. The gentleman from Massachusetts asks unanimous consent to proceed for 10 minutes. Is there objection?

Mr. THOMPSON. Mr. Chairman, I shall object in the future to any extension over five minutes. We have been on this item now for an hour and a half.

The CHAIRMAN. The gentleman from Oklahoma objects.

Mr. TREADWAY. Does the gentleman insist upon his objection?

Mr. SMALL. Mr. Chairman, the gentleman from Massachusetts is a member of the committee, and I hope the gentleman from Oklahoma will withdraw his objection.

Mr. TREADWAY. I can get five minutes more, and I shall not ask any courtesy of the gentleman from Oklahoma.

Mr. BENNET. I hope the gentleman from Oklahoma will not insist upon his objection.

Mr. THOMPSON. I am not going to insist upon it.

The CHAIRMAN. The gentleman from Oklahoma withdraws his objection, and the gentleman from Massachusetts will proceed for 10 minutes.

Mr. TREADWAY. Mr. Chairman, I am not altogether certain about the infallibility of the gentleman from New York [Mr. BENNET] in quoting the rules of the House. I think it is a fair proposition to know whether a Member of the House advocating a measure on the floor of the House is or is not in favor of the item he is discussing. I did not intend to infringe on any rule in the question I asked by colleague. I simply wanted to bring out the facts in the case in connection with this particular matter. Now, it is a well-known fact, and it appears in the printed hearings of the Committee on Rivers and Harbors, that the gentleman from New York [Mr. HULBERT] did not go before our committee advocating this item under discussion here to-day. He was advocating—and I think he will bear me out in my statement of the fact—the adoption of the bigger project, the Hell Gate project, so-called, of which the project now before us is simply one item.

Mr. O'SHAUNESSY. Will the gentleman yield?

Mr. TREADWAY. Yes.

Mr. O'SHAUNESSY. I want to know if the gentleman from Massachusetts [Mr. TREADWAY] considers that a fair statement in view of the ruling of the Chair?

Mr. TREADWAY. I will say that I am not trying to infringe the rule or get around the rule, but we have the printed hearings, wherein, I think, I will be borne out in that statement. If the gentleman from New York objects to the statement, I withdraw it, because we are both members of the committee, and I do not wish to misrepresent his attitude.

Mr. HULBERT. Does the gentleman assume that the matter I presented to the committee was the matter contained in the letter of the Secretary of the Navy addressed to the Speaker of this House under date of December 21, 1915, and no more?

Mr. BENNET. Mr. Chairman, I make the same point of order against my colleague. He has no right to disclose what took place in the committee, except as it appears in the printed hearings.

Mr. TREADWAY. I think we can change the line of discussion without intruding on the rules in any sense. I think there is not much disagreement as to what the viewpoint of the gentleman from New York is on the whole project.

I will pass to another phase of the matter, Mr. Chairman, and that is one of congratulation to the gentleman from New York, and the fact that he has been able through his very persistent methods to bring this matter squarely before the House to-day. He says this is his first term, and if he can carry a thing like this through in his first term, Heaven help the rest of us after he has served 15 or 20 terms, as he probably can, if he is as successful in other political relations as he evidently is going to be in this instance.

I want to say this in all fairness as to the proposition in New York Harbor. I am in favor of the proposition, and would be only too glad to vote for it if I felt it was rightly here. It is a good project, and I do not blame any man for voting for it. It is just the kind of a place where we ought to expend our money for harbor improvements—at great commercial centers, having likewise to do with preparedness. But that is not the point at stake here. The question before this House to decide in connection with this debate to-day is whether or not this item should be given a special right over every other similar one because the President was induced to favor it. The gentleman from New York [Mr. BENNET] speaks about the time he introduced the bill. He introduced the bill on the 6th of December, the very day the House opened—I have a copy of it here—asking for an appropriation of $500,000. Now, Mr. Chairman, I submit that that was long in advance of the time when the Committee on Rivers and Harbors had under consideration whether or not new projects should go into this bill. There was ample time with all this correspondence back and forth with the Secretary of the Navy and submitting letters to the House and all that sort of thing to have had a hearing in regular order and then have given other new projects the same opportunity.

The gentleman from New York said that this was in response to the urgent request of the President of the United States. Well, why, in the name of all that is good, was not that urgent request of the President of the United States put up to our committee? More than six weeks elapsed from the time that this bill was introduced until February 11; at the urgent request of the gentleman from New York [Mr. FITZGERALD], the President writes a letter that brought about the action of the committee. The chairman of the committee said the other day that the reason this item was admitted was because on February 11 the Committee on Rivers and Harbors received a request from the President of the United States stating the urgency, and saying that it was imperative, or whatever the construction of Mr. Tumulty's letter may have been. The friends of the project had from the 6th of December until the last of February to discover that condition. They never availed themselves of the opportunity for a hearing until all hearings had been closed by the Committee on Rivers and Harbors.

Mr. HULBERT. Will the gentleman yield?

Mr. TREADWAY. I yield to the gentleman.

Mr. HULBERT. Do I understand the gentleman to state that I never brought this thing to the attention of the committee until the 11th of February?

Mr. TREADWAY. No. On the contrary, Mr. Chairman, I corroborate the gentleman's statement, made on page 6053 of the CONGRESSIONAL RECORD, that that letter, referring to the letter of the Secretary of the Navy, December 21, "was permitted to slumber in the office of the chairman of the committee, and was never brought to the attention of any individual member of the committee, so far as I know, until it was mentioned to me by the Secretary of the Navy and brought by me to the attention of the committee." I absolutely corroborate the gentleman's statement that so far as he was concerned it was not slumbering.

Now, reference has been made also to the political feature of the matter. My colleague, the gentleman from Massachusetts, stated the political situation very thoroughly; only he omitted one factor in that great combine. Our friend the gentleman from New York [Mr. BENNET], who is so distinguished in his services here, and has been in previous Congresses, and who now is so proud of the Democratic district which we are also proud he was able to carry, in the face of great difficulties, last fall—no one would accuse him of not knowing anything about the political game, so called, that was played either here or in New York or Albany——

Mr. BENNET. Mr. Chairman, will the gentleman yield there?

Mr. TREADWAY. I would like to complete the political picture drawn by the gentleman.

Mr. BENNET. I wanted simply to say there are people in New York State who will not agree with the gentleman's statement.

Mr. TREADWAY. Well, we will not dispute the fact that he may know something about the game, so far as his colleagues here are concerned. Now, as to the able chairman of the Committee on Appropriations [Mr. FITZGERALD], I have served here only 3 years now, but if at the end of 25 years of long and continuous study I should have the slightest inkling that I knew one particle of the political game that the able gentleman from Brooklyn does I would suppose that the possibilities of political knowledge had been exhausted. [Laughter.] He has the whole thing down in a nutshell, and we all admit that there was no possibility of assuming the fact that he had very much to do with Tammany, but, then, we knew he had reached the leaders of Tammany, and they are included in this group of New York Representatives. They, too, can surely qualify in the group of nonpartisan, nonpolitical, nonorganization gentlemen. But my friend from Massachusetts forgot a very important part of the political group in New York City as represented upon this floor, and evidently other gentlemen from New York forgot that political party also. It is small, but it is mighty important, and I can not, for my part, conceive of why in this harmony of nonpartisanship that was being displayed by these various gentlemen they overlooked the great Socialist Party as represented here on this floor. [Laughter and applause.]

The CHAIRMAN. The time of the gentleman from Massachusetts has expired.

Mr. CONRY rose.

Mr. TREADWAY. Mr. Chairman, I ask unanimous consent to proceed for five minutes more.

The CHAIRMAN. The gentleman from Massachusetts asks unanimous consent to proceed for five minutes more. Is there objection?

Mr. THOMPSON. I object.

Mr. TREADWAY. Mr. Chairman, I make the point of no quorum.

The CHAIRMAN. The gentleman from Massachusetts makes the point that there is no quorum present. The Chair will count. [After counting.] One hundred and three gentlemen are present, a quorum. The gentleman from New York [Mr. CONRY] is recognized.

Mr. CONRY. Mr. Chairman, I regret exceedingly that certain gentlemen connected with the opposition to this item have deemed it necessary to introduce the cry of politics into this situation, a cry for the introduction of which there is absolutely no justification. The gentleman from Washington [Mr. HUMPHREY] and his colleagues from Massachusetts have raised the cry of Tammany in this discussion. Every discredited politician in the city of New York who is seeking rehabilitation in politics raises the cry of Tammany to subserve his purpose. Every repudiated corruptionist with whose career the people are familiar, seeking to get back into power, raises the same cry. To-day these gentlemen raise that cry to cover up the fatuous fallacy contained in the contention that there is no merit from a strategical standpoint in the item contained in this bill. This will deceive no one as to the purpose back of this opposition. It will not be effective in the accomplishment of its purpose, because of the intrinsic and superlative merit of the item.

Talk about politics! Where do you get politics in this situation? Is the Admiral of the Navy, Admiral Benson, a politician? He was summoned before this committee to testify; the hearings were held with due solemnity, and I do not think that any man will impute political motives or political considerations to this distinguished seaman when he says, in the introduction of his testimony, that the necessity for having a proper channel, particularly to the southern entrance to the navy yard, to get into the navy yard safely with our larger vessels, has been very apparent for some time.

Is there politics in that statement? That is the statement of a fact [applause], delivered with due force and solemnity by a distinguished officer of our Naval Establishment, who is absolutely disinterested and who has the courage to tell the whole and absolute truth. [Applause.]

He goes further in his testimony and testifies:

I have come out of there in the *Utah*, drawing a little over 29 feet—29.6 feet is about the most I have ever taken through there—and I have frequently gone in and out without a pilot, but it was always with a great deal of anxiety, and only at the top of the tide, when the current was practically still and not running at all.

There is the testimony of a gentleman distinguished in the naval service of our country, unconnected with politics, who is telling the absolute truth. [Applause.]

He is not looking to the political situation, as some of our petty politicians are, but he is looking to the question and consideration of preparedness; preparedness, which can not be accomplished in a day; preparedness, the consummation of which requires weeks and months and years.

The testimony of Col. Black in relation to this particular item is that this improvement of the harbor, if begun now, will consume three years in its completion. Gentlemen, you can not prepare these vast and extensive improvements in a day. We are talking strategy now. We are providing for it in this item. We want to be prepared to perfect the strategical situation in this the most important navy yard in the country. The New York Navy Yard is the only governmental navy yard in which our large dreadnaughts are being built to-day. [Applause.]

The CHAIRMAN. The time of the gentleman from New York has expired.

Mr. CONRY. I ask leave to proceed for five minutes more, Mr. Chairman.

The CHAIRMAN. The gentleman from New York [Mr. CONRY] asks unanimous consent to proceed for five minutes more. Is there objection?

There was no objection.

Mr. CONRY. This navy yard is the only navy yard in the country at which the dreadnaughts are being built to-day, as I have said before; and here is an admiral of the Navy who testifies that in taking in the *Utah*, which is smaller than the vessels now being constructed at that yard, he had to strain every nerve, exercise every care, and exert all the ingenuity known to navigation in order to steer between this modern Scylla and Charybdis.

Now, gentlemen, business sense, if no other consideration, should compel us to make all necessary improvements in these waters in order to protect the $360,000,000 or $370,000,000 of floating property that is liable at any time in negotiating this passage to be destroyed and sent to the bottom of the bay. The necessity for this improvement is apparent and insistent. Good business sense dictates it, and strategical considerations imperatively demand it.

Enlightened statesmanship and ordinary prudence dictate that the proper improvement should be made in these waters in order that millions of property may be effectively protected from the perils and hazards of these shoals. In making this improvement now an immense profit will accrue from this small expenditure. An expenditure of $700,000 is all that is required. Remember, there is in progress on the other side of the world a terrible war that is rewriting the whole map of Europe, and changing the political situation on that continent. Nobody knows what is going to happen after this terrible holocaust of death comes to an end. We may not become involved. I hope we may not; but after these nations have spent their energies and their wealth in this devastating war they will be poor; we will be rich, exciting the envy and jealousy of the world. There is no nation prepared to spring at us to-day. We know not from what quarter the blow will be struck if the blow must come, but the air seems to be charged with ominous forebodings. Let us, in preparing to meet any emergency that may arise, look to development of our strategical naval stations in such a way as to have our Navy—the first arm of defense—prepared to strike effectively and disastrously any and every enemy, in order that this Republic may continue to the end of time to fulfill her glorious destiny and to guarantee to all the preservation of American civilization upon this continent. [Applause.]

Mr. SPARKMAN. I ask unanimous consent that debate on this paragraph and all amendments thereto conclude in 10 minutes, and that I be permitted to use three minutes of that time?

The CHAIRMAN. The gentleman from Florida asks unanimous consent that all debate upon the pending amendment and paragraph be concluded in 10 minutes, and that he, as chairman of the committee, may have three minutes of that time. Is there objection?

Mr. MOORE of Pennsylvania. I should like to have five minutes of that time.

Mr. SPARKMAN. A member of the committee wants five minutes.

Mr. HUMPHREY of Washington. I want five minutes.

The CHAIRMAN. Is there objection?

Mr. MANN. Reserving the right to object, let us see if we can not agree upon time.

Mr. SPARKMAN. How much time does the gentleman from Washington want?

Mr. HUMPHREY of Washington. Five minutes.

Mr. MANN. We would like to have 15 minutes over here.

Mr. SPARKMAN. Then I ask unanimous consent that debate on this amendment and paragraph be concluded in 25 minutes.

The CHAIRMAN. The gentleman from Florida asks unanimous consent that debate on this paragraph and all amendments thereto close in 25 minutes. Is there objection?

Mr. HUMPHREY of Washington. Fifteen minutes to be used on this side.

Mr. SPARKMAN. Fifteen minutes upon that side; yes.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. MOORE of Pennsylvania. Mr. Chairman, it makes very little difference to me whether there is any politics in this proposition or not. The project is a meritorious one, and it ought to be included in this bill.

I am aware that some of the evidence presented by the gentleman from New York [Mr. HULBERT] to the Committee on Rivers and Harbors, which is now in print, indicates that there may have been some politics in the proposition in its inception; but if politics was introduced in this matter at all it was good politics, and when we need improvements of this kind the more politics we have to secure them the better. Now, here is a proposition which may have originated with the New York delegation and the hand of Tammany may have been in it. It appears from some of the correspondence in the hearings that the Secretary of the Navy had made a speech on the subject of preparedness before the National Democratic Club of New York and that the gentleman from New York [Mr. HULBERT] desired also to discuss the same proposition, using some of the facts that the Secretary had used before the Cleveland Democracy in New York. That may be. I do not care. I am frank to say, as a Republican, that if I saw the necessity for a great project like this in a river and harbor bill, I would resort to every political method at my command in order to get recognition at the hands of Congress. The needs of the country demand it. [Applause.] I pay tribute to the methods of the New York Democracy for getting together once in awhile to secure what the country needs and what it ought to have. The chaplet falls upon the brows of those who got together in this instance and convinced the President of the United States—a minority President, if you please—that this was an extreme case of necessity, and that provision ought to be made in the bill for a suitable approach to the navy yard at Brooklyn.

We have to watch the navy yard at Brooklyn from a Philadelphia standpoint, because Brooklyn has an advance over the other navy yards of the country. Brooklyn is the only navy yard equipped to build battleships. It is the only navy yard, as the gentleman from New York [Mr. CONRY] has just indicated, that is building dreadnaughts, because it is the only navy yard in the United States that has building ways equipped to build superdreadnaughts. However, if all the battleship building is to be centralized at the port of New York because it has the only building ways in the country suitable for the construction of battleships, then we are going to concentrate business in a manner that is unfair to other sections of the country that are knocking at the doors of Congress for recognition.

I sympathize with the chairman of the Committee on Rivers and Harbors [Mr. SPARKMAN] in the predicament in which he finds himself with regard to this transaction. On December 1, 1915, he appeared at the White House, and the newspapers reported that the President advised him that there should be economy in the matter of river and harbor improvements. Yes; this old plod horse of the Government, by which commerce is generated and upon which it moves business which pays the expenses of the Government—this old plod horse was again to be robbed in the interest of certain other branches of the Government service. Preparedness, was it? I care not what it was; rivers and harbors were selected to bear the burden and the appropriations were to be cut down. The President indicated that he wanted economy in this regard, and the chairman of the committee in good faith reported it to his committee, and the committee in good faith, and agreeing with the President of the United States, decided that there should be no new projects. There were a number of worthy new projects that should have been considered, but only the New York project, for which the President stood, was admitted. It was hard on the rest of us; but as the New York project is meritorious, I intend to support it, no matter how it got into the bill.

Mr. BOOHER. Mr. Chairman, the position in which I find myself, so far as this item is concerned, is not a pleasant one. As a member of the committee, I in good faith voted to place no new projects in this bill. That was done after due discussion in the committee. This proposition was not heard of in the Committee on Rivers and Harbors until after the river and harbor bill had been completed and was almost ready to be reported to this House. The proposition was then sprung that this was a case of emergency in the preparedness program; and of all the arguments that have been made upon this item to-day there

has been but one upon the subject of preparedness, and that was by the gentleman from New York [Mr. CONRY], who sees war right now, and who sees armies landing upon our shores and sees the necessity for this preparedness proposition. Well, they may come, they may land, but God save them, they will never get away. Now, if this is a preparedness proposition, it ought to go to the Committee on Naval Affairs, and I will tell you why. We have a Committee on Naval Affairs that provides for building warships, dreadnaughts, and battle cruisers so large that you can not get them in any dry dock in the country, so large that they can not get over bars in the harbors. In the hearings before our committee Capt. Knapp, of the Navy, says, "You can not take a wounded dreadnaught over a 35-foot channel." What do you want of a dry dock if you can not take a wounded vessel into it? You can not do it over Diamond Reef if you make it 35 feet deep; put 35 feet of water there and you can not get to the dock with a wounded dreadnaught. If it is a question of preparedness, it ought to go to the committee that has jurisdiction of naval affairs, which will provide a channel that will take the vessels into a harbor of refuge.

If this had been a question of preparedness and not a commercial proposition, the members of the River and Harbor Committee would not have been deluged by documents from every commercial body in the city of New York to take this project on, not as a question of preparedness but as a commercial proposition. That was all it was then. Why, even this great organization known as the Security League never asked the Committee on Rivers and Harbors to deepen this channel because that would be for preparedness; they never heard of it.

Mr. BENNET. Will the gentleman yield?

Mr. BOOHER. Certainly.

Mr. BENNET. As a commercial proposition, does not the gentleman think it is a good one?

Mr. BOOHER. As a commercial proposition it is one of the best in the world, and if I had not voted in committee not to take on any new projects I would vote to take on the whole project and put it in the bill. [Applause.] So I would with the navy yard at Philadelphia, the navy yard at Boston, the navy yard at Charleston, the navy yard at Norfolk, and the mouth of the Columbia River. But in our wisdom we decided that none of these should go on to the bill, and for that reason I am unable to support this proposition. It is a commercial proposition, and no better than the others. The others are entitled to as much consideration, and if this stays in the bill I hope every other one that I have mentioned will be put on. [Applause.]

Mr. TREADWAY. Mr. Chairman, the point made by the last speaker is the very one that certain gentlemen of the House wanted to bring about last Saturday. The gentleman from Washington asked unanimous consent that this item should be taken up before any similar item might be reached in the bill. That was objected to, and when I offered an amendment for Boston I asked that the Boston item should follow this because this was the one example before the House, and what was done with this item should be the action on other similar items. That, likewise, was objected to. It is exactly on that ground that I wanted the matter to come in that order, as the gentleman from Missouri has stated, in order that the same action might be taken by this House on other as meritorious projects as this, depending upon what the House might do with this item.

Now let us go back to where we stand as regarding the action of the committee. The chairman of our committee, as we were informed, waited on the President. The President informed him that he did not believe any new projects should go into the bill. Some of us did not think that that was final, and I was one of those voting that we should put new projects in the bill, having in mind among others this very project now under discussion. I made myself very plain, and I hope I do now, that I favor, as the gentleman from Missouri does, this project as one of the most meritorious before Congress to-day along the line of river and harbor work.

Mr. MOORE of Pennsylvania. Will the gentleman yield?

Mr. TREADWAY. Yes.

Mr. MOORE of Pennsylvania. Does not the fact that this has gone into the bill, the fact that the majority of the committee reported it to the House, give it a different status from other worthy projects?

Mr. TREADWAY. I do not consider that it does when you consider the manner in which it reached the bill. I, for one, do not intend to take dictation from the source that secured this item in the bill. Then there is the further fact that all the gentlemen from New York, all the parties except the Socialist Party, met and asked the President to make an exception in behalf of this one item, and the very day of the hearing, given out of courtesy to a member of the committee, this presidential indorsement is secured. The President asked the Committee on Rivers and Harbors to make an exception of this one case. He reversed himself, and then he asked the Committee on Rivers and Harbors to reverse itself. The gentleman from Wisconsin a few days ago brought up a very apt illustration of this very same point. He said it had been quoted right and left that we should stand by the President. I can not say it in the beautiful language that the gentleman did, but in effect he said that if we were to stand by anything, that thing must remain in a permanent position, and the same illustration he used in connection with the McElmore resolution actually applies to taking on the project of the East River at the dictation of the President.

Now one further word. They say this is an existing emergency. It is in evidence that the work can not be begun on Diamond Reef for at least the best part of a year. Now it will absolutely block commerce in that particular channel if they try to work on Diamond Reef and Coenties Reef at the same time, so that until the $200,000 we voted as an emergency last year is expended it will be impossible to do anything on Diamond Reef.

I will add under leave to extend my remarks that during this discussion the chairman [Mr. SPARKMAN] quoted extracts from a letter addressed to me by Col. Black. He did not quote the following sentence from the same letter: "It would be undesirable on account of interference with traffic to commence the removal of these two reefs at the same time."

Mr. HUMPHREY of Washington. Mr. Chairman, the gentleman from New York [Mr. CONRY] read from the testimony of Admiral Benson, saying that he had passed through this channel with a great deal of anxiety and only at the very top of the tide. And he said with great emphasis that was not the statement of a politician. That was true, and that was received with applause on that side of the House. Mr. Chairman, if he had turned right over on page 13, he would have found this language:

> Mr. COSTELLO. When the tide is high, in using Buttermilk Channel you avoid all the dangers ascribed to the other?
> Admiral BENSON. Yes.

That is all there is in this entire proposition. They can use Buttermilk Channel whenever they please without any danger, and, notwithstanding the dangers that have been ascribed to the other channel, an accident of importance has never occurred to a naval vessel going through either of those channels, although they go up there in great numbers.

Mr. HULBERT. Mr. Chairman, will the gentleman yield?

Mr. HUMPHREY of Washington. I can not yield; and by the evidence that the distinguished gentleman, Mr. HULBERT, placed in the RECORD on Saturday there are 33 feet in that Buttermilk Channel at high tide, and a mud bottom—absolutely no danger—and the new vessels we are going to construct for the Navy will draw no more than 30 feet. While the vessels are to be enlarged in other ways, so far as the draft is concerned, it is not going to be increased.

I think I shall have to stop a moment to compliment my distinguished friend from Pennsylvania [Mr. MOORE]. I have heard him stand up here a great many times and talk about the President's dictation, and he was one of the last men whom I expected to see join that procession. He says that he is convinced from the evidence that has been introduced——

Mr. O'SHAUNESSY. Will the gentleman yield?

Mr. HUMPHREY of Washington. I decline to yield.

Mr. O'SHAUNESSY. I just wanted to say that everybody is joining the procession.

Mr. HUMPHREY of Washington. That is true; but the procession is moving in the opposite direction from what the gentleman from Rhode Island thinks it is. [Laughter and applause on the Republican side.] As I was starting to say a moment ago, my distinguished friend from Pennsylvania [Mr. MOORE] said that he is convinced from the evidence that has been brought out before the committee that this is a meritorious project. Mr. Chairman, he is very easily convinced, because there was not a single man on the committee who was convinced, not a single one; and Mr. HULBERT is the only one on that committee who would have voted for this project——

Mr. MOORE of Pennsylvania. I have not heard it disputed by a member of the committee.

Mr. HUMPHREY of Washington. There is not a single man on the committee who would have voted for this project, with the exception of Mr. HULBERT, of New York, if it had not been for that letter from the President; so it does not take very much to convince my distinguished friend from Pennsylvania and persuade him to follow the President. I regret that he is one of those distinguished gentlemen that I fear hereafter will

take orders from the White House without waiting to hear any evidence beyond the mere expression of the President's will.

Mr. MOORE of Pennsylvania. Mr. Chairman, will the gentleman yield?

Mr. HUMPHREY of Washington. Yes.

Mr. MOORE of Pennsylvania. Would the gentleman have hesitated to go to a Republican President and ask to get a project through for Puget Sound?

Mr. HUMPHREY of Washington. Is the gentleman through?

Mr. MOORE of Pennsylvania. Yes.

Mr. HUMPHREY of Washington. If I had, and if I could not have made any better showing than has been made here, I would have been ashamed of my friend if he had voted for it.

Mr. MOORE of Pennsylvania. If the gentleman had a letter from the President, I guess he would not have hesitated to use it.

Mr. HUMPHREY of Washington. It would depend on what it was. [Laughter.]

Mr. MOORE of Pennsylvania. Of course, if the gentleman wanted a channel he would not hesitate to go after it.

The CHAIRMAN. The time of the gentleman from Washington has expired.

Mr. SPARKMAN. Mr. Chairman, after the discussion here to-day and what I had the privilege of saying in my opening statement, I do not care to detain the House more than a few minutes. I wish to say that there is not, in my opinion, a single channel or harbor in the entire country upon which a navy yard is located that is in a class with the one now under consideration. The navy yard at Brooklyn, as has been said, is the most important in the entire country, and while it can accommodate the largest battleships afloat or in contemplation it can not, by reason of the shallowness of the channel, be reached by these larger vessels. So far as the political side is concerned, I have nothing to say except that if it is politics that inspired the movement it is the broadest kind of politics, that kind that comes from the performance of a duty to the country, and there is never any objection to playing that kind of politics. Now, with reference to the claim that work can not go on at Diamond Reef and Coenties Reef at the same time, I wish to say that Col. (now Gen.) Black, then in charge of the work in and around New York Harbor, takes a different view. In a letter to the gentleman from Massachusetts [Mr. TREADWAY], dated February 14 last, Gen. Black showed how this can be done. I will read a couple of paragraphs from this letter. They are short and are as follows:

> Before specifications and invitations for bids for the removal of Diamond Reef are issued it will be necessary to make a rather extensive examination of the reef by borings. The work on Coenties Reef should have progressed sufficiently by next fall so that this examination could be made without undue interference with traffic. Upon the completion of the examination the specifications must be prepared and advertised for 30 days. Approximately another month must be allowed for entering into a contract for the work.
>
> It is thought that the actual work of removal of Diamond Reef could be started advantageously about the 1st of January, 1917, if the necessary funds should be appropriated during this session of Congress.

That is the reason, Mr. Chairman, for the authorization in this bill. The $200,000 will permit of the necessary examination and plans and the $500,000 authorized will permit a contract, which the engineers wish to enter into with some contractor as soon as the necessary examination, borings, and plans are made. Gen. Black's letter shows very clearly how much time will be saved by making the appropriation and authorization now. I ask for a vote.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Washington.

The question was taken, and the amendment was rejected.

Mr. HUMPHREY of Washington. Mr. Chairman, I have another amendment to offer, to strike out all of line 4, on page 5, after the colon down to the word "that," in line 10, which is the proviso.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

> Amend, on page 5, by striking out after the colon, in line 4, down to and including "*Provided further,*" in line 10.

Mr. HUMPHREY of Washington. What I really want to do is to strike out the first proviso.

The CHAIRMAN. Debate upon this paragraph and all amendments has been exhausted. The question is on the amendment offered by the gentleman from Washington.

Mr. HUMPHREY of Washington. Oh, no.

The CHAIRMAN. The Chair expressly so stated.

Mr. HUMPHREY of Washington. I did not so understand that. I ask unanimous consent to proceed for five minutes.

The CHAIRMAN. The gentleman from Washington asks unanimous consent that he may proceed for five minutes. Is there objection?

Mr. SPARKMAN. Mr. Chairman, I ask unanimous consent that all debate on this paragraph and all amendments thereto end in seven minutes, and that the gentleman have five minutes of the time.

The CHAIRMAN. The Chair will state to the gentleman from Florida that debate is now being ended on all amendments to the paragraph. If he desires to make a unanimous-consent request, it will be submitted. Is there objection to the gentleman proceeding for five minutes? [After a pause.] The Chair hears none.

Mr. HUMPHREY of Washington. Mr. Chairman, I am reading from the hearings on page 33. Mr. SMALL, a member of the committee, asked this question of Col. Black:

> Now, if this committee should undertake to include that in this bill, how much of that $700,000 would you require—how much could you economically spend for the next fiscal year, or until the next river and harbor bill, which must be passed at the short session in December?

To which Col. Black replied:

> I could not expend in that time over $200,000.

Now, we have heard a great deal about preparedness and the necessity for economy, and here is a statement made by the engineer who has the matter in charge, to the effect that we are giving them $500,000 more than he can use. That may not be politics, but it certainly is not the economy that our Democratic friends have been preaching so much about.

Now, I did not clearly understand the chairman of the committee as to what he said about politics a little while ago. A good deal has been said about it, and a good many references have been made to what I have said about politics. Mr. Chairman, I have no apology for anything I have said in regard to this item being placed in here for political reasons. The fact about it is that it was politics from the beginning to the end. It was adroitly worked. They waited until the committee had finished its bill, and then it was brought to the attention of the committee, when there was no opportunity to consider any of the other items that stood exactly on the same footing. Then the same thing was practiced here on the floor of the House, and I am not going to criticize those gentlemen on the other side of the House for taking their orders from the White House. They have been at it so long that you can not expect anything else, and it has come down to the point where the White House must even dictate the items that go into an appropriation bill. And I am not surprised to see the gentlemen on that side of the House follow the suggestion. They have become accustomed to it.

They are reversing themselves, and if they will follow out the directions of the President, they will reverse themselves every day. He reverses himself on the policy of this bill as he has upon many other propositions.

And I have no apologies to make when I say that this item was placed in the bill for politics and not for preparedness. I am perfectly willing to leave it to the country to judge whether or not I am justified in saying it. The country knows the condition that existed between this administration and the Democrats in New York. They know whether it is worth while just at campaign time to make a reconciliation, and if they want to take a campaign fund out of the National Treasury for the purpose of reconciling Tammary, let them have it if they have the assurance to take it.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Washington [Mr. HUMPHREY].

The question was taken, and the amendment was rejected.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

> Hudson River, N. Y.: Continuing improvement and for maintenance, $640,000: *Provided,* That the Secretary of War may enter into a contract or contracts for such materials and work as may be necessary to prosecute the said project, to be paid for as appropriations may from time to time be made by law, not to exceed in the aggregate $610,000, exclusive of the amounts herein and heretofore appropriated.

Mr. FREAR. Mr. Chairman, I move to strike out the last word.

I believe this is one of the most important projects that we have. At this stage of the proceedings it is very important for us to realize that the gentlemen from New York will probably be bound to this bill irrespective of what else happens, and that had their project preceding this one been struck from the bill those gentlemen would have been against the bill. I speak of that because it shows the way that our waterway bills are constructed. One proposition has to hang with all others; for if it goes down, then the bill goes.

On this particular project the Government is expending $7,500,000 on the Hudson River. It was originally $5,000,000, but it has been increased about $2,500,000. It is to connect with the Erie Canal, which originally was to cost $100,000,000. New York State courageously took that proposition on its own shoulders.

Since that time they have voted something like $35,000,000. The estimates of those who have taken into consideration terminals and all is that $170,000,000 will be borne under this bonded indebtedness for the Erie Canal. That is in addition to $90,000,000 which originally existed, or $240,000,000 in all on the Erie Canal. It would be small and niggardly for this Government to refuse to connect the Hudson River with that project.

But I wish to call attention at this time, Mr. Chairman, because it seems a very important proposition, to the fact that one of the strongest waterway publications in the country, Waterways and Commerce, declares that this project will be useless for commercial purposes, and they go on and give the reasons why, and one of them is that you can not carry a deep-water vessel through that canal.

Mr. PARKER of New York. Will the gentleman yield?

Mr. FREAR. I can not just now. I have only five minutes, and I do not want to take further time in addition to that.

I insert herewith the portion of the article to which I have referred:

[From Waterways and Commerce, March, 1916.]

OF INTEREST TO AMERICANS.

The magazine Waterways and Commerce is all pro-American. It always has been so and always will be pro-American. The founder of this magazine two years ago did not imagine that the day was so near when the United States could have a merchant marine.

Every shipper of merchandise must be familiar with the power of the Interstate Commerce Commission. He must know the intimate relations existing between the railroads of the United States and the merchant ships of Great Britain.

* * * * * * *

We see Canada building the Welland Canal for boats of 25-foot draft, at a cost of $50,000,000, while the Erie Canal, costing the State of New York alone to-day $150,000,000 plus $90,000,000 expended in the past, or $240,000,000 in all, has only a 12-foot draft. More than that, the 12-foot Erie Canal unites with the Hudson River at Albany, where there is only 8 feet of water.

Worse yet, the Erie Canal lock at Oswego accommodates boats of only a 7-foot draft, thereby limiting the Erie Canal to 7-foot-draft boats at the only place where there will be competition with the Welland Canal ships.

Of what use is a 12-foot canal to the 25-foot ships that will use the Welland Canal, and what will be the cost of transshipment from the 25-foot boat to a 12-foot boat and from a 12-foot boat to an 8-foot boat and from an 8-foot boat to a 7-foot boat?

Why spend enormous sums of money on building useless canals? When the Welland Canal is in operation all of our Lake traffic will go by the way of Montreal, because the 25-foot Canadian ships can not use the 7 or 8 or 12 foot American waterway. At best, these Canadian ships will deliver cargoes for American cities to the railroads for distribution.

In addition to that, the opinion of some of the best waterway experts in the country is to the effect that the canal will be practically useless. Now, this is only a prediction on their part, I concede. I trust it will not be so. But it is one of the most important matters for us to consider, by reason of the vote upon it—I admit by the city of New York, largely, and those along the canal—whether or not we should do this. Gentlemen on the floor of the House have told me that they voted against it, believing it was useless. Some of the leading gentlemen in New York having to do with the transportation question believe it will be useless. It is possibly necessary on our part that, New York having expended $170,000,000 for the canal in addition to what was expended before, we should pay $7,500,000 for the approaches, but it is an evidence of our reckless waterway system, which goes on without regard to past experiences.

Now, I simply suggest these things as a prediction coming from men who are waterway experts, or who assume to be, and that is their judgment. I withdraw my pro forma amendment, Mr. Chairman.

The CHAIRMAN. The pro forma amendment is withdrawn.

Mr. PARKER of New York. Mr. Chairman, I wish to strike out the last two words.

The CHAIRMAN. The gentleman from New York moves to strike out the last two words.

Mr. PARKER of New York. Will the gentleman from Wisconsin [Mr. FREAR] tell me whether the authority he has just quoted is not in the form of an advertisement for a ship canal?

Mr. FREAR. I do not so understand it.

Mr. PARKER of New York. Does it not ask at the bottom for a contribution for a ship canal?

Mr. FREAR. I do not understand so. It is written by the editor and is placed on the last page. I shall submit it in the RECORD, and it will answer the gentleman's question. The editor writes it, and I think he is perfectly sincere.

The CHAIRMAN. Without objection, the pro forma amendment is withdrawn. The Clerk will read.

The Clerk read as follows:

Absecon Inlet, N. J.: For maintenance, $25,000.

Mr. FREAR. Mr. Chairman, again I move to strike out the last word. I have not endeavored heretofore to strike out any items, and I do not propose to do so as a rule—that is, to go through the form of making a motion—but I wish to call the attention of the House to various projects here and there, and these are projects that are in the North, and I trust I will not be charged with being sectional in that respect.

This item, Absecon Inlet, receives $25,000. It is a mile long, separating Atlantic City from Brigantine Beach. There are one or two facts showing the nature of the improvements we are making. This is on the New Jersey coast, as you will understand. The appropriations to 1915 were $320,000. This bill carries an item for this project of $25,000. It was reported against by Chief Marshall, but Chief Bixby overruled him. The commerce at that time was estimated at from 2,000 to 7,000 tons daily. That was the estimate of what was to be carried, or upward of 2,530,000 tons a year. The commerce last year was 13,413 tons—only a mere nominal commerce, an insignificant commerce as compared with what was expected.

Now, I want to say that when we are appropriating $25,000 for projects of this kind, after placing $320,000 in a project, it is time for us to stop and ascertain whether or not we are investing our money wisely. I will not call for a vote, and so withdraw my pro forma amendment, Mr. Chairman.

The CHAIRMAN. The pro forma amendment is withdrawn.

Mr. MOORE of Pennsylvania. Mr. Chairman, with respect to this item I wish to say that, if we are to give encouragement to commerce at all, this is one of the instances in which it ought to be given.

Hundreds of thousands of people visit Atlantic City every year. It is the playground of the United States and this is the chief approach to it. Appropriations have been made for far less worthy projects in other sections of the country. I do not question them now, but I want the House to know, with regard to any criticism of the Absecon Inlet projects, that steamboat lines run from Atlantic City to New York and Philadelphia through this inlet. Vessels have gone on the bar here time and time again. It is within the easy recollection of many Members of this House that the *Cherokee* went ashore at this point. The whole country stood aghast because of that incident. Accidents are constantly occurring along the shoals in this vicinity, and there is no earthly reason why the Government of the United States should not take care of the situation. It should encourage the commerce that is created at this port, but it should also provide for the safe passage of vessels which every summer carry hundreds of thousands of human lives. It is one of the instances to which criticism does not fairly apply, because the business concerns and the life and the property are there, and the Government should afford them protection.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Cold Spring Inlet, N. J.: For maintenance, $40,000.

Mr. FREAR. Mr. Chairman, I am expecting that the gentleman from Pennsylvania [Mr. MOORE] will not advocate this project. This is a project for $40,000, in which the engineers only recommend $20,000.

Cold Spring Inlet is located near Cape May. This is for a $1,311,000 project, on which $905,000 has been expended and $961,000 has been appropriated.

As I said, the amount that can be profitably expended is $20,000, according to the engineers' reports, but double that amount is recommended here. The commerce in 1914 was 6,193 tons of commerce, with $103,000 valuation, whereas at the time that this project was placed in the bill originally it was estimated that the valuation would be $2,226,000. That is the engineers' estimate. Here is $103,000.

Now, I wish to quote from the engineers' report, which seems to be very interesting on this point. Capt. Lockwood says, on page 8 of the document:

The project of improvement, if carried to completion, will be of material benefit to the city of Cape May as a pleasure resort by filling the adjacent swamp lands, obliterating mosquito-breeding beds, and furnishing opportunity for expansion of building sites.

That was the determination of the engineers. Let it be said that the real estate company that was making this improvement, as they called it at that time, put up $100,000, but I understand that the gentleman from Illinois [Mr. MADDEN], when this bill was up before, presented the condition of affairs, and showed it was a real estate project.

But let us read from Capt. Flagler's report, page 5, under date of August 14, 1905, Document 388, Fifty-ninth Congress. He said that this improvement—

would also permit a resumption of the yacht races that were at one time sailed at Cape May and formed the most attractive event of the season. The Cape May cup, an international trophy, I am informed, is now sailed for at New York.

He proceeds, further, as follows:

Together with the projects in real estate improvements at Cape May, the establishment of a secure harbor would, I am sure, largely increase the present patronage of summer visitors at this locality.

This was to get the races away from you gentlemen at New York. Mr. Chairman, it is a real estate project. I do not care what administration it was put in under; I do not care where it is located; it was a real estate proposition originally. This appropriation doubles the engineers' recommendation, which only asked for $20,000. The committee have put in $40,000. It accommodates 6,000 tons of commerce annually, and I move to strike it out.

Mr. SPARKMAN. Mr. Chairman, I wish to say just a few words on the motion made by the gentleman from Wisconsin, for the purpose of explaining the position of the committee with reference to this matter.

This project was adopted in the bill of 1907. Three projects were suggested by the engineers. The board recommended the smaller project, and the chief, after stating that it was a question that only Congress in its wisdom should decide, concurred with the board and advised the adoption of the least expensive of the three. The Committee on Rivers and Harbors, however, recommended the most expensive upon condition, among other things, that the locality should contribute a given sum of money toward the work. In this recommendation the House concurred and the project was adopted.

Mr. KITCHIN. How much has been expended?

Mr. SPARKMAN. Nearly $1,000,000.

Mr. FREAR. About $900,000.

Mr. SPARKMAN. Now, the project was at one time considered as completed, but there is a system of jetties there which have deteriorated, so that the channel has been filling up, and if something is not done will soon become useless so that if we are going to keep it up at all, it is absolutely necessary to appropriate this money. It is true that only $20,000 was originally estimated by the engineers for this bill, but later on, and after further investigations, the engineer in charge found the injury more serious than when the first estimate was made and recommended that the amount be increased to $40,000 instead of $20,000. Now it is for the House to say what shall be done, but if you are going to keep up the project you must appropriate this money. If you do not intend to keep it up, but wish to abandon it, then, of course, it can be stricken out.

Mr. HULBERT. Will the gentleman yield for a question?

Mr. SPARKMAN. Yes.

Mr. HULBERT. What was the amount of money expended for the improvement of this harbor last year?

Mr. SPARKMAN. Fifty-six thousand dollars.

Mr. HULBERT. Fifty-six thousand dollars last year, and you intend to give $40,000 more.

Mr. SPARKMAN. That is the proposition.

Mr. HULBERT. Will the gentleman yield for one further question?

Mr. SPARKMAN. Certainly.

Mr. HULBERT. We have heard a whole lot here about the greatest waterway expert in America. Was not this particular project adopted while Mr. Burton was chairman of the Committee on Rivers and Harbors?

Mr. SPARKMAN. That is true; and it was adopted in the bill of 1907, which has been regarded by some experts, at least, as the very best river and harbor bill that ever passed through this House or ever became a law.

Mr. MOORE of Pennsylvania. Mr. Chairman, during my first session of Congress this matter of the Cold Spring Inlet was brought up in the river and harbor bill. I remember it very well, because we were intensely interested in opening up the approaches to the Delaware River at that time. Cold Spring Inlet was about 14 miles above the entrance to Delaware Bay, and there was a great deal of discussion as to whether it was such an improvement as could be successfully maintained by the Government. There were certain suggestions of private ownership of land, and the maintenance of the project was also a debated question; but the then chairman of the River and Harbor Committee, Mr. Burton, of Ohio, who is often referred to with very great admiration by the gentleman from Wisconsin [Mr. FREAR] as one of the leading experts of the country, made one of the most eloquent and forceful appeals I have ever heard, urging the adoption of the project.

Mr. BUTLER. Will the gentleman yield?

Mr. MOORE of Pennsylvania. I yield to the gentleman.

Mr. BUTLER. I remember when the gentleman came to Congress, and we gave him a very welcome reception. We were mighty glad to have him come.

Mr. MOORE of Pennsylvania. I thank the gentleman. I was glad to get here.

Mr. BUTLER. Does the gentleman recollect having heard Senator Burton commend this project?

Mr. MOORE of Pennsylvania. I was about to say that the greatest waterway expert of the country advocated this project most earnestly and eloquently at that time. I mention it because my friend from Wisconsin, Mr. FREAR, is very proud of the information he obtained from Mr. Burton, who was then chairman of the River and Harbor Committee, and who is undoubtedly a great waterway expert. At that time the galleries were filled, the floor was occupied by Members in larger numbers than we usually see here.

The gentleman from Illinois [Mr. MADDEN] had made a speech very much after the fashion of the speech just made by the gentleman from Wisconsin [Mr. FREAR]. He had before him a map indicating the lots that were to be sold. He pointed out on the map the territory that was to be covered by the sand that was to be dredged up from the sea, so that summer residents might obtain attractive home sites, and all that. I recall the discussion very well; it was memorable because of my interest in the Delaware River. The gentleman from Ohio, Mr. Burton, was in charge of the bill; it was said to be one of the best and most economical of all river and harbor bills ever brought into Congress. I remember that the gentleman from Ohio turned to that side of the House as if to give a challenge and said, "Is there anyone on this side who opposes this project?" Then he turned to the other side and with a sweep of his arm said, "Is there anyone on this side who rises to oppose this project?" No one having arisen, and the argument being concluded, the question was put and the item went into the bill. It is true that it held up the improvement of the Delaware River for some time, but it was supported by the gentleman from Ohio and it went into the bill. The gentleman from Ohio put that project in the bill. The improvement has been made. The engineers, who once reported against the project, said they could do the work if ordered to do so, and they did. The jetties were built and now the sweeping sands——

Mr. MADDEN. Will the gentleman yield?

Mr. MOORE of Pennsylvania. I can not yield now. It is true the harbor fills up and the channel has to be cleared occasionally for the vessels that use it. A million dollars has been spent at this point, and now the question of maintenance naturally arises. The harbor is a good harbor for the people of Cape May and those along the Atlantic seaboard who desire to use it. Small naval vessels, yachts, and other boats go in and out, and cargoes of fish and other commodities are transported to different ports. The channel has to be kept in order. It ought to be, and I trust the work done in 1907 by the gentleman from Ohio will not be abandoned now through the failure of an appropriation to keep this channel clear.

Mr. FESS. Mr. Chairman, I do not think that Mr. Burton needs any defense from me or from anyone else in the House. His name has been frequently used in this debate on the rivers and harbors bill. I have been studying the make-up of this bill, and I have no criticism on it. I do not know enough about it in detail, and I try to be a student of the legislation so as to be intelligent on questions upon which I am called to vote. After a project has been undertaken, I can not without knowing all the facts say whether I would support it or not, and therefore I must take it largely from the committee.

I was in favor of the project that was voted into the bill a while ago—the East River item—because it seemed to me a good one, but I was not in favor of the manner in which it was put in. It seemed to me that that was open to severe criticism.

It is a very easy thing to take a position at one time and to see the necessity of changing it later on. Many reasons may be assigned for modification of one's position. I have no condemnation for anyone who changes his mind. I think it was Lowell that said that new times demand new duties. Time makes ancient good uncouth.

Senator Burton took a position. He is well known upon that position. He has been severely criticized for not following what seemed to be the position he originally took. I do not know whether he was inconsistent or not. I do not have the facts, but I do know that he has refused to stand for certain projects when it would appear that it would be to his favor personally to do it. I do know that a committee or a representative came here from Cleveland appointed by the Chamber of Commerce or other commercial body of the city to ask him to stand for a project for the city that would require a great deal of money. I know, too, that the committee or members of the Rivers and Harbors Committee, to which the representatives went, declared that Senator Burton's indorsement was necessary, and it was further declared that if he indorses the same this matter will go through. I do know that Senator Burton said to the representatives from Cleveland that while it would be his personal pleasure as well as his political advantage if such a project could be put into the bill, yet he could not indorse it because it did not seem to him that it was justifiable. And with the statement made by the representatives of the com-

mercial interests of Cleveland that if he would indorse it the committee would do it, he said that he could not indorse it, and he would not.

I do not think that whatever criticism Mr. Burton may be subject to no one will charge him of taking advantage of a situation that confronted him, when to do so would be more easy than not to do so. I say to you that I do not know about the change of course that has been mentioned here, but I do not think that his motives are open to the criticism that strikes me has crept into this discussion. While I do not rise to defend his name because I feel that such defense is necessary, I simply call the attention of the House to his exalted position on public questions, always free from personal grounds and based upon the plane of a statesman, of which he is a splendid example.

Mr. BACHARACH. Mr. Chairman, I represent the district that Cold Spring Harbor is located in. I want to say that it is the only harbor of refuge from Delaware River to Sandy Hook and the only place a boat can go in and find any depth of water in stress of weather. I think there is about 70 feet over the bar after they get inside. The people appropriated $100,000 toward the $1,000,000 which the Government is expending, and they have spent several hundred thousand dollars inside to get a sufficient depth of water. Many boats do go in and out of there, also using the harbor of refuge.

I want to state in contradiction of what the gentleman from Wisconsin has stated about the channel never being used that it has been used by torpedo boats and other boats of the Navy and that the commercial end of it is gradually growing. In addition to that there are a number of small passenger boats that go in and out of there to other nearby points.

Let me read a letter received by me March 5 from the Engineer of the War Department.

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF ENGINEERS,
Washington, March 6, 1916.

Hon. ISAAC BACHARACH,
House of Representatives.

SIR: 1. Replying to your letter of the 4th instant, asking for information in regard to the Cold Spring project, I beg to say that the report upon which this project is based is printed in House Document No. 388, Fifty-ninth Congress, second session. The Annual Report of the Chief of Engineers for 1915, which is printed as House Document No. 91, Sixty-fourth Congress, first session, gives the status of the work on June 30, 1915. Both of the documents referred to you can undoubtedly obtain from the House Document Room.

2. You will note that the only estimate which was submitted in the annual report is $20,000 for maintenance of the improvement, and in the footnote on page 351 it is stated that the "funds on hand are sufficient to complete the project, and further appropriation will not be needed."

3. Due to unexpected shoaling and the necessity for repairs to the jetties a larger appropriation became necessary than was indicated last June. The changes which had occurred in the condition of the work subsequent to the time the annual report was submitted were described to the River and Harbor Committee when the amounts which should be appropriated were being considered, and it is assumed that it was upon the information thus obtained that the committee recommended the appropriation of $40,000 instead of $20,000 as estimated for originally.

4. No printed reports other than the documents referred to and the regular annual reports which have described the progress of the work year by year are available.

Very respectfully,
H. TAYLOR,
Colonel, Corps of Engineers,
Acting Chief of Engineers, United States Army.

Mr. COOPER of Wisconsin. Will the gentleman yield?

Mr. BACHARACH. I will.

Mr. COOPER of Wisconsin. I understood the gentleman to say that this was the only harbor of refuge between the Delaware River and Sandy Hook.

Mr. BACHARACH. With a sufficient depth of water.

Mr. COOPER of Wisconsin. What is that distance?

Mr. BACHARACH. From Sandy Hook about 135 miles.

Mr. LENROOT. How far from Delaware River?

Mr. BACHARACH. About 15 miles.

Mr. LENROOT. Mr. Chairman, I move to strike out the last word.

Mr. SPARKMAN. Mr. Chairman, I did not suppose that this item would call for an extended debate, and I move that all debate on the amendment close in five minutes.

The CHAIRMAN. The gentleman from Florida moves that all debate on the pending amendment close in five minutes. Is there objection?

There was no objection.

Mr. LENROOT. Mr. Chairman, I do not know whether the committee observed a statement of the chairman of the committee with respect to this item. He stated that it was reported because it was the carrying out of an adopted project, and stated, as to whether or not this should be continued, the committee itself had no opinion, but left it to the House to decide.

Mr. SPARKMAN. Mr. Chairman, if the gentleman will yield, I do not know but that my language was open to that construction, but I did not intend to say that. The committee did have a decided opinion on the subject, but I stated that as to whether the committee was going to be sustained or not was a matter to be left to the House—that is, whether the item should remain in the bill would be left to the House.

Mr. LENROOT. Mr. Chairman, of course that would be true of every project that comes in the bill. What I wanted to say is this, that if this Congress desires to be relieved from the charge, and a just charge, that the river and harbor bill is a pork-barrel proposition, it must come to that point where it will strike out such items as is now before the committee. The defense for this item is wholly that it has heretofore been adopted by Congress and was indorsed by Mr. Burton, who was then a Member of the House. I submit that we are entitled to better evidence than that. The question of whether or not an appropriation should be made ought to be considered in the light of circumstances as they now exist, and if it is clear that a project that has heretofore been adopted ought not to have been adopted, or if, after being nearly completed, it has been shown that it was not such a project as warranted Government appropriation, then, notwithstanding the fact that it is the carrying out of an existing project, this House, if it does not wish to stand for pork-barrel bills, should treat it upon its merits and vote out an item that ought not to be there.

With reference to this item I hold in my hand a report of the Board of Engineers. The project is 93 per cent completed—practically completed—and has cost nearly $1,000,000. The tonnage last year was 6,000, and upon a basis of $40,000 per year for maintenance it will cost the Government $6 per ton. Is that the kind of business administration that this Congress ought to indulge in in river and harbor appropriation bills? Mr. Chairman, I am in favor of a river and harbor bill; I think it is one of the most important things that this Congress can deal with. The improvement of our rivers and harbors is a matter of vital importance; but because I am in favor of a proper river and harbor bill, because I want to see such a bill relieved of just criticism, I believe that this House, when it comes to items like this, ought to strike them out of the bill; and if we will treat some of these propositions upon that basis, then it will no longer be said of the different river and harbor appropriation bills that they are pork-barrel propositions, and people will not be able to point to a few items like this to substantiate it.

Mr. BACHARACH. Mr. Chairman, will the gentleman yield?

Mr. LENROOT. Yes.

Mr. BACHARACH. The gentleman referred to the tonnage. He did not speak of the passengers, though I think that is referred to right on the same page of the report.

Mr. LENROOT. No, it is not.

Mr. BACHARACH. The passengers taken over and returned from the fishing banks were 5,083. I merely desire to call attention to that to show that it is valuable for passenger service.

Mr. LENROOT. Even that does not authorize an appropriation of $40,000 a year upon the part of the Government for 5,000 passengers and 6,000 tons of merchandise.

Mr. BACHARACH. The gentleman realizes, of course, that $40,000 is an unusual proposition, owing to the fact that it has shoaled up this particular year.

Mr. LENROOT. The gentleman does realize that the engineers recommended $20,000, and I say that any project that calls for an appropriation of $20,000 a year upon the showing made here is not justified and is nothing but pork.

The CHAIRMAN. The time of the gentleman from Wisconsin has expired. All time has expired. The question is on the amendment offered by the gentleman from Wisconsin.

The question was taken; and on a division (demanded by Mr. LENROOT), there were—ayes 24, noes 26.

So the amendment was rejected.

The Clerk read as follows:

Woodbridge Creek, N. J.: For maintenance, $3,000.

Mr. FREAR. Mr. Chairman, I move to strike out the last word. The last project which was commented upon was criticized because of the fact that it was a real-estate project. I am not moving to strike this out, although I want to state to the House what it appears to be from the engineer's report. Let me say, incidentally, I do not think that the gentleman who has been criticized on this floor, Senator Burton, needs any defender, although the gentleman from Ohio [Mr. FESS] defended him so well. He is the ablest expert, I believe generally so considered, excepting in the mind of, perhaps, several gentlemen who may have that opinion of themselves. He has done more for the waterways of this country possibly than any other man, and he has done it sincerely, but he has made mistakes in judgment, as every man has made upon the subject of waterways who has recommended many of these projects. This one project

carries only $3,000, but there is a balance unexpended of $6,000, and I want to call attention to the fact that, so far as the record shows, it has to be expended—and that is the engineer's recommendation—for a channel 1¼ mile long up to Vallentine's private dock. I do not believe that it is a right use to make of public funds. Mr. Vallentine can well afford to give the money if he chooses to, or he can make some contribution. I do not understand on what principle we are entitled to go to work and use public funds for a private interest of this kind for a mile or a mile and three-quarters. I call attention to the fact that commerce to the extent of 203,000 tons went through this channel in 1912, but had diminished to 59,000 tons in 1914, showing a loss of 70 per cent in two years.

Let me call attention to another fact. Very few Members have an intelligible understanding of the project, and it involves, just as the other did, a real estate project. The question is, Are you going to use public funds to help out private concerns. The dredging company receives 35 cents a yard for dredging, whereas in Woodbury Creek they receive 8¾ cents. I do not know but that that may be a fair proposition, but I can not fail to remember what the gentleman from Iowa [Mr. GOOD] said at the last hearing of the committee, that nearly twice as much is paid to private contractors for dredging as is paid out by the Government when it does its own work. Here is a case where we are paying 35 cents a yard instead of 8¾ cents a yard for a commerce that fell off 70 per cent last year. I do not know that I care to say anything further.

Mr. PARKER of New Jersey. Mr. Chairman, will the gentleman yield?

Mr. FREAR. Yes.

Mr. PARKER of New Jersey. Does it not appear, even from what is found here, that there are a good many docks on this project? The Salamander is the farthest up, and then Vallentine's, and there are various other docks within the township of Woodbridge.

Mr. FREAR. That may be true, but, so far as the official reports show, there are no public docks there—no public wharves.

Mr. CLARK of Florida. Mr. Chairman, I move to strike out the last two words and I do that for the purpose of referring to some remarks made a few days ago by the gentleman from Illinois [Mr. MADDEN].

The gentleman from Illinois [Mr. MADDEN] in discussing this bill undertook to draw a comparison with reference to the appropriations made in the bill for the State of Illinois and the appropriations made in the bill for the State of Florida. The gentleman stated that the State of Illinois paid some $5,618,400.38 for income and corporation taxes in the last fiscal year, and the State of Florida paid $228,358.85 for those purposes, and the State of Illinois got in this bill some $850,000, whereas the State of Florida got some $950,000, and some odd. I want to state, Mr. Chairman, in the first place, that the river and harbor bill is not constructed as the gentleman appears to believe upon the theory of allotting money pro rata among the several States. The river and harbor bill is constructed upon the theory of taking care of the river and harbor projects of the country in the interest of the commerce of the country. And I want to say, Mr. Chairman, if the gentleman is to draw that rule, and if that is to be the basis of river and harbor appropriations, that since this Government began appropriating money for river and harbor improvement the State of Illinois has received $19,874,336.32, with only 325 miles of navigable rivers and no sea coast to take care of, whereas the State of Florida has received $17,535,579.88, with 3,421 miles of coast line and navigable rivers to be taken care of. [Applause.] The fact of the business is that the rivers in the State of Illinois were cared for years ago and their improvement practically completed, and I presume the gentlemen from that State are satisfied with what has been done. Mr. Chairman, that is not all. The gentleman stops with the corporation tax and the income tax, but I want to remind him of the fact that the State of Illinois receives annually out of the Treasury of the United States for pensions the magnificent sum of $11,409,082.92, while the State of Florida receives only $1,027,368.29.

Mr. MADDEN. Will the gentleman yield?

Mr. CLARK of Florida. For a question.

Mr. MADDEN. And the State of Illinois furnished the men to defend and preserve the Union, while the State of Florida did everything it could to destroy it. [Applause on the Republican side.]

Mr. CLARK of Florida. But, Mr. Chairman, the men in Florida who are drawing these pensions are men who came from his State and from every other Northern State and live in the State of Florida, and they are Union soldiers just the same as your people are Union soldiers. [Applause on the Democratic side.] The natives of Florida and the natives of the other Southern States who live in Florida draw practically nothing in pensions from the Government of the United States.

Mr. MADDEN. They are not entitled to them and ought not to draw them.

Mr. CLARK of Florida. I am not saying they are, and I want to say, Mr. Chairman, I shall never vote for them to do it. I would be ashamed of myself if I did.

Mr. Chairman, that is not all.

The CHAIRMAN. The time of the gentleman from Florida has expired.

Mr. CLARK of Florida. Mr. Chairman, I ask unanimous consent for five minutes more.

The CHAIRMAN. The gentleman from Florida asks unanimous consent to proceed for five minutes more. Is there objection.

There was no objection.

Mr. CLARK of Florida. That is not all. The State of Illinois has had $19,874,336.32, the figures which I have mentioned, which makes $61,153.34 contributed to every mile of navigable streams in the State of Illinois, while the State of Florida has received $17,535,579.88, which makes $5,126.15 for every mile of her navigable waterways.

Mr. MADDEN. Will the gentleman yield for another question?

Mr. CLARK of Florida. I will.

Mr. MADDEN. Will the gentleman tell the House how much Illinois contributed more than the State of Florida contributed toward the revenues of the Government out of which this expenditure was made?

Mr. CLARK of Florida. Yes. I will tell the gentleman that Illinois pays a great deal more than does the State of Florida, and I will also tell him that the population of the State of Illinois is 5,628,591, while the population of the State of Florida is only 752,619, about half of them negroes, who do not pay a dollar of taxes.

Mr. MADDEN. And not allowed to vote, either, I suppose?

Mr. CLARK of Florida. And will not be, I will say to the gentleman. [Laughter.]

Mr. Chairman, if the gentleman's theory is true, then the States of Arizona, Wyoming, Idaho, Utah, Nevada, Colorado, New Mexico, and Oklahoma, which do not get a dollar for the improvement of rivers and harbors, do not get their share. These States get nothing in this bill, however, for the simple reason that they have no navigable waters within their borders.

Mr. Chairman, the gentleman's statement was made purely for political and sectional purposes. [Applause on the Democratic side.] I have never during my 11 years' service in this House—and no man upon this floor can say to the contrary—uttered one word calculated to stir up sectional prejudice in this country. If it is true that we are all citizens of this country, we are asking for nothing more here than we are entitled to by reason of the rivers and harbors that happen to be in our section.

Mr. Chairman, the gentleman states that northern Democrats upon this floor are bound by caucus rule. He knows that no caucus has been held upon this bill. He knows that every Member of this House, be he Democrat or Republican, and no matter from what section he comes, is at liberty to vote as he pleases upon any amendment and upon the bill as a whole. No caucus has tied the hands of anybody.

I want to correct my statement of a moment ago by saying this: That in the State of Florida we have no law denying to any man the right to vote. They simply have a poll-tax prerequisite and the Australian ballot, which is an educational qualification, and that is the reason the ignorant are denied a vote; but if the gentleman means to intimate that we ought to allow those people to control us, I say to him that we never will do that, no matter what happens in this country. [Applause.]

Mr. Chairman, under the leave granted to extend my remarks I desire to submit one or two more thoughts in this connection. The complaint of the gentleman from Illinois [Mr. MADDEN] that his State is not being treated fairly, that this is a sectional bill, and that "the South is truly in the saddle" is unjust and with no basis of fact to support it.

Take, for instance, the matter of public-building construction by the Federal Government in the different States, and we will find that since the State of Illinois has been a State in the Union there has been expended for the erection of Federal buildings within her borders the sum of $16,100,525.70, while within the State of Florida the United States Government has only expended the sum of $3,018,867.71. And in this present Congress the city of Chicago alone, through its Representatives upon this floor, is asking for $4,250,000 additional to $1,750,000 already authorized, making a total of $6,000,000 with which to purchase a site upon which to erect a new Federal building for that great city. But, Mr. Chairman, I am not criticizing

either Chicago or the State of Illinois. I glory in the achievements and the progress of that magnificent city and great Commonwealth. Year after year the South and the West pour millions into the coffers of Chicago, and as patriotic American citizens we take just pride in her progress.

I am an American citizen, and I wish every portion of my great country Godspeed in the march of progress. I would place no obstacle in the pathway of any city or State within the broad domain of this Republic, and I would consider myself unworthy of a seat in this historic Chamber if I should by word or deed seek to rekindle the dead embers of sectional hate.

I have said that the negro did not, as a rule, vote in my State. He does not vote not because the right to vote is arbitrarily denied him. We have in the State of Florida the Australian ballot in its purity and simplicity. No ornament, party emblem, or other distinguishing mark is on the ticket. The names of candidates for each office are placed on the ticket alphabetically and no voter unless he be blind can be assisted in marking his ticket. The voter goes in the booth alone, and he must make a cross mark to the left of each person's name for whom he desires to vote. It will thus be seen that he must be able to read before he can vote intelligently. This is our educational qualification and the only one we have. Does the gentleman from Illinois think this is unfair?

We also levy each year a poll tax on all males between the ages of 21 and 55, and unless a man shall have paid his poll taxes for the two years immediately preceding the year in which he offers to vote he can not cast his ballot. This poll tax is only $1 a year and it goes into the school fund of the State. Does the gentleman from Illinois think this is unfair? The great mass of the negroes can not read and hardly any of them will pay their poll taxes, and consequently very few of them vote. We disfranchise them in no other way. But I want to say to the gentleman from Illinois and to all the world that we of the South agree with George Washington when he said in his Farewell Address that "the intelligence and virtue of a country must rule it." We regard the negro as an inferior being—made so by God himself—and we will never consent that the negro shall dominate in our affairs. And it is time that those who are not his friends, but who profess to be for selfish political purposes, quit trying to instill such notions into his head.

The men on both sides who fought out the War between the States ceased fighting at Appomattox, and from that day until this good hour no real soldier on either side has endeavored to rekindle the fires of sectional animosity. It does seem to me, Mr. Chairman, that more than 50 years having elapsed since the close of that awful fratricidal struggle, the man who would reopen the old wounds and attempt to supplant brotherly love with sectional hate is, indeed and in truth, an enemy to his country. We of the South have accepted the results of that great war in good faith; we have demonstrated that good faith by the sacrifice of the lives of our sons and brothers on land and sea in the War with Spain. If unhappily our beloved country should become involved—which God forbid—in war with some other foreign power, the best blood of the South will be willingly offered on our country's altar. This is our country, and Old Glory is our flag. Let us, then, as one people of one country with one flag move forward to the music of national progress toward the high destiny decreed for us by the Creator of Nations.

Mr. MADDEN. Mr. Chairman, I move to strike out the last word.

The gentleman from Florida [Mr. CLARK] seems to be worried about what I said. I simply stated a few facts taken from the records of the Democratic administration as to where the revenue comes from and where it goes. He does not like it. It seems to hurt. Then he commences to argue about how much Illinois has received since its organization as a State for river improvement. He forgets to tell how many more hundred million dollars it has paid into the Treasury than it has taken out. The gentleman also forgets to state how much less Florida has paid into the Treasury of the United States than it has taken out.

Now, as to the question of whether men are prohibited from voting just because they are black, I want to say to the gentleman from Florida that the time must come, and I hope to God it will come soon, when every man that lives under the Stars and Stripes, whether he is black or white, will be permitted to exercise his rights as an American citizen, as provided by the Constitution of the United States. [Applause.]

Ah, the gentleman says they have no law that prohibits men because they are black from voting, but he says they have methods by means of which they produce the same result.

Mr. McKELLAR. Mr. Chairman, will the gentleman yield there?

Mr. MADDEN. No; I must refuse to yield at this time. He says they propose never to permit these men to vote. Well, I suppose that will be true if they have their way. But there are 10,000,000 of these people in America. They will rise in their might some day against those who are keeping them down. They have been loyal to the flag. They have fought in every battle that has been waged for the liberty of the Nation. They have shed their blood upon every battle field. They are law-abiding citizens. They are loyal to the country and to the Constitution, and they are entitled to better consideration than they are receiving at the hands of men like my distinguished friend from Florida, who has just taken his seat. And I resent the attitude of the gentleman from Florida and all who think and act as he does upon that question, because I believe that every human being, no matter what his creed or what his color, is entitled to his right to participate in the activities of this Republic, if he be a citizen of the United States. Oh, you do not ask these men what the color of their skin is when you want them to fight for the flag. Oh, no. You only ask them what the color of their skin is when they want to exercise their right of franchise. You did not ask those men who went to Santiago, who led the charge at San Juan Hill, what the color of their skin was when they won the victory for our flag there. You did not ask them what the color of their skin was when they fought with Gen. Jackson at New Orleans. Oh, no. You did not ask them what the color of their skin was when they fought in the Revolution, and no one asked them what the color of their skin was when they fought for the preservation of the Union under which we now all live in that degree of prosperity and happiness of which we are all so proud. [Applause.]

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. CLARK of Florida. Mr. Chairman, I ask leave to extend my remarks in the RECORD.

The CHAIRMAN. The gentleman from Florida [Mr. CLARK] asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Keyport Harbor, Matawan Creek, Raritan, South, and Elizabeth Rivers, Shoal Harbor, and Compton Creek, N. J.: For maintenance, $10,000.

Mr. HUMPHREY of Washington. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Washington moves to strike out the last word.

Mr. HUMPHREY of Washington. It is with great reluctance, Mr. Chairman, that I propose to add anything to the gaiety that has been created in this discussion. But I want to call the attention of my friend from Florida [Mr. CLARK] to the fact that if he had been on the floor of the House to-day when the discussion was had awhile ago he would have hesitated to make the statement that gentlemen on that side of the House voted as they pleased in regard to the items of this bill. If he had made an exception of the item in regard to New York Harbor, he would not have had to revise his statement.

Mr. CLARK of Florida. Mr. Chairman, will the gentleman yield?

Mr. HUMPHREY of Washington. Yes.

Mr. CLARK of Florida. Does the gentleman mean to say that there has been a caucus on the New York item or on any items to bind Democrats on this bill?

Mr. HUMPHREY of Washington. Oh, it is not necessary to have a caucus for the Democrats to know how they will vote. All that it is necessary to have is an intimation from the White House. You did not have to call any caucus. [Laughter and applause on the Republican side.] That is what I am saying. With the exception of that one item, where they got their direction from the White House, that is probably true. I am sure my good friend the gentleman from Florida was not on the floor or he would not have made that statement.

Mr. CLARK of Florida. Did the gentleman oppose the New York item?

Mr. HUMPHREY of Washington. I supposed I did. I made a good deal of noise about it. [Laughter.]

Mr. CLARK of Florida. I understand about the noise; but did the gentleman vote against it?

Mr. HUMPHREY of Washington. I certainly did.

Mr. CLARK of Florida. Was there a call for a division?

Mr. HUMPHREY of Washington. Oh, there was no call for a division. I knew that the Democrats would do what they were told to do over there. [Laughter on the Republican side.]

Mr. MANN. If that side wants a division on every vote, you can have it.

Mr. CLARK of Florida. I was asking the gentleman from Washington why, if he was opposed to that item, he did not call for a division.

Mr. MANN. And I was butting in. [Laughter.]

Mr. HUMPHREY of Washington. I did not want to take up unnecessary time. I could see, as anyone could see, that it was not necessary to prolong the agony any further. I was certainly opposed to that item in the bill. I do not think it was justified, and I do not think it was put in there for any other reason than as a political favor.

Mr. CLARK of Florida. Will the gentleman allow me to ask him one more question?

Mr. HUMPHREY of Washington. Certainly.

Mr. CLARK of Florida. Did any of the Republicans vote for that item? [Laughter on the Democratic side.]

Mr. HUMPHREY of Washington. Oh, you can always find some misguided Republicans that will vote occasionally with the other side. [Laughter.]

Mr. CLARK of Florida. Did the President tell them to vote for it? [Laughter on the Democratic side.]

Mr. HUMPHREY of Washington. Well, you can ask the gentleman from Pennsylvania [Mr. MOORE] about that. I was a little bit suspicious of the way he acted on that. [Laughter.]

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Shrewsbury River, N. J.: For maintenance, $10,000.

Mr. MOORE of Pennsylvania. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. MOORE of Pennsylvania. I wanted to get the parliamentary status. Is the Clerk reading the bill?

The CHAIRMAN. Yes.

Mr. MOORE of Pennsylvania. A parliamentary inquiry. Under those circumstances "the gentleman from Pennsylvania" would not have a chance to answer the question propounded by the gentleman from Florida [Mr. CLARK]?

The CHAIRMAN. The Chair thinks the gentleman from Pennsylvania is familiar with the rule that entitles a Member to the floor.

Mr. MOORE of Pennsylvania. I am, and I yield to the rule.

Mr. MANN. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Illinois moves to strike out the last word.

Mr. MANN. The gentleman from Florida was not in the Chamber when the New York item was discussed and voted upon. I noticed on the floor a little while ago that he evidently was receiving some coaching from Members who were in the Chamber.

Thereupon, with a view to showing that the gentleman from Washington was not in favor of his own motion to strike out, he asked the gentleman from Washington whether he had asked for a division. I asked the gentleman from Washington not to ask for a division merely for the purpose of not having undue delay; but if every time a gentleman offers a motion gentlemen on the committee are going to take it that he is not in favor of his motion because he does not ask for a division, I will not only ask for a division each time, but for tellers. If gentlemen on that side of the House want delay of that kind, we will give it to them. [Applause on the Republican side.]

The Clerk read as follows:

Mantua Creek, N. J.: For maintenance, $10,000.

Mr. FREAR. Mr. Chairman, I move to strike out the last word. The criticism may be made a little later on against those who are objecting to different items that, as suggested by the gentleman from Florida [Mr. SPARKMAN], there is something sectional in these objections. I am endeavoring to show that there is absolutely nothing of that kind; that the projects mentioned are objectionable in some features; and I believe that the facts ought to be disclosed to the House, irrespective of where they may be located.

Take, for instance, this Mantua Creek item of $10,000. The Engineer's report says that it is 85 per cent completed and that the remainder is unimportant. On page 2215 the Engineer says:

No operations were in progress during the year, as no dredging was necessary for maintenance in the portion of improvement completed, nor any repairs to the jetties, and the remainder of the project is unimportant.

And yet we are appropriating $10,000 in this bill, as is disclosed here, to put a channel of 12 feet up to J. P. Thomas & Sons' phosphate works. Now, if that be a proper expenditure of the public money, it is just as fair to put it down at Northeast River, N. C., as it is up in New Jersey, because the same proposition came up at Northeast River. There is no choice between the two. That is the purpose, as suggested by the engineer's report. There is no local contribution. It is just a question of making an outright appropriation to reach a private factory. The engineer's report shows, as to the ordinary traffic there, that the loss in commerce was 45 per cent in the last two years.

Mr. MANN. Do I understand the gentleman's position to be that if there is an industry there, the fact that it is a private industry—and all industries are private—is a reason for not making an improvement to navigation in order to reach the industry?

Mr. FREAR. I am very glad that the gentleman asks that question, because I did not make it clear. In our bill we insist time after time on local contributions. We urge that the locality shall make its fair contribution toward the project. Not often, I admit, but occasionally. We insist on that on projects in Texas and California, and some other places. But here there is no imposition of any terms, and I say when you are making an improvement up to a private wharf—because it is not a public wharf, as I take it—up to the private wharf of a manufacturing institution of this kind, there ought to be some contribution by that concern. If not, you can see how wide open we throw the doors of the Federal Treasury for the purpose of making these improvements, or dredging up to every wharf where a channel is desired.

Mr. SPARKMAN. Has the gentleman the figures as to the tonnage there?

Mr. FREAR. There was a tonnage of 113,000 tons last year, and a loss of 45 per cent, but where it occurs there is nothing to show.

Mr. SPARKMAN. I know the gentleman stated the percentage of loss. What is the present tonnage?

Mr. FREAR. The present tonnage is 113,000 tons, of which 90,000 tons is fertilizer.

Mr. SPARKMAN. I notice the gentleman has a special dislike for fertilizer.

Mr. FREAR. Oh, no.

Mr. SPARKMAN. And I would like to inquire if he does not wish us to improve the rivers of the country so that we can even carry fertilizer?

Mr. FREAR. I will answer the gentleman that my objection lies to dredging up to a private wharf. That was the reason offered.

I have only moved to strike out the last word, and I withdraw the motion.

Mr. PARKER of New Jersey. Does not the gentleman recognize the fact that during 1913 and 1914 there was a great falling off of such freight as building materials in New Jersey and other sections of the United States because of the destruction of manufactures on account of the change in our commercial relations?

Mr. FREAR. That is true all over the country and on every waterway. I did not lay any emphasis on that. That was called out by the chairman.

Mr. PARKER of New Jersey. In 1912 the commerce was 202,000 tons.

Mr. FREAR. That is true, I presume.

Mr. PARKER of New Jersey. And it is probably more than that now.

The Clerk read as follows:

Toms River, N. J.: For maintenance, $2,000.

Mr. FREAR. Mr. Chairman, I wish to read the recommendation of the engineers when Toms River was improved and the reason for that improvement. It is a small project. There were 92 tons of commerce last year, valued at $2,714. Document 346, Sixtieth Congress, states that there are two railroads there, which in 1907 carried 15,000 to 20,000 tons of freight—

Much of which, it is expected, would be shipped by water if the channel permitted.

They had 92 tons of commerce last year on this waterway. I call the attention of the House to the reason given by engineers for putting in this improvement. At page 4 of this document Maj. Flagler states:

Toms River is located on one of the three principal automobile lines of travel and has a large and increasing business from this source. Suitable depth in the river would increase this traffic, owing to the ease with which owners could communicate with their yachts at this point. Local cooperation, none.

That was the reason given by the engineer for recommending this improvement. I have moved to strike out the last word, and I withdraw the motion, because I only desired to disclose reasons for recommending the project.

Mr. MOORE of Pennsylvania. I happen to know something about Toms River, N. J., and I do not see any reason why it should be criticized, as it has been, by the gentleman from Wisconsin. The river empties into Barnegat Bay, and throughout the year it is frequented by vessels of various dimensions, largely pleasure craft, as he states. The town of Toms River is

at the western end of this stream. There are other towns along the stream. The river is somewhat remote from the larger cities, but the settlements along it are frequented by people from New York, Philadelphia, and elsewhere. The craft that use the river come in from all points on Barnegat Bay, some of them coming in from the ocean. They stop at the various towns, many of them going to Toms River for their supplies. The paltry sum of $2,000 is appropriated for the purpose of maintaining this channel. It is a tidal stream, with a sandy bottom, which when wind swept is apt to fill. Two thousand dollars a year is what the Government is asked to spend to maintain the channel, in order that thousands of people may come and go upon it. It is small enough.

I want to say to the gentleman from Wisconsin and to the House that a tidal channel can not be kept clear and free for navigation unless it is maintained. To say that we spent $10,000, which was spent on Toms River years ago in order to get a 6-foot depth, and that that is all we have to do, is an absurd proposition. From year to year the tide fills up the channel and the sand drops in from the embankments, closing up the passageway. It must be cleaned out once in a while, just as the housewife must sweep the floor once in awhile to keep it clean. I mention this because the gentleman from Wisconsin on several occasions has referred to the question of maintenance, and has complained against it. It is as essential to maintain our channels and keep them in order as it is to cover a building once in awhile with a tin roof to keep out the rain.

Mr. SPARKMAN. Mr. Chairman, I think it is well that I should say a word here. This item was inserted in the bill after very careful consideration. It was one of the first items presented when we began to consider the bill in December last year, and during the two and a half months that we were at work upon it the estimate remained before us unadopted, because we wanted to get all the evidence obtainable both as to the amount necessary and the tonnage, which was small. The information finally obtained was the same as that just furnished by the gentleman from Pennsylvania [Mr. MOORE], and was such that after due consideration the committee concluded to allow the amendment. I think it should remain in the bill as we have it.

The Clerk read as follows:

Chester River, Pa.: For maintenance, $3,000.

Mr. SPARKMAN. Mr. Chairman, I ask unanimous consent that we may pass this item and later return to it in order to offer an amendment.

The CHAIRMAN. The gentleman from Florida asks unanimous consent that the item on page 7, line 9, Chester River, Pa., be passed, and that the committee may return to it later for the purpose of offering an amendment. Is there objection?

There was no objection.

The Clerk read as follows:

Delaware River, Pa., N. J., and Del.: Continuing improvement and for maintenance from Allegheny Avenue, Philadelphia, to the sea, $2,100,000; for maintenance of improvement from Allegheny Avenue, Philadelphia, to Lalor Street, Trenton, $25,000; and completing improvement above Lalor Street, Trenton, $40,000; in all, $2,165,000: *Provided*, That the Secretary of War may enter into a contract or contracts for such materials and work as may be necessary to prosecute the project from Allegheny Avenue, Philadelphia, to the sea, to be paid for as appropriations may from time to time be made by law, not to exceed in the aggregate $600,000, exclusive of the amounts herein and heretofore appropriated.

Mr. FREAR. Mr. Chairman, I move to strike out the last word, and I do it to allow the gentleman from Pennsylvania to speak on the excellent qualities of his river and harbor and also to impress on the committee the fact that where there is something legitimate—not a 92-ton project, as was the last one criticized, but where there is a valuable traffic—no one will object, unless it is to say that this is a large appropriation at this particular time, and that is a matter of judgment.

Mr. MANN. But is there any reason at this time, under the condition of the Treasury and our large expenditures for preparedness, for expending over $2,000,000 on the Delaware River?

Mr. FREAR. Two million seven hundred thousand dollars.

Mr. MANN. This is a pretty large sum of money. How much was spent last year?

Mr. FREAR. Something like a million and a half.

Mr. MANN. Out of the $20,000,000 appropriation?

Mr. FREAR. I think so.

Mr. MANN. How much was spent on the Delaware River last year, the current year or the year before?

Mr. SPARKMAN. One million two hundred and seventy-eight thousand dollars.

Mr. MANN. Is there no limit to this capacity for absorption of the public funds?

Mr. SPARKMAN. Oh, yes; but I do not think we reached it last year.

Mr. MANN. It seems to be a large sum of money. Did what we spent last year do any good?

Mr. SPARKMAN. Yes; it did a great deal of good, and what we propose to spend next year I hope will do more.

Mr. MANN. How long is this going to continue?

Mr. SPARKMAN. At the rate we are going on——

Mr. MANN. Oh, I will not ask the gentleman to guess, for the gentleman does not know how long the gentleman from Pennsylvania will remain in the House. [Laughter.]

Mr. MOORE of Pennsylvania. The gentleman from Pennsylvania is fortified by his colleague from Pennsylvania, Mr. COSTELLO, who I hope will address the House and give the details asked for by the gentleman from Illinois and the gentleman from Wisconsin.

It goes without saying that this is the most meritorious project in the bill. [Laughter.]

If we are to continue the policy of making river and harbor improvements, I can not conceive of any being so productive of returns upon the Government investment as the Delaware River.

It produces a large sum of money every year by reason of commerce that traverses it, and it pays into the Treasury of the United States as high as twenty and twenty-one million dollars per annum in customs revenues, which is an earning power worth while. At the same time, since the beginning of our history, even prior to the days when Daniel Webster made his celebrated reply to Mr. Hayne, in which he made reference to the Delaware, we had not received as much from the improvement of the entire Delaware as is turned in from customs in Philadelphia in a single year. That ought to be a satisfactory answer to the good-natured questions that have been propounded. It is a revenue-earning property. The commerce upon the Delaware River is increasing. In the city of Philadelphia we do more than a billion dollars worth of manufacturing per annum, and much of this goes out on the Delaware River to other ports of the United States and to foreign countries. The Delaware River has become a veritable beehive of industry during the last two years by reason of war conditions in Europe. We make more ships on the Delaware River than are made on any other river in the United States. It is now the center of the shipbuilding industries, the Clyde of America. In 1910 Congress approved a project for a 35-foot channel in the Delaware, which was agitated here largely upon the ground that New York had a commercial channel of 40 feet, Boston had more than 35 feet, Baltimore had 35 feet, and Philadelphia, the center of the shipbuilding industry, with its great navy yard, its great arsenals, was being left behind in the commercial as well as in the naval race.

We are now constructing a 35-foot channel, for which we have to thank Congress, but that project was commenced in 1910; at that time the engineer in charge was Herbert Deakyne, a major who has frequently been quoted on the floor here by the gentleman from Wisconsin [Mr. FREAR], who in his report estimated that the total cost of a 35-foot channel would be $10,900,000. He said, and the Chief of Engineers and the Board of Engineers sustained him, that, "with proper appropriations the work would require for completition about six years."

Up to the present time the work has been completed to the extent of about 40 per cent. The appropriations have not been coming along at a rate to complete the project in six years. To that extent there has been a waste, in that the work has not been proceeding as rapidly as it might, in order to effectuate an economical finish. This year, for the first time, the committee has made an appropriation which approximates the engineer's six-years-to-completion recommendation. With the sum provided for in this bill it may now be possible to advance the work more rapidly. It is to be hoped we will catch up to the original estimate of the engineers. I think that is about all that ought to be said at this time except that my colleague from Pennsylvania [Mr. COSTELLO] ought to be heard upon this subject. He is a member of the Rivers and Harbors Committee and I trust will address the House.

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

Mr. COSTELLO. Mr. Chairman, I was in hopes that this item would pass without any criticism, as my friend from Wisconsin [Mr. FREAR] seems to think it is all right. The $2,100,000 cash item contained in the bill is $300,000 less than the engineer desired for the next year. In addition there is a $600,000 continuing contract making $2,700,000 in all. There are $900,000 of that item involved in the removing of a ledge of rock, which is necessary before we will ever acquire a 35-foot channel—$300,000 in this appropriation and $600,000 for a con-

tinuing appropriation—$300,000 to be used each year. We do not expend half enough money for our rivers and harbors. I often wonder while sitting here listening to men commenting upon river and harbor legislation what they would do if the Government owned the railroads. You ought to appropriate $100,000,000 a year for rivers and harbors work in order to get the most good out of it. More money was lost in the Union Pacific and the Northern Pacific and other railroads that attempted to cross this continent than you have appropriated to the river and harbor item since the beginning of this Government. I hope that this item will pass, and I am satisfied it will. Gentlemen may play along a little with it, but there is no doubt that here is a project that has all the merit of worth, and I know this House will recognize that worth. [Applause.]

It was necessary to make this appropriation in that way in order that the Government would get the best results from the contractors who will bid on this work. It would take from 10 to 15 per cent of the total amount to erect a plant necessary to do this work, and if we made three contracts it would just cost the Government about 30 per cent for the placing of the plant in operation in place of 10 per cent.

I do not think it is necessary to go into this very extensively. The Government has given the city of Philadelphia in about 114 years the magnificent sum of $21,000,000, and we pay back into the Treasury of the United States over that amount sometimes in one year. We have paid in 50 years over $800,000,000 on duty collected on imports, while our internal-revenue tax in 50 years amounted to over $264,000,000. Our value in commerce is over $1,200,000,000 per annum, while the tonnage is over 25,000,000 tons per annum; in 10 years our tonnage equals 250,000,000 tons. [Applause.]

Mr. BENNET. Mr. Chairman, I move to strike out the last word for the purpose of asking why it is that the gentleman from Pennsylvania [Mr. MOORE] and his colleague [Mr. COSTELLO] omitted one of the very best reasons for improving the Delaware, and that is that the Delaware shad is the best fish that lives in the East.

Mr. MANN. Oh, anyone who knows shad does not believe that.

Mr. FESS. Mr. Chairman, I rise in opposition to the amendment of the gentleman from New York [Mr. BENNET]. I am impressed with his suggestion in reference to the value of shad, and it reminds me of a couplet on the subject that I think I can reproduce:

O fishermen on the Delaware, with slaughter on thy brow,
Come, speak the truth, your duty tell, what fortune is thine now?
The fishermen on the Delaware, with visage grim and sad,
Replied, "I can not tell a lie—full fifteen million shad."
O fishermen on the Delaware, with slaughter on thy brow,
Truth crushed to earth will rise again; she ought to do it now!

[Laughter and applause.]

Mr. HUMPHREY of Washington. Mr. Chairman, I move to strike out the last two words. I have just listened to my colleague on the committee speak of this project—and it is a great project—but as he was telling about the wealth of Philadelphia the same thought occurred to me that did awhile ago when I heard my distinguished friend Mr. BENNET, of New York, and other gentlemen speak of the wonderful wealth of that city.

I wonder why it never occurs to some of these cities of immense wealth to help themselves. I never heard of Philadelphia or New York appropriating any great amount of money to help their harbors.

Mr. CONRY. Will the gentleman yield?

Mr. HUMPHREY of Washington. Certainly.

Mr. CONRY. Does not the gentleman know that New York City in the improvement of the North River expended $105,000,000 for doing work that the National Government should have done?

Mr. HUMPHREY of Washington. No.

Mr. COSTELLO. Will the gentleman yield?

Mr. HUMPHREY of Washington. I think the gentleman has got a misconception of the facts. My distinguished friend from New York, Mr. BENNET, placed the sum at $240,000, and certainly he would not overlook anything. You certainly would not accuse him of placing the estimate too low.

Mr. COSTELLO. I do not think that can apply to Philadelphia. Our city and State have appropriated over $10,000,000 for the improvement of the river, and we are now developing docks that will amount to about $25,000,000, for which we get scarcely a nominal consideration.

Mr. HUMPHREY of Washington. I am glad to know that Philadelphia has been helping herself. It constantly occurs to me when I hear these gentlemen from New York and Philadelphia boasting of the tremendous wealth of those cities, which nobody disputes, why, they have to have the Government help them so much. They do not have to do it out in our country. You take Portland, Oreg., for example, and they appropriate half a million dollars every year for river and harbor improvements, and they do not brag about it, either.

Mr. MOORE of Pennsylvania. Mr. Chairman, I move to strike out the last two words.

Mr. HUMPHREY of Washington. I have not yielded the floor yet, unless my time has expired.

Mr. MOORE of Pennsylvania. Does the gentleman yield?

Mr. HUMPHREY of Washington. Do you want me to yield to you?

Mr. MOORE of Pennsylvania. I wanted to pay the gentleman a compliment. I do not know how to do it unless I get some time. Suppose I ask the gentleman a question, will he answer?

Mr. HUMPHREY of Washington. I will.

Mr. MOORE of Pennsylvania. I have a faint recollection of having seen somewhere in a Washington or Seattle newspaper a cartoon which indicated that the gentleman from Washington had drawn out of the Treasury for his splendid river, the Columbia, and its tributary, the Willamette, no less than $26,000,000, which I regard as the highest evidence of the activity of a Congressman. Has the gentleman ever seen that cartoon?

Mr. HUMPHREY of Washington. Well——

Mr. BUTLER. I have no doubt he paid for it. [Laughter.]

Mr. HUMPHREY of Washington. I am sorry my distinguished friend, usually so accurate, should have made a mistake.

Mr. MOORE of Pennsylvania. It may have been $28,000,000.

Mr. HUMPHREY of Washington. In the first place, it was not $26,000,000; it was $23,000,000. It was over on Puget Sound, and scattered generally throughout the State. This does not include the amount for the Columbia. What the total would be if that is added I do not know.

Mr. MOORE of Pennsylvania. But the gentleman got it, and he is entitled to the credit.

The CHAIRMAN. The time of the gentleman has expired. The Clerk will read.

The Clerk read as follows:

Harbor at Wilmington, Del.: For maintenance, $30,000.

Mr. FREAR. I move to strike out the last word for the purpose of putting an inquiry, which, I understand, the gentleman from Delaware [Mr. MILLER] is willing to answer. In the engineers' report for Wilmington Harbor there appears this provision:

By an act of the Delaware State Legislature, passed March 9, 1901, the city of Wilmington was authorized to contribute toward the improvement of Wilmington Harbor the amount of 10 per cent of the United States Government appropriation, not exceeding $60,000. To the close of the fiscal year the city has contributed, including interest, $20,707, which is less than 2 per cent of the amount appropriated by the United States since 1901.

I recognize that that is one of the places where the Government has insisted upon contribution, but I wish to ask the gentleman from Delaware if he knows, or I may ask the chairman of the committee, why that has not been insisted upon; why the other $40,000 has not been contributed, in view of the fact that the Government has spent over $1,000,000 on the project.

Mr. MILLER of Delaware. Mr. Chairman, I would prefer to make a motion and take five minutes of my own time to answer the gentleman.

Mr. FREAR. The gentleman can do that now.

Mr. MILLER of Delaware. Mr. Chairman, I move to strike out the last word.

I am very glad the gentleman from Wisconsin saw fit to bring this up, because if he had not done so I would have made the usual pro forma amendment in order to obtain the floor to explain it. This question came up last year, when the United States Engineer officer at Wilmington, Del., called my attention to a letter which he had written to the city authorities in Wilmington with reference to this matter. Under the act of the General Assembly of Delaware, passed in 1901, the city of Wilmington is authorized to contribute 10 per cent of the amount appropriated by the National Government up to and including the sum of $60,000. Heretofore it has been the practice of the district engineer to make known to the city authorities the state of the finances in connection with these appropriations, and then the money would be included in the next annual budget of the city. In other words, the initiative, as has been the practice, has come from the United States Engineer in that district. Maj. Johnston, the present engineer, reported in his letter in June to the city council, that since 1901, when this act went into effect, $554,000 had been appropriated by the National Government for Wilmington Harbor. I want to call to the attention of the gentleman from Wisconsin [Mr. FREAR], that although there may have been, as he says, $1,000,000 expended on the projects at Wilmington, Del., to date, the act of

the General Assembly of Delaware is only construed to mean that the city shall pay this 10 per cent from 1901, and up until the end of the last fiscal year, June 30, 1915, there has been $554,000 appropriated by the National Government. Ten per cent of that would be $55,000. Up to June, 1915, there had been appropriated about $21,000. In the rivers and harbors act of 1912 a dredging plant was established for the Wilmington (Del.) district, and to date above $200,000 has been expended on that dredging plant.

I will here insert that portion of the river and harbor act of 1912 relative to the dredging plant for the Wilmington district:

An act making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes. (July 25, 1912; vol. 37, p. 201.)

Improving harbor at Wilmington, Del., in accordance with the report submitted in House Document No. 359, Sixty-second Congress, second session, $250,000, of which amount so much as may be necessary may be used for the purchase or construction of a dredging plant to be used in connection with the work of improving and maintaining the harbor at Wilmington, Del., and at other places in the engineer district, with headquarters at Wilmington: *Provided*, That if, in the opinion of the Secretary of War, dredges of a suitable character to do the work at Wilmington, Del., are readily obtainable for doing the work by contract at reasonable rates, the amount herein appropriated shall become immediately available for the prosecution of such work.

As I have said, to date about $200,000 has been expended on that dredging plant, but there was a sharp difference of opinion between the city authorities and the various organizations of the city of Wilmington, such as the chamber of commerce and the engineer officer at Wilmington, my people claiming that the cost of this dredge should not be charged up against the total appropriations of Wilmington Harbor, for the reason that by the wording of the river and harbor act of 1912 this dredging plant can be used in connection with the improvement of the harbor at Wilmington, Del., and in other places in the engineering district with headquarters at Wilmington. That means any other project in the State of Delaware and any other project in the State of New Jersey down as far as Cape May and up as far as Absecon Inlet, on the Atlantic Ocean; so that I think the committee will bear with me in the contention that there is merit in the claim of the city authorities that the cost of this dredging plant should not be charged up against the total appropriation for Wilmington Harbor. Therefore that reduces the total to about $350,000, and 10 per cent of that, as we see, is $35,000, in round figures.

Following the letter of the engineer to the city authorities, the sum of $10,000 was appropriated, but it was not appropriated in time for the engineer to take cognizance of it in this report. That would raise the amount to about $31,000, and just as soon as the United States engineer shows that the Government is ready to go ahead with its money, he will make application to the city council, and they will appropriate additional money.

One of the duties of a Representative in Congress, besides representing his State as a national legislator, is to look out for such cases as this that come up in regard to his district and concern his people, and I am very glad that the gentleman from Wisconsin [Mr. FREAR] has brought this matter up before you gentlemen to-day, because I was aware of the fact last spring, when my service in Congress began, of what the engineer, who was a personal friend of mine, stated in his report, and I presumed that this question would undoubtedly be mentioned in the Committee on Rivers and Harbors, where it was mentioned, and that it would also be mentioned on the floor of the House.

Mr. Chairman, while I have a few minutes remaining I would like to state that throughout the State of Delaware, in connection with other projects where cooperation is mentioned, it is shown that in every instance the people have lived up to the spirit of the agreement between the National Government and the localities to cooperate wherever they can. My people and my State are not a rich people; neither are any of the municipalities or towns in that State what might be termed as rich cities or municipalities as compared with other cities that have been discussed here to-day.

The CHAIRMAN. The time of the gentleman from Delaware has expired.

Mr. MILLER of Delaware. Mr. Chairman, I have not had any time heretofore on this bill, and may I ask that the House give me five minutes more?

Mr. SMALL. Mr. Chairman, I ask unanimous consent that the gentleman from Delaware may proceed for five minutes more.

The CHAIRMAN. Is there objection to the gentleman's request?

Mr. SPARKMAN. Mr. Chairman, I ask unanimous consent that all debate on this item and amendments thereto end in five minutes.

The CHAIRMAN. The gentleman from Florida asks unanimous consent that all debate on this item and amendments thereto close in five minutes. Is there objection?

There was no objection.

The CHAIRMAN. Is there objection to the request of the gentleman from North Carolina [Mr. SMALL], that the gentleman from Delaware [Mr. MILLER] may proceed for five minutes more?

There was no objection.

Mr. MILLER of Delaware. Mr. Chairman, I would not be fulfilling my duty if I did not see to it that there was written into the CONGRESSIONAL RECORD the fact that my people had cooperated to the fullest extent of their capabilities with the Federal authorities.

I am not going to deal with this subject of cooperation any longer, because I think I may have already answered the statement of the gentleman from Wisconsin [Mr. FREAR], and if he has any further questions to ask I would like to answer them. I would like to take up the question suggested by my friend from North Carolina [Mr. SMALL] as to the shortness of tonnage, the lack of tonnage, on the various streams in the State of Delaware. It seems that the tonnage of streams all over the country went down in the fiscal year 1914, but there were so many glaring inconsistencies in the statistics of various streams in my State as compared with the tonnage of the year before that I made it my duty to investigate and ask various shipping men and to write letters and visit these places myself to ascertain just what the cause was. The act of February 21, 1891, practically makes it mandatory upon shipping men to report their tonnage, but I dare say that the penalty carried in section 2 of that act is never enforced, and therefore the shipping men have grown careless.

I am not going to take the time of the House to-day to go over the report of the committee or the report of the engineer from that district, which is also a public document, and show where there is more tonnage; but I am going to ask the House for permission to extend my remarks to the extent of inserting various data that I have collected about these streams in my State, showing that there is more tonnage than has been reported by the people. I do not mean to excuse them. I am glad to utilize this opportunity, so to speak, to bring it to their attention in a public manner, and I can put in the RECORD statistics which will show in every case that there has been more tonnage than has been reported in the public documents I have referred to. And I frankly say it is the fault of my own people, and I hope that after the matter has been called to their attention in this public manner they will see to it that they rectify their mistake, because it is necessary for them to show what that tonnage is, in order for the Government to do what is fair and what is fair for them to do likewise.

I am going to yield back the balance of my time, Mr. Chairman, and ask that I may extend my remarks in the RECORD on this topic; and I would like my remarks on the alleged lack of cooperation to follow the remarks of the gentleman from Wisconsin [Mr. FREAR].

The CHAIRMAN. The gentleman from Delaware asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Inland waterway between Rehoboth Bay and Delaware Bay, Del.: Continuing improvement and for maintenance, $50,000.

Mr. FREAR. Mr. Chairman, I move to strike out the last word. I have looked around to see if the gentleman from Delaware [Mr. MILLER] was here, because I did not want to raise this question otherwise. We are appropriating by this bill $50,000 for this waterway. I do not believe that this report states very clearly what the total amount is to be, although it is suggested that $356,000 is to be expended.

I call attention to the document containing the comments on this item by Maj. Flagler, who also made the recommendation which I discussed a few moments ago. Back on May 17, 1907, he stated, in Document 323, on page 9, that $4,500,000 in commerce will follow the canal, and the amount will be doubled within 10 years. That was in 1907. It may be possible that that will come about, but I suggest that the commerce of 1914, after the expenditure that we have made, reaches 4,928 tons, less than 5,000 tons, of the value of $67,000.

There is another question which was raised by the gentleman from Iowa yesterday, which is interesting in this connection, and that relates to the dredging contracts. On this same proposition the rate in one dredging contract is 8 cents and in another it is 13.9 cents. I do not know whether there is any light

that can be thrown on it by the gentleman from Delaware. I only moved to strike out the last word in order to enable him to offer whatever explanation he may have.

Mr. MILLER of Delaware. Mr. Chairman, I move to strike out the last two words. I am not going to take the time of the committee this afternoon to go into detail about this matter, except to say that the gentleman from Wisconsin [Mr. FREAR] evidently does not know that this project has not been completed. In other words, the dredge is still working, and the commerce that Maj. Flagler predicted has not yet started to use that cut-off, because it has not been completed. The gentleman evidently does not understand that this project has not been finished, and therefore there is no commerce to estimate.

I will ask permission, Mr. Chairman, to extend my remarks in the RECORD in connection with my other remarks on this bill. I do not want to detain the committee any longer. Its membership has been very good to me. I will say in closing that this Lewes and Rehoboth Bay project is one of the most important in my State, and will be of lasting benefit to the people of Sussex County, in Delaware. As the gentleman's objection is withdrawn, I will extend my remarks on this subject at a later date, so that the RECORD will show the true facts in connection with this project.

The CHAIRMAN. The pro forma amendments are withdrawn. The Clerk will read.

The Clerk read as follows:

Elk and Little Elk Rivers, Md.: For maintenance, $8,500.

Mr. FREAR. Mr. Chairman, I rise to make an inquiry and to strike out the last word.

The CHAIRMAN. The gentleman from Wisconsin moves to strike out the last word.

Mr. FREAR. In the bill $8,500 has been presented. The engineers' report on this project, I understand, is only for $2,500. I will ask the chairman of the committee what the purpose is in increasing this item?

Mr. SPARKMAN. Two thousand five hundred dollars was the original estimate; but when we came to consider the item Col. Taylor, from the office of the Chief of Engineers, came before us and stated that after the estimate was submitted he had discovered considerable deterioration in the work, and that it needed this larger amount. On this statement we increased the amount to the figures in the bill.

Mr. FREAR. I would suggest in that connection, Mr. Chairman, that Document 770, Sixty-second Congress, shows that the cost of maintenance is large, and the river must be classed as unworthy of improvement. That is the engineers' report. On March 4, 1912, it was recommended to various Members of Congress that the Government should expend $4,040 and the local interests $2,020. That is all, as I understand, shown by the engineer's report, and the House or the committee was asked to support these measures when the statement of the engineers was that it was not worth the improvement, but they eventually put on $4,040 for the Government and $2,020 for local interests. Now, we finally find that it has jumped up to $8,500 in this bill.

Mr. MOORE of Pennsylvania. I can say to the gentleman that a new town has been started along the line of Elk River. It is called Chesapeake Beach, and a steamboat line has started business. That, to a large extent, accounts for the increased appropriation to carry the depth of water up to the town.

Mr. FREAR. And only 75 tons of merchandise was carried last year.

Mr. MOORE of Pennsylvania. Yes; but this is a new line. Mr. Chairman, I move to strike out the last two words. If the gentleman from Florida will indulge me for a moment.

Mr. COOPER of Wisconsin. Before the gentleman proceeds I want to ask a question. The gentleman from Wisconsin said that 25,000 tons of freight was carried.

Mr. FREAR. Twenty-five tons of merchandise.

Mr. COOPER of Wisconsin. On page 96 of the report it says 44,000 tons.

Mr. FREAR. The gentleman from Wisconsin is always watchful of my words. I stated that it was 25 tons of merchandise, and that was all that was carried.

Mr. COOPER of Wisconsin. I misunderstood the gentleman. I am not keeping such especial track of the words of the gentleman, but as a legislator here called upon to vote I want to know whether a man is accurate in his statements. I shall have occasion to comment on that a little later.

Mr. MOORE of Pennsylvania. Mr. Chairman, I think the whole point is that business is anticipated and the way must be cleared to accommodate that business, a perfectly natural proposition.

Now, I would like to ask the gentleman from Florida if he will consider an amendment such as was introduced in the bill of 1914, with respect to taking over the Chesapeake & Delaware Canal?

Mr. SPARKMAN. I did not quite understand the gentleman's request.

Mr. MOORE of Pennsylvania. In 1914 the bill contained an item to take over the Chesapeake & Delaware Canal and improve it for commercial purposes. A few days ago I spoke upon the advisability of opening up this and other waterways as a matter of preparedness. I ask the gentleman whether, at this time, he will agree to the introduction of an amendment looking to the condemnation of that property?

Mr. SPARKMAN. I will say to the gentleman that the committee can not accept an amendment of that kind. It is what we call a new project, and although we adopted it, as far as the action of the House was concerned, in the bill of 1914, it was stricken out in the Senate and stands now before the Congress as a new project. Unless we were going to take on new projects we could not take on that proposition. I want to say further that the committee as organized at that time thought it a good project and worthy to be adopted, and I for one have not changed my mind on the merits of that proposition.

Mr. MOORE of Pennsylvania. I wish to say to the gentleman and to the House that this is one of the new projects that was kept out of the present bill. A little while ago I started to say that I sympathized with the gentleman from Florida because of the predicament he found himself in with respect to the New York Navy Yard channel proposition. I voted for it because I believed it was absolutely necessary. I think it is; but I also recognize that there are other worthy projects that were kept out of the bill. The Chesapeake & Delaware Canal project, the Charleston Navy Yard project, the Norfolk Navy Yard project, and the project that the gentleman from Washington [Mr. HUMPHREY] has between Lakes Union and Washington—all of these were kept out of the bill under the rule the committee adopted, and of which we had public notice. The New York project having gone in at the instance of the President, and the Chesapeake & Delaware Canal project having been kept out, I hoped the gentleman from Florida would accede to the proposition that I might offer it as an amendment.

Mr. SPARKMAN. No; we could not open that without opening it to others.

Mr. MOORE of Pennsylvania. But the River and Harbor Committee approved of it and put it in the 1914 bill. That is correct?

Mr. SPARKMAN. Yes.

Mr. MOORE of Pennsylvania. As far as the committee is concerned, then, it appreciates the importance of the project, but does not take it on because of the rule that new projects are not taken on in this bill?

Mr. SPARKMAN. As far as the chairman of the committee is concerned, that is true, and I know of no objection to it coming from any member of the committee.

Mr. MOORE of Pennsylvania. I supported the one new project that went into the bill, but, under the circumstances, will not now undertake to break the committee's action by introducing this amendment. I thank the gentleman from Florida for the statement he has made as to the merits of the project.

Mr. MADDEN. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. The gentleman from Illinois asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

Mr. MILLER of Delaware. Mr. Chairman, I move to strike out the last word, for the purpose of obtaining the floor. I was with the gentleman from Pennsylvania [Mr. MOORE] when we discussed this matter of the Chesapeake & Delaware Canal at various times with the members of the Rivers and Harbors Committee. I want to say to the House that the reason I have supported the Committee on Rivers and Harbors when amendments have been offered—both to strike out and to add to projects in this bill—was because I thought they would oppose all amendments covering so-called new projects. No one would like to see the Chesapeake & Delaware Canal project included in the bill more than I would, because it is practically wholly within my State, except a few miles that are in Maryland. I was willing to accede to the so-called gentlemen's agreement existing between the committee and the gentleman from Pennsylvania [Mr. MOORE] and the gentleman from New York [Mr. BENNET] and myself, but I thought we should ask for this amendment on the floor. I supported the committee in opposing the striking out of the New York amendment to-day,

and opposed striking out that item in this bill for the reason that I really think it to be a real preparedness measure, although I did not like the political aspect that was brought in. Therefore I will follow my colleague from Pennsylvania [Mr. MOORE] and not offer any amendment to this bill touching this Chesapeake & Delaware Canal project, in view of what the chairman of the committee has said.

The Clerk read as follows:

Waterway on the coast of Virginia: For maintenance, $1,000.

Mr. FREAR. Mr. Chairman, the item of $1,000 in lines 9 and 10, for the waterway on the coast of Virginia, is very small. I did not speak of the item on lines 7 and 8, referring to the James River, which I called attention to when the former bill was considered, because I realized that there is no object in presenting these matters constantly to the House. That may be a meritorious project in some respects, but I will not discuss it.

I wish to call attention to this waterway on the coast of Virginia for only one purpose. In Document No. 957, Sixtieth Congress, first session, Maj. Flagler, who recommended improvements on Toms River, estimated the commerce on Cat Creek at that time to be $1,015,000. The engineer's report for last year shows 1,955 tons, valued at $37,000. That is the character of so many estimates on which we base our waterway improvements. Here is less than 5 per cent of the commerce realized after the expenditure of money on this project, and the same is true of many others that I could refer to. Yet on these rainbow dreams of engineers we proceed to adopt projects and make expenditures. Then when the question comes as to their abandonment the people of the locality protest against it, and we have that experience time after time. Cases will again be referred to, I presume, in this bill. I call attention to that just for the purpose of showing the entire lack of realization of estimates made by engineers.

The CHAIRMAN. Without objection, the pro forma amendment will be considered as withdrawn, and the Clerk will read.

The Clerk read as follows:

Inland waterway from Norfolk, Va., to Beaufort Inlet, N. C.: Continuing improvement, $1,000,000.

Mr. GOOD. Mr. Chairman, I move to strike out the figures "$1,000,000" and to substitute "$200,000."

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Amend, on page 9, in line 12, by striking out "$1,000,000" and inserting "$200,000."

Mr. GOOD. Mr. Chairman, I offer this amendment in order that we may appropriate enough money to do all the work which the Government plant located on this canal is capable of doing. I understand the testimony of Col. Taylor to be to the effect that the Government can perform only about $200,000 worth of work a year with its plant at that place. The Government with its plant is making excavations for 4.3 cents per cubic foot, place measurement. It is contracting to do this work for over 7½ cents per cubic foot, place measurement.

I think it would have been better if the gentleman from North Carolina [Mr. SMALL] had not challenged the figures of the gentleman from Wisconsin [Mr. FREAR] with regard to the commerce on this canal. I have been verifying these figures. The gentleman from Wisconsin stated that the commerce for 1913 was 67,000 tons of merchandise, and his statement is entirely correct. It is true there were, during 1913, 229,000 tons, but all except 67,000 tons was lumber, shingles, and things of that kind, that can float in 6 feet of water.

But the gentleman from North Carolina complained of the gentleman from Wisconsin because he had taken the figures for 1913. I have before me the Engineer Report for 1914. And, mind you, last year, according to the figures in this report, we did $647,000 worth of work in improving this waterway. Yet there is a decrease in the tonnage of 1914 as compared with 1913 of over 29,000 tons. Now, if it requires an appropriation of $647,000 of the Government's money to decrease the tonnage on this canal 29,000 tons, how long will it be until there is no commerce on this inland canal at all?

Mr. MADDEN. And how much will it cost us to continue the decrease?

Mr. GOOD. We are now appropriating $1,000,000 for this project, $800,000 of it to be done by private contract, which means a profit to the private contractors of not less than $300,000.

Mr. Chairman, I hold in my hand a letter which contains the private report of the board of directors of the Atlantic & Gulf Coast Dredge Owners' Association. It is an interesting report, and when I read it I see the reason assigned why we appropriate money in these large sums for the profit of the private dredge owners. Why, let us see—

Mr. SPARKMAN. Does the gentleman wish to be understood as charging the Committee on Rivers and Harbors with making appropriations for the benefit of dredge owners?

Mr. GOOD. I would not charge the gentleman from Florida with doing anything that was in the least degree improper. I think the gentleman from Florida has been imposed upon by these dredge owners, in getting into this bill large appropriations in order that a few dredge owners can receive unreasonable profits.

Mr. SPARKMAN. I want to thank the gentleman for his certificate of character.

Mr. GOOD. Does the gentleman from Florida think this is a meritorious project, and that in view of the present state of the Treasury we ought to appropriate $1,000,000 this year for this project?

Mr. SPARKMAN. I think if we are going to complete that project, the sooner we complete it the better, and the larger the appropriation the sooner it will be completed.

Mr. GOOD. I think the sooner we drop it the better. But I want to read some of the things that these dredge owners have reported in their convention, secretly. The first thing is fixing prices. Why, there is no competition. Here is what they say, themselves:

During the past year your board have especially taken up for consideration the question of its department for fixing prices on work and the allotment of work through the commissioners of that department, and have carefully studied the problems which present themselves in connection with that line of work.

Then, again, the report says:

Starting, as it did, in the desire to combine against outsiders, it has ended in combining against itself; and instead of its members standing together to promote the business of dredging in all its general and important details, as above mentioned, we behold a spectacle of members quarreling one with another over the division of work, and each one complaining that the association is a failure because it does not give to each one all the work that he feels is his due, each member forgetting that the association simply undertook this duty because it was forced upon it, and because other agencies to do that work had failed, and because the operators on the Atlantic coast refused to enter into proper arrangements for dividing work amongst them and preferred to load this work upon the association, a work for which the latter was unfitted, for which it was never intended or formed, and the only excuse for foisting this measure upon it was apparently the dredging operators failed to appreciate that this kind of work was done in other lines of business by special pools organized for no other purpose and specially organized for that purpose alone.

The CHAIRMAN. The time of the gentleman from Iowa has expired.

Mr. GOOD. Mr. Chairman, I ask unanimous consent to proceed for five minutes.

The CHAIRMAN. The gentleman from Iowa asks unanimous consent to proceed for five minutes. Is there objection?

There was no objection.

Mr. SPARKMAN. Mr. Chairman, I ask unanimous consent that debate on this paragraph and all amendments thereto close in 15 minutes.

Mr. FREAR. Mr. Chairman, reserving the right to object, I suggest to the chairman of the committee that this is a million-dollar proposition, and it does not seem right to hold the committee down to 15 minutes.

The CHAIRMAN. The gentleman from Florida asks unanimous consent that all debate on this paragraph and all amendments thereto close in 15 minutes. Is there objection?

Mr. FREAR. Mr. Chairman, I object.

Mr. GOOD. Mr. Chairman, I quote further from this report:

The association should, on the other hand, favor the creation of pools in each district formed upon the lines of other successful business arrangements of like character.

The association as a whole will then confine itself to legitimate business of acquiring work and promoting the resources of members for doing work, leaving to the separate pools the business of dividing up that work at good prices.

Why, the gentleman seems to think that the Government has something to say with regard to fixing the price, but this pool and this waterways association not only fixes the price, but they divide the work. Further on they complained because they had not had any banquets of the association in the later years and go on to say how important it is to invite members of the State legislatures, governors of the States, and, last but not least, to invite Congressmen to banquets to get their favorable consideration. I quote from the report:

These entertainments do not entail any serious expense upon the association, but they do create the greatest possible prestige for our business in the estimation of those whose favor it is to our advantage to gain. Influential public men and men of business affairs having to do with transportation companies and steamship lines are entertained by us on these occasions with the greatest possible benefit to our business—municipal officers, heads of departments, Members of Congress, and of legislatures—and their favor and interest is legitimately gained and has been found to be of the greatest value when circumstances required it. The expense of our entertainment is wisely expended, and brings an adequate return for every dollar so spent.

Gentlemen, here is a proposition questionable in the extreme, a proposition that will never amount to anything as a waterway, on which there will move no commerce. It is a little canal, and, with the Treasury empty, we are appropriating $1,000,000 this year for that project. Then, too, in so doing we are appropriating about $300,000 of pure pork, I assume, for the members or some member of this dredgers' association. Why, this dredgers' association has a campaign fund, according to the report. They approach Members of Congress from every side, if their report is to be believed. They go to them before election and after election, and it seems to me that it is about time that Congress should purify itself by refusing to make appropriations of this kind. This item is for a million dollars, a great increase over any appropriation before. The commerce on this little canal is dwindling away, and by the time we have completed it the timber will have been removed from the banks of the canal and there will be no commerce to move.

Mr. SPARKMAN. Mr. Chairman, will the gentleman yield?

Mr. GOOD. Yes.

Mr. SPARKMAN. Does the gentleman know of any case where they have approached a Congressman either before or after election?

Mr. GOOD. I know nothing about it except what the Dredge Owners' Association say. They say it is necessary to have these banquets in order to influence Members of Congress, and they say it in that many words—Members of Congress. There has been much said throughout the country in regard to pork——

Mr. SPARKMAN. Does the gentleman know of any case where a Member of the House has attended any of their banquets?

Mr. GOOD. No; I do not. I have never attended any of their banquets. I do not know of any Member of Congress attending any of their banquets, and do not believe they would be influenced if they did. I only know that that sort of statement does Congress no good and that it does Members of Congress a great deal of harm. They can not be bought that way. I am doing, by offering this amendment, what I think will improve this bill and will give that canal all of the money that the Government can expend there, $200,000 a year, until that useless and worthless canal has been completed. I suppose we will have to do that. I am opposed to appropriating $1,000,000 for that purpose at this time.

The CHAIRMAN. The time of the gentleman from Iowa has expired. The question is on the amendment offered by the gentleman from Iowa.

Mr. FREAR. Mr. Chairman, I do not know that there is very much to add to what has just been said in regard to this project. It is a $5,400,000 project that received $400,000 last year. This year, in a time of need of the Government, it is given $1,000,000 for a traffic that reached 65,000 tons of actual commerce outside of the timber and wood in 1913, and about the same amount in 1914. That is the last report that we have from the Army engineers. I find that it is very unsafe to accept the estimate of anyone outside unless you have the actual figures from the engineers. That amount has been placed in this bill—$1,000,000—and we are asked to support a bill containing an item of this kind. When this project was first put through it was urged as a military necessity; and Col. Black, who today is the Chief of Engineers, says, on page 27 of House Document 391, Sixty-second Congress, that the depth from Norfolk to Beaufort is sufficient for navigation, and that for the movement of troops water transportation affords many advantages over rail. He also says that to move a division of troops it will take 12 ships of 20-foot draft or 22 ships of 16-foot draft, and that is what they propose for this canal. That was the object of it at the time the document was written, and we are digging a 12-foot canal. Again, on page 117, of the document, we find the following:

> The possible danger of interruption to traffic by the forces of the enemy has been suggested as a reason why this route should not be chosen. At its nearest point this route is distant 6½ miles from the seashore and some 8 miles from the sixth-fathom curve of the ocean.

Then he goes on to demonstrate that this will be protected from the enemy. Mr. Chairman, I know that, because I have ridden up and down that coast day after day on horseback.

There is no chance for anyone to get within gunshot with a cannon or otherwise of that canal more than there is of storming the city of Washington from the Chesapeake Bay—not a particle. It is an absurdity. But it is put there for the purpose of aiding this $5,400,000 project on which we are asked to appropriate $1,000,000. The gentleman from Iowa says, and well says, and he reads from the dredgers' report, that those dredgers in past years entered into a conspiracy, because it is purely that, to apportion the Government contracts among themselves. Now, if that be true at this time, and we see that they get twice as much on these contracts as the Government pays for its own work, an investigation should be had.

Mr. Chairman, I do not know that I care to say anything else, except that this one item of $1,000,000 ought not to stand.

The CHAIRMAN. The time of the gentleman has expired.

Mr. SWITZER. The gentleman from Wisconsin [Mr. FREAR], on page 3 of the minority report, criticizes the Rivers and Harbors Committee for adopting projects and making dribbling appropriations for their completion, and thereby dragging the whole system into a mire of waste. And here is a project for which we appropriate $1,000,000 to finally complete in a year, after having expended $4,000,000 upon it, which is now standing idle so far as bringing in any revenue. And he takes the other horn of the dilemma and criticizes the committee for making an exorbitant appropriation. The gentleman from Iowa [Mr. GOOD] said he would not accuse the chairman of recommending the appropriation in the interest of the dredgers, but he did not say anything about the rest of the Committee on Rivers and Harbors.

Mr. GOOD. Will the gentleman yield?

Mr. SWITZER. There was no such proposition put up to me as a member of the Rivers and Harbors Committee, I will say, for a project to merely help some dredgers on the Atlantic coast.

Mr. GOOD. Of course, the gentleman knows I have not charged any member of the committee, and would not, or any Member of the House. I have only read what is in the report of the Dredgers' Association.

Mr. SWITZER. I do not want this taken out of my time.

Mr. Chairman, the fact of the matter is, there are two canals down there now in operation; or rather the canal on which this work is being done is in partial operation. The other canal, of course, is carrying all the tonnage, and therefore there is only a small tonnage being carried over the canal which is now in the process of being deepened. I think that the tonnage coming through both canals aggregates yearly something like 600,000 tons. I was informed the other day by the gentleman from Pennsylvania [Mr. COSTELLO] that one firm in his city—Philadelphia—has 90 or 100 barges to go through that canal when completed. It seems to me that a sensible thing to do in cases of this kind is to complete the project, in place of dribbling it along, so that we may get some return for the money expended. And I think the sensible thing to do would be to appropriate sufficient money to complete this project in one year. The gentleman from Iowa [Mr. GOOD] does not know what the contractors will make on the next contract any more than I do. In fact, they may lose money. Some contractors on the Ohio River this year have gone into the hands of receivers. Because a contractor makes some little money this year, there is no reason that he will make any excessive or exorbitant profits next year. You do not anticipate that the Government officials that have this work in charge are going to look around for the highest bidder. They certainly will undertake to have the work done as cheaply as possible, but if you leave this to be completed by the Government plant there, it will take six or eight years, and if you put in a larger Government plant at this time, with the price of iron going up and all equipment of this kind going up, day after day, the work can not be done any cheaper.

Mr. COOPER of Wisconsin. Do I understand that if a million dollars was appropriated that would result in the completion of this project?

Mr. SWITZER. Completion of the project.

Mr. COOPER of Wisconsin. Does the gentleman think that we would save money?

Mr. SMALL. It would complete this particular section from Norfolk, Va., to Albemarle Sound.

Mr. COOPER of Wisconsin. That is what I mean. Has the gentleman any idea of how much more it would cost the Government if it has to complete the project ultimately, if it should do it by dribblets of $200,000 a year?

Mr. SWITZER. It would depend on the price of labor in the future. Labor is going up every day now.

The CHAIRMAN. The time of the gentleman has expired.

Mr. COOPER of Wisconsin. I ask that the gentleman may have two minutes more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. SWITZER. It is not a question of costing the Government more, but what I want is to have a project completed so that the people can get some benefit and some use from it.

Mr. COOPER of Wisconsin. When I first came here, or a year or two after I came here, Gen. Casey, Chief of Engineers, wrote a letter, and I recall that Mr. Burton read it. I remember

well when he read it, because it was the first time that subject of making contracts and completing a great work had ever been brought to my attention. Gen. Casey in the letter said:

At the Hay Lake Channel the work estimated to cost $2,659,150 will be completed upon the execution of the existing contracts, and fully $900,000 within the estimate, a saving of one-third, or 33 per cent.

And he also says the same thing about the Philadelphia Harbor:

The price under the continuing contract is only 33 per cent of the average price which during the past 10 years has been paid on the Delaware for similar dredging under annual contracts.

Mr. SWITZER. I agree with the gentleman that one contract for the entire work usually results in a great saving of money on the work to be done.

The CHAIRMAN. The time of the gentleman from Wisconsin has expired.

Mr. SMALL. Mr. Chairman, in view of the character of the criticisms that have been made against this project, I will be glad to have the attention of the committee briefly.

This project is for an inside route from Norfolk, Va., southwardly, entering the ocean at Beaufort Inlet, N. C., a distance of 186 miles. It is inside of Cape Hatteras and Cape Lookout, the most dangerous menaces to navigation along the Atlantic seaboard, to which Cape Cod comes next in point of danger.

The project is for a minimum depth of 12 feet. Here on this map is located Norfolk, and the inside route here runs out to the ocean again at Beaufort Inlet. The estimated cost is $5,400,000. The sum of $1,800,000 has already been appropriated. This additional million will complete the section from Norfolk to Albemarle Sound, leaving $2,600,000 to be appropriated to complete the remainder of it to Beaufort Inlet.

There have been since 1902 three or four examinations of that project, each time by a special board of engineers, reviewed by the Board of Engineers for Rivers and Harbors and by the Chief of Engineers. There has never been an unfavorable report. Each one of those reports in unqualified terms and unreservedly commends it for its advantages to commerce and as a strategic arm of defense. I will summarize as follows those several surveys and reports.

There have been an unusually large number of examinations and surveys of this inland waterway from Norfolk to Beaufort, N. C. In 1875 Congress ordered a survey from the southern end of the Dismal Swamp Canal to the Cape Fear River, and a most valuable report, by S. T. Abert, was made, which is to be found in the Annual Report of the Chief of Engineers for 1876, page 376.

There were several subsequent reports, but the most important was that authorized in the river and harbor act of June 13, 1902, submitted to Congress February 19, 1904, and is printed as House Document No. 563, Fifty-eighth Congress, second session. This report covers the route from Norfolk, Va., to Beaufort, N. C., Inlet. The authorization was to determine the most advantageous route, with a channel depth of not less than 16 feet, and the law further directed the engineers to include the probable cost of any existing privately owned waterway which might form a part of the proposed route and which it might be to the interest of the United States to acquire. The special board detailed thereon made an elaborate favorable report. The Board of Engineers for Rivers and Harbors, in reviewing this report, while conceding the importance of this waterway, stated as their conclusion that the cost of a waterway 16 feet in depth was greater than the resulting benefits would justify, and recommended that another survey be had between Norfolk and Beaufort with a view to securing a depth of 10 or 12 feet, as might be most desirable, and they further expressed the opinion that a waterway of this lesser depth would greatly benefit commerce and possess military advantages.

Congress authorized another examination and survey from Norfolk to Beaufort in the river and harbor act of March 3, 1905, with a depth of 10 to 12 feet, and this work was assigned to a special board of engineer officers, and their report, with the concurring approval of the Board of Engineers for Rivers and Harbors and the Chief of Engineers, was submitted to Congress on December 3, 1906, and is printed as House Document No. 84, Fifty-ninth Congress, second session. This report contains estimate of cost for a depth of 10 and 12 feet, respectively, but recommended the latter depth. It also recommends the purchase of the Albemarle & Chesapeake Canal as a part of the route, provided the said canal could be purchased by the United States for a sum not exceeding $500,000. This report is altogether favorable to the project.

By the act of March 2, 1907, Congress provided for the construction of one section of this waterway by making an appropriation for the construction of the Adams Creek Canal, connecting Neuse River with Beaufort Inlet, with a channel depth of 10 feet. This canal was so constructed as to admit of dredging it to a greater depth.

In the river and harbor act of March 3, 1909, Congress authorized the survey for a continuous waterway from Boston to Beaufort with a maximum depth of 25 feet and such lesser depths along any portion as may be found sufficient for commercial, naval, and military purposes. This report was submitted to Congress on January 4, 1912, and is printed as House Document No. 391, Sixty-second Congress, second session. This is an elaborate report, and discusses in detail all the intervening links between Boston and Beaufort, including the link from Norfolk to Beaufort. This report recommended the construction of a waterway 12 feet deep between Norfolk and Beaufort, at a total cost of $5,400,000, which included $500,000 for the purchase of the existing Albemarle & Chesapeake Canal.

Congress adopted the project from Norfolk to Beaufort in accordance with the report last named in the river and harbor act of 1912 and appropriated $600,000, of which $500,000 was to be used in the purchase of the Albemarle & Chesapeake Canal property. This canal has been purchased and is now the property of the United States.

In the river and harbor act of 1913 an additional appropriation of $800,000 was made for this project. The work on this project so far undertaken is on that section between Norfolk and Albemarle Sound.

Out of the lump appropriation contained in the river and harbor act of 1914 no allotment was made for this project, for the reason that it was assumed that the existing appropriations would continue the work up to March, 1915.

From the lump appropriation contained in the river and harbor act approved March 4, 1915, the sum of $400,000 was allotted to this waterway.

There have been numerous criticisms of this project mostly in this body. I have been a Member of this House since the Fifty-sixth Congress, and during that time have pressed this project continuously. This is not the first time that unfair, unjust criticism has been made against it, and probably it will not be the last time. I may say in that connection that I have never resented that kind of criticism and opposition to this project. Not only has it always received uniformly the approval of the Army engineers, but it has never been presented to a citizen at all acquainted with the conditions of water-borne commerce in the Atlantic seaboard States who has not given it his entire approval. I have discussed it personally with many Members of this House during these last 16 years and I have never yet found a Member who was open minded and fair who did not give it his approval.

To be brief, the chief benefit and advantage and necessity of this route lies in the fact that it avoids Cape Hatteras here [indicating on the map] and Cape Lookout there. The coastwise commerce carried on the ocean between ports north of Hatteras and ports south of Hatteras is comparatively small in volume. The only coastwise commerce substantially is carried in a few very large coastwise steamships. Barge transportation is practically prohibited by reason of the danger of Hatteras.

To place the matter before you briefly, the great importance of this inside route is that it is inside of Cape Hatteras and Cape Lookout.

The CHAIRMAN. The time of the gentleman from North Carolina has expired.

Mr. SMALL. Mr. Chairman, may I ask unanimous consent for five minutes more?

The CHAIRMAN. Is there objection to the gentleman's request?

There was no objection.

Mr. MOORE of Pennsylvania. Mr. Chairman, will the gentleman yield?

Mr. SMALL. Certainly.

Mr. MOORE of Pennsylvania. Is it not a fact that commerce has been going between Hampton Roads and the sounds of North Carolina through two existing, but now antiquated, canals for 50 years or more?

Mr. SMALL. It is true.

Mr. HICKS. Mr. Chairman, will the gentleman yield there for a question?

Mr. SMALL. Yes.

Mr. HICKS. What is the distance between Beaufort Inlet and the next point south where the canal will be taken up again?

Mr. SMALL. The gentleman means its continuation?

Mr. HICKS. Yes.

Mr. SMALL. There has been submitted a report for its continuation from Beaufort Inlet to Cape Fear River, and from

Cape Fear River to Winyah Bay, S. C., and from Winyah Bay to the St. Johns River, Jacksonville.

Mr. HICKS. Nothing has been done with that?

Mr. SMALL. No; nothing has been done with that.

Mr. MOORE of Pennsylvania. Pardon me, but much has been done below Georgetown, S. C., moving north.

Mr. SMALL. Yes; I beg pardon. I had in mind the section between Beaufort Inlet and Winyah Bay. There is a natural inner channel extending from Winyah Bay to St. Johns River, Fla., having a minimum depth of 6 feet, on which there is very considerable commerce.

However, south of Beaufort Inlet on the ocean there is substantially no menace to navigation except Cape Fear and the Frying Pan Shoals off Cape Fear, which are not comparable to the dangers of Capes Lookout and Hatteras. So that with this route barge transportation is entirely practicable between ports north and ports south of Hatteras by using this Norfolk-Beaufort Inlet waterway lying inside of Hatteras.

Something has been said about the commerce through this Norfolk-Beaufort Inlet waterway. The gentleman from Wisconsin [Mr. FREAR] says there are 65,000 tons, not including floatable products, as he calls them, whatever that means.

Mr. FREAR. No; not that, if I may interrupt the gentleman.

Mr. SMALL. What did the gentleman call it?

Mr. FREAR. Floatable timber.

Mr. SMALL. If the gentleman means rafts of logs, these constitute a very small proportion of the commerce through this waterway. Before Congress adopted this project there were two privately owned canals between Norfolk and Albemarle Sound, N. C., one known as the Dismal Swamp Canal, which is a lock canal with a lift of 11 feet, and the other the Albemarle & Chesapeake Canal, which is practically a tide-level canal.

The engineers recommended the purchase of the Albemarle & Chesapeake Canal, by reason of the fact that it was a tide-level canal. It so happened that at the time the United States purchased the Albemarle & Chesapeake Canal the Dismal Swamp Canal had a greater depth and was in better condition, so that up to this time, both by reason of that fact and because the Albemarle & Chesapeake Canal route is under construction, loaded barges and steamers have not been able to use the free waterway, but are still compelled to pay tolls through the old Dismal Swamp Canal, and up to this time more tonnage goes through the Dismal Swamp Canal than through the Government-owned Albemarle & Chesapeake Canal.

Mr. MOORE of Pennsylvania. May I ask the gentleman why?

Mr. SMALL. Because it is in better condition and has a greater depth. In other words, there is a depth of only 8 feet on a part of the Albemarle & Chesapeake Canal and its bottom is obstructed by logs. It has not yet been completed, and there is a depth of 9 feet in the old Dismal Swamp Canal. Now, of course, with that statement it is apparent that when you ask what is the commerce involved in this improvement, it is entitled to the commerce carried through both canals, because when this Albemarle & Chesapeake Canal route is completed, being free as it is, it will get all the commerce, and, of course, no traffic will go through the other canal and pay tolls. I had Mr. Joseph H. McGann, a clerk in the River and Harbor Committee, who has been there for many years and was clerk of that committee when Mr. Burton was chairman, summarize the commerce going through these two canals in 1914, according to the engineers' report, and it amounts to 603,307 tons, of a total valuation of $7,815,773. That statement is made by this clerk of the committee, without any suggestion having been made to him as to the manner of making it, and he vouches for its correctness. I will now read a summary of this commerce as prepared by Mr. McGann:

"B."

Inland waterway from Norfolk to Beaufort Inlet, N. C.

COMMERCIAL STATISTICS.

[Season of navigation, year 1914.]

	Tons.	Value.
Beverages	73	$29,900
Brick	1,453	90,428
Canned goods	549	109,933
Cement	1,044	10,446
Coal	34,373	147,657
Corn	2,441	97,720
Cotton	705	84,660
Cotton products	30	6,115
Fertilizer	44,792	1,343,760
Fertilizer material	1,238	24,760
Fish	553	8,295
Flour	2,323	139,392
Gasoline	1,403	56,149
Groceries	1,060	84,800
Grain	311	$12,466
Gravel and sand	1,510	3,020
Hay	605	12,100
Hides	5	2,000
Ice	208	2,080
Junk	163	978
Laths	1,720	7,602
Logs	51,214	395,894
Lumber	249,014	1,466,189
Lime, building	83	834
Lime, agriculture	746	5,122
Merchandise, general	2,015	201,500
Oats	645	1,935
Oils	1,255	43,055
Oysters	2,433	24,435
Packing-house products	358	143,200
Poultry	73	1,266
Peanuts	10	1,018
Potatoes	7,197	251,763
Piling	4,303	244,962
Salt	7,088	70,800
Shells, oyster	7,418	22,093
Shingles	1,927	26,373
Staves	5,070	121,802
Stock, live	160	126,000
Sugar	799	95,940
Ties, railroad	2,253	17,239
Wheat	56	1,894
Wood, fuel	35,242	61,477
Wood, pulp	2,045	3,188
Miscellaneous	69,883	2,257,740
Props, mine	11,839	59,196
Total	603,307	7,815,773

The CHAIRMAN. The time of the gentleman has expired.

Mr. SMALL. I ask unanimous consent that I may have five minutes more.

The CHAIRMAN. The gentleman from North Carolina asks unanimous consent that he may proceed for five minutes. Is there objection?

There was no objection.

Mr. MADDEN. Will the gentleman allow me to ask him a question?

Mr. SMALL. Yes. I hope the gentleman will be brief.

Mr. MADDEN. I wish to ask the gentleman from North Carolina whether it is possible to expend in the coming year all of the $1,000,000 proposed to be appropriated?

Mr. SMALL. I am glad the gentleman has asked that question. The engineers state that with this $1,000,000 they can complete this section from Norfolk to Albemarle Sound, which is a very important section to complete, because they can use this route through Croatan Sound, which has a depth of 9 feet, thence through Pamlico Sound, then up Neuse River, and thence through the Adams Creek Canal to Beaufort Inlet, which latter canal has a depth of 10 feet and is already completed and is the southern end of this project. The $1,000,000 will complete this section from Norfolk to Albemarle Sound, and will give us the uninterrupted use of this free waterway between those points.

Mr. MADDEN. But what I wished to know was whether the whole million dollars could be expended in the coming year.

Mr. SMALL. Yes; the whole of it.

Mr. GOOD. Will the gentleman yield?

Mr. SMALL. Yes.

Mr. GOOD. The gentleman stated that the commerce was 603,000 tons. The report of the Chief of Engineers states that in 1914 it was 219,000 tons. The gentleman has included the commerce on the Dismal Swamp Canal, has he not?

Mr. SMALL. Yes, I so stated.

Mr. GOOD. And that is 30 miles from there.

Mr. SMALL. Oh, no; they both go from Norfolk to the Albemarle Sound. They start from Elizabeth River and they end in Albemarle Sound. They are practically parallel.

Mr. GOOD. But it is not a part of this canal.

Mr. SMALL. I stated a moment ago that when the Albemarle & Chesapeake Canal is completed it will of necessity take all of the commerce that is now going through the Dismal Swamp Canal.

Mr. FREAR. Will the gentleman yield?

Mr. SMALL. Certainly.

Mr. FREAR. In the hearings before the committee did not Mr. Taylor say that a large amount of the traffic of the Dismal Swamp Canal originated between Elizabeth and Norfolk, and is it not true that that large traffic must of necessity go through the Dismal Swamp Canal?

Mr. SMALL. I do not know where the gentleman from Wisconsin obtains his information, but it is not correct.

Mr. REAVIS. Will the gentleman yield?

Mr. SMALL. If the gentleman will be brief.

Mr. REAVIS. The gentleman made a statement that the immediate appropriation of a million dollars would permit the utilization of the canal from Norfolk to Albemarle Sound, and from the sound into the river, and from the river into Beaufort Inlet. Why could not the sound be used permanently and the rest of the canal be obviated?

Mr. SMALL. Because the engineers say that the erosion in Croaton Sound is so constant and great that to keep up a 12-foot depth would be more expensive than the route up Allegator River and the excavation of a canal across Hyde County, as recommended.

Mr. REAVIS. There would have to be continuous dredging?

Mr. SMALL. Yes; in order to keep the channel open.

Mr. REAVIS. The gentleman stated that the construction of the canal would be a benefit to national defense. What character of naval vessels could be accommodated in that canal with a depth of only 12 feet?

Mr. SMALL. Well, some of the smaller submarines, destroyers, and smaller type of naval vessels. I do not hesitate to say that in my opinion, when this project is completed, it will develop such a volume of commerce, much more traffic than it has now, and the strategic value will become so apparent that ultimately we will deepen it, and now it is being constructed of such a width that it may be deepened in the future without further being widened.

Mr. REAVIS. If it was of an adequate depth, a wounded or crippled vessel could go in to Beaufort Inlet and reach the Norfolk Navy Yard without going into the sea at all?

Mr. SMALL. It could.

Mr. MOORE of Pennsylvania. Will not the gentleman indicate the extent of the barge traffic that has been created in the last two or three years which goes through the canal?

Mr. SMALL. I was just coming to that. I have stated the facts as to commerce, that there are 603,000 tons of a valuation of over $7,000,000. That does not represent the commerce to-day. The engineer's report is for the calendar year of 1914. During the last year there was a barge traffic from Philadelphia, Wilmington, Del., Baltimore, and Norfolk to Wilmington, N. C., Savannah, Charleston, Georgetown, and Jacksonville, but the most of the barge traffic was between Philadelphia and Baltimore of the northern ports and Savannah and Charleston of the southern ports. When we get the amount of traffic through the waterway for the year 1915, I believe it will show a largely increased commerce. Now, there is not included in this statement which I read a moment ago the traffic at the southern end between Pamlico Sound and Beaufort Inlet. As a matter of fact, it is less than 100,000 tons. I did not include it because some of it would be a duplication, but not all of it. The next report will show a very largely increased through traffic from the ports south of Hatteras with those ports north of Hatteras. I have here a voluntary letter from Eugene W. Fry, treasurer of the Southern Transportation Co. of Philadelphia, which company is largely engaged in barge traffic, and which is operating the largest number of barges through this waterway from ports north to ports south, and I would like to read this letter in conclusion to the committee. Mr. Fry is one of the most intelligent and progressive transportation men in the country. It is dated March 27, 1916, and is as follows:

PHILADELPHIA, *March 27, 1916.*

Hon. JOHN H. SMALL,
House of Representatives, Washington, D. C.

DEAR SIR: We understand that the river and harbor appropriation bill will be taken up in the House of Representatives for consideration some time this week. We are taking the liberty of writing to you to impress upon you the importance, from the standpoint of commerce, of the item of appropriation of $1,000,000 toward the further construction of the Norfolk-Beaufort inlet waterway. We, as well as other large owners, are hoping for an early completion of this waterway, as we are now trying to develop a very large business of carrying commerce by barges between the South Atlantic States and the northern ports.

We are now very much handicapped in carrying commerce between the North and the South, as we are obliged to pay canal tolls to the Lake Drummond Canal & Water Co. on all of the cargoes passing through the canal and all of our barges are limited to a 9-foot draft in passing through the canal. We have persistently tried to develop this barge traffic under the adverse conditions which we must at present encounter in using the inland waterways Norfolk to Beaufort Inlet, eliminating Hatteras, only because we have been anticipating the early completion of the Norfolk-Beaufort Inlet waterway.

We do not receive a fair profit operating our barges under such conditions with short cargoes (on account of the limited draft of 9 feet), and, as there is a great demand for barges in the northern ports, it would be much more profitable for us to withdraw all of our barges from the South Atlantic trade. However, when we opened up this barge traffic with the South Atlantic ports about 18 months ago we stated to our various shippers that we would be disposed to keep the barges in the business continuously, provided our Government completed the Norfolk-Beaufort Inlet waterway within reasonable time. In other words, we are disposed to worry through the present hindrances or disadvantages in operating our boats through the North Carolina waters to get below Hatteras, if the Government free and deeper waterway is completed within reasonable time.

We are now operating a fleet of 95 barges and 15 steam tugs, and more than one-half of the barges are equipped for sea service. We wish to state emphatically that unless we can see early relief in the way of the completion of the Norfolk-Beaufort Inlet waterway, enabling our barges to use the free waterway with a draft of from 11 to 12 feet, we must withdraw our boats from the South Atlantic trade.

While a large number of our boats are licensed to trade around Hatteras, we have refrained from sending any of our boats to sea around Hatteras, as we have not felt it safe or practicable to operate barges or schooners around Hatteras. The continuous losses from year to year of vessels trading around Hatteras convinces us that our views in this respect are correct. Aside from the dangers of navigating vessels around Hatteras, it will never be possible to get low rates of freight on commerce moving between the South Atlantic and the northern ports until the Government free and deeper waterway is completed back of Hatteras.

We would further state that we are receiving entreaties almost every day from buyers in the North and shippers and manufacturers of lumber in the South requesting us to build more barges and increase the number of boats we are operating between the South Atlantic and the northern ports via the inland waterways Norfolk to Beaufort Inlet, and apparently the situation is very serious. There is a great demand for lumber in the North, the mills in the South are running to full capacity, but on account of the great shortage of bottom the lumber and other commodities can not be moved. In our opinion this situation will become much worse during the next two or three years at least, and it seems very important that our Government hurry the completion of the waterway, so as to afford relief to the shippers and consumers of the North and South and give the vessel owners an opportunity to operate on a practical basis at lower rates of freight and eliminate the dangers of Hatteras.

From the standpoint of commerce, we think it important that not only the appropriation be made, but that the work of deepening the waterway be pushed more rapidly. It has been very discouraging, indeed, to all parties interested to be obliged to wait such a long time for the necessary relief for the development of commerce between the North and South, when it was anticipated that the work would be completed within about two or three years at the most after the purpose of the Albemarle & Chesapeake Canal by our Government.

Trusting you will pardon this lengthy letter, we are,

Yours, very truly,

SOUTHERN TRANSPORTATION CO.,
EUGENE W. FRY, *Treasurer.*

Mr. Chairman, in conclusion I wish to say that I have endeavored to state briefly the chief reasons constituting the commercial and strategic value of this great waterway. I have stated to you the facts as to the commerce from the reports of the engineers. I have endeavored to be conservative in any anticipation of commerce to be promoted. I submit that it is a complete answer to any criticisms which may have been made. I submit that any suggestion of dredging companies influencing Members of Congress as an argument against this project is absurd. Upon the contrary, I suggest that it is an impeachment upon the integrity of Members of this House that ought not to have been made. [Applause.]

Mr. HICKS. Mr. Chairman, I ask uanimous consent to extend my remarks in the RECORD upon the subject of Diamond Shoals.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. CONRY. Mr. Chairman, I make the same request.

Mr. BENNET. Mr. Chairman, I make the same request.

The CHAIRMAN. Is there objection to the requests of the gentlemen from New York [Mr. CONRY and Mr. BENNET] to extend their remarks in the RECORD upon the same subject?

There was no objection.

Mr. CANNON rose.

The CHAIRMAN. The Chair desires to state that under a previous order of the House the committee must rise at 5 o'clock.

Mr. SPARKMAN. Mr. Chairman, I ask unanimous consent that debate close immediately upon the conclusion of the gentleman from Illinois [Mr. CANNON].

Mr. CANNON. I would like to have the remaining 12 minutes.

Mr. FREAR. Mr. Chairman, I desire to offer an amendment and speak to it briefly at the conclusion of the remarks of the gentleman from Illinois.

Mr. SPARKMAN. I understood that the gentleman from Illinois wanted only a few minutes, but might want to extend his remarks a little further, and that was the reason I made my request so broad.

Mr. CANNON. The matter can go over until morning.

Mr. MANN. I ask unanimous consent that my colleague may proceed for 11 minutes.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. CANNON. Mr. Chairman, I desire to say that I am not very familiar with this project. It is within some 6 to 12 miles of the Atlantic Ocean, and when completed is to be either 12 or 6 feet deep. I believe it is not sufficient for the coastwise trade, the barges that ply upon the Atlantic Ocean in our coastwise trade, and that trade is a wonderful trade. I live a thousand miles inland. Oh, I wish that we had the Atlantic Ocean out there within 6 miles of us—without destroying any of our agricultural lands or any of our coal lands,

our manufacturing industries of production. The journey passing Hatteras and Beaufort, and so on, to the contrary notwithstanding, we would be very glad to incur the danger if we had the ocean.

Mr. Chairman, I have a very clear recollection of the desire of Indiana and Illinois for canals many years ago. The canal from Toledo to Evansville was constructed in my recollection. I was a good healthy boy at that time, and I recollect it very well. The canal passed through the neighborhood where I lived. Indiana piled up a debt, as I recollect it. In round numbers for canals Indiana expended about $15,000,000. It took a long time to pay it. Illinois accumulated a debt not so large, but I think from eight to ten million dollars, for the Illinois & Michigan Canal, and my dear friend and colleague, whose memory I love, Gen. Henderson, for a long time chairman of this Committee on Rivers and Harbors, had a great desire to connect the Mississippi River with the Illinois River by a route known as the Hennepin Canal. That finally was completed at a cost of——

Mr. MADDEN. Seven million dollars.

Mr. CANNON. Oh, yes; more than that. It cost nearly $12,000 to the best of my recollection. Mr. Chairman, if any canal boat has ever carried a ton of freight over that canal from that time to this I am not informed of it. It has been a little valuable here and there for water power, where we do not need water power particularly as nature gave us an abundance of water power. We have the Rock River and the Illinois River and various rivers nearby. It was money thrown away, and yet I loved Thomas J. Henderson. He believed it was going to revolutionize all the business of the northern Mississippi River, and honestly believed it would carry the products of Iowa and the Northwest on its way to eastern markets. And of the canal constructed in my time from Toledo to Evansville—I want to say that practically but little business was ever done upon it and has not been for 40 years. Oh, yes; the towpath has been useful, because a railroad has been built upon the towpath. I do not believe in these canals. Of course I do not refer to such canals as the Sault Ste. Marie Canal, connecting Lake Superior with the great chain of lakes, which carries more tonnage through it than it is said comes into the port of New York from all the foreign trade from all the oceans of the world—80,000,000 tons a year. Now, let us take the railroads.

I pick up the Interstate Commerce Commission report and see the various classes of freight carried by the railroads in the United States. I find that about 3 mills a ton per mile hauls the coal, and I find that 7½ mills per ton per mile hauls all the products back and forth that are produced everywhere in the United States or imported into the United States and distributed for consumption. We already have one-half of all the railroads of all the world and transport our products at a cost of one-half the freight cost paid for similar transportation in the world.

Now, there is one good thing about it. When this canal is completed to Beaufort it will please one of the most pleasant gentlemen in the Old North State that I ever met, and one whom I esteem highly and who believes that this is, no doubt, a very great project and one which will make everybody smile and prosper. Well, the Government will own it, and perhaps it will be maintained. If private parties opened it, and I should live as long as I hope to live—another score of years—I should expect to see, if this canal has a towpath—I do not know whether it has or not—a railroad constructed on the towpath.

Mr. SMALL. Twenty years from now we will show you 20,000,000 tons on it.

Mr. CANNON. Although my friend is not a prophet or the son of a prophet, I will not dispute him. I know he believes what he says. I will throw no stones at him or at other people who advocate it. It is a magnificent project, one starting in from the neighborhood of Boston, extending down the Atlantic coast, along on the Gulf coast, across the Mississippi River, on the Gulf coast in Texas. I do not know whether that is contemplated about this or not, but I heard a wonderfully eloquent speech about it once. I cheered with everybody else, because it was so well made.

Now, gentlemen this appropriation is going through. I did not intend to say anything about it. It will not do any good. I wish that the millions of dollars that it will cost had been expended. I wish it could stop there at Beaufort, but I would be perfectly willing, as I say, if this whole canal project could be closed up for $2,000,000 or $3,000,000 or $5,000,000. That is the way I feel about it, and when completed and it has failed to justify the expenditure, then we will be able to stop further expenditure or further extension of this project.

Preparedness? That is brought in to aid this measure. [Laughter.] Talk about a 6-foot or a 12-foot canal 6 to 12 miles from the ocean for preparedness. Why, with our railroads running everywhere there is carried an immense tonnage. I do not know how many railroads you have in North Carolina, but you have several north and south and some east and west. If you need them, I wish you had more. But let me tell you about tonnage. Oh, 600,000 tons a year, you say. There originates in three townships every year in Vermilion County—the county in which I reside—Illinois, a tonnage of 4,000,000 tons of products that passses over the railroads for consumption in other markets. There originates, as I say, without counting the incoming freight, a tonnage of 4,000,000 tons annually. I have not looked up the statistics, but I will leave it to my friend and colleague, Dr. FOSTER, that if there is not in southern Illinois, north and east and west, a wonderful tonnage?

Mr. FOSTER. Very large.

Mr. CANNON. Very large, indeed; and then there is the Mississippi River. Great heavens, we are spending money on the Mississippi River world without end. Well, I am for it. It is not a matter of navigation, because there is less navigation now—not one-fifth, not one-sixth of the navigation there was on it when I was a boy, the railroads having taken its place with the railway transportation. The navigation is negligible. I am for it honestly, and I have been for it, because there is a stretch of country from Cairo to New Orleans, averaging, I suppose, in the aggregate 70 to 100 miles, adjacent to the Mississippi River, of the best land on earth, and when brought under subjection and protected by levees it will produce enough cotton to furnish all the spindles of all the earth with a full supply. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. CANNON. And therefore I am for the levees. [Applause.]

The CHAIRMAN. The question is on the amendment offered by the gentleman.

Mr. MANN. You will have to quit at 5 o'clock.

Mr. FREAR. I suppose we are going to take to-morrow morning. Mr. Chairman, I move an amendment to the amendment to increase the amount to $250,000 in order to discuss this question.

Mr. SMALL. I make the point of order that the gentleman is against his own amendment.

Mr. FREAR. I move to reduce it to $100,000.

Mr. SPARKMAN. Mr. Chairman, I move that all debate on this amendment and all amendments to this section now close.

Mr. FREAR. Mr. Chairman, I desire to speak on that.

Mr. MANN. Mr. Chairman, I make the point of order that under the order of the House the committee is now required to rise in order that the House may recess.

The CHAIRMAN. The Chair is under that impression. Although he did not hear the order, he finds a memorandum to the effect that an order was entered that at 5 o'clock the House should recess, and that means that the Chair puts the motion that the committee do now rise. Without objection, the committee will now rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. SHERLEY, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 12193, the river and harbor appropriation bill, and had come to no resolution thereon.

RETURN OF BILL.

Mr. ADAMSON. Mr. Speaker——

The SPEAKER. For what purpose does the gentleman rise?

Mr. ADAMSON. I want to correct a mistake made yesterday. We passed a bill yesterday, when there was an identical bill of the same purport on the Speaker's table, and I ask unanimous consent to request its return from the Senate. It is H. R. 13006.

The SPEAKER. The gentleman from Georgia asks unanimous consent that the Senate be requested to return the bill H. R. 13006. Is there objection?

There was no objection.

Mr. MURRAY. Mr. Speaker——

The SPEAKER. For what purpose does the gentleman rise?

Mr. MURRAY. I want to ask unanimous consent to extend my remarks in the RECORD.

Mr. MANN. It is too late.

The SPEAKER. The gentleman will have to attend to that in the morning.

Under the special order of the House, the House will stand in recess until 8 o'clock this evening.

Accordingly (at 5 o'clock p. m.) the House stood in recess until 8 o'clock p. m.

EVENING SESSION.

The recess having expired, the House was called to order by Mr. IGOE as Speaker pro tempore.

The SPEAKER pro tempore. Under the agreement made on last Friday, the Private Calendar will be called for the consideration of bills to which there is no objection. The Clerk will call the first one.

F. W. SCHULTZ.

The first business on the Private Calendar was the bill (H. R. 3895) for the relief of F. W. Schultz.

The title of the bill was read.

The SPEAKER pro tempore. Is there objection to the consideration of this bill?

There was no objection.

The SPEAKER pro tempore. The Clerk will report the bill.

The Clerk read as follows:

Be it enacted, etc., That the Postmaster General be, and he is hereby, authorized and directed to cause the account of F. W. Schultz, postmaster at Junius, State of South Dakota, to be credited with the sum of $244.78, and that he cause said credit to be certified to the Auditor of the Treasury for the Post Office Department, being on account of loss by robbery of said post office on the 17th of October, 1909, it appearing that said loss was without fault or negligence on the part of said F. W. Schultz, postmaster.

The SPEAKER pro tempore. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

On motion of Mr. DILLON, a motion to reconsider the vote whereby the bill was passed was laid on the table.

CIVILIAN EMPLOYEES, ENGINEER DEPARTMENT, UNITED STATES ARMY.

The next business on the Private Calendar was the bill (H. R. 5079) for the relief of certain civilian employees of the Engineer Department at Large, United States Army.

The title of the bill was read.

Mr. STEPHENS of Mississippi. Mr. Speaker, I have received word from the gentleman from Delaware [Mr. MILLER] asking that this bill be passed over until he can arrive. He will be here presently.

The SPEAKER pro tempore. The gentleman from Mississippi asks unanimous consent that the bill be passed over without prejudice to be called up later. Is there objection?

There was no objection.

OSCAR FROMMEL & BRO.

The next business on the Private Calendar was the bill (H. R. 2241) for the relief of Oscar Frommel & Bro.

The title of the bill was read.

The SPEAKER pro tempore. Is there objection?

Mr. MANN. I object.

The SPEAKER pro tempore. Objection is had. The Clerk will report the next one.

CLAIMS OF SETTLERS IN SHERMAN COUNTY, OREG.

The next business on the Private Calendar was the bill (H. R. 2534) to adjust the claims of certain settlers in Sherman County, Oreg.:

The Clerk read the bill, as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized to pay, out of any money in the Treasury not otherwise appropriated, the following several sums of money to the respective claimants, their heirs, assigns, or legal representatives; the amount to be paid to each settler, his heirs, assigns, or legal representatives:

To Harry Hill, $1,255.
To Hiram E. Powell, deceased, $2,000.
To Otis B. Messinger, $2,000.
To David W. Huff, deceased, $1,440.
To Eliza J. Powell, $1,265.
To Luther B. Hill, $800.
To Alva B. Craft, $1,290.
To Benjamin E. Dougherty, $1,600.
To Theron S. Hill, deceased, $2,000.
To James H. Clements, $1,360.
To Absalom B. Allison, $1,375.
To Edgar Lewis, $1,180.
To Elizabeth A. Bates, $1,385.
To Lena Wegener, $1,280.
To Rufus H. King, $2,000.
To Charles K. Huff, $1,600.
To Grace T. Hill, $1,625.
To John B. Coon, $1,426.41.
To Merit F. S. Henton, $1,500.
To Robert L. Allison, $1,618.
To Clark E. Brown, $1,515.
To Reuben D. Allison, $1,450.
To Adolph Perrault, $2,000.
To Lester A. Heath, $1,830.
To Warren D. Marshall, $1,970.
To Anastasse Perrault, $1,460.
To John Willet, $1,190.
To John W. Willis, $800.
To Diedrich Patjens, deceased, $850.
To Ellen E. McLeod, now Ellen E. Somer, $800.
To George M. Simpson, $800.
To Henry Nachand, $800.
To Cascious W. Fairchild, $855.
To Frank Watkins, deceased, $560.
To William Daugherty, deceased, $1,039.
To Alice M. Coats, deceased, $570.
To Thomas J. Farra, deceased, $1,760.
To Edgar G. Messinger, $1,760.
To Louisa M. Clements, $1,600.
To George D. Clements, $1,605.
To William Krusow, $1,899.72.
To Thomas F. Cochran, $300.
To George Meader, $2,000.
To William H. Andrews, $2,000.
To Charlie W. Barzee, $1,900.
To Joel H. Reed, deceased, $1,370.
To John O. Powell, $1,400.
To Abraham C. Huff, $1,400.
To John D. Wilcox, $1,200.
To Eugene W. Garlick, $1,400.
To Goodrich D. Boardman, $700.
To Elisha T. Vallandingham, $1,080.
To Frank A. Sayrs, $1,900.
To William S. Powell, as transferee of George W. Mark, $1,400.
To Thomas Macken, $1,120.
To James Macken, $1,200.
To Joeb M. Powell, deceased, $2,000.
To Leon V. Moore, $1,400.
To Fred Krusow, $1,255.
To Uriah Serviss, $2,000.
To Alexander Scott, $1,350.
To Thomas Walsh, deceased, $480.
To Johan Janssen, $1,550.
To Elmer F. Heath, $1,600.
To John Fulton, $1,200.
To Carl Peetz, $2,000.
To John W. Messinger, $2,000.

In all, $94,318.13, which amount is hereby appropriated; and the Secretary of the Interior is authorized and directed to make the payments to the claimants herein named and provided for by his warrant upon the Treasury of the United States: *Provided*, That no agent, attorney, firm of attorneys, or any persons engaged heretofore or hereafter in preparing, presenting, or prosecuting this claim shall, directly or indirectly, receive or retain for such service in preparing, presenting, or prosecuting such claim, or for any act whatsoever in connection therewith, an amount greater than 5 per cent of the amount allowed under this bill to the person for whom he has acted as agent or attorney: *Provided further*, That no purchaser or assignee of the claims of any of the said claimants shall receive therefor a greater amount than was paid to the claimant for his assignment.

The SPEAKER pro tempore. Is there objection?

Mr. STAFFORD. Reserving the right to object, Mr. Speaker, I would like to inquire whether I am correct in my understanding with respect to this bill, that the amounts stated in this bill as due the respective claimants are based upon the full value of the property at the time of ouster? As I understand this bill, it seeks to reimburse these respective entrymen on Government land who located there under a misapprehension of the facts, and later it developed that the United States Government had previously passed title to this land to some road company. The query that I wish to propound to the gentleman from Oregon [Mr. SINNOTT] is whether these amounts are based on the full value of the land at the time of ouster?

Mr. SINNOTT. I would state to the gentleman that the amounts do not represent the full value of the land. These various settlers and patentees were ousted in 1900. In 1904 an investigation was made by a special agent. On page 36 of his report he shows that when he made the investigation the lands then were worth double the value that they were at the time of the ouster, and the claimants are only allowed the small value of the land at the time of the ouster. The acreage runs in value from $2 up to $12 an acre, and in one case $15. I think that is the highest valuation placed upon any particular tract of land.

The land at the present time will average in value from $35 to $60 an acre. The special agent inquired of this road company at the time he made this investigation what the road company would sell the land for, and the road company wanted $60 an acre for the land.

Mr. STAFFORD. If the gentleman will permit me there—because I do not wish to delay the proceedings to-night unnecessarily—was not this report of Special Agent Neuhausen in pursuance of the act of Congress passed some years ago, in which he was directed to ascertain the reasonable value of such lands at the time of ouster?

Mr. SINNOTT. At the time of ouster.

Mr. STAFFORD. I find on page 36 of last year's report in this case where he says it appeared to be the consensus of opinion of the three estimators—and they were local people, one a judge and the others residents of the District—that to arrive at the present value of the overlapped land the amounts given in the classified list should be doubled.

Mr. SINNOTT. Yes; and they are not doubled in the classified list. They are getting less than half of what Special Agent Neuhausen found to be the value of the land at the time of his investigation.

Mr. STAFFORD. In Neuhausen's report, page 38, there is given not only the full value but in some instances more than was estimated in that report.

Mr. MANN. The Neuhausen estimates are not carried in this bill.

Mr. STAFFORD. I beg the gentleman's pardon; I think they are. I call the gentleman's attention to the first one in the report—Harry Hill, $1,255. According to the statement found on page 38 the acreage was 120; value of improvements, $175; value at ouster, $9 per acre—$1,080—which, with the value of improvements, equals the amount allowed.

Mr. SINNOTT. Yes. That is the value of the land, together with improvements he had there when Mr. Neuhausen went there.

Mr. STAFFORD. As I scan these claims the value of the improvements generally did not exceed $200. In many of them it is less than $100. Yet you are paying to these men who entered on the public land of the Government, through the mistake of the Government, it is true, a price more than they paid to the Government for the land, just because there happened to be a flaw in the title whereby the land officers had been misled into the belief that the lands were subject to entry.

I fear from my investigation of this case that I shall be compelled to object to such a basis of reimbursement in the payment of these claims, not what they paid to the Government for the land but the value of the land.

Mr. MANN. If the gentleman will permit—and the gentleman is very careful—the Senate in the last Congress passed a bill for this purpose, covering $250,000 and making an appropriation of $250,000. It came up in the House, and I objected to it. I had done so in a previous Congress. I have not been over the matter carefully recently, but my understanding is that all of the objectionable claims were eliminated, and this bill covers a little over $90,000 in place of the $250,000 originally proposed, which was based on that report.

Mr. STAFFORD. Does the gentleman believe it is a fair policy for this Government to pursue when it is ascertained that the Government has not title to land that we should pay the settler not merely the amount of money that he paid for the land but the value of the land at the time of ouster?

Mr. MANN. Ordinarily, I certainly do not.

Mr. SINNOTT. Will the gentleman bear this in mind? This man Hill and many others lived on that land and cultivated it for a period of from 5 to 10 years, and they put the value into that land with the expectation that their time and labor would be rewarded by a good title to the land.

Mr. STAFFORD. Take, for instance, that man Hill. He must have done a great deal of cultivation, when he only placed a value of $175 on the improvements of the land in 10 years.

Mr. SINNOTT. Let me explain. That is the amount of the improvements that Mr. Neuhausen found on the land after Mr. Hill was ousted. If you will read the report, on page 54 you will see that there is an affidavit of Mr. Hill showing that he placed considerably more improvement on the land than $175 worth, and where the improvements were removed when Mr. Neuhausen got there nothing is allowed for them. Mr. Hill's affidavit shows improvements, a house $200, a cellar $25, a well $10, 2 miles of fencing $140. It also shows residence and cultivation for six years; that practically all of the 120 acres were put in cultivation by Mr. Hill.

Mr. STAFFORD. From my present knowledge of this case—and I have given it some attention—I shall have to object. Perhaps on fuller investigation if I find that these estimates are based upon only half the value, I will be able to recede from my objection. But from my reading of the report I am led to believe that these people are being paid the full value, and I do not think that is the proper rule to follow. For that reason I shall have to object.

Mr. SINNOTT. Will the gentleman withhold his objection?

Mr. STAFFORD. I will withhold it if the gentleman wishes to make any statement.

Mr. SINNOTT. As to the precedents in this matter, in 1814, when the Government was poor, weak, and small, Congress appropriated $5,000,000 for the relief of settlers in Mississippi. In 1820 Congress made another appropriation. In 1824 Congress made an appropriation of $80,000 for a matter similar to this, and in 1894 Congress appropriated $240,000 for the relief of settlers who were known as the Des Moines settlers in Iowa, who had lost their lands in the same manner as the Sherman County settlers lost theirs.

Mr. STAFFORD. What was the basis of compensation?

Mr. SINNOTT. The basis of compensation in 1894 was just the same as in this bill—the value of the land at the date of the ouster.

Mr. STAFFORD. I do not believe that is a proper policy, that when the Government allowed settlers to enter upon land under a misapprehension as to the lands being subject to entry and they merely had possession of it for a short time and paid the Government a nominal amount for the land, that then the Government should reimburse them for the full value. I object for the time being.

The CHAIRMAN. The gentleman from Wisconsin objects.

TUTTLE TOWN SITE.

The next business in order on the Private Calendar was the bill (H. R. 10791) for the relief of the occupants of the Tuttle town site.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection to the present consideration of the bill?

Mr. FOSTER. Reserving the right to object, I observe that this bill provides for the payment of interest at the rate of 6 per cent. I do not know why any interest should be paid.

Mr. MANN. This is interest at the rate of 6 per cent from the date of the settlement. If this was the only way to get this bill before the House, I should object to passing it by unanimous consent without consideration. It is, however, an amendment to the Indian bill, already inserted, and I have no doubt that it will be in the bill when it is finally enacted. The interest at 6 per cent is only from some date this year. I have looked this matter up, and I think they have an agreement with the man Dowden. Of course, that is dependent upon Congress making the appropriation; but the agreement provides that he shall be paid so much money, as I understand it, with interest from that date.

Mr. FOSTER. From February 24, 1916?

Mr. MANN. It is not interest from any back date.

Mr. FOSTER. No; I understand that it is only from February 24; but I do not think interest ought to be paid at all.

Mr. MANN. Well, I quite agree with my colleague. Yet these gentlemen who are interested think they have made a very good settlement with Mr. Dowden. Whether they have or not I do not undertake to say. If the thing is to go through at all, and we are to appropriate a large amount of money because of somebody's mistake, the interest does not amount to enough to stand out for.

Mr. FOSTER. No; it is the precedent that I care about.

Mr. MANN. The interest is very little compared with the $57,000 carried by the bill.

Mr. FOSTER. It is a precedent that we have never been in the habit of following that I know of.

Mr. MANN. It is not a proposition to pay interest on a claim.

Mr. FOSTER. It is to pay interest on a settlement. I think that part ought to be stricken out.

Mr. STAFFORD. Referring to what the gentleman from Illinois [Mr. MANN] stated, there is a compromise agreement entered into with this man, who has obtained a judgment in the United States circuit court of appeals, and by that compromise agreement he agreed to accept $57,500, if accepted prior to February 24, 1916; and the agreement further provides that if it is not accepted by that date it shall bear interest thereafter at 6 per cent. So there is the tentative agreement entered into between the Government and the plaintiff in this suit. Of course if the Government wishes to avail itself of the agreement, it will have to meet the terms of the agreement. Otherwise perhaps this bill will be of no avail.

Mr. FOSTER. I think it is a bad policy for the Government to agree to pay interest.

Mr. STAFFORD. It has the full approval of the Secretary of the Interior.

Mr. FOSTER. That is true, but he ought not to agree to pay interest.

Mr. STAFFORD. It is merely carrying out the compromise settlement of this case, which has been appealed to the Supreme Court of the United States.

Mr. FOSTER. I shall permit it to go under the circumstances, but I shall object to any more bills coming up like this, where interest is to be paid.

The CHAIRMAN. Is there objection to the present consideration of the bill?

There was no objection.

The bill was read, as follows:

Be it enacted, etc., That the Secretary of the Interior be, and he is hereby, authorized to effectuate a compromise settlement of the suit of the United States against E. Dowden and others decided adversely to the Government on January 4, 1915, by the United States circuit court of appeals for the eighth circuit and now pending on appeal in the Supreme Court of the United States, and for said purpose to purchase whatever right, title, and interest that said E. Dowden may have in or to the land involved in said suit, said land being situated within the area segregated for town-site purposes at Tuttle, Okla., and to take such other action as may be necessary to quiet the title in the Choctaw and Chickasaw Nations to said land and in the purchasers from said nations at the Government sale of the town lots, and for the above

purpose the sum of $57,500, together with interest thereon at the rate of 6 per cent per annum from February 24, 1916, to date of settlement is hereby appropriated.

With the following committee amendment:

Page 2, line 6, after the word "appropriated," strike out the period, insert a comma, and add the following: "out of any money in the Treasury of the United States not otherwise appropriated: *Provided*, That the United States is to be reimbursed to the extent of the proceeds heretofore derived, or which may hereafter be derived, from the sale of the town lots within the area affected by such."

The amendment was agreed to.

The bill as amended was ordered to be engrossed and read a third time, and was accordingly read the third time and passed.

FARMERS & MERCHANTS BANK, HEADLAND, ALA.

The next business on the Private Calendar was the bill (H. R. 10823) for the relief of the Farmers & Merchants Bank, of Headland, Ala.

The SPEAKER pro tempore. Is there objection?

Mr. STAFFORD. Reserving the right to object, the amount here is very small—$34.50. I question the propriety of our Government launching on the policy of reimbursing private individuals who do not take the precaution when they ask the Treasury officials to forward stamps by mail to have them registered. I believe that the bill has the objection of the Secretary for that reason.

Mr. STEPHENS of Mississippi. It is true that the Secretary refused to approve of the bill for that reason.

Mr. STAFFORD. Then, Mr. Speaker, I object temporarily.

RELIEF OF CIVILIAN EMPLOYEES, ENGINEER DEPARTMENT, UNITED STATES ARMY.

Mr. MILLER of Delaware. Mr. Speaker, I ask unanimous consent to return to the bill H. R. 5079.

The SPEAKER pro tempore. The gentleman from Delaware asks unanimous consent to return to No. 23 of the Private Calendar. Is there objection?

Mr. MANN. I reserve the right to object.

Mr. MILLER of Delaware. Mr. Speaker, this bill was reported by the committee on the 1st of February, and it has been passed over once before when the Claims Committee had a day. It was taken up before the full committee. I call the attention of the House to the fact that it is not only reported favorably by the authorities of the War Department but an estimate to reimburse these men was sent in to the Committee on Appropriations by the Secretary of the Treasury. I am interested in the bill because I reported it from the Claims Committee, and I told the gentleman from Texas [Mr. GREGG] that I would be here to answer any objection that was made. If the gentleman from Illinois [Mr. MANN] wants to persist in his objection I have nothing further to say, as the gentleman from Texas is here.

Mr. MANN. Mr. Speaker, a good many of the Government employees desire, and a good many of them believe, that the Government is an insurer of personal property wherever the owners are. I do not think that the Government is an insurer of clothing or the personal effects of employees who lose them whether they lose them on a vessel or some other place. They have their methods of obtaining insurance. This is simply to reimburse a number of Government employees who lost their personal effects on a vessel. You might as well, when a house burns down, pay for the personal effects of Government employees. They can insure their property as other people do.

Mr. MILLER of Delaware. Will the gentleman yield?

Mr. MANN. Certainly.

Mr. MILLER of Delaware. The gentleman will admit that the report on this bill shows that the authorities in the War Department approved of it, and it has the approval of the Judge Advocate General.

Mr. MANN. I did not say that they did not approve of the bill.

Mr. MILLER of Delaware. That answers all objections that the department has not approved of it. In other words, when a bill is brought up here one of the first things that is asked is whether the department has approved of it, whether there has been a favorable report.

Mr. MANN. Not whether there is a favorable report, but whether any report has been made. We have a right to the information which the department has and the department very naturally, or the Chief of Engineers, or the Secretary of War, is influenced, and properly so, by the men under them. They would like to take care of them whenever they lose anything. If they had their way they would double their salaries and see that they never had any sickness, never lost their jobs, but had a good place, and all that. They do not have the responsibility of determining the cost as we do.

Mr. MILLER of Delaware. This has the added merit that the Secretary of the Treasury has approved of it; asked for it in his estimates sent to Congress.

Mr. MANN. That does not add anything to it. There are bills here before Congress that have been here for 10 years where the department approved of them and have sent estimates for them to Congress.

Mr. MILLER of Delaware. Mr. Speaker, I have nothing more to say. All I wanted to do was to bring to the House everything that was brought out in the hearings before the committee. If the gentleman wants to object I do not care to take up any further time of the House as we have a great number of bills before us on the calendar.

The SPEAKER pro tempore. Is there objection?

Mr. MANN. I object.

SAMUEL H. WALKER.

The next business on the Private Calendar was the bill H. R. 9994, for the relief of Samuel H. Walker.

The Clerk read the title to the bill.

The SPEAKER pro tempore. Is there objection?

Mr. MANN. Reserving the right to object, this is a personal injury case where the man's salary was not much; $480 a year. We have been holding it down to what it would be if a man was allowed compensation under the general law. I am perfectly willing to give him what he would have had if he was covered by the general law. The mere fact that a Government employee has not been lucky enough to be covered by the general law is not a sufficient reason in my opinion for paying him more than he would have got if he had been covered by the general law.

Mr. STEPHENS of Mississippi. Mr. Speaker, this bill has passed the Senate twice, and one time for $2,000 and another time for $1,000. It was shown that this man was very badly injured. He suffered from the injury about 12 or 14 years. It developed that he expended about $870 for medical attendance.

The committee thought that because of the fact that he was so badly injured and that he received only $480 a year for his work, it would be nothing but right to increase the amount so that it would reimburse him for the expenses that he was out, in addition to the year's salary. Several cases of this kind have passed both branches of Congress. There was the case of the young lady who had her scalp torn from her head, who was paid about $7,500, I believe. This gentleman was before me and I made an examination of him, though of course I am not a physician, but I could tell that he was still in a very bad condition and suffered all of the time. The fact is that his lower limbs are one solid scar. It is not possible for any perspiration to come through the skin on his lower limbs. The skin is very thin and he has to keep it anointed with oil at least three times a week in order to prevent it breaking. He has to be very careful that he does not strike something, because if he does it is liable to cause a bad sore and perhaps rupture a blood vessel, the doctors say. In view of all these things we thought that $1,350 was not too much.

Mr. MANN. Mr. Speaker, if this were one single individual case I would be willing to give $10,000, but the very fact that the gentleman referred to the case of the young lady down here where we paid a larger amount is sufficient reason for not letting this bill pass at a larger amount. Every time one of them passes it is used as a precedent for a great many others. The committee at one time started in to report very large sums without much regard for the facts. They have done exceedingly well, I think, in this Congress, and I propose to help them maintain their record. I object.

The SPEAKER pro tempore. The gentleman from Illinois objects.

Mr. STEPHENS of Mississippi. Mr. Speaker, I understood the gentleman to say that he might be willing to let the bill pass if we could agree upon a less sum. Is he still of that mind?

Mr. MANN. I said that I would have no objection to paying the man a year's salary.

Mr. STEPHENS of Mississippi. If the gentleman will withdraw his objection and let the bill come up for consideration I will move that the bill be so amended.

The SPEAKER pro tempore. Does the gentleman from Illinois withdraw his objection?

Mr. MANN. I withdraw the objection.

The SPEAKER pro tempore. The Clerk will report the bill.

The Clerk read as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay to Samuel H. Walker, out of any money in the Treasury not otherwise appropriated, the sum of

$10,000, in full compensation for injuries received by the said Samuel H. Walker while performing his duties as a laborer in the fireroom of the General Land Office, Department of the Interior.

With the following committee amendment:

Line 6, strike out the figures "$10,000" and insert the figures "$1,350."

Mr. STEPHENS of Mississippi. Mr. Speaker, I move to amend the committee amendment by striking out "$1,350" and inserting "$480."

The SPEAKER pro tempore. The Clerk will report the amendment.

The Clerk read as follows:

Amend the committee amendment by striking out the figures "$1,350" and inserting in lieu thereof the figures "$480."

The SPEAKER pro tempore. The question is on agreeing to the amendment.

The amendment to the amendment was agreed to.

The SPEAKER pro tempore. The question now is on agreeing to the committee amendment as amended.

The committee amendment was agreed to.

The bill as amended was ordered to be engrossed and read a third time, was read the third time, and passed.

DOMMICK TAHENY AND JOHN W. MORTIMER.

The next business on the Private Calendar was the bill (H. R. 6167) for the relief of Dommick Taheny and John W. Mortimer.

The SPEAKER pro tempore. Is there objection?

Mr. EDMONDS. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection?

There was no objection, and it was so ordered.

THEODORE BAGGE.

The next business on the Private Calendar was the bill (H. R. 10643) for the relief of Theodore Bagge.

The SPEAKER pro tempore. Is there objection to the consideration of the bill?

There was no objection.

The SPEAKER pro tempore. The Clerk will report the bill.

The Clerk read as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay to Theodore Bagge the sum of $1,000, out of any money in the Treasury not otherwise appropriated, for injury sustained on the 24th day of April, in the year 1907, while employed by the United States Government on the U. S. dredge *Ajax*.

With the following committee amendment:

Line 5, strike out the figures "$1,000" and insert the figures "$221.91."

The SPEAKER pro tempore. The question is on agreeing to the committee amendment.

The committee amendment was agreed to.

The bill as amended was ordered to be engrossed and read a third time, was read the third time, and passed.

GEORGE T. LARKIN.

The next business on the Private Calendar was the bill (H. R. 947) for the relief of George T. Larkin.

The SPEAKER pro tempore. Is there objection to the consideration of the bill?

Mr. MANN. Mr. Speaker, I object.

Mr. SLEMP. Mr. Speaker, will the gentleman reserve his objection for a moment?

Mr. MANN. Certainly.

Mr. SLEMP. Is there any amount that the gentleman from Illinois [Mr. MANN] would agree to less than the sum of $1,284? This provides for $2 a day for 642 days. The original amount put in the bill included expenses of six hundred and odd dollars. Will the gentleman from Illinois consider a lower amount?

Mr. MANN. We have had this case up once before and allowed the man $1,976.

Mr. SLEMP. But that bill did not pass. It did not get through the Senate.

Mr. BLACKMON. Mr. Speaker, I demand the regular order.

The SPEAKER pro tempore. Is there objection?

Mr. MANN. I object.

MRS. JOSEPH CAMERON.

The next business on the Private Calendar was the bill (H. R. 2554) for the relief of Mrs. Joseph Cameron.

The SPEAKER pro tempore. Is there objection to the consideration of the bill?

There was no objection.

The SPEAKER pro tempore. The Clerk will report the bill.

The Clerk read as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and is hereby, authorized and directed to pay to Mrs. Joseph Cameron, widow of Joseph Cameron, the sum of $2,500 for physical and personal injuries sustained by said Joseph Cameron while in the employ of the United States Government near Minnehaha Falls, Mississippi River, in the State of Minnesota, and while he was working on Government Dam No. 1 on August 9, 1907.

With the following committee amendment:

Line 5, strike out the figures "$2,500" and insert in lieu thereof the figures "$242."

The SPEAKER pro tempore. The question is on agreeing to the committee amendment.

The committee amendment was agreed to.

The bill as amended was ordered to be engrossed and read a third time, was read the third time, and passed.

J. T. NANCE.

The next business on the Private Calendar was the bill (H. R. 10052) to reimburse J. T. Nance.

The SPEAKER pro tempore. Is there objection?

Mr. STAFFORD. Mr. Speaker, reserving the right to object, I would like to inquire of the gentleman who reported the bill, or of the author, whether, in his judgment, the postmaster was not guilty of lack of ordinary care in leaving the front door of his building open and responding to a fire alarm up the street, thus allowing some person to get in and pilfer the post-office money-order drawer.

Mr. EDMONDS. Answering the gentleman, I would like to say there was a catch on the door, one of these snap locks, and he thought he locked the door when he went up the street to see whether it was his own residence that was on fire when it was reported to him. We passed this bill last year.

Mr. STAFFORD. Where is it shown in the report that it was a night lock?

Mr. EDMONDS. He pulled the door shut, and he thought the catch had caught, but it had not.

Mr. STAFFORD. Is there any evidence to that effect in the possession of the committee? It is not in the report.

Mr. CULLOP. I will say to the gentleman that it was filed with the committee. It is shown by the sworn testimony.

Mr. STAFFORD. There is nothing in the report or in the letter of the Assistant Postmaster General that explains the facts.

Mr. CULLOP. I desire to say to the gentleman from Wisconsin that this is a meritorious measure.

Mr. STAFFORD. The evidence shows that he hurriedly left the store, thinking that his own property was burning. If there is evidence that he snapped the door shut, thinking that the lock was on, I withdraw the reservation of the objection, Mr. Speaker.

The SPEAKER pro tempore. Is there objection? [After a pause.] The Chair hears none. The Clerk will report the bill.

The Clerk read as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay, out of any funds in the Treasury not otherwise appropriated, the sum of $81.78 to J. T. Nance, postmaster at Harrodsburg, Ind., to reimburse him for losses sustained by reason of robbery of that post office.

Also the following committee amendment was read:

Line 4, after the word "authorized," insert the words "and directed."

The amendment was agreed to.

Also the following committee amendment was read:

Line 4, strike out the word "the" and insert the word "any."

The amendment was agreed to.

The bill as amended was ordered to be engrossed and read a third time, was read the third time, and passed.

JAMES HOUYDE.

The next business on the Private Calendar was the bill (H. R. 3255) for the relief of James Houyde.

The SPEAKER pro tempore. Is there objection to the consideration of this bill?

Mr. MANN. Reserving the right to object, this is a personal-injury case, where it is proposed to pay to the father. He is certainly not entitled to more than one year's pay. And that is pretty doubtful. There is nothing in the report to show what salary the man was receiving.

Mr. JOHNSON of Washington. Mr. Speaker, I can give a little information in regard to this matter to the House. This man is a widower with small children, and is sick and helpless. His son, 18 years old, was killed while making a fire trail in a forest reserve. In that country when the rangers call on the men to work on the fire trail, the citizens for a considerable distance around go to work. Until recently they were never paid.

Mr. MANN. That is not this case. This man was employed by the Forest Service.

Mr. JOHNSON of Washington. This man's boy was killed.

Mr. MANN. He was employed in the Forest Service. It has nothing to do with the neighbors around going to work.

Mr. JOHNSON of Washington. This boy, Houyde, who was killed was employed. He was sent to tamp a rock. He was sent by a superior officer, and while there a rock that had been loosened by a previous blast fell, and the young man was killed. If $1,000 is too much to pay the father, a figure might be set which he should be paid.

Mr. MANN. I think if he had anybody dependent upon him he should receive one year's pay, and I am perfectly willing, so far as I am concerned, to give it to the father, although I do not think the father was really dependent upon him. What was his pay?

Mr. STEPHENS of Mississippi. Mr. Speaker, it does not appear from the report as to what the amount of his salary was in specific terms, but in a letter from the Acting Secretary I find this, on the second page of the report:

This claim appears to be a meritorious one, but if it had been approved by the department under the compensation act the beneficiary thereunder would not have received a sum in excess of $1,000.

Mr. MANN. I think that is true, but that does not indicate very much to me. I read that.

Mr. STEPHENS of Mississippi. It does not indicate the amount.

Mr. MANN. I think the bill had better be passed over until you find out what the amount was.

The SPEAKER pro tempore. Is there objection?

Mr. JOHNSON of Washington. I ask, Mr. Speaker, that the bill be passed over without prejudice.

The SPEAKER pro tempore. The gentleman from Washington asks unanimous consent that the bill be passed over without prejudice. Is there objection? [After a pause.] The Chair hears none.

ALLOTMENT OF DAVIE SKOOTAH.

The next business on the Private Calendar was the bill (H. R. 8203) to cancel the allotment of Davie Skootah, on the Lummi Reservation, Wash., and reallot the land included therein.

The SPEAKER pro tempore. Is there objection to the consideration of this bill?

Mr. HUMPHREY of Washington. Reserving the right to object, I would like to know something about the character of the bill.

Mr. STEPHENS of Mississippi. Mr. Speaker, I will say that this bill does not come from the Committee on Claims. It is from the Committee on Indian Affairs, and I can not give the gentleman any information.

Mr. HUMPHREY of Washington. It so happens that this particular Indian reservation is situated in what was for many years my district, and I am more or less familiar with it. I would like to know something about the claim. I probably would have no objection to the bill.

Mr. STEPHENS of Mississippi. Mr. Speaker, I ask unanimous consent that the bill be passed without prejudice.

The SPEAKER pro tempore. The gentleman from Mississippi asks unanimous consent that the bill be passed without prejudice. Is there objection? [After a pause.] The Chair hears none.

OLAF NELSON.

The next business on the Private Calendar was the bill (H. R. 5411) for the relief of Olaf Nelson.

The title of the bill was read.

The SPEAKER pro tempore. Is there objection?

Mr. STAFFORD. Reserving the right to object, Mr. Speaker, this is rather an unusual bill, and I would like to have some member of the committee explain the theory of it, or I would like to have the author of the bill explain the principle which the committee follows in recommending a favorable report on it. I say it in all seriousness, because it does not appear from the report that this now insane person received the injuries while in the employ of the Government on the Canal Zone. There are certain facts that squint in that direction, but there is no definite statement that this man really suffered the injuries in the employ of the Government that resulted in his present condition.

Mr. EDMONDS. Mr. Speaker, answering the gentleman, I will state that there are no absolute proofs that this man received any injuries on the Isthmus occasioning his loss of eyesight, but undoubtedly he went down to the Isthmus, worked there, and had some trouble with his eyes while there. Afterwards it seemed to have developed into a trouble by which he lost his eyesight, and from the loss of eyesight he went insane. Considering the pitiful condition of the case, the committee thought it was at least proper to give him some compensation on account of the probability that if he had not gone to the Isthmus he would not have suffered the loss of his eyesight.

Mr. STAFFORD. This claimant is now insane?

Mr. EDMONDS. Yes.

Mr. STAFFORD. To whom will this money be paid in view of the fact that the bill provides not for payment to his guardian but to the individual himself? It is a bill that appeals to my sympathy, as it would to the sympathy of every person. This person has lost his mind, and very likely the loss of mind or the melancholy habit of mind had been superinduced by the loss of his eyesight. I have known of instances where that has followed. But to whom is this money to be paid, and what is the purpose of it?

Mr. EDMONDS. I presume it is to be paid to a relative. He has a sister, I believe.

Mr. MANN. He would have to have a conservator to get it.

Mr. EDMONDS. It is understood that he has a sister in this country who tried to take care of him and could not, and who afterwards turned him over to the city authorities in Chicago.

Mr. DAVIS of Minnesota. Is it necessary to have a guardian before the money is appropriated? If the money is allowed, subsequent proceedings can be had to determine to whom the money should be paid.

Mr. STAFFORD. If it is certain that he will never recover his mind again, I would be willing to provide for the payment of this money to his guardian.

Mr. MANN. He has not a dollar's worth of property, and they will never appoint a conservator for him.

Mr. STAFFORD. I have been waiting a long time for the author of the bill to make an explanation of it.

Mr. MANN. I will make an explanation so far as I am posted, but I am not very well posted.

Mr. CULLOP. If this man was not mentally in a condition to do business, it would require the appointment of some one who would be authorized to receive the payment in his behalf.

Mr. STAFFORD. It is not certain that he acquired these disabilities on the Canal Zone, but it is a case that evokes sympathy.

Mr. MANN. He acquired his disabilities while working on the canal.

Mr. STAFFORD. It was during his employment, but not on account of his employment.

Mr. MANN. He was a carpenter working in a dark shop. He first had trouble in one eye and went to the hospital. He came out and went to work again, and lost one eye and then the other. He lost both eyes. Before he went down he had been examined by the Civil Service Commission physically, and his eyesight was in perfect shape. Of course I do not know and nobody knows, but he attributed the loss of his eyes to working in this dark place in a car shop. He was treated at once by the hospital authorities.

Mr. STAFFORD. Mr. Speaker, the author of the bill has advanced some facts which are not disclosed in the report. There is nothing in the report that shows that this man suffered from the defective vision and ultimately lost his vision completely by working in a dark room in a car shop. Of course, if that is the fact, I will not press the reservation of an objection.

Mr. FOSTER. The clerk of this committee informs me that he received a letter dictated by this claimant's daughter, which came from a street number of a street in Chicago—a pitiful letter.

Mr. MANN. He is living with friends, living with a man by the name of Eric Young, a friend of his, without paying compensation.

Mr. STAFFORD. He is in the United States?

Mr. MANN. Yes; he is in the United States.

Mr. STAFFORD. Mr. Speaker, I will withdraw the reservation of objection.

The SPEAKER pro tempore. The Clerk will read the bill.

The Clerk read as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay to Olaf Nelson, out of any money in the Treasury not otherwise appropriated, the sum of $10,000, in compensation for injuries sustained on the Panama Canal while in the discharge of his duties.

With a committee amendment, as follows:

Amend, line 6, by striking out the figures "$10,000" and inserting in lieu thereof the figures "$1,200."

The SPEAKER pro tempore. The question is on agreeing to the committee amendment.

The committee amendment was agreed to.

The SPEAKER pro tempore. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

The SPEAKER pro tempore. The Clerk will report the next one.

CLAIMS OF SISSETON AND WAHPETON BANDS OF SIOUX INDIANS AGAINST THE UNITED STATES.

The next business on the Private Calendar was the bill (H. R. 6022) conferring jurisdiction on the Court of Claims to hear, determine, and render judgment in claims of the Sisseton and Wahpeton Bands of Sioux Indians against the United States.

The title of the bill was read.

The SPEAKER pro tempore. Is there objection?

Mr. STAFFORD. Reserving the right to object, Mr. Speaker, I remember that last year this proposition was before the House. What was the result of the bill before the House last year embodying this same provision?

Mr. YOUNG of North Dakota. It was recommended last year by the Committee on Indian Affairs. The bill had been referred to that committee just the same as many bills of similar character had been referred for many years, but some one raised the objection that the Committee on Indian Affairs did not properly have jurisdiction of it, and the Speaker ruled that it should not have been referred to that committee, and therefore the House was not in a position to act on it.

Mr. MANN. If the gentleman will pardon me, this bill, in its present shape, is now, according to my comparison, exactly in the same form in which we had agreed to let it pass in the last Congress.

Mr. STAFFORD. I was under the impression that it was in the same form. Notwithstanding the department says the claim is without any merit whatsoever, I was wondering whether this bill was instigated at the behest of some Indian-claim attorneys, or whether it is really at the instance of the Indians themselves.

Mr. YOUNG of North Dakota. I will say to the gentleman that a member of this tribe came down to Washington and went down to see the Indian Commissioner, and the Indian Commissioner prepared this bill for him. There has never been any attorney in the matter.

Mr. MANN. The department drew the Senate bill in the last Congress, which was not nearly as favorable to justice and the Government as is this bill now.

Mr. STAFFORD. I withdraw the reservation of objection, Mr. Speaker.

The SPEAKER pro tempore. Is there objection?

Mr. YOUNG of North Dakota. I ask, Mr. Speaker, that Senate bill 585, which is identical with this bill, and which is on the Speaker's desk, be substituted.

The SPEAKER pro tempore. Is there objection to the consideration of this bill?

There was no objection.

Mr. YOUNG of North Dakota. Mr. Speaker, I ask unanimous consent that S. 585, which has passed the Senate and is on the Speaker's table, be taken from the table and considered in place of this bill.

Mr. STEPHENS of Mississippi. That bill is No. 191 on the Private Calendar.

The SPEAKER pro tempore. The gentleman asks unanimous consent that S. 585 be considered in place of the House bill. Is there objection?

There was no objection.

The bill (S. 585) conferring jurisdiction on the Court of Claims to hear, determine, and render judgment in claims of the Sisseton and Wahpeton Bands of Sioux Indians against the United States was read as follows:

Be it enacted, etc., That all claims of whatsoever nature which the Sisseton and Wahpeton Bands of Sioux Indians may have or claim to have against the United States shall be submitted to the Court of Claims, with the right to appeal to the Supreme Court of the United States by either party, for the amount due or claimed to be due said bands from the United States under any treaties or laws of Congress; and jurisdiction is hereby conferred upon the Court of Claims to hear and determine all claims of said bands against the United States and also any legal or equitable defense, set-off, or counterclaim which the United States may have against said Sisseton and Wahpeton Bands of Sioux Indians, and to enter judgment, and in determining the amount to be entered herein the court shall deduct from any sums found due said Sisseton and Wahpeton Bands of Sioux Indians any and all gratuities paid said bands or individual members thereof subsequent to March 3, 1863: *Provided*, That in determining the amount to be entered herein, the value of the land involved shall not exceed the value of such land on March 3, 1863. If any such question is submitted to said court, it shall settle the rights, both legal and equitable, of said bands of Indians and the United States, notwithstanding lapse of time or statute of limitations. Such action in the Court of Claims shall be presented by a single petition, to be filed within one year after the passage of this act, making the United States a party defendant, which shall set forth all the facts on which the said bands of Indians base their claims for recovery; and the said petition may be verified by the agent or authorized attorney or attorneys of said bands, to be selected by said bands and employed under contract approved by the Commissioner of Indian Affairs and the Secretary of the Interior, in accordance with the provisions of existing law, upon information or belief as to the existence of such facts, and no other statements or verifications shall be necessary. Official letters, papers, reports, and public records, or certified copies thereof, may be used as evidence. Whatever moneys may be found due the Sisseton and Wahpeton Bands of Indians under the provisions of this act, less attorney's fees, shall be placed to their credit in the Treasury of the United States: *Provided*, That the compensation to be paid the attorney or attorneys for the claimant Indians shall be determined by the Secretary of the Interior, but in any event shall not be greater than the amount named in the approved contract: *Provided further*, That such compensation shall in no event exceed $15,000.

The bill was ordered to a third reading, and was accordingly read the third time and passed.

On motion of Mr. YOUNG of North Dakota, a motion to reconsider the last vote was laid on the table.

By unanimous consent the corresponding House bill (H. R. 6022) was laid on the table.

GEORGE W. GAMBLE.

The next business in order on the Private Calendar was the bill (H. R. 2814) for the relief of George W. Gamble.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection to the present consideration of the bill?

Mr. STAFFORD. I object.

Mr. MILLER of Delaware. Will the gentleman reserve his objection a moment?

Mr. STAFFORD. I am very glad to do so.

Mr. MILLER of Delaware. Does the gentleman note that this bill has been favorably recommended by the Acting Secretary of the Department of Labor, and that it is to pay the clerk of the circuit court of Rock Island County, Ill., for moneys stolen from him, being naturalization fees which he had in his possession?

Mr. STAFFORD. Yes; I have read the report and considered the bill carefully. I can not see why we should pass this bill because of the mere fact that he happened to be performing some duty of a governmental character, for which he received fees, of which he was obliged to turn over one-half to the Government, they being his funds.

Mr. MILLER of Delaware. But he is not a Government official. The naturalization laws force this on him because he is a county official.

Mr. STAFFORD. The duty is not forced upon him. State officials are not obligated to perform this work. They are only too willing to perform it, because they make large sums of money out of it.

Mr. MILLER of Delaware. A burglar broke into his office and took this money. The department has looked into it, and reports that the bill should pass.

Mr. MANN. I think these county officials are obligated to perform this work.

Mr. STAFFORD. I do not believe the United States Government can call upon any State official to perform duties of a national character.

Mr. MANN. I think it can as to naturalization, because we have control over the subject of naturalization.

Mr. STAFFORD. I remember a debate participated in by Senator Hoar some 15 years ago, when that question was up, and he doubted the constitutional authority of the National Government to compel a State official to perform a function of the National Government.

Mr. MANN. That may be; but we do compel them, and they do it.

Mr. STAFFORD. They do it at a good profit.

Mr. MANN. There is no profit in it generally.

Mr. STAFFORD. The clerks of the circuit court in large cities find it very profitable.

Mr. MANN. Oh, they do not find it profitable.

Mr. STAFFORD. They do up my way.

Mr. MANN. Very likely they do up in Milwaukee, although I remember a few years ago they were howling that they were not getting money enough to pay the men whom they had to employ.

Mr. STAFFORD. Who were howling?

Mr. MANN. In Milwaukee.

Mr. STAFFORD. I beg the gentleman's pardon. They have not been howling up there. They are only too glad to receive these perquisites.

Mr. MANN. I think that was while the gentleman was taking his vacation.

Mr. STAFFORD. While I was taking my vacation I was better acquainted with conditions at home, because I was practicing law and more conversant with conditions there while I was taking my sabbatical than I would have been if I had been down here.

Mr. MANN. This clerk of the circuit court lost $45 by the burglary of the vault. They caught the burglar and sent him to the penitentiary. I do not think the Government ought to require the clerk, under such circumstances, to pay over the money. He has no volition about it. If it had happened in a

post office, it would have been paid without coming to Congress at all.

Mr. STAFFORD. Yes; because a post-office official is a direct employee of the Government, and the Government has authority and control over the fund; but here the Government has no authority or control over the fund. It is entirely optional with the clerk as to the custody of the fund.

Mr. MANN. That is true; but he put it in the vault, and that is what the Government would require him to do.

Mr. STAFFORD. Whose money is it? Is it the Government's money or the individual's money?

Mr. MANN. It is the Government's money, under the law.

Mr. STAFFORD. That is the very point of my objection. If I thought it was the Government's money I would not object, but I claim it is not the Government's money until he actually pays it over. He is responsible for the payment of these fees.

Mr. MANN. It is like any fees that are collected. It is the Government's money. They can walk into his office at any time and require him to make an accounting as to the money.

Mr. STAFFORD. I do not think there is anything in the law that requires him to allot the money into separate funds.

Mr. MANN. Oh, no; that is true.

Mr. STAFFORD. There is nothing that requires him to segregate the funds, half to the Government and half to himself. It is his money as long as it is merged.

Mr. DENISON. I understand that these were naturalization fees?

Mr. STAFFORD. Yes.

Mr. DENISON. A court has held that the half which the clerk retains does not belong to him individually, but belongs to the county in which he has the office. He does not get one cent of it individually.

Mr. STAFFORD. Then it does not belong to the National Government.

Mr. DENISON. One-half of it belongs to the National Government and the other half to the county.

Mr. STAFFORD. The gentleman was speaking of the other half. Is there any decision that the half that he is obliged to turn over to the National Government belongs to the Government at the time it was paid over?

Mr. DENISON. There is a decision holding that the half retained by the clerk does not belong to him individually, but belongs to the county.

Mr. MANN. In this case the report indicates that the money was kept separate from the start—put in an envelope by itself. The man was taking every possible precaution to keep the Government money separate.

Mr. STAFFORD. Mr. Speaker, I will withdraw the reservation of the point of order.

The SPEAKER pro tempore. The Clerk will report the bill.

The Clerk read the bill, as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized to pay, out of any money in the Treasury not otherwise appropriated, the sum of $45.50 to George W. Gamble, clerk of the circuit court in and for the county of Rock Island, in the State of Illinois, which sum was lost through the burglarizing of his office, vault having been opened by parties as yet unknown on February 24, A. D. 1913; said money being amount due the United States Government for fees collected in matters of naturalization of aliens.

Mr. MANN. Mr. Speaker, I move to amend by striking out, on lines 8, 9, and 10, the following language:

Vault having been opened by parties as yet unknown on February 24, A. D. 1913.

The SPEAKER pro tempore. The Clerk will report the amendment.

The Clerk read as follows:

In lines 8, 9, and 10 strike out the following language: "vault having been opened by parties as yet unknown on February 24, A. D. 1913."

Mr. MANN. Doubtless at one time or another the burglar was unknown, but the gentleman who introduced the bill forgot to take it out. The report shows that they not only know who the burglar was, but that they sent him to the penitentiary.

The SPEAKER pro tempore. The question is on the amendment.

The amendment was agreed to.

Mr. STAFFORD. Mr. Speaker, I will make a pro forma amendment to strike out the last word for the purpose of inquiring of the gentleman who reported the bill whether the last clause of the bill should not be eliminated, "said money being the amount due the United States Government for fees collected in matters of naturalization of aliens," in view of the fact that he has already paid the money to the Government. I would direct the gentleman's attention to a letter from the claimant which says that "The above sum of $45 was included in a remittance of $139.50 sent to the Secretary of Labor on April 1, A. D. 1913."

Mr. MILLER of Delaware. I have no objection to accepting the amendment. Possibly it might have been better to have said "having been," and so forth.

Mr. STAFFORD. Then, Mr. Speaker, I move to strike out the words beginning with "said" on line 10, and ending with "aliens" on line 12.

The Clerk read as follows:

In lines 10, 11, and 12 strike out the following language: "said money being amount due the United States Government for fees collected in matters of naturalization of aliens."

The amendment was agreed to.

The bill as amended was ordered to be engrossed and read a third time, was read the third time, and passed.

MARTIN HUHN.

The next business on the Private Calendar was the bill (H. R. 15281) for the relief of Martin Huhn.

Mr. MILLER of Delaware. Mr. Speaker, the gentleman who introduced this bill, the gentleman from New Jersey [Mr. HAMILL], has asked that it go over without prejudice, because he does not approve of the amount which the committee allowed.

The SPEAKER pro tempore. The gentleman from Delaware asks unanimous consent that the bill be passed without prejudice. Is there objection?

There was no objection.

PHILIP H. HEBERER.

The next business on the Private Calendar was the bill (H. R. 7239) for the relief of Philip H. Heberer.

The SPEAKER pro tempore. Is there objection?

Mr. STAFFORD. Reserving the right to object, I have no objection to a smaller sum being allowed, but it is difficult for me to see how the committee arrived at such a large amount as is stated in the bill.

Mr. MANN. It should be only $634, however they arrived at it.

Mr. MILLER of Delaware. If the gentleman will look at page 2 of the report he will see a letter from the Assistant Secretary of the Department of Labor, where he says that this case appears to be a very meritorious one, but the department is unable to afford any relief for the reasons stated.

Mr. STAFFORD. This man was only out of employment some 78 days. At the rate of $5 a day for 78 days, including Sundays and holidays, makes a total of $390.

Mr. MILLER of Delaware. The gentleman loses sight of the fact that the injury disabled him from ever being a lineman again, and he is now only a camp cook.

Mr. STAFFORD. He did camp cooking after he came out of the hospital.

Mr. MANN. The difference in pay was 85 cents a day and he had that for 287 days, which would make $243.95, which might be added to the $390 at $5 a day, making $633.95. I was willing to give him the benefit of the 5 cents and called it $435.

Mr. STAFFORD. I call attention to the report on the bill. The surgeon that examined the claimant as late as November 30, 1914, in reply to one of the questions, "In your opinion are any permanent disabilities from the injury probable," answered "No."

And yet you intend to not only reward him for the time he has lost, but intend to add to it several hundred dollars more.

Mr. MILLER of Delaware. Mr. Speaker, it is shown that the man could not carry on the duties of a lineman any longer, and when he went back the next summer he went back as a camp cook.

Mr. STAFFORD. Is the gentleman going to accept the statement——

Mr. MILLER of Delaware. It is not up to me; it is up to the House.

Mr. STAFFORD. The statement of the contract surgeon of the United States Army who makes his report says that his disability will not be permanent?

Mr. MILLER of Delaware. The gentleman can offer his amendment if he desires. I have no objection to it, if the House desires to put it in.

Mr. STAFFORD. I am not inclined to let it go unless the committee——

The SPEAKER pro tempore. Is there objection?

Mr. MANN. I object.

HARBOR COMMISSIONERS, CALIFORNIA.

The next business on the Private Calendar was the bill (H. R. 5453) for the relief of the State board of harbor commissioners of the State of California.

The SPEAKER pro tempore. Is there objection?

There was no objection.

The SPEAKER pro tempore. The Clerk will report the bill.

The Clerk read as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay, out of any money in the United States Treasury not otherwise appropriated, the sum of $199.62 to the State board of harbor commissioners of the State of California, for the purpose of reimbursing the said State board of harbor commissioners for repairing damages to Piers Nos. 15 and 27, in the city of San Francisco, Cal., caused by the steamship *Angel Island*, of the United States Immigration Service, on August 8, 1911, and on August 17, 1911, respectively.

The SPEAKER pro tempore. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

W. W. WALL.

The next business on the Private Calendar was the bill (H. R. 1373) for the relief of W. W. Wall.

The SPEAKER pro tempore. Is there objection?

Mr. MANN. Mr. Speaker, let the bill be read.

The SPEAKER pro tempore. The Clerk will report the bill.

The Clerk read as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay to W. W. Wall, of Henry County, Mo., out of any money in the Treasury not otherwise appropriated, the sum of $226.31, being the amount stolen from said Wall while postmaster at Prairie Home, Mo., and thus lost by him without fault on his part, and thereafter by him paid to the Government out of his own funds.

The SPEAKER pro tempore. Is there objection?

Mr. MANN. Mr. Speaker, reserving the right to object, it appears that this is a case where the postmaster lost the money and the Government brought suit against him and got a judgment. He now claims that Union soldiers stole the money. He did not set up that defense.

Mr. DICKINSON. Mr. Speaker, will the gentleman yield?

Mr. MANN. I yield to the gentleman.

Mr. DICKINSON. Mr. Speaker, this case of W. W. Wall has been before this House since I have been in Congress two or three times, and has passed the House at least twice during the last six years and has gone to the Senate, but on account of the crowded condition of business there it has failed to receive consideration. It is true that no defense was set up in this case. I know this old man, W. W. Wall. He now lives in the county in which I live. He was a storekeeper in the county north of the county in which I live at the time that his store was robbed and the stamps and money taken and appropriated. It is a matter of common history. The same bill, I believe, was introduced by my predecessor, Judge De Armond, who for a number of years was in Congress from my district. It is a matter of common notoriety about the old man being robbed, and the testimony of a number of reputable citizens, almost all of whom I know personally——

Mr. MANN. But why did he not defend himself in court when the Government sued him?

Mr. DICKINSON. It was immediately after the war, during the unsettled condition of things, and he did not appear. Judgment by default was taken. The fact that he did not appear does not change the facts as testified to here. There can be no question about the facts. The case is somewhat similar to the case already approved, No. 81 on the calendar, except that it is much stronger. He paid not only the amount, $226.31, but paid the costs, $308 in all. He asks now only the original amount. It is a long time ago, and I hope that this will not be objected to at this time.

The SPEAKER pro tempore. Is there objection? [After a pause.] The Chair hears none.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

PHILIP H. HEBERER.

Mr. MILLER of Delaware. Mr. Speaker, I ask unanimous consent to return to the consideration of the bill (H. R. 7239) for the relief of Philip H. Heberer, No. 83 on the calendar.

The SPEAKER pro tempore. The gentleman from Delaware asks unanimous consent to return to the consideration of the bill H. R. 7239. Is there objection?

Mr. MANN. Let the bill be read.

The SPEAKER pro tempore. The Clerk will report the bill.

The Clerk read as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay, out of moneys in the Treasury not otherwise appropriated, to Philip H. Heberer the sum of $2,500, for injuries sustained while employed as a lineman in the United States telegraph corps near Valdez, Alaska, in June, 1914.

With the following committee amendment:

Line 6, strike out the figures "$2,500" and insert the figures "$1,825."

The SPEAKER pro tempore. Is there objection to the consideration of the bill?

There was no objection.

Mr. MILLER of Delaware. Mr. Speaker, I move to amend the committee amendment by striking out the figures "$1,825" and inserting in lieu thereof the figures "$634."

The SPEAKER pro tempore. The Clerk will report the amendment.

The Clerk read as follows:

Amend the committee amendment by striking out the figures "$1,825" and inserting in lieu thereof the figures "$634."

The SPEAKER pro tempore. The question is on the amendment to the amendment.

The amendment to the amendment was agreed to.

The SPEAKER pro tempore. The question now is on agreeing to the committee amendment as amended.

The committee amendment as amended was agreed to.

The bill as amended was ordered to be engrossed and read a third time, was read the third time, and passed.

JOHN E. JONES.

The next business on the Private Calendar was the bill (H. R. 9898) for the relief of John E. Jones.

The SPEAKER pro tempore. Is there objection?

There was no objection.

The SPEAKER pro tempore. The Clerk will report the bill.

The Clerk read as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay, out of any moneys in the Treasury not otherwise appropriated, to John E. Jones, consul general of the United States of America, the sum of $386, which sum was stolen from his office in Genoa, and all the facts are fully set forth in House Document No. 598, Sixty-fourth Congress, first session.

Mr. STAFFORD. Mr. Speaker, I move to strike out all of lines 8, 9, and 10.

The SPEAKER pro tempore. The gentleman from Wisconsin offers an amendment which the Clerk will report.

The Clerk read as follows:

Strike out lines 8, 9, and 10, being the words: "And all the facts are fully set forth in House Document No. 598, Sixty-fourth Congress, first session."

The SPEAKER pro tempore. The question is on agreeing to the amendment.

The amendment was agreed to.

The bill as amended was ordered to be engrossed and read a third time, was read the third time, and passed.

MINNESOTA AND ONTARIO POWER CO.

The next business on the Private Calendar was the bill (H. R. 2555) for the relief of the Minnesota and Ontario Power Co.

The SPEAKER pro tempore. Is there objection to the consideration of the bill?

Mr. STAFFORD. Reserving the right to object, I wish to inquire of some member of the committee whether there is any like instances where we have returned impost duties on goods that have been imported into the country and then later shipped again out of the country?

Mr. SMITH of Minnesota. We do that every day by what are called "drawbacks"?

Mr. STAFFORD. But that is authorized by law. I can appreciate, if we were going to pursue this policy as carried in this bill, that it would be warrant for many instances where goods are shipped in from Canada to this country and then finding they are no longer of need here, would be returned and claim made against the Government that the duty should be repaid.

Mr. SMITH of Minnesota. Yes; but in this instance, may it please my colleague, these goods were ordered for a specific purpose, and the parties who ordered them supposed that they could use them for that purpose. When they came to ascertain whether they could get their boat registered or not, they found they could not, and they immediately returned the goods. They were made for a specific purpose, could not be used in the general trade, and could not be used for anything else except as a towing apparatus.

Mr. STAFFORD. The gentleman will agree that in many instances the goods ordered by a United States merchant from abroad are intended for a specific purpose, and yet after they arrive here he may find he can not utilize them. Of course, in this case the contract was for the building of a boat in which the laws absolutely forbade the use of a foreign engine in case the boat received American registry.

Mr. MANN. Of course, it was a case of misapprehension of the law.

Mr. STAFFORD. And that is a distinguishing feature. I would not be willing to establish a precedent that whenever a merchant in this country happens to order goods from abroad which he found he could not utilize, that therefore the Government would be called upon to reimburse him for the duties upon the return of the goods.

Mr. MANN. Of course, no one would, but the distinction is that often in such cases they could not be identified clearly. Of course, they could introduce them in bond and return them now without paying the duty. Here is a case where certain machinery was brought, about the identification of which there was no question. The law forbade the use of the machinery, and at once it was returned out of the country. I do not think there is any precedent set.

Mr. STAFFORD. I withdraw the objection.

The SPEAKER pro tempore. The Clerk will report the bill.

The Clerk read as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized to pay to the Minnesota & Ontario Power Co., a corporation organized under the laws of the State of Minnesota, from any moneys in the Treasury not otherwise appropriated, the sum of $714.66, the same being duties paid by the said Minnesota & Ontario Power Co to the collector of customs for the district of Minnesota on May 31, 1912, on certain boiler and machinery especially imported from Canada for the equipment of a steam barge operating in the Rainy River between Minnesota and Ontario, said boilers and machinery having been refused for such use in the United States by the Secretary of Commerce and Labor, and at once having been returned to Canada without being used for any purpose in the United States.

The SPEAKER pro tempore. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read a third time, and passed.

HEIRS OR LEGAL REPRESENTATIVES OF CHARLES AND KATE JOHNSON.

The next business on the Private Calendar was the bill (H. R. 9466) for the relief of the heirs or legal representatives of Charles Johnson and Kate Johnson.

The SPEAKER pro tempore. Is there objection to the consideration of the bill?

Mr. MANN. I object, Mr. Speaker.

The SPEAKER pro tempore. The gentleman from Illinois objects, and the Clerk will report the next bill.

JOHN B. HOOVER.

The next business on the Private Calendar was the bill (H. R. 5262) for the relief of John B. Hoover.

The SPEAKER pro tempore. Is there objection to the consideration of the bill? [After a pause.] The Chair hears none. The Clerk will report the bill.

The Clerk read as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay to John B. Hoover the sum of $145.83, out of any money in the Treasury not otherwise appropriated, amount expended by him out of his personal funds for medical services of agency physician during his incumbency as superintendent at Fort McDermitt Indian School from July 1, 1909, to October 15, 1909.

Also, the following committee amendment was read:

Line 5, strike out the figures "$145.83" and insert "$145.30."

The amendment was agreed to.

The bill as amended was ordered to be engrossed and read a third time, was read a third time, and passed.

PRIVATE MAIL CONTRACTS.

Mr. STEPHENS of Mississippi. Mr. Speaker, the next bill is one providing for the payment of money due to a carrier of mails prior to May 31, 1861. There are quite a number of bills of a similar character on the calendar. I would like to ask unanimous consent to pass these bills over and call up Calendar No. 186, H. R. 11150, which is a general bill that covers all matters provided for in these individual bills.

Mr. MANN. That has just been reported.

Mr. STEPHENS of Mississippi. It will cut out at least 50 or 60 per cent of the work to-night if we could do that, and it will serve the same purpose.

Mr. MANN. I have not even seen the bill yet. It was reported yesterday, I believe, or the day before.

Mr. STEPHENS of Mississippi. I had understood, Mr. Speaker——

Mr. MANN. Is it a private bill?

Mr. STEPHENS of Mississippi. No; it is a general bill.

Mr. MANN. The House would not pass a general bill to-night in the regular order.

The SPEAKER pro tempore. The gentleman from Mississippi [Mr. STEPHENS] asks unanimous consent to pass over the next bill on the calendar and take up Calendar No. 186, H. R. 11150. Is there objection?

Mr. MANN. Mr. Speaker, I reserve the right to object.

Mr. STEPHENS of Mississippi. When I said it was a general bill, of course, I meant it included bills for the same character of service. I understood the gentleman from Illinois [Mr. MANN] was in favor of a bill of this character.

Mr. MANN. I am in favor of this class of a bill, but I am not in favor of passing many of these personal bills. I see that this bill the gentleman refers to is on the Private Calendar, but it is there erroneously. It belongs on the Union Calendar. I do not think that under the order that was entered it would be proper to pass it to-night.

Mr. STEPHENS of Mississippi. The order was to consider bills on the Private Calendar.

Mr. MANN. I know; but where a public bill is on the Private Calendar, since that order was made, as this has been, nobody in the House ought to be taken advantage of. I think the gentleman had better let these bills be passed over and put this bill where it belongs to-morrow, on the Union Calendar, and then on the Unanimous Consent Calendar. I have no doubt it can be passed.

Mr. ASWELL. Mr. Speaker, I would like to say to the gentleman from Illinois that this bill includes all of the bills that precede—about 700 of them in all—on this calendar and that are pending.

It is a bill that has been indorsed by the Postmaster General and the Secretary of the Treasury and the Auditor of the Treasury for the Post Office Department. It is an effort to pass one bill and save these several hundred individual bills that are pending. It covers all of them, and a list of them is in the report. It is really an omnibus bill. It covers all of those that are on this calendar except about 20 per cent.

Mr. MANN. It may be proper that it is on the Private Calendar. I will not say that it is not properly on the Private Calendar, because I have not examined the bill. The bill was reported in the House yesterday, I believe?

Mr. ASWELL. That is true.

Mr. MANN. Well, I would have examined this bill to-night if there had not been a night session, but I am not going to let a bill of this sort pass by unanimous consent, reported only yesterday, that I have not the chance to examine.

Mr. STAFFORD. I think the gentleman, upon examination, will find that this is a public bill.

Mr. MANN. I am not certain about that, but——

Mr. STAFFORD. It is public in its phraseology.

Mr. MANN. Of course, if it identifies the claimant—and I do not undertake to say—but I do undertake to say that I am in favor of passing a general bill on the subject.

Mr. ASWELL. I understand the gentleman.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Mississippi [Mr. STEPHENS]?

Mr. MANN. I will object if the gentleman persists in making a request that is utterly unreasonable under the circumstances, after the explanation I have made. I do not like to object, but am constrained to do so.

Mr. STEPHENS of Mississippi. Will the gentleman withhold for a moment?

The SPEAKER pro tempore. Does the gentleman from Illinois withhold his objection and yield to the gentleman from Mississippi?

Mr. MANN. Yes.

Mr. STEPHENS of Mississippi. I would like to say this in response to the gentleman's statement that this is unreasonable: I had understood that the gentleman had been consulted and that he was in favor of this bill and that some changes were made to meet some objections that he had.

Mr. MANN. I will say to the gentleman that I never knew that the bill was introduced, and nobody has talked to me about it. But that is nothing against the bill.

Mr. STEPHENS of Mississippi. I understood in the committee that the gentleman made certain suggestions in regard to amendments. I do not know who it is who claimed that he talked with the gentleman from Illinois.

Mr. MANN. I have talked with the gentlemen mostly in this manner in the House on this subject. Whether I have had a private conversation on the subject with anybody I do not know. I am sure I have not, however, since February 9.

Mr. STEPHENS of Mississippi. Mr. Speaker, I withdraw the request.

Mr. MANN. If I had time to look over the bill I might take a different attitude.

HENRY MERSEBURGER.

The next business on the Private Calendar was the bill (H. R. 9558) for the relief of the estate of Henry Merseburger.

The title of the bill was read.

The SPEAKER pro tempore. Is there objection?

Mr. MANN. I object.

The SPEAKER pro tempore. The gentleman from Illinois objects, and the Clerk will report the next one.

JOHN R. TALLY.

The next business on the Private Calendar was the bill (H. R. 9148) for the relief of the estate of John R. Tally.

The title of the bill was read.

The SPEAKER pro tempore. Is there objection?

Mr. MANN. I object.

The SPEAKER pro tempore. The gentleman from Illinois objects.

Mr. STEPHENS of Mississippi. Mr. Speaker, I want to inquire of the gentleman whether it is the purpose of the gentleman to object to all bills of this character?

Mr. MANN. Yes; so long as you are going to have a general bill. I stated my position some time ago as to these bills, where the report from the Post Office Department showed, apparently, that over $100,000 of the claims set out in the auditor's report had been paid by the Confederate Government, and that after that time I was not willing to see pass any more of these bills by unanimous consent unless some one made an affidavit or gave some other proof that the claimants had not been paid by the Confederate Government. The committee stated at that time that they would follow that course hereafter, but they have not paid any attention to it.

Mr. STEPHENS of Mississippi. I will say to the gentleman that that matter is taken care of in the general bill that we attempted to call up to-night, and we are not going to attempt to pass these private bills that would not meet the objection which the gentleman has named.

Mr. MILLER of Delaware. These bills were reported before the gentleman made that objection.

Mr. MANN. I understand.

Mr. MILLER of Delaware. The gentleman is going to object to these?

Mr. MANN. I said I was going to object to most of them.

Mr. MILLER of Delaware. These four bills are similar, and the amendments are exactly as in the case of all the other bills that we passed this session.

Mr. MANN. If we are going to pass the other bill, what is the use of passing these?

Mr. MILLER of Delaware. The Members who had the little bills said they would prefer to stand their chances with them, and if the big bill got through, of course, they would be taken care of in the other body. As the Member who prepared the reports on these bills, I would like to see them either tabled or taken off the calendar.

Mr. MANN. Well, my friend from Delaware, who has done exceedingly good work on the committee, will have to learn, after all, that he can not sometimes either get a bill off the calendar or pass it.

Mr. MILLER of Delaware. They are in the interest of other people.

Mr. MANN. Yes. I do not think they are in the interest of anybody in the House.

Mr. STEPHENS of Mississippi. I withdraw my request, Mr. Speaker, that all these bills in favor of the payment of claims for the carriage of mail before August, 1861, be passed over without prejudice.

The SPEAKER pro tempore. The gentleman withdraws his request, and the Clerk will report the next one.

JOHN R. BRANTLEY.

The next business on the Private Calendar was the bill (H. R. 10851) for the relief of the estate of John R. Brantley.

The title of the bill was read.

The SPEAKER pro tempore. Is there objection?

Mr. FOSTER. Mr. Speaker, that is one to go over.

Mr. MANN. I object.

The SPEAKER pro tempore. The gentleman from Illinois objects. The Clerk will report the next one.

HEIRS OF H. HEARD.

The next business on the Private Calendar was the bill (H. R. 11092) for the relief of the heirs of H. Heard.

The title of the bill was read.

Mr. STEPHENS of Mississippi. Mr. Speaker, that is a bill of the same character. I ask that it be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the gentleman's request?

There was no objection.

The SPEAKER pro tempore. The Clerk will call up the next bill.

HEIRS OF WILLIAM T. EDMONDS.

The next business on the Private Calendar was the bill (H. R. 9113) for the relief of the estate of William T. Edmonds, deceased.

The title of the bill was read.

The SPEAKER pro tempore. Is there objection?

Mr. MANN. I object.

The SPEAKER pro tempore. The gentleman from Illinois objects. The Clerk will report the next one.

JULIA R. GOODLOE.

The next business on the Private Calendar was the bill (H. R. 4866) for the relief of Julia R. Goodloe.

The title of the bill was read.

The SPEAKER pro tempore. Is there objection?

Mr. CULLOP. Mr. Speaker, I would like to have the bill reported, reserving the right to object.

The SPEAKER pro tempore. The Clerk will report the bill.

The Clerk read as follows:

Be it enacted, etc., That the title of Julia R. Goodloe in and to fractional section 31, township 2, range 13, Colbert County, Ala., be, and the same is hereby, quieted and confirmed, and patent therefor shall issue to the said Julia R. Goodloe.

The SPEAKER pro tempore. Is there objection?

Mr. FOSTER. Mr. Speaker, I would like to inquire why it is that there has not been an issue to this before.

Mr. ALMON. Mr. Speaker, this is a little tract of land owned by Mrs. Julia R. Goodloe, a most estimable widow, a lady of limited means, and the proof before the committee—and I know it of my personal knowledge—is that she and those under whom she claims have been in possession of this land for 25 years, paying taxes on it, thinking it was their own, until it was shown about a year ago that the Government tax books indicated that it was vacant. There was a unanimous report from the committee, and I trust that nobody will object to it.

Mr. CULLOP. In view of the explanation of the gentleman I shall not object.

The SPEAKER pro tempore. Is there objection?

There was no objection.

The bill was ordered to be engrossed and read a third time, and was accordingly read the third time and passed.

IRA G. KILPATRICK AND GUY D. DILL.

The next business in order on the Private Calendar was the bill (H. R. 9353) for the relief of Ira G. Kilpatrick and Guy D. Dill.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection?

There was no objection.

The bill was read, as follows:

Be it enacted, etc., That the title of Ira G. Kilpatrick and Guy D. Dill, as tenants in common in and to the west half of the southeast quarter of section 3, township 32 north, range 8 east, in the district of lands, subject to sale at Fort Wayne, Ind., in Whitley County, Ind., as assignee from Jonathan Pearson, by conveyance be and the same is hereby quieted and confirmed, and patent therefor shall issue to the said Ira G. Kilpatrick and Guy D. Dill as tenants in common.

Mr. MANN. Mr. Speaker, does the gentleman from Indiana [Mr. CLINE], the author of this bill, think he can get it passed through the Senate?

Mr. CLINE. I can if merit will win anything in the Senate.

Mr. MANN. The gentleman could not get a favorable report from the Secretary of the Interior.

Mr. CLINE. I got a favorable report from the committee.

Mr. MANN. I know; but the gentleman is a member of the House. He got a favorable report from the Committee on the Public Lands, and I am inclined to think that the report is right; yet the Secretary of the Interior did not recommend this bill.

Mr. CLINE. He recommended this bill, provided we amended it.

Mr. MANN. Oh, yes; he recommended that we sell the land at $1.25 an acre. The gentleman can take his chances. I think the bill probably is a good one.

The bill was ordered to be engrossed and read a third time, and was accordingly read the third time and passed.

WILLIAM GUY.

The next business in order on the Private Calendar was the bill (H. R. 11939) for the relief of William Guy.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection?

Mr. MANN. Reserving the right to object, I should like to ask the gentleman from Oklahoma [Mr. THOMPSON] whether there is any evidence that Gov. Johnson, as Indian chief, asked that this donation of Indian funds be made?

Mr. THOMPSON. Yes. I introduced the bill at the suggestion of Gov. Johnson and the tribal representatives of the Chickasaw Nation. Ex-Gov. Guy is a very old man, nearly 80 years old.

Mr. MANN. I understand, but this is money to be paid out of an Indian fund.

Mr. THOMPSON. Out of the Chickasaw funds; yes.

Mr. MANN. The intimation is made, and perhaps the direct statement is made, that Gov. Johnson has requested that these tribal funds be used in this way. It seems to me that there ought to be some statement, either in writing or at least on the record, to that effect.

Mr. THOMPSON. That statement is in writing and filed with the Committee on Indian Affairs.

The SPEAKER pro tempore. Is there objection?

There was no objection.

The bill was read as follows:

Be it enacted, etc., That the sum of $2,000 is hereby appropriated, out of any money in the possession of the United States belonging to the Chickasaw Tribe of Indians, not otherwise appropriated, to reimburse William Guy, ex-governor of the Chickasaw Nation, for the loss which he sustained by fire in the destruction of the building and furnishings of the Indian boarding school owned and conducted by him at Sulphur, Murray County, Okla.

With the following committee amendment:

Line 9, after the word "school" insert the words "owned and."

The amendment was agreed to.

The bill as amended was ordered to be engrossed and read a third time, and was accordingly read the third time and passed.

HEIRS OF ISHAM BUTTERWORTH.

The next business in order on the Private Calendar was the bill (H. R. 11400) for the relief of the heirs of Isham Butterworth.

The Clerk read the title of the bill.

Mr. MANN. Let that bill go over.

Mr. STEPHENS of Mississippi. Mr. Speaker, I ask unanimous consent that this bill be passed without prejudice.

The SPEAKER pro tempore. Without objection this bill will be passed without prejudice.

There was no objection.

ELLEN B. MONAHAN.

The next business in order on the Private Calendar was the bill (H. R. 6770) for the relief of Ellen B. Monahan.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection?

Mr. CULLOP. Mr. Speaker——

Mr. MANN. I object.

The SPEAKER pro tempore. The gentleman from Illinois objects. The Clerk will report the next bill.

E. C. HORNOR.

The next business in order on the Private Calendar was the bill (H. R. 8068) for the relief of E. C. Hornor.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection?

There was no objection.

The bill was read.

With the following committee amendment:

Strike out all after the enacting clause and insert in lieu thereof the following:

"That the Secretary of the Treasury be, and is hereby, authorized and directed to pay to E. C. Hornor, of Helena, Ark., the sum of $1,000, out of any money in the Treasury of the United States not otherwise appropriated, this being the amount of cash bond forfeited by the said E. C. Hornor as surety for Mrs. F. M. Alden."

Mr. MANN. Mr. Speaker, I move to amend the committee amendment by striking out lines 2 and 3, on page 2, and inserting the words which I send to the Clerk's desk.

The SPEAKER pro tempore. The gentleman from Illinois offers an amendment, which the Clerk will report.

The Clerk read as follows:

Strike out lines 2 and 3 on page 2 and insert the following:

"On account of forfeiture of bond in case of Anna B. Taylor."

Mr. MANN. Mr. Speaker, the language of the committee amendment which I have proposed to strike out reads:

This being the amount of cash bond forfeited by the said E. C. Hornor as surety for Mrs. F. M. Alden.

That statement is correct, except in all of its particulars. The bond was not a cash bond, E. C. Hornor was not the surety, and Mrs. F. M. Alden was not the name of the accused; otherwise, I suppose, the statement is correct. [Laughter.]

Mr. STEPHENS of Mississippi. I do not think there is much of it left.

Mr. MANN. No; I think not. How anybody could be so careless as to prepare that amendment, reciting that there was a cash bond when there was not a cash bond; that E. C. Hornor was the surety when he was not the surety, and that he was surety for Mrs. F. M. Alden, when that is not the name of the accused, is beyond my understanding. However, I have offered an amendment which corrects it.

Mr. STEPHENS of Mississippi. I will say that this woman was known as Mrs. Alden.

Mr. MANN. She was not tried as Mrs. Alden.

Mr. STEPHENS of Mississippi. She was not tried as Mrs. Alden, but that was her real name.

Mr. MANN. There was no surety for Mrs. Alden. There was surety for Anna B. Taylor, but a surety company gave bond, and it was not a cash bond.

Mr. STEPHENS of Mississippi. I have no objection to the amendment.

The amendment to the amendment was agreed to.

The amendment as amended was agreed to.

The bill as amended was ordered to be engrossed and read a third time, was accordingly read a third time, and passed.

THOMAS S. JOHNSON.

The next business on the Private Calendar was the bill (H. R. 3794) for the relief of Thomas S. Johnson.

The SPEAKER pro tempore. Is there objection?

Mr. MANN. Reserving the right to object, this man was never mustered into the service. There seems to be no report from the War Department as to whether he served in any capacity.

Mr. BURKE. I did not quite understand the gentleman's remarks.

Mr. MANN. I say that this man was not mustered into the service, and there is no statement in the report from the War Department as to what he ever did.

Mr. BURKE. I understood that such evidence was before the committee. I desire to say that the report shows that he was appointed and commissioned on the 4th of November, 1864, but he was not mustered in on account of the absence of the mustering officer until the 14th of the following December. But he accepted the appointment, and in the meantime performed all of the duties of chaplain as shown in the report. This bill passed the House in the second session of the last Congress and was referred to the proper committee in the Senate, and to a subcommittee of one. A report was made to the full committee, but the report was misplaced and later on there was a stipulation signed by all of the members of the committee that it might be taken up and passed in the Senate, but the Senate failed to reach it before adjournment.

This man performed all the necessary services, the same as if he had been mustered in, and the reason that he was not mustered in was, as I say, because of the absence of the mustering officer.

Mr. MANN. I suppose there were thousands of cases during the Civil War where a man received an appointment as an officer but did not receive pay until he was mustered in. If we start in to pay these men before they were mustered in, some nice, sharp claims attorney in Washington will start out a letter to all of these people telling them that they have claims against the Government. I do not know how many times it will rise up before us.

Mr. BURKE. What objection can there be where the actual services were rendered between the date of the commission and the date of mustering in, as is shown in this report?

Mr. MANN. He may have served before he was commissioned. We do not agree to pay them before they are mustered in.

Mr. BURKE. But the Government accepted his services, and his services were as good before he was mustered in as afterwards.

Mr. MANN. Such services as were rendered were purely voluntary.

Mr. BURKE. They were of just as much benefit between the date of the commission and his mustering in as they were afterwards.

Mr. MANN. I think that is very likely.

The SPEAKER pro tempore. Is there objection? [After a pause.] The Chair hears none.

The Clerk read the bill, as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Thomas S. Johnson, of Beaver Dam, Wis., late chaplain One hundred and twenty-seventh Regiment United States Colored Volunteer Infantry, the pay and allowances of a chaplain of Infantry from November 4 to December 14, 1864, not to exceed $200.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

ESTATE OF MARY H. S. ROBERTSON.

The next business on the Private Calendar was the bill (H. R. 12248) for the relief of the estate of Mary H. S. Robertson, deceased.

The SPEAKER pro tempore. Is there objection to the consideration of this bill?

Mr. CULLOP. Mr. Speaker, reserving the right to object, I would like to ask to have the bill reported.

The Clerk read the bill, as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay, out of any money in the Treasury of the United States not otherwise appropriated, to S. Stephens Stone, administratrix of the estate of Mary H. S. Robertson, deceased, late of McCracken County, Ky., the sum of $2,936, in full compensation for use and occupation of real estate situated at Paducah, Ky., by United States authorities from September 10, 1861, to October 8, 1865, as found due by the Third Auditor of the Treasury on February 27, 1889: *Provided*, That said S. Stephens Stone shall file in the Treasury Department a certificate showing her appointment as administratrix of said estate and a certified copy of her bond, which bond must be at least equal in amount to the sum hereby appropriated.

The SPEAKER pro tempore. Is there objection?

Mr. CULLOP. Mr. Speaker, I understand that the chairman of the committee has a report on the subject, and I would like to hear what the facts are.

Mr. GREGG. I will read the report:

The Committee on War Claims, to whom was referred the bill (H. R. 12248) for the relief of the estate of Mary H. S. Robertson, deceased, submit the following report:

This is a claim for rent of certain real estate situated in Paducah, Ky., occupied by United States authorities from September 10, 1861, to October 8, 1865. All questions of fact have been settled by the Treasury Department and bills providing for the payment of the claim have been favorably reported to the House of Representatives several times, but the claim has never received consideration in the House. (See H. Rept. 312, 51st Cong., 1st sess.; H. Rept. 51, 52d Cong., 1st sess.; H. Rept. 303, 53d Cong., 2d sess.; H. Rept. 1145, 54th Cong., 1st sess.; and H. Rept. 1187, 55th Cong., 2d sess.)

The last-mentioned report (H. Rept. 1187, 55th Cong., 2d sess.) is attached hereto and made a part of this report. Your committee adopt the said report as the report of this committee and recommend the passage of the bill.

[House Report No. 1187, Fifty-fifth Congress, second session.]

The Committee on War Claims, to whom was referred the bill (H. R. 651) for the relief of the estate of Mary H. S. Robertson, submit the following report:

This is a claim for rent of a dwelling situated in Paducah, Ky., from September 10, 1861, to October 8, 1865, by the United States forces under the command of and used by Brig. Gen. Lew Wallace as his headquarters from September 10, 1861, till about the time of the Fort Donelson fight, in February, 1862. As soon as he vacated it it was taken by the military authorities in command of the post at Paducah and occupied and used by them as a convalescent hospital continuously up to the 8th day of October, 1865.

The case was originally filed with the Quartermaster General, United States Army, and transferred to the Third Auditor of the Treasury, by which officer, after a thorough examination of all the proofs, it was recommended for payment and sent to the second comptroller for approval, but which officer, although admitting "the evidence is voluminous as to the ownership and loyalty of the claimant, the fact of the occupation, the value of the property, and the duration of the occupancy," yet disapproved the finding of the auditor on the ground that it did not appear there was any stipulated agreement to pay rent for the occupation of the premises.

Your committee after an investigation find, with the third auditor, there is sufficient evidence upon which to imply a contract to pay rent in this case.

The claim is proved beyond a shadow of a doubt, and as it is a just demand your committee recommend the payment of the claim and the passage of the bill, with the following amendment.

The SPEAKER pro tempore. Is there objection?

Mr. CULLOP. I have no objection.

Mr. MANN. Reserving the right to object, why did not the committee send it to the Court of Claims? The reason that the committee reported this bill to the House instead of sending it to the Court of Claims is because of what?

Mr. GREGG. Because the Government had the record of the occupancy and it had been passed upon by The Adjutant General and different boards, and we did not think it necessary.

Mr. MANN. It had been rejected by the Government—the comptroller rejected it.

Mr. GREGG. It was not rejected on any ground except that there was no proof of the value of the occupancy.

Mr. MANN. There is no proof here of the value of the occupancy. I asked why they did not send it to the Court of Claims?

Mr. GREGG. We thought it was a matter of record, and that it was not necessary to go there.

Mr. MANN. Well, I will help the gentleman out. I think that the reason was because of the Crawford amendment.

Mr. GREGG. I know the Crawford amendment was in the way, but I was not present when the bill was up for consideration.

Mr. MANN. I know the gentleman was necessarily absent.

The SPEAKER pro tempore. Is there objection?

There was no objection.

The bill was ordered to be engrossed and read the third time, was read the third time, and passed.

HEIRS OF ELIZABETH BRUCE, DECEASED.

The next business on the Private Calendar was the bill (H. R. 8108) for the relief of the legal representatives and heirs of Elizabeth Bruce, deceased, widow of the late John H. Bruce.

The SPEAKER pro tempore. Is there objection?

There was no objection.

The SPEAKER pro tempore. The Clerk will report the bill.

The Clerk read as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay, out of any money in the Treasury of the United States not otherwise appropriated, to the legal representatives and heirs of Elizabeth Bruce, deceased, widow of the late John H. Bruce, of Rowan County, Ky., the sum of $155, pay and bounty due said John H. Bruce for services rendered as a private in Company G, Twenty-second Regiment Kentucky Volunteer Infantry.

Mr. SISSON. Mr. Speaker, reserving the right to object, there was a bill passed specifically prohibiting payment of claims of this kind, as I recollect.

Mr. MANN. Mr. Speaker, I move to strike out the last word. Is the bill beyond the point of objection?

The SPEAKER pro tempore. It is beyond the point of objection.

Mr. MANN. I thought that question was put before the bill was read.

Mr. CULLOP. I so understood it.

Mr. SISSON. Mr. Speaker, I do not have all of the bills before me, and I did not know what the bill was.

Mr. MANN. Mr. Speaker, I think the gentleman is correct in his position, otherwise we would have to have the bills read in full, as he has a right to. I think I can give the gentleman the information that he is asking for, or perhaps the gentleman from Kentucky [Mr. FIELDS] can, whom I see has risen. We have had a statute of limitations on these things a number of times, and in the urgent deficiency appropriation act of December 22, 1911—and I have no doubt that that is what is in the mind of the gentleman from Mississippi [Mr. SISSON]—occurred this item:

No claim for arrears of pay, bounty, or other allowances growing out of the service of volunteers who served in the Army of the United States during the Civil War shall be received or considered by the accounting officers of the Treasury unless filed in the office of the Auditor for the War Department on or before December 31, 1912.

Of course that does not prevent Congress acting, and it only illustrates the uselessness as a rule of passing a statute of limitations against the Government. Here, 50 years after the war, we pass a statute of limitations, and then when that expires we go ahead and pay the bills just the same.

Mr. SISSON. Does the gentleman have any information—and I ask him because I presume he has gone through this calendar—as to how many bills of this character are on the calendar?

Mr. MANN. This is the only bill of that character on the calendar.

Mr. SISSON. So far as the present bill is concerned, I do not know a thing about the claim, except as it appears from the face of the bill as read a moment ago, but I fear that if this bill should go through it would simply open up the floodgates to others.

Mr. MANN. I think there are not many more of the cases left, and if there are many more we will probably pass a general law upon the subject, giving them time again.

Mr. SISSON. I hope not.

Mr. MANN. So do I.

Mr. FIELDS. Mr. Chairman, will the gentleman yield?

Mr. SISSON. Yes.

Mr. FIELDS. I want to say for the information of the gentleman that the legal representative of Elizabeth is her only son, G. W. Bruce, who was formerly a resident of Vanceburg, Ky. After this statute was passed, just before the limitation ran on the claim, he was notitfied by the department or by the proper authorities from Washington——

Mr. SISSON. Or by some attorney.

Mr. FIELDS. That the limitations would run by a certain time, and a letter was sent to Vanceburg, Ky. During the holiday vacation, prior to the 31st day of December, on which the limitation would run, I happened to be in the town of Vanceburg. Another gentleman of the same name had received this letter. He did not know the other man's address, and he said to me, "I have a letter here that is of some importance to G. W. Bruce, who used to live here, but I do not know where to send it," and he turned the letter over to me. I then wired Mr. Bruce to immediately file his claim. He sent his claim to my office, and it reached the department two days late.

Mr. SISSON. Mr. Bruce did not seem to know he had a claim against the Government.

Mr. FIELDS. Oh, yes; he had the claim up before, but he did not know about this statute.

Mr. SISSON. Has the claim ever been rejected by the department or by Congress?

Mr. FIELDS. Oh, no; it has never been rejected, and would have been paid without question had he gotten it in in time. I took the matter up with the department, and that was the only trouble with the claim, that it got in two days too late.

Mr. SISSON. I withdraw the objection.

The SPEAKER pro tempore. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

ERSKINE R. HAYES.

The next business on the Private Calendar was the bill (H. R. 7062) for the relief of Erskine R. Hayes.

The SPEAKER pro tempore. Is there objection?

Mr. MANN. Mr. Speaker, reserving the right to object, this is another one of these personal injury cases, where the committee has allowed very much over the year's pay.

Mr. MILLER of Delaware. Mr. Speaker, will the gentleman yield?

Mr. MANN. Certainly.

Mr. MILLER of Delaware. This bill was passed in the Senate calling for $3,000, and when the House took it up the gentleman from Ohio [Mr. FESS] made a very earnest plea before the committee. I desire to call the attention of the gentleman from Illinois [Mr. MANN] as well as the House to these few words that appear in the report from the department:

> The helpless and pitiable condition of the plaintiff appeals strongly to our sympathies, but we must find the facts as the evidence proves them and state the law applicable to the same as we believe it to be, leaving to Congress to determine whether anything, and if so, what amount, should be paid to the claimant by way of bounty or gratuity.

We put that in, knowing that on the face of it it might look as though this bill came from the department with an unfavorable report, but it plainly shows that it is up to Congress to decide in this special case whether one of the most pathetic as well as one of the most meritorious cases that has ever come before the committee should be, I will state frankly, given a better chance than perhaps it might have if it were considered absolutely upon its merits, as compared to other personal-injury cases. The gentleman from Ohio [Mr. FESS] can deal with this far better than I, but as I gave considerable study to it I did not want to let the bill come up without saying something.

Mr. FESS. Mr. Speaker——

The SPEAKER pro tempore. Does the gentleman from Illinois [Mr. MANN] yield to the gentleman from Ohio?

Mr. MANN. Certainly.

Mr. FESS. Mr. Speaker, I made a trip last summer to the home of this boy in order that I might know something about the situation, as it appealed to me as a very pitiable case. I had had a good deal of correspondence. I made sure that there was no attorney back of this matter, because I have prejudice against the working up of cases. I found that this young man, 22 years of age at the time he entered the service here in the Bureau of Engraving and Printing, had not been at work very long until this injury had taken place, and I also found that the Court of Claims stated that the hallway in which he was injured was not the only way that the boy could have gone. For that reason there was contributory negligence on his part, but if anyone cares to take the time to read the report, and I know the gentleman from Illinois has read the report——

Mr. MANN. I have read the report, and I think it shows the boy was negligent. However, I do not think that cuts much ice as long as we are not proceeding upon that theory of negligence any more in any of these bills.

Mr. FESS. The situation of the boy at this time is this: He probably will never walk again unsupported. He walks on crutches. His body is all contorted and bent over, and at the eleventh dorsal there is a running sore that is constant and very putrid, and his vertebræ seems to be, I think, decayed from the seventh to the eleventh.

I talked with him personally and with his family, and I told them that the finding of the Court of Claims would not give an undisputed case, because the Government probably was not under any obligation, but that I would present it, and I would like the privilege, as you have granted me, to make a plain statement of the condition of the boy's health. He thought that he might be able to go to some institute and under proper treatment might recover. I do not think that will ever be possible. I think that Dr. Austin stated the case when he said that he is incurable and will be a hopeless cripple for the balance of his life. If I could feel sure that by going to some institute he could receive treatment that would enable him to recover, I would think that there would be greater reason for passing the bill. However, I do not think that that is possible, and yet I wish that this relief could be granted to this man. I have not any interest in this matter in the world other than a humanitarian interest. It is a case that wonderfully appeals to me.

Mr. MANN. Mr. Speaker, there can be no question about the pathetic side of the case. It is one that excites the sympathy of anybody, even if he has a heart of ice—and I try to have one on these cases. If anyone throws it up to me hereafter—and I suppose somebody will the first time I object to his case—that I let this go through by unanimous consent, I can assure them now that it will not have the slightest effect on me. I suppose we may properly once in a while step outside the lines, though several years from now some one will say that we passed a case in this Congress that covered a good deal more than the amount that would have been allowed under the compensation law. I really think we ought to have a compensation law more generous than we have now. I am not going to object to this bill, although I have a good deal of hesitation in not doing it. [Applause.]

The SPEAKER pro tempore. Is there objection to the consideration of the bill? [After a pause.] The Chair hears none.

The Clerk will report the bill.

The Clerk read as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Erskine R. Hayes, the sum of $5,000, in full compensation for injuries received on the 16th day of December, 1902, while in the performance of his duty as an employee of the Bureau of Engraving and Printing, Treasury Department, in the city of Washington, D. C.; $3,000 of said sum shall be payable upon the passage and approval of this bill and the balance shall be payable in monthly installments of $100 until the full sum of $5,000 shall be paid.

Also the following committee amendment was read:

Line 6, strike out the figures "$5,000" and insert the figures "$3,000."

The amendment was agreed to.

Also the following committee amendment was read:

Line 11, on page 1, after the word "Columbia," strike out the remander of the paragraph.

The committee amendment was agreed to.

Mr. CULLOP. Mr. Speaker, can we have the bill reported as amended?

The Speaker. The Clerk will report the bill as amended.

The Clerk read as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Erskine R. Hayes, the sum of $3,000, in full compensation for injuries received on the 16th day of December, 1902, while in the performance of his duty as an employee of the Bureau of Engraving and Printing, Treasury Department, in the city of Washington, D. C.

The bill as amended was ordered to be engrossed and read a third time, was read the third time, and passed.

BORDEN H. MILLS.

The next business on the Private Calendar was the bill (H. R. 8325) for the relief of Borden H. Mills.

The title of the bill was read.

The SPEAKER pro tempore. Is there objection?

There was no objection.

The SPEAKER pro tempore. The Clerk will report the bill.

The Clerk read as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Borden H. Mills, United States commissioner at Albany, in the northern district of New York, the sum of $84.50, in payment of the amount of fees earned by him as such United States commissioner while performing the duties of such office in connection with the cases of the United States against Lee Ning, Yee Quong, Charles Wong, James Bennett, Arthur Smith, and Lee Ning, alias Charles Lee, the said sum being the amount disallowed by the Auditor for the State and Other Departments on the settlement of the quarterly accounts of said commissioner for the quarter ending June 30, 1915, which amount is hereby appropriated.

Mr. CULLOP. Mr. Speaker, I would like the author of the bill, or some one having the bill in charge, to explain this measure.

Mr. MILLER of Delaware. Mr. Speaker, I shall be glad to explain it as briefly as possible to the gentleman.

The so-called "dope squad" in the customs service was after some Chinamen who were violating the customs laws in reference to the importation of opium. They had to get after the Chinamen very quickly, because they were fleeing toward the Canadian border.

One of the inspectors, a member of the dope squad, went to the claimant, who is United States commissioner for the northern district of New York, and asked for their arrest. It seemed that the only officers who are authorized to issue these warrants are United States attorneys or United States district attorneys. But the evidence adduced before the committee showed that had not the United States commissioner issued this warrant at the request of the customs inspector the Chinamen would have gotten away. All of them were apprehended, some turned State's evidence, and one paid a fine of $2,000, which was turned into the Treasury.

This gentleman is only asking for the fee he would have received on this case as United States commissioner had the United States attorney or assistant attorney signed the warrants.

Mr. CULLOP. Did the party collect any fees for his services?

Mr. MILLER of Delaware. No. I will say to the gentleman that the fees were not allowed. They were refused by a decision of the Acting Comptroller of the Currency, and in his decision he says this one line:

It can be understood that such a condition is possible, but when it is the fault of the law it can only be remedied by Congress.

Mr. CULLOP. There has been no compensation provided by law in the way of fees?

Mr. MILLER of Delaware. I will say to the gentleman that this man has absolutely had no compensation for his two weeks' work, which he would have gotten if the district attorney had issued the warrant. These are the fees that the United States commissioner would have received had the warrant been issued by a district attorney rather than by a United States commissioner to an inspector.

The SPEAKER pro tempore. Is there objection?

There was no objection.

The SPEAKER pro tempore. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

The SPEAKER pro tempore. The Clerk will report the next one.

MARTHA A. MOFFITT.

The next business on the Private Calendar was the bill (H. R. 11304) for the relief of Martha A. Moffitt.

The title of the bill was read.

The SPEAKER pro tempore. Is there objection?

Mr. CULLOP. Reserving the right to object, Mr. Speaker, may we have the bill reported?

The SPEAKER pro tempore. The Clerk will report the bill.

The Clerk read as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and hereby is, authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Martha A. Moffitt, of Randolph County, N. C., widow of E. A. Moffitt, who, while in the discharge of his duties as deputy collector, was murdered by Lee Turner, a violator of the United States internal-revenue laws, on the 4th day of December, 1896, the sum of $10,000, on account of the murder of her said husband while in the service of the Government of the United States.

With a committee amendment, as follows:

Strike out, in line 10, "$10,000," and insert in lieu thereof "$1,500."

Mr. CULLOP. Mr. Speaker, I see the author of the bill is present, and I would like to have an explanation of the circumstances under which this occurred.

Mr. PAGE of North Carolina. Mr. Speaker, this is a claim to pay a deputy collector who, under orders from his superior officer, served a warrant for the arrest of an illicit distiller, and was shot and killed 20 years ago. The amount recommended by the committee was one year's salary. He was receiving $1,500 a year, and the committee has recommended that his widow be paid his salary for one year.

Mr. CULLOP. Has the widow remarried?

Mr. PAGE of North Carolina. No; she is still a widow, with 10 children.

Mr. CULLOP. Has this claim ever been presented before in Congress?

Mr. PAGE of North Carolina. I think I introduced the bill first in 1904 or 1905, but it was not reported out of the committee at that time and it has not been presented to the House. There was no general law at that time that would permit a payment of this sort.

The SPEAKER pro tempore. Is there objection?

There was no objection.

The SPEAKER pro tempore. The question is on agreeing to the committee amendment.

The committee amendment was agreed to.

The SPEAKER pro tempore. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

B. F. HAVENS.

The next business on the Private Calendar was the bill (H. R. 8622) for the relief of the estate of B. F. Havens.

The Clerk read the title of the bill.

Mr. STEPHENS of Mississippi. Mr. Speaker, this is one of those mail contract bills, and I ask unanimous consent that it be passed without prejudice.

The SPEAKER pro tempore. Without objection, it will be passed without prejudice.

There was no objection.

ESTATE OF GILBERT WINNE.

The next business in order on the Private Calendar was the bill (H. R. 12553) for the relief of the estate of Gilbert Winne.

Mr. STEPHENS of Mississippi. Mr. Speaker, the same state of facts applies to this bill.

The SPEAKER pro tempore. Without objection, it will be passed without prejudice.

There was no objection.

LAWRENCE J. KESSINGER.

The next business in order on the Calendar for Unanimous Consent was the bill (H. R. 7417) for the relief of Lawrence J. Kessinger.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection?

Mr. MANN. Reserving the right to object, I can not quite understand on what basis they recommend that this money be paid.

Mr. FOSTER. The reason this was recommended was because this man was employed by the postmaster to continue the service of carrying this mail, as I understand it. The contract had expired, and he was notified by the Government. Under the law which gives the postmaster the right to employ for a certain period, this man was employed to do this service, and the committee thought for that reason he was entitled to be paid.

Mr. MANN. After he had been notified by the Government that his term of service had expired, and the postmaster had been notified to engage a new man, if he could get him, which, of course, he could not at the salary allowed, this man continued to carry the mail.

Mr. FOSTER. As I understand the law, they notified him that his contract expired on a certain date. Now, that contract was not renewed, but under the law which gave the postmaster at the local office the right to employ some one for a certain time to carry the mail this man was employed under those conditions.

Mr. MANN. Then he is not entitled to this sum of money. My recollection is that the postmaster had the right to employ a man for about $7. I am not sure about the amount. I am only speaking from recollection. He has a claim in here for $200.

Mr. SMITH of Idaho. That amount represents the service rendered, covering a period of about two months and a half, up to the time that the new contract was let. The correspondence on file shows—but, unfortunately, the report does not show it—that when the contract expired on the 30th of June, so the claimant alleges, the postmaster told him to continue to carry the mail until the department readvertised. He performed the service in good faith, and he simply claims compensation at the same rate that he received under his contract.

Mr. MANN. But he was notified by the Post Office Department that his contract was over with.

Mr. SMITH of Idaho. That is very true.

Mr. MANN. The postmaster was notified that he should make a new contract based on the compensation of that post office, which at that time, I believe, was $5 per annum, and in utter disregard of the law and the regulations and the notice he put in a claim to have done the work, and hence to be entitled to be paid. A man might just as well go out here on the street in front of the Capitol and dig up a tree that perhaps ought to be dug up, after he was told that he must not do it, and that he would not be paid for it if he did it, and then say it was necessary to dig up this tree, and ask to be paid for it.

Mr. SMITH of Idaho. The communication that the gentleman refers to is rather ambiguous, and the carrier claims that he did not understand it; that he went to the postmaster, who is supposed to know, and that he told him to continue carrying the mail until the department readvertised. The service was rendered, and he simply asks compensation at the same rate that he was receiving under his contract.

Mr. FOSTER. There were three post offices to which the mail was carried. One of them was discontinued because there was no pay, or about $5 a year. The other one paid $96, and at the third one I think the salary of the postmaster was something like $1,900, as the record shows.

Mr. MANN. He did not carry the mail to that office.

Mr. FOSTER. That was one of the offices connected with the carrying of this mail.

Mr. MANN. That was the one that they carried the mail from.

Mr. SMITH of Idaho. He carried the mail from the larger office to the smaller ones, and back to the larger one.

Mr. FOSTER. Yes. The committee thought that as the man did the work, he was entitled to pay for his services. The report of the Post Office Department is not very favorable, I will say to the gentleman from Illinois.

Mr. MANN. I should say not.

Mr. FOSTER. No; it is not; but the committee took the fact that this man had done the work in good faith. He had been employed in good faith by the postmaster, and so under these circumstances they thought he was entitled to pay for his services. Now, that is the case.

The SPEAKER pro tempore. Is there objection? [After a pause.] The Chair hears none.

The Clerk read the bill, as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Lawrence J. Kessinger, Rupert, Idaho, the sum of $207.75, full compensation for carrying the mails from Cotterel by Jackson to Rupert, Idaho, three times a week from July 1, 1914, to September 30, 1914; this amount to be accepted by said Lawrence J. Kessinger as full compensation for service rendered.

The bill was ordered to be engrossed and read the third time, was read the third time, and passed.

GEORGE W. TRAHEY.

The next business on the Private Calendar was the bill (H. R. 1592) for the relief of George W. Trahey.

The SPEAKER pro tempore. Is there objection?

Mr. CULLOP. Reserving the right to object, I ask that the bill be reported.

The Clerk read the bill, as follows:

Be it enacted, etc., That there be paid to George W. Trahey, of Bremerton, Wash., out of any money in the Treasury not otherwise appropriated, the sum of $10,000 for damages suffered by him on account of an injury received by him while performing his duties as master shipwright at the navy yard, Puget Sound, on May 8, 1912, said injury resulting from gunshot wounds inflicted upon him by one John N. Haley, an employee of said yard, who at the time of such shooting was insane.

With the following committee amendment:

On line 5, page 1, strike out the figures "$10,000" and insert the figures "$762."

The SPEAKER pro tempore. Is there objection?

Mr. CULLOP. Mr. Speaker, I would like an explanation by the author of the bill.

Mr. HUMPHREY of Washington. This was a case where George W. Trahey, who was employed in the Puget Sound Navy Yard, was shot by another employee who had suddenly gone insane. He was shot three times and was in the hospital for six weeks and incapacitated for a period of five months. If you will look at the back of the report you will see a statement by the Secretary of the Navy which gives all the information that the gentleman will want.

Mr. CULLOP. I would like to ask whether or not this party was compensated by any accident-insurance company or in the recovery in a suit at law from the party who inflicted the injury?

Mr. HUMPHREY of Washington. No; he has never received a cent for this injury and will suffer from it for the rest of his life.

The SPEAKER pro tempore. Is there objection? [After a pause.] The Chair hears none.

The committee amendment was agreed to.

The bill as amended was ordered to be engrossed and read a third time, was read the third time, and passed.

BERNARD H. SCHAAF.

Mr. CALDWELL. Mr. Speaker, I ask unanimous consent that we take up No. 133 on this calendar, to put Bernard H. Schaaf on the retired list out of its regular order. This is a case unanimously reported by the Committee on Military Affairs, after carefuly investigation, and after a recommendation by the department, and I ask for it at this time because of the extreme suffering of the family.

The SPEAKER pro tempore. The gentleman from New York asks unanimous consent to take up the No. 133 on the calendar, H. R. 8267, out of the regular order.

Mr. MANN. I have no objection to its being reported, but I am going to object to its consideration.

Mr. COX. Then I object to its being reported.

LOUIS JONES.

The next business on the Private Calendar was the bill (H. R. 10642) for the relief of Louis Jones.

The SPEAKER pro tempore. Is there objection?

There was no objection.

The Clerk read the bill, as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay to Louis Jones the sum of $1,000, out of any money in the Treasury not otherwise appropriated, for injury sustained on the 28th day of August, in the year 1906, while employed by the United States Government in the Government arsenal at Rock Island, Ill.

The following committee amendment was read:

Page 1, line 5, strike out the figures "1,000" and insert the figures "61.50."

The committee amendment was agreed to.

The bill as amended was ordered to be engrossed and read the third time, was read the third time, and passed.

S. L. BURGARD.

The next business on the Private Calendar was the bill (H. R. 1609) for the relief of S. L. Burgard.

The SPEAKER pro tempore. Is there objection?

Mr. MANN. Reserving the right to object, this bill goes back to an injury in 1898. I suppose there were people injured in 1798.

Mr. STEPHENS of Mississippi. I will say that the committee has not fixed any time limit in regard to that matter.

Mr. MANN. The only way to do is to fix a definite limit, because there were personal injuries a hundred years ago and many of them. It is a question whether there is any reason why we should go back so many years. It is only recently that this policy has been adopted of Congress paying any of these claims. If we start in to pay for all the injuries that have occurred since the Government was instituted, we will have quite a job on our hands.

Mr. STEPHENS of Mississippi. I think there are a few cases where we have gone back as far as this, but only a few.

Mr. MANN. I think there are a few cases where the committee has gone back as far, but not any that were passed by unanimous consent. There were some reported, and I objected to them.

The SPEAKER pro tempore. Is there objection? [After a pause.] The Chair hears none.

The Clerk read the bill, as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, directed to pay, out of any money in the Treasury not otherwise appropriated, to S. L. Burgard the sum of $559.36 as compensation for injuries received by the said S. L. Burgard while in the employment of the United States Government at the Rock Island Arsenal, in the State of Illinois, on June 13, 1898.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

WILLIAM D. ALLEN.

The next business on the Private Calendar was the bill (H. R. 2052) for the relief of the estate of William D. Allen.

The SPEAKER pro tempore. Is there objection?

Mr. CULLOP. Mr. Speaker, reserving the right to object, I ask to have the bill reported.

The SPEAKER pro tempore. The Clerk will report the bill.

The Clerk read as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay to the legal heirs of William D. Allen, deceased, of Oswego, N. Y., out of any money in the Treasury not otherwise appropriated, the sum of $320, for work performed in the release and rescue of the lighthouse tender *Hare*.

The SPEAKER pro tempore. Is there objection?

Mr. CULLOP. Mr. Speaker, I would like to have some one in charge of the bill make some explanation.

Mr. EDMONDS. Mr. Speaker, the tugboat of William D. Allen took care of a lighthouse tender that was in danger of being wrecked in Lake Erie. At the time of the rendering of the services by the tugboat the Government offered Mr. Allen $320. He thought that that was not sufficient for the services, and he refused it. The heirs of Mr. Allen now state that they are willing to take the $320, and the department recommends that we pay it to them.

Mr. CULLOP. They are now willing to take what the Government in the first instance offered them?

Mr. EDMONDS. Yes.

The SPEAKER pro tempore. Is there objection?

There was no objection.

The SPEAKER pro tempore. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

RENÉ W. PINTÓ Y WENTWORTH.

Mr. GREENE of Vermont. Mr. Speaker, I ask unanimous consent to return to S. J. Res. 80, authorizing the Secretary of War to receive for instruction at the United States Military Academy at West Point René W. Pintó y Wentworth, a citizen of Cuba, being No. 132 on the Private Calendar, for the reason that I think there will be no objection to it now.

The SPEAKER pro tempore. The gentleman from Vermont asks unanimous consent to return at this time to S. J. Res. 80, No. 132 on the Private Calendar. Is there objection?

Mr. MANN. Let the Senate joint resolution be read.

The SPEAKER pro tempore. The Clerk will report the resolution.

The Clerk read as follows:

Resolved, etc., That the Secretary of War be, and he hereby is, authorized to permit René W. Pintó y Wentworth, a citizen of Cuba, to receive instruction at the United States Military Academy at West Point: *Provided*, That no expense shall be caused to the United States thereby, and that the said René W. Pintó y Wentworth shall agree to comply with all regulations for the police and discipline of the academy, to be studious, and to give his utmost efforts to accomplish the course in the various departments of instruction, and that the said René W. Pintó y Wentworth shall not be admitted to the academy until he shall have passed the mental and physical examinations prescribed for candidates from the United States and that he shall be immediately withdrawn if deficient in studies or conduct and so recommended by the academic board: *And provided further*, That in the case of the said René W. Pintó y Wentworth the provisions of sections 1320 and 1321 of the Revised Statutes shall be suspended.

The SPEAKER pro tempore. Is there objection?

Mr. CULLOP. Mr. Speaker, reserving the right to object, is this resolution necessary?

Mr. GREENE of Vermont. Mr. Speaker, this is following a precedent that has been observed for a number of years, in pursuance of a practice that has extended this courtesy to the Republic of Cuba during that time.

Mr. CULLOP. A great many young men in this country desire admission to that institution.

Mr. GREENE of Vermont. We usually allow one from Cuba and one or two others from South American countries.

Mr. CULLOP. Has that been the practice?

Mr. MANN. It has.

Mr. GREENE of Vermont. It is altogether according to the wishes of the President, is requested by him, and comes to us through the Secretary of State.

Mr. CULLOP. For what length of time has this custom been followed?

Mr. MANN. Ever since I have been here; and as to Cuba, ever since Cuba has been an independent country.

Mr. CULLOP. That is, since 1899.

Mr. MANN. Shortly after that time. We do it for several of the South American countries.

Mr. GREENE of Vermont. In this instance it is manifestly in our interest to stimulate military education in Cuba, our next friend and good ally.

Mr. CULLOP. I wanted to know whether this was establishing a new precedent?

Mr. MANN. It is not establishing a precedent, it is following a long-established one.

Mr. GREENE of Vermont. It is an old custom, and the President makes the request.

The SPEAKER pro tempore. Is there objection?

There was no objection.

The SPEAKER pro tempore. The question is on the third reading of the Senate joint resolution.

The Senate joint resolution was ordered to be read a third time, was read the third time, and passed.

BEVERLY E. WHITEHEAD.

The next business on the Private Calendar was the bill (S. 707) for the relief of Beverly E. Whitehead.

The SPEAKER pro tempore. Is there objection?

Mr. EDMONDS. Mr. Speaker, that is one of those mail bills.

Mr. STEPHENS of Mississippi. Mr. Speaker, I would like to direct the attention of the gentleman to the fact that this bill has passed the Senate, and as this man has waited some 50 or 60 years for his money, I think it ought to go through.

Mr. MANN. I have no objection to the bill being considered at this time. I will not object.

The SPEAKER pro tempore. Is there objection to the present consideration of the bill? [After a pause.] The Chair hears none, and the Clerk will report the bill.

The Clerk read as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, the sum of $102.60 to Beverly E. Whitehead for the balance due him for the transportation of the United States mails under contract prior to May 31, 1861, on route No. 6199, Georgia, said balance having been found due by the Auditor for the Post Office Department and reported to the Senate by the Auditor for the Post Office Department on January 17, 1903: *Provided*, That not exceeding 25 per cent attorney's fee is allowed.

The SPEAKER pro tempore. The question is on the third reading of the Senate bill.

The bill was ordered to be read a third time, was read the third time and passed.

PETER M'KAY.

The next business on the Private Calendar was the bill S. 1376, an act for the relief of Peter McKay.

The SPEAKER pro tempore. Is there objection to the consideration of the bill?

Mr. MANN. I object.

MARY S. CORBIN.

The next business on the Private Calendar was the bill (H. R. 11261) for the relief of Mary S. Corbin.

The SPEAKER pro tempore. Is there objection?

Mr. CULLOP. Reserving the right to object, I would like to have the bill reported.

The SPEAKER pro tempore. The Clerk will report the bill.

The bill was read as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Mary S. Corbin, of Oconee County, S. C., widow of W. B. F. Corbin, who, while in the discharge of his duty as a deputy United States marshal, was murdered by Robert Belcher, Lou Belcher, J. B. Palmer, and Charles Palmer, violators of the United States postal laws and regulations, on the 8th day of March, 1909, the sum of $1,000, on account of the murder of her said husband while in the service of the Government of the United States.

Mr. CULLOP. Reserving the right to object, I would like to ask the gentleman from Mississippi in reference to this and the following bill on the calendar. It seems as if there are two Corbins there who are asking for relief. Is it relief for the injury or killing of the same person?

Mr. STEPHENS of Mississippi. No, sir. It seems that these two men were brothers, and they were both out arresting men who had shot up rural free-delivery boxes. They had warrants for the arrest of these parties, and both were killed.

Mr. CULLOP. Were they civil or Federal officers?

Mr. STEPHENS of Mississippi. My recollection is that they were Federal officers.

The SPEAKER pro tempore. Is there objection to the consideration of the bill? [After a pause.] The Chair hears none.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

MRS. C. D. CORBIN.

The next business on the Private Calendar was the bill (H. R. 11262) for the relief of Mrs. C. D. Corbin.

The SPEAKER pro tempore. Is there objection to the consideration of the bill? [After a pause.] The Chair hears none.

The Clerk will report the bill.

The Clerk read as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Mrs. C. D. Corbin, of Oconee County, S. C., widow of C. D. Corbin, who, while in the discharge of his duty as a deputy United States marshal, was murdered by Robert Belcher, Lou Belcher, J. B. Palmer, and Charles Palmer, violators of the United States postal laws and regulations, on the 8th day of March, 1909, the sum of $1,000, on account of the murder of her said husband while in the service of the Government of the United States.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

MARY E. NICOLSON.

The next business of the Private Calendar was the bill (S. 922), an act for the relief of Mary E. Nicolson.

The SPEAKER pro tempore. Is there objection to the consideration of the bill? [After a pause.] The Chair hears none. The Clerk will report the bill.

The Clerk read as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay to Mary E. Nicolson, of Idaho Falls, Idaho, out of any money in the Treasury not otherwise appropriated, the sum of $900, to compensate her for the death of her son, C. Val Nicolson, killed while fighting fires on the Coeur d'Alene National Forest on August 20, 1910.

The bill was ordered to be read a third time, was read the third time, and passed.

WARREN E. DAY.

The next business on the Private Calendar was the bill (S. 1048), an act for the relief of Warren E. Day.

The SPEAKER pro tempore. Is there objection to the consideration of the bill? [After a pause.] The Chair hears none. The Clerk will report the bill.

The Clerk read as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay to Warren E. Day, out of any moneys in the Treasury not otherwise appropriated, the sum of $1,200, being for professional services rendered and medicine furnished the Hualapai Indians in Arizona Territory, under the orders and approval of the Commissioner of Indian Affairs, during the years 1883 and 1884: *Provided*, That the acceptance of said sum shall be considered as final settlement of all claims of every kind whatsoever against the United States.

The bill was ordered to be read a third time, was read a third time, and passed.

KAREN S. SORENSON AND JAMES LYLE.

The next business on the Private Calendar was the bill (H. R. 1636) for the relief of Karen S. Sorenson and James Lyle.

The SPEAKER pro tempore. Is there objection to the consideration of the bill? [After a pause.] The Chair hears none. The Clerk will report the bill.

The Clerk read as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized to pay, out of any money in the Treasury of the United States not otherwise appropriated, to Karen S. Sonerson and James Lyle, doing business as copartners at Honolulu, Territory of Hawaii, under the firm name and style of Sorenson & Lyle, for use of marine railway, work done, and materials furnished in making necessary repairs to the schooner *Charles Levi Woodbury*, which said schooner was damaged as the result of a collision with the United States ship *Iroquois* in the Pacific Ocean, off the coast of Kauai, Territory of Hawaii, on May 4, 1905, $1,019.69.

The bill was ordered to be engrossed and read a third time, was read a third time, and passed.

Mr. STEPHENS of Mississippi. Mr. Speaker, the next three bills on the calendar are mail-carrying contract bills.

The SPEAKER pro tempore. Without objection, the next three bills will be passed.

There was no objection.

FRED HENDERSON.

The next business on the Private Calendar was the bill (H. R. 10641) for the relief of Fred Henderson.

The SPEAKER pro tempore. Is there objection to the consideration of the bill? [After a pause.] The Chair hears none. The Clerk will report the bill.

The Clerk read as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay to Fred Henderson the sum of $43.75, out of any money in the Treasury not otherwise appropriated, for injury sustained on the 16th day of September, in the year 1906, while employed by the United States Government in the Government Arsenal at Rock Island, Ill.

Also the following committee amendment was read:

Line 5, strike out "$1,000" and insert "$43.75."

The amendment was agreed to.

The bill as amended was ordered to be engrossed and read a third time, was read the third time, and passed.

DR. E. V. HAILMAN.

The next business on the Private Calendar was the bill (H. R. 3145) for the relief of Dr. E. V. Hailman.

The title of the bill was read.

The SPEAKER pro tempore. Is there objection?

Mr. MANN. I object.

The SPEAKER pro tempore. The gentleman from Illinois objects.

Mr. CONNELLY. Mr. Speaker, will the gentleman withhold his objection for a moment?

Mr. MANN. I will reserve my objection.

Mr. CONNELLY. I will say to the gentleman, Mr. Speaker, that this claim appears to be confirmed and approved by the department, and I wondered what the gentleman's objection was.

Mr. MANN. I can not see any possible excuse for paying this claim. Here is a doctor who did not perform his duties properly. He was in charge of an Indian agency, and an Indian lost his child through the neglect of the doctor, and subsequently shot the doctor and set fire to his house; and the bill says that this payment is for damages incurred in the act of "saving property that had been set on fire by said Indian."

That is all buncombe, that part of it. The Indian was not crazy, but was crazed, and thought the doctor had not properly attended to his child, and I think so. He shot the doctor and set fire to the doctor's house. Now the doctor wants us to compensate him for those injuries or damages. If he had attended to his duties properly, he would not have been shot. But whether he had or not, it is not a case where we are under any obligation to pay.

Mr. EDMONDS. I will say to the gentleman that this bill only undertakes to pay the medical expenses of the doctor in getting well.

Mr. MANN. I know; but we do not undertake to pay medical expenses. We never undertake to pay medical expenses.

Mr. CONNELLY. Will the gentleman object to letting this go over?

Mr. MANN. It will go over. There is no prejudice about it. It retains its place on the calendar. It may come up again.

The SPEAKER pro tempore. The gentleman from Illinois objects. The Clerk will report the next one.

M. A. SWEENEY SHIPYARDS & FOUNDRY CO.

The next business on the Private Calendar was the bill (H. R. 13064) for the relief of the M. A. Sweeney Shipyards & Foundry Co.

The title of the bill was read.

The SPEAKER pro tempore. Is there objection?

There was no objection.

The SPEAKER pro tempore. The Clerk will report the bill.

The Clerk read as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, directed to pay to the M. A. Sweeney Shipyards & Foundry Co., out of any money in the Treasury not otherwise appropriated, the sum of $4,047, and which sum of money is hereby appropriated for this purpose, the same being the amount of money withheld by the Government from said firm for building and constructing a steamboat named *John Ewens*.

With a committee amendment, as follows:

Amend, line 6, by striking out "$4,047" and inserting in lieu thereof "$2,635."

The SPEAKER pro tempore. The question is on agreeing to the committee amendment.

Mr. MANN. Mr. Speaker, I move to strike out the last word.

The SPEAKER pro tempore. The gentleman from Illinois moves to strike out the last word.

Mr. MANN. Mr. Speaker, I am not sure that this claim ought to be paid. Here is a case where the Government made a contract for the building of a ship. The Government fulfilled its part of the contract, in a way at least, and now why should we pay the contractors more?

Mr. COX. The constructors complied with their part of the contract, too, as far as they possibly could, and finally built the boat, which was accepted by the Government, and the Government has recouped all the damage that it possibly could have been put to, because it withheld from them about $1,500.

Mr. MANN. The gentleman thinks that the Government is not out anything?

Mr. COX. No; it can not be.

Mr. MANN. It was out the use of the boat for a while.

Mr. COX. The Government made no complaint about that. The contract price for this boat was $23,450. The facts, I think, are rather fully set out in the report. We are not making any complaint or criticism on the part of the Government, because between the date of the opening of the contract and the final letting of the contract a period of something like six weeks elapsed, and a considerable period elapsed between the time of the awarding of the contract and the time it was executed between the Government and the contractors.

Mr. MANN. Has the gentleman from Indiana himself given careful consideration to this case?

Mr. COX. I have.

Mr. MANN. Is the gentleman satisfied that under the circumstances the Government ought equitably to pay this money now to the contractors?

Mr. COX. I am. I have paid attention to it down at the War Department, and with the board of engineers, and with the people back home, in the city of Jeffersonville, whom I know personally.

Mr. MANN. I have great confidence in the gentleman from Indiana, and I withdraw my pro forma amendment.

The SPEAKER pro tempore. Without objection, the pro forma amendment will be withdrawn.

There was no objection.

The SPEAKER pro tempore. The question is on agreeing to the committee amendment.

The committee amendment was agreed to.

The SPEAKER pro tempore. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

The SPEAKER pro tempore. The Clerk will report the next one.

CAPT. HARVEY H. YOUNG.

The next business on the Private Calendar was the bill (H. R. 10049) for the relief of Capt. Harvey H. Young.

The title of the bill was read.

The SPEAKER pro tempore. Is there objection?

Mr. CULLOP. Reserving the right to object, Mr. Speaker, I would like to have the bill read.

The SPEAKER pro tempore. Without objection, the Clerk will report the bill.

The Clerk read as follows:

Be it enacted, etc., That in the administration of any laws conferring rights, privileges, or benefits upon honorably discharged soldiers Harvey H. Young, late captain Company C, Ringgold's battalion, Pennsylvania

Volunteer Cavalry, shall hereafter be held and considered to have been discharged honorably from the military service of the United States: *Provided*, That other than as set forth above no bounty, pay, pension, or other emolument shall accrue prior to or by reason of the passage of this act.

Mr. CULLOP. I should like to ask the gentleman in charge of this bill for an explanation of it.

Mr. CALDWELL. I will say to the gentleman from Indiana that the gentleman from Pennsylvania [Mr. CRAGO] is in charge of this bill, but he is not here. I am a member of the Committee on Military Affairs, and I will state that during this period of the Civil War a great deal of politics was played in the Army. It so happened that Capt. Young was of the wrong political faith, and he was tried for substituting his own horse for some other horse. He not only put in one horse for the one he got, but three others at his own expense. He was dishonorably discharged from the Army, and all this time he has labored under this disgrace. He is a very old man, very highly respected in the community in which he lives. Mr. CRAGO's father and this man were old friends. He knew all about it, and we thought it was a case in which justice ought to be done before this old man dies.

Mr. CULLOP. I think it a very good idea myself.

The SPEAKER pro tempore. Is there objection?

There was no objection.

The bill was ordered to be engrossed and read a third time, and was accordingly read the third time and passed.

A. H. REBENTISH.

The next business in order on the Private Calendar was the bill (H. R. 2535) for the relief of A. H. Rebentish.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection?

There was no objection.

The bill was read, as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay out of the Treasury, from any money not otherwise appropriated, to A. H. Rebentish, of San Antonio, Tex., the sum of $175.98, the amount due him by reason of the purchase from the United States Government of 14 head of cattle at a customs sale in Marfa, Tex., February 28, 1914, which cattle were afterwards taken from said Rebentish by due process of law.

The bill was ordered to be engrossed and read a third time, and was accordingly read the third time and passed.

ALLEN M. HILLER.

The next business in order on the Private Calendar was the bill (H. R. 1024) for the relief of Allen M. Hiller.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection?

There was no objection.

The bill was read, as follows:

Be it enacted, etc., That in the administration of any laws conferring rights, privileges, or benefits upon honorably discharged soldiers Allen M. Hiller, who was a first lieutenant in Company G, One hundred and ninety-ninth Regiment Pennsylvania Volunteer Infantry, shall hereafter be held and considered to have been discharged honorably from the military service of the United States as an officer of said company and regiment on the 28th day of June, 1865.

With the following committee amendment:

In line 11, after the word "sixty-five," add the following:

"*Provided*, That no back pay or pension be allowed prior to the passage of this act."

The amendment was agreed to.

The bill as amended was ordered to be engrossed and read a third time, and was accordingly read the third time and passed.

BERNARD H. SCHAAF.

The next business in order on the Private Calendar was the bill [H. R. 8267] to place Bernard H. Schaaf on the retired list.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection?

Mr. CULLOP. I object.

Mr. CHURCH. Mr. Speaker, will the gentleman withhold his objection?

Mr. CULLOP. I will reserve it.

Mr. CHURCH. I want to say to the House that Bernard H. Schaaf, first seeking this relief, has been in the service of his country for the past 13 years. He enlisted in the year 1903, and was in the Regular Army for six years, and then was commissioned to the Philippine Islands, where he served as a first lieutenant of the Philippine Scouts. In his service in the Philippine Islands he became hopelessly insane. He was at his post of duty when this occurred, and he was sent back here, and is now in St. Elizabeth's Hospital. His commission as a first lieutenant expired on the 1st of January of this year. He has a wife, and has no means of support whatever. Of course he could not be recommissioned as a lieutenant, and so it is asked that he be retired as a master signal electrician, and receive the pay to which he would thus be entitled.

Mr. CULLOP. I should like to ask the gentleman from California what compensation would he receive if retired as provided by the bill?

Mr. CHURCH. Some member of the Committee on Military Affairs can answer that question better than I can. I will ask the gentleman from Vermont [Mr. GREENE] to answer that question.

Mr. GREENE of Vermont. I have an imperfect recollection that the base pay of a master signal electrician is about $75 a month. On the retired list he would receive three-quarters of whatever the pay is.

Mr. CULLOP. Was his insanity the result of his service?

Mr. CHURCH. Oh, yes; so stated, and so recognized by those who are aware of the situation.

Mr. CALDWELL. I will say also that in the last session of Congress a bill was introduced for the relief of Sergt. Drake, who was in exactly the same position. That bill was acted upon by the committee and passed by both House and Senate and signed by the President. So the precedent has been established in a case of this kind, where the disability and everything else was the same, and we thought this action ought to be taken.

Mr. CULLOP. I shall not object, Mr. Speaker.

Mr. MANN. Reserving the right to object, this man is in the Government Hospital for the Insane?

Mr. CHURCH. Yes.

Mr. MANN. Of what good is the salary to him?

Mr. CHURCH. He has a wife dependent upon him; it is for the benefit of his family.

Mr. MANN. How long has he been in the Philippine Scouts?

Mr. CHURCH. He acted in that capacity for six years, but he has been in the service of his country since 1903.

Mr. MANN. Is he entitled to any pension?

Mr. CHURCH. I suppose he is entitled to some pension.

Mr. MANN. He better apply for it then. I do not know whether he is entitled to any pension or not, but we have seven or eight thousand Philippine Scouts. Does the gentleman think that if anything happens to any of them we should put them on the retired list at increased pay?

Mr. CHURCH. This seems to be an extraordinary case to begin with.

Mr. MANN. I do not see anything extraordinary about it.

Mr. CHURCH. Let me explain what I mean. The War Department seems to so consider it and prepared the bill asking for relief simply because they knew all the facts and circumstances and the splendid services that this man had been rendering to the Government.

Mr. MANN. The splendid service is on all fours with all of the Philippine Scouts. They all render splendid services.

Mr. CHURCH. This man is absolutely insane.

Mr. MANN. He is not the only one; the insane hospital out here is filled with people who are insane.

Mr. CHURCH. And he has a family.

Mr. MANN. And those people out here have families.

Mr. CHURCH. Does not the gentleman think that he is entitled to relief?

Mr. MANN. We put him in the hospital and take care of him.

Mr. CHURCH. What about his family and his wife?

Mr. MANN. What about anybody's family?

Mr. CALDWELL. Mr. Speaker, as I understand, in order to get a pension they have to show that the infirmities came directly from the line of duty. Now, there is some question about that.

Mr. MANN. If there is, there is no occasion at all for our taking care of him.

Mr. CULLOP. Pensions allowed for soldiers of the Philippine and Cuban Wars are always very small, and they are very hard to obtain.

Mr. MANN. This has nothing to do with the Spanish War or the Philippine War or with the Volunteers making application for pension.

Mr. CULLOP. But he was in the service.

Mr. MANN. I do not say that he is entitled to a pension.

Mr. CALDWELL. He was in the service since 1903.

Mr. MANN. I do not know whether we have a retired list for Philippine Scouts or not; but if we have not, I am not willing to start one now one by one.

Mr. CALDWELL. This is not the first case of this kind.

Mr. MANN. This is the first time such a proposition has been presented here.

Mr. CALDWELL. Sergt. Drake had a bill passed in the House last session very much like this. I know; for I looked at that case to draw this report by.

Mr. MANN. Very likely; but that is where a man served 50 years or something like that. If you have any more like that case, I am willing to have it go through, but that is not this case.

Mr. CHURCH. I have a letter here from a major who was in the Philippine Islands and observed the splendid services rendered by this man.

Mr. MANN. I do not doubt his splendid services, and I presume they all render splendid service, from what I hear of them.

Mr. CHURCH. Some render more efficient services than others.

Mr. MANN. My observation is that where a man is applying for relief of this kind he has always rendered splendid services. When a woman runs away, she is always high up in society and beautiful, although she may not have been before or afterwards. [Laughter.]

Mr. CHURCH. It does seem to me that where a man has given 13 years of his life to his country, beginning service at the age of 23 years, serving until he is 29, and on account of the services he has rendered and the condition of the country he was serving in he has become insane, it looks to me rather small if the Government is not willing to pay him or his family something for the rest of his life. Mr. Speaker, I will ask that the bill be considered at the present time.

Mr. MANN. I make the point that the House is to adjourn at 11 o'clock.

Mr. STEPHENS of Mississippi. Mr. Speaker, I ask unanimous consent that a motion be entered in all these bills to reconsider the votes by which the bills were passed, and that the motion lie on the table.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Mississippi?

There was no objection.

ADJOURNMENT.

The SPEAKER pro tempore. The hour of 11 o'clock having arrived, the House stands adjourned.

Accordingly (at 11 o'clock p. m.) the House adjourned until to-morrow, Wednesday, April 5, 1916, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1. A letter from the Secretary of War, transmitting, with a letter from the Chief of Engineers, reexamination of Sandusky Harbor, Ohio (H. Doc. No. 982); to the Committee on Rivers and Harbors and ordered to be printed with illustration.

2. A letter from the Secretary of War, transmitting, with a letter from the Chief of Engineers, reports on reexamination of Conneaut Harbor, Ohio (H. Doc. No. 983); to the Committee on Rivers and Harbors and ordered to be printed with illustration.

3. A letter from the Acting Secretary of the Treasury, transmitting draft of a bill to authorize the Secretary of the Treasury to sell the present site of the United States assay office and the buildings thereon in the city of New York and acquire a new site and erect a building for said office (H. Doc. No. 984); to the Committee on Public Buildings and Grounds and ordered to be printed.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, bills and resolutions were severally reported from committees, delivered to the Clerk, and referred to the several calendars therein named, as follows:

Mr. HAMLIN, from the Committee on the Territories, to which was referred the bill (H. R. 14071) to amend certain public-utility company franchises in the Territory of Hawaii, reported the same without amendment, accompanied by a report (No. 489), which said bill and report were referred to the House Calendar.

Mr. PADGETT, from the Committee on Naval Affairs, to which was referred the bill (H. R. 13670) amending an act entitled "An act making appropriations for the naval service for the fiscal year ending June 30, 1916, and for other purposes," relating to the authorization of fleet submarines, reported the same with amendment, accompanied by a report (No. 492), which said bill and report were referred to the House Calendar.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, private bills were severally reported from committees, delivered to the Clerk, and referred to the Committee of the Whole House, as follows:

Mr. CONNELLY, from the Committee on Naval Affairs, to which was referred the bill (H. R. 9946) waiving the age limit for admission to the Medical Corps of the United States Navy in the case of John B. Bostick, reported the same without amendment, accompanied by a report (No. 490), which said bill and report were referred to the Private Calendar.

Mr. BUTLER, from the Committee on Naval Affairs, to which was referred the bill (H. R. 9971) for the relief of Harold Holst, reported the same without amendment, accompanied by a report (No. 491), which said bill and report were referred to the Private Calendar.

CHANGE OF REFERENCE.

Under clause 2 of Rule XXII, the Committee on Invalid Pensions was discharged from the consideration of the bill (H. R. 3788) for the relief of George A. Miller, and the same was referred to the Committee on Claims.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills and a resolution were introduced and severally referred as follows:

By Mr. BARKLEY: A bill (H. R. 14186) for the erection of a public building at Murray, Ky.; to the Committee on Public Buildings and Grounds.

Also, a bill (H. R. 14187) for the purchase of a site and the erection of a public building at Hickman, Ky.; to the Committee on Public Buildings and Grounds.

By Mr. GOULD (by request): A bill (H. R. 14188) to fix the standards for Climax baskets for grapes and other fruits, vegetables, and other dry commodities, and for other purposes; to the Committee on Coinage, Weights, and Measures.

By Mr. McARTHUR: A bill (H. R. 14189) to authorize the Secretary of Commerce, through the United States Coast and Geodetic Survey, to cooperate with the Secretary of War and the Corps of Engineers of the United States Army in making a survey of the Columbia and Willamette Rivers; to the Committee on Appropriations.

By Mr. LEHLBACH: A bill (H. R. 14190) to amend the act of Congress, approved March 4, 1913 (37 Stats., p. 875), to provide for addition to the site and the cost therefor for the erection and completion of the United States post office and other governmental offices in the town of Montclair, N. J.; to the Committee on Public Buildings and Grounds.

By Mr. JOHNSON of Kentucky (by request): A bill (H. R. 14191) to provide an additional method for enforcing and foreclosing tax sales and tax deeds in the District of Columbia, and for other purposes; to the Committee on the District of Columbia.

By Mr. TEMPLE: A bill (H. R. 14192) providing for the purchase of a site and the erection thereon of a public building at Midland, in the State of Pennsylvania; to the Committee on Public Buildings and Grounds.

By Mr. McKINLEY: A bill (H. R. 14193) for the enlargement of the Federal Building at Decatur, Ill.; to the Committee on Public Buildings and Grounds.

By Mr. BARNHART: Concurrent resolution (H. Con. Res. 24) authorizing the printing of the journal of the national encampment of the Grand Army of the Republic; to the Committee on Printing.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills were introduced and severally referred as follows:

By Mr. BACHARACH: A bill (H. R. 14194) for the relief of Providence S. Ludlam; to the Committee on Pensions.

By Mr. BARKLEY: A bill (H. R. 14195) granting an increase of pension to John Martin; to the Committee on Pensions.

Also, memorial of Chamber of Commerce of Boston, Mass., favoring the Rubey bill for the grading of grain; to the Committee on Agriculture.

Also, memorial of Eastern States Interstate and Agricultural Association, praying for Federal aid in the National Dairy Show; to the Committee on Agriculture.

Also, petition of Branch No. 5, Amalgamated Lace Operatives of America, of Alton, R. I., favoring an investigation of conditions surrounding the marketing of dairy products; to the Committee on Agriculture.

By Mr. SULLOWAY: Petition of sundry citizens and organizations of New Hampshire, favoring national prohibition; to the Committee on the Judiciary.

By Mr. TALBOTT: Petitions of 150 people of Pleasant Grove; Finksburg Woman's Christian Temperance Union of 42 people, of Finksburg; 550 people of Finksburg; 25 people of Union Bridge; 36 people of Union Bridge; 125 people of Carrollton; 200 people of Baltimore, all in the State of Maryland, favoring national prohibition; to the Committee on the Judiciary.

By Mr. VARE: Petition of Keystone Yacht Club, of Philadelphia, against several bills pertaining to power-boat regulation; to the Committee on the Merchant Marine and Fisheries.

Also, memorial of Typothetæ of Philadelphia, urging Congress to place embargo on the export of manufactured paper and materials entering into its manufacture; to the Committee on Interstate and Foreign Commerce.

By Mr. WASON: Petition of Eva J. Burt and 15 other residents of Westmoreland, N. H., favoring national prohibition; to the Committee on the Judiciary.

Also, petition of Forrest W. Hall and 13 other residents of Westmoreland, N. H., favoring national prohibition; to the Committee on the Judiciary.

SENATE.

WEDNESDAY, *April 5, 1916.*

(Legislative day of Thursday, March 30, 1916.)

The Senate reassembled at 12 o'clock meridian, on the expiration of the recess.

Mr. CHAMBERLAIN. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst	du Pont	Martin, Va.	Simmons
Bankhead	Gallinger	Martine, N. J.	Smith, Ga.
Beckham	Hardwick	Myers	Smoot
Borah	Hitchcock	Nelson	Sterling
Brady	Hollis	Norris	Sutherland
Brandegee	Husting	O'Gorman	Swanson
Broussard	James	Oliver	Taggart
Burleigh	Johnson, Me.	Overman	Thomas
Catron	Johnson, S. Dak.	Page	Underwood
Chamberlain	Jones	Pittman	Vardaman
Chilton	Kenyon	Poindexter	Wadsworth
Clapp	Kern	Pomerene	Walsh
Clark, Wyo.	Lane	Ransdell	Warren
Clarke, Ark.	Lewis	Robinson	Weeks
Culberson	Lippitt	Saulsbury	Works
Cummins	Lodge	Shafroth	
Curtis	McCumber	Sheppard	
Dillingham	McLean	Sherman	

Mr. KERN. I desire to announce the unavoidable absence of the senior Senator from Florida [Mr. FLETCHER]. He is absent on official business. This announcement may stand for the day.

I wish also to announce the unavoidable absence, on account of illness, of the Senator from Arizona [Mr. SMITH]. This announcement may stand for the day.

Mr. LEWIS. I wish to announce the absence of the senior Senator from South Carolina [Mr. TILLMAN]. He has been suddenly called to his home.

Mr. CHILTON. I wish to announce for the day that my colleague [Mr. GOFF] is absent on account of illness.

The VICE PRESIDENT. Sixty-nine Senators have answered to the roll call. There is a quorum present.

SUSQUEHANNA RIVER BRIDGES.

The VICE PRESIDENT laid before the Senate the amendments of the House of Representatives to the bill (S. 3978) to authorize the Catawissa Railroad Co., its lessees, successors, and assigns, to construct a railroad bridge across the west branch of the Susquehanna River from the borough of Milton, Northumberland County, Pa., to the borough of West Milton, Union County, Pa., which were, on page 1, line 5, to strike out "railroad" and to amend the title so as to read: "An act to authorize the Catawissa Railroad Co., its lessees, successors, and assigns, to construct a bridge across the west branch of the Susquehanna River from the borough of Milton, Northumberland County, Pa., to the borough of West Milton, Union County, Pa."

Mr. OLIVER. I move that the Senate concur in the amendments of the House.

The motion was agreed to.

The VICE PRESIDENT laid before the Senate the amendments of the House of Representatives to the bill (S. 3977) to authorize the Shamokin, Sunbury & Lewisburg Railroad Co., its lessees, successors, and assigns, to construct a railroad bridge across the Susquehanna River from the borough of Sunbury, Northumberland County, Pa., to Monroe Township, Snyder County, Pa., which were, on page 1, lines 5 and 6, to strike out "railroad" and to amend the title so as to read: "An act to authorize the Shamokin, Sunbury & Lewisburg Railroad Co., its lessees, successors, and assigns, to construct a bridge across the Susquehanna River from the borough of Sunbury, Northumberland County, Pa., to Monroe Township, Snyder County, Pa."

Mr. OLIVER. I move that the Senate concur in the amendments of the House.

The motion was agreed to.

REPORTS FROM COMMITTEE ON PUBLIC LANDS.

Mr. MYERS. I ask leave out of order to submit three reports from the Committee on Public Lands.

Mr. CHAMBERLAIN. Mr. President, I shall object to the reception of any further morning business than this.

The VICE PRESIDENT. Is there objection to the reception of these reports?

Mr. CHAMBERLAIN. I do not object to these reports being received, but hereafter I shall object to the transaction of any morning business.

Mr. MYERS, from the Committee on Public Lands, to which was referred the bill (H. R. 384) to amend the act of June 23, 1910, entitled "An act providing that entrymen for homesteads within the reclamation projects may assign their entries upon satisfactory proof of residence, improvement, and cultivation for five years, the same as though said entry had been made under the original homestead act, reported it without amendment and submitted a report (No. 328) thereon.

He also, from the same committee, to which was referred the bill (S. 4025) to grant patent to certain lands to Christian Fredrickson, reported it with an amendment and submitted a report (No. 327) thereon.

He also, from the same committee, to which was referred the bill (S. 3929) validating certain applications for and entries of public lands, reported it with amendments and submitted a report (No. 326) thereon.

NATIONAL DEFENSE.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States.

Mr. CHAMBERLAIN. The pending question before the Senate is the motion to strike out section 56 of the bill.

The VICE PRESIDENT. That is the pending question, on the motion of the Senator from Maryland [Mr. LEE].

Mr. CHAMBERLAIN. I understand that there are one or two Senators who desire to address themselves to this subject, but before yielding the floor for that purpose I wish to state that I have received 40 or 50 telegrams addressed to me protesting against the striking of section 56 from the bill. I ask the Secretary to read the first two of them.

The VICE PRESIDENT. Is there objection? The Chair hears none, and the Secretary will read as requested.

The Secretary read as follows:

NEW YORK, *April 4, 1916.*

Senator GEORGE E. CHAMBERLAIN,
The Capitol, Washington, D. C.:

The executive committee of Military Training Camps Association has watched with concern the effort to kill Federal volunteer provision. We have no axes to grind, no pay or favors to ask. All we want is a chance to serve the country in effective manner. Our policy has always been to avoid legislative activity, but in view of effort to deprive our men of chance to get training we now propose to do what we can by open and straightforward methods to prevent killing of Federal volunteer section. We have sent telegraphic protests to all Senators and asked some of our members to wire you their views in order to assist you. Wish to be guided by your views; if you have suggestion as to what we can do to help your legislation, please notify immediately.

GRENVILLE CLARK,
Secretary, 31 Nassau Street.

—

NEW YORK, N. Y., *April 4, 1916.*

Hon. G. E. CHAMBERLAIN,
United States Senate, Washington, D. C.:

On behalf of Military Training Camps Association of the United States, of 4,200 men from all sections who have attended Federal training camps and representing also not less than 30,000 citizens who will attend this year's camps, at a cost of $2,000,000 to themselves, we earnestly protest against attempt to defeat section 56, Senate military bill. This section, without impairing National Guard, will make available for service of Nation tens of thousands who under no circumstances can be made available under a National Guard system.

MILITARY TRAINING CAMPS ASSOCIATION EXECUTIVE COMMITTEE.

Mr. CHAMBERLAIN. I simply present the balance of the telegrams and ask that they be printed in the RECORD without having them read.

The VICE PRESIDENT. Is there objection? The Chair hears none.

The telegrams are as follows:

NEW YORK, *April 5, 1916.*

Senator GEORGE E. CHAMBERLAIN,
Washington, D. C.:

As a member of last year's Plattsburg camp and as a member of this State's National Guard I urge you to use every effort to protect our country by extending the Plattsburg idea.

J. I. B. VAIL,
350 West Fifty-eighth Street.

—

MOUNT VERNON, N. Y., *April 5, 1916.*

Senator GEORGE E. CHAMBERLAIN,
Chairman Senate Committee on Military Affairs,
Washington, D. C.:

Please see that section 56 of Federal reserve bill is not defeated.

A. C. EMMEL.

—

NEW YORK, *April 5, 1916.*

Hon. GEORGE E. CHAMBERLAIN,
Washington, D. C.:

Strongly urge passage of section 56, preparedness bill.

ERNEST E. WHEELER.

NEW YORK, *April 5, 1916.*

Senator GEORGE E. CHAMBERLAIN,
Washington, D. C.:

In my opinion every possible effort should be made to prevent section 56 of the Senate bill being in any way amended. I earnestly hope that your efforts to pass this section will be successful.

JOHN T. PRATT.

—

NEW YORK, *April 5, 1916.*

Senator GEORGE E. CHAMBERLAIN,
Washington, D. C.:

Permit me in the strongest manner to urge upon you the passage of the Federal reserve plan in section 56 of the Army bill.

FREDERICK DREW BOND,
15 Broad Street, New York City.

—

NEW YORK, *April 5, 1916.*

Hon. GEORGE E. CHAMBERLAIN,
Washington, D. C.:

Strenuously protest against attempt to defeat Federal reserve plan embodied in section 56 of the Senate, and emphatically urge the passage of this section.

G. E. GRAFMULLER.

—

NEW YORK, *April 5, 1916.*

Senator GEORGE E. CHAMBERLAIN,
Washington, D. C.:

Have just learned that there is danger that the Federal reserve plan embodied in section 56 of the Senate bill may be defeated. The idea embodied in this section was put in practice in a small but very successful way at Plattsburg last year. It would be a great pity to discourage this first and only tangible effort to awaken the country to the need for preparedness. A great many other people will join me in thanking you for any effort you can make to prevent the defeat of this measure.

W. A. CHADBOURNE,
14 Wall Street, New York City.

—

PHILADELPHIA, PA., *April 5, 1916.*

Hon. GEORGE E. CHAMBERLAIN,
Washington, D. C.:

Strongly protest against attempt to defeat Federal reserve plan embodied in section 56, Senate bill, and urge passage of this section.

L. F. PARSLY.

—

NEW YORK, *April 5, 1916.*

Senator GEORGE E. CHAMBERLAIN,
Washington, D. C.:

Emphatically protest against attempt to defeat section 56 of Senate military bill.

P. E. ADAMS.

—

NEW YORK, *April 5, 1916.*

Hon. GEORGE E. CHAMBERLAIN,
Washington, D. C.:

Protest most indignantly against defeat of Federal reserve plan, section 56. Will do more than almost anything else to democracize the United States and protect it from enemies within as well as without.

FREDERICK TREVOR HILL.

—

NEW YORK, *April 5, 1916.*

Senator GEORGE E. CHAMBERLAIN,
Washington, D. C.:

I earnestly urge your support of the Federal reserve plan as set forth in section 56 of the Senate bill. I urge this as a citizen of military age anxious to train for and be enrolled in a Federal reserve.

DAVID DOWS,
120 Broadway.

—

NEW YORK, *April 5, 1916.*

Senator GEORGE E. CHAMBERLAIN,
Washington, D. C.:

Respectfully urge you to make every effort to defeat the attempt to kill section 56, Senate bill for national defense.

DE WITT MILHAUSER.

—

NEW YORK, *April 5, 1916.*

Senator GEORGE E. CHAMBERLAIN,
Washington, D. C..

I greatly oppose the attempt to defeat the Federal reserve plan embodied in section 56 of the Senate bill, and emphatically urge the passage of this bill.

LORIS R. POTTER,
1 Liberty Street, New York City.

—

NEW YORK, *April 5, 1916.*

Senator GEORGE E. CHAMBERLAIN,
Washington, D. C.:

Strongly urge passage of section 56, Senate bill.

H. E. MONTGOMERY, 2D.

—

NEW YORK, *April 5, 1916.*

Senator GEORGE E. CHAMBERLAIN,
Washington, D. C.:

Respectfully urge you to make every effort to defeat the attempt to kill section 56, Senate bill for national defense.

GORDON MACDONALD,
Morristown, N. J.

—

NEW YORK, *April 5, 1916.*

Hon. GEORGE E. CHAMBERLAIN,
Washington, D. C.:

We vigorously protest against any attempt to defeat Federal reserve plan embodied section 56, Senate bill, and emphatically urge passage of this section.

JAS. M. GIFFORD.
ALFRED P. W. SEAMAN.
CHARLES B. HOBBS.
JOHN D. FEARHAKE.

NEW YORK, *April 5, 1916.*

Hon. GEORGE CHAMBERLAIN,
Washington, D. C.:

Believe section 56 of proposed bill of vital importance to military policy of country.

TRUMAN SMITH.

—

NEW YORK, *April 5, 1916.*

Senator GEORGE E. CHAMBERLAIN,
Washington, D. C.:

Emphatically urge passage of section 56 of your Senate bill.

W. W. METCALF.

—

NEW YORK, N. Y., *April 5, 1916.*

Senator GEORGE E. CHAMBERLAIN,
Washington, D. C.:

Please note that as a citizen of New York I protest against any attempt to defeat the Federal reserve plan embodied in section 56 of Senate bill, and I emphatically urge the passage of this section.

W. E. DOWD, Jr.

—

NEW YORK, *April 5, 1916.*

Senator GEORGE E. CHAMBERLAIN,
Washington, D. C.:

Best interests of country demand passage section 56, Senate bill—Federal reserve plan.

SAMUEL O. KUHN.

—

NEW YORK, N. Y., *April 5, 1916.*

Senator GEORGE CHAMBERLAIN,
Washington, D. C.:

On behalf of many friends I wire you protesting against attempt to defeat Federal reserve plan—section 56. We can not urge its passage too strongly.

GEO. W. HUBBELL, Jr.

—

NEW YORK, N. Y., *April 5, 1916.*

Senator GEORGE E. CHAMBERLAIN,
Committee on Military Affairs, Washington, D. C.:

Urge protest against defeat section 56, Senate bill—Federal reserve plan—and emphatically urge passage of that section.

EDWIN DE T. BETCHELL.

—

LAKEWOOD, N. J., *April 5, 1916.*

Senator GEORGE E. CHAMBERLAIN,
Washington, D. C.:

As member Military Training Camps Association emphatically protest against attempt to defeat Federal reserve plan in section 56, Senate bill. Urge passage of bill.

Sergt. W. G. SCHAUFFLER, Jr.

—

NEW YORK, N. Y., *April 5, 1916.*

Senator GEORGE E. CHAMBERLAIN,
Washington, D. C.:

I am informed that section 56 of Senate bill authorizing Federal volunteers is seriously threatened. It is the one redeeming feature of the bill. The country will not forget its friends in the black days that are surely coming.

ABEL C. THOMAS.

—

NEW YORK, *April 5, 1916.*

Senator GEORGE E. CHAMBERLAIN,
Washington, D. C.:

Undersigned militiaman protests against attempt to defeat Federal reserve plan, section 56, Senate bill. Most valuable provision of Army legislation.

JOHN FINE.

—

NEW YORK, *April 5, 1916.*

Senator CHAMBERLAIN,
Washington, D. C.:

I protest emphatically against attempt to defeat section 56 of Federal reserve plan and urge passage of section.

LAMONT DOMINCK,
49 Wall Street.

—

NEW YORK, *April 5, 1916.*

Senator GEORGE CHAMBERLAIN,
Washington, D. C.:

I strongly protest against attempt to defeat the Federal reserve plan embodied in section 56 of Senate bill and emphatically urge passage of this section.

GEO. DE K. GILER,
New York City.

—

NEW YORK, *April 5, 1916.*

Senator GEORGE E. CHAMBERLAIN,
Washington, D. C.:

Use every influence to pass Senate bill, especially section 56, dealing with the Federal reserve plan.

B. M. VANCE.

—

NEW YORK, *April 5, 1916.*

GEORGE E. CHAMBERLAIN,
Washington, D. C.:

I protest against attempt to defeat Federal reserve plan, section 56, Senate bill. Urge passage.

SCHUYLER M. MEYER.

—

NEW YORK, *April 5, 1916.*

Senator GEORGE E. CHAMBERLAIN,
Washington, D. C.:

I wish to protest against the attempt to defeat the Federal reserve plan embodied in section 56 of the Senate bill and strongly urge its passage.

EDW. SHIPPEN.

NEW YORK, *April 5, 1916.*

Senator GEORGE E. CHAMBERLAIN,
Washington, D. C.:

I strongly protest against the attempt to defeat the Federal reserve plan embodied in section 56 of Senate bill and emphatically urge passage of this section.

P. E. WOOD,
New York City.

—

NEW YORK, *April 5, 1916.*

Senator GEORGE E. CHAMBERLAIN,
Washington, D. C.:

Emphatically urge passage of Federal reserve plan, section 56, Senate bill.

DAVID FOX.

—

RIDGEWOOD, N. J., *April 5, 1916.*

GEORGE E. CHAMBERLAIN,
Washington, D. C.:

Protest against attempt to defeat Federal reserve plan, section 56.

R. N. WILCOX.

—

NEW YORK, N. Y., *April 5, 1916.*

Senator GEORGE E. CHAMBERLAIN,
Washington, D. C.:

Protest vigorously against attempt to defeat Federal reserve plan in section 56. Emphatically urge passage of this section especially.

N. A. MIDDLETON.

—

NEW YORK, N. Y., *April 5, 1916.*

Senator GEORGE E. CHAMBERLAIN,
Washington, D. C.:

Strongly protest against attempt to defeat Federal reserve plan, section 56.

R. CHOLMELEY JONES.

—

MONTCLAIR, N. J., *April 5, 1916.*

Senator GEORGE E. CHAMBERLAIN,
Washington, D. C.:

I protest against any attempt to defeat the Federal reserve plans embodied in section 56 of the Senate bill and also urge passage of this section.

DAVID M. WESSON.

—

NEW YORK, N. Y., *April 5, 1916.*

Senator GEORGE E. CHAMBERLAIN,
Washington, D. C.:

Am heartily in favor with Federal reserve plan embodied in section 56 of Senate bill, and emphatically urge its passage.

RICHARD DERBY,
116 East Seventy-ninth.

—

EAST ORANGE, N. J., *April 5, 1916.*

Hon. GEORGE E. CHAMBERLAIN,
Washington, D. C.:

I emphatically protest against proposed defeat of Federal reserve plan embodied in section 56, Senate bill.

C. S. FINCH.

—

PHILADELPHIA, PA., *April 5, 1916.*

Hon. G. E. CHAMBERLAIN,
Washington, D. C.:

Surely you have received sufficient protests against the attempt to defeat the Federal reserve plan as embodied in section 56 of the Senate bill to insure your urging the passage of this section with present urgent demand for preparedness. Surely you gentlemen will pass this vital piece of legislation.

C. E. BERTIE.

—

PHILADELPHIA, PA., *April 5, 1916.*

Hon. GEORGE E. CHAMBERLAIN,
Washington, D. C.:

A Federal reserve and training camps enabled under Senate bill, section 56, are measures of first consequence. As a student of this subject who attended the business men's camp at Plattsburg, I vigorously protest against their threatened elimination from the bill.

WALTER L. SHEPPARD.

—

NEW YORK, *April 5, 1916.*

Hon. GEORGE E. CHAMBERLAIN,
Washington, D. C.:

People of this section strongly approve Federal reserve plan (Senate bill, section 56), and condemn attempt to defeat it.

WM. MONTAGUE GEE, Jr.

—

NEW YORK, *April 5, 1916.*

Senator G. E. CHAMBERLAIN,
Washington, D. C.:

Please support section 56 of Chamberlain Army bill, giving President power to organize Federal volunteer camps in time of peace. Have attended Plattsburg camp personally, and believe it the greatest system ever devised for military instruction in a short period of time.

PERCY H. STEWART.

—

NEW YORK, *April 5, 1916.*

Hon. GEORGE E. CHAMBERLAIN,
Washington, D. C.:

Urge passage of Federal reserve plan in section 56 of Senate military bill. A national system of training camps is essential.

WM. D. STIGEN.

—

NEW YORK, *April 5, 1916.*

Senator G. E. CHAMBERLAIN,
Washington, D. C.:

Earnestly urge passage of section 56 of Senate bill embodying Federal reserve plan.

V. WORTHINGTON.

NEW YORK, *April 5, 1916.*

Senator G. E. CHAMBERLAIN,
Washington, D. C.:

Would respectfully urge you to make every effort to defeat the attempt to kill section 56, Senate bill for national defense.

EDWIN A. SEASONGOOD.
GEO. C. HAAS.
ALEX AMEND.

—

NEW YORK, *April 5, 1916.*

Hon. GEORGE E. CHAMBERLAIN,
Washington, D. C.:

I protest against elimination or alteration of section 56 of Senate bill.

C. H. WILMERDING, Jr.

—

NEW YORK, *April 5, 1916.*

Senator G. E. CHAMBERLAIN,
Washington, D. C.:

I most strongly urge passage of section 56, Senate bill, embodying Federal reserve of volunteers and emphatically protest against attempt to defeat this plan.

H. B. CLARK,
New Canaan, Conn.

—

NEW YORK, *April 5, 1916.*

Senator G. E. CHAMBERLAIN,
Washington, D. C.:

Earnestly urge passage of section 56 of Senate bill, providing for Federal reserve plan.

L. R. KING.

—

NEW YORK, N. Y., *April 5, 1916.*

Hon. G. E. CHAMBERLAIN,
Washington, D. C.:

Last year over 3,000 men at their own expense took a course of training at Plattsburg camps. At present rate of enrollment there will be 30,000 this year, assuring in advance successful results from passage of section 56 of Senate bill under consideration. It is of vital importance that section 56 be retained in bill and passed.

SNOWDEN A. FAHNESTOCK,
1½ East Seventy-sixth Street, New York.

—

PHILADELPHIA, PA., *April 5, 1916.*

Senator GEO. E. CHAMBERLAIN,
Washington, D. C.:

As a member of the first training regiment and strong believer in Federal reserve plan, section 56, Senate bill, I protest against effort being made to defeat this plan, and beg to urge most earnestly your efforts to forward passage of this section.

Respectfully,

C. F. HUSTON MILLER.

—

PHILADELPHIA, PA., *April 5, 1916.*

Senator GEO. E. CHAMBERLAIN,
Washington, D. C.:

I protest against attempt to defeat Federal reserve plan, section 56, Senate bill. Emphatically urge its passage.

WARNER E. DORAN.

—

NEW YORK, N. Y., *April 5, 1916.*

Senator GEO. E. CHAMBERLAIN,
Washington, D. C.:

Urge passage of Federal reserve plan in section 56 of Senate military bill. A national system of training camps is essential.

ALFRED ROELKER, Jr.

—

NEW HAVEN, CONN., *April 5, 1916.*

Senator GEO. E. CHAMBERLAIN,
Washington, D. C.:

As a citizen intensely in favor of military preparedness and as a member of the Plattsburg contingent, I hereby protest against any attempt to defeat the Federal reserve plan embodied in section 56 of Senate bill and emphatically urge its passage.

D. C. SMYTH.

—

NEW YORK, N. Y., *April 5, 1916.*

Senator GEO. E. CHAMBERLAIN,
Washington, D. C.:

Section 56, regarding organization of Federal volunteers, most important. Expect you will vote for it.

B. MEREDITH LANGSAFF.

—

NEW YORK, N. Y., *April 5, 1916.*

Hon. GEO. E. CHAMBERLAIN,
Washington, D. C.:

Urge passage of section 56 in Senate preparedness bill.

ARTHUR WOODS.

—

NEW YORK, N. Y., *April 5, 1916.*

Senator G. E. CHAMBERLAIN,
Washington, D. C.:

I protest against the attempt to defeat the Federal reserve plan embodied in section 56 of the Senate bill. I urge the passage of this section.

OLIVER ISELIN.

—

NEW YORK, *April 5, 1916.*

Senator GEORGE E. CHAMBERLAIN,
Washington, D. C.:

Section 56, Federal reserve plan, gives patriotism outlet. Enact it.

CLARENCE A. PERRY.

NEW YORK, *April 5, 1916.*

Senator GEORGE E. CHAMBERLAIN,
Washington, D. C.:

I most strongly urge passage section 56, Senate bill, embodying Federal reserve of volunteers, and emphatically protest against attempt to defeat this plan.

FRANCIS M. WELD,
Huntington, Long Island.

—

PHILADELPHIA, PA., *April 5, 1916.*

Hon. GEORGE E. CHAMBERLAIN,
Washington, D. C.:

I emphatically urge passage of section 56 of Senate Army reserve bill.

HAZLETON MIRKIL, Jr.

—

PHILADELPHIA, PA., *April 5, 1916.*

Senator GEORGE E. CHAMBERLAIN,
Washington, D. C.:

Please protest emphatically against attempt to defeat Federal reserve plan embodied in section 56, Senate bill, and insist passage this session.

LAWRENCE J. MORRIS.

—

NEW YORK, *April 5, 1916.*

Senator GEORGE E. CHAMBERLAIN,
Washington, D. C.:

Emphatically urge passage of section 56 of Senate military bill, calling for a Federal reserve.

JAMES JACKSON HIGGINSON.

—

NEW YORK, *April 5, 1916.*

Hon. GEORGE E. CHAMBERLAIN,
Washington, D. C.:

As a Spanish War veteran and ex-member of the National Guard and a Plattsburg Camp man, as well as a citizen with the welfare of the Commonwealth very much at heart, may I respectfully protest against the attempt to defeat the Federal reserve plan embodied in section 56 of the Senate bill, and emphatically urge the passage of this section?

HENRY W. BULL.

—

NEW YORK, *April 5, 1916.*

Senator GEORGE E. CHAMBERLAIN,
Chairman Senate Military Affairs Committee,
The Capitol, Washington, D. C.:

Thousands of live Americans are expecting the chance of entering the Federal volunteers, who will be embittered if denied and who will not join a federalized militia, for obvious reasons. Won't you give these Americans a run for their white alley? If this administration won't, the next will.

ALBERT F. NATHAN,
55 Liberty Street, New York.

—

NEW YORK, *April 5, 1916.*

Senator GEORGE E. CHAMBERLAIN,
The Capitol, Washington, D. C.:

I wish through you to protest against the attempt to defeat section 56 of the Senate bill for national defense.

PHILIP J. ROOSEVELT,
Corporal, Company B, First Training Regiment.

—

NEW YORK, N. Y., *April 5, 1916.*

Senator GEORGE E. CHAMBERLAIN,
Chairman Senate Military Affairs Committee,
Washington, D. C.:

I protest against the attempt to defeat the Federal reserve plan embodied in section 56 of the Senate bill and urge the passage of this section.

KENNETH P. BUDD.

—

NEW YORK, N. Y., *April 5, 1916.*

Senator GEORGE E. CHAMBERLAIN,
Chairman Senate Military Affairs Committee,
Washington, D. C.:

Wish to protest against attempt to defeat Federal reserve plan embodied in section 56 of Senate bill. Strongly urge passage of this section.

PAYNE WILLIAMSON,
601 West Thirty-third Street.

—

NEW YORK, *April 5, 1916.*

Senator GEO. E. CHAMBERLAIN,
Washington, D. C.:

We believe defeat of Federal reserve plan embodied in section 56 of Senate bill will be disastrous to the country, and strongly urge its passage.

J. M. TOWNSEND, Jr.
J. C. THORNTON.

—

NEWARK, N. J., *April 5, 1916.*

Senator GEO. E. CHAMBERLAIN,
Senate Military Committee, Washington, D. C.:

Am anxious to have section 56 enacted. Hope you try hard for it.

DR. A. L. BOYEE,
Fifty-second Avenue.

—

NEW YORK, *April 5, 1916.*

Senator GEORGE E. CHAMBERLAIN,
Chairman Senate Military Affairs Committee,
Washington, D. C.:

I most strongly urge passage of section 56 of Senate bill embodying Federal reserve of volunteers, and emphatically protest against attempt to defeat this plan.

W. J. K. VANSTON,
14 Glenside Road, South Orange, N. J.

NEW YORK, *April 5, 1916.*

Senator GEO. E. CHAMBERLAIN,
Washington, D. C.:

I respectfully urge upon you the necessity of approving section 56 in the Senate bill on military organization now under consideration. I feel very strongly about this.

J. A. RIPLEY.

—

NEW YORK, N. Y., *April 5, 1916.*

Senator GEO. E. CHAMBERLAIN,
Chairman Senate Military Affairs Committee,
Washington, D. C.:

The defeat of section 56 of the Senate bill, dealing with the Federal reserve plan, will undoubtedly do much to destroy public confidence in the policies of your committee as well as in the administration. I urge you to use your influence to have this section approved.

J. W. TAUSSIG.

—

NEW YORK, N. Y., *April 5, 1916.*

Senator GEORGE E. CHAMBERLAIN,
Chairman Senate Military Affairs Committee,
Washington, D. C.:

I hereby protest against the attempt to defeat the Federal reserve plan embodied in section 56 of the Senate bill, and urge you to use every effort to have this section passed by the present Congress.

EDWARD H. LITTLE.

—

PHILADELPHIA, PA., *April 5, 1916.*

Senator GEORGE E. CHAMBERLAIN,
Capitol, Washington, D. C.:

Believe Federal reserve plan embodied in section 56 of Senate bill most important, and vigorously protest against any attempt to defeat it.

WILLIAM J. CLOTHIER.

—

NEW YORK, *April 5, 1916.*

HAROLD T. WHITE,
President Bedford Rifle Club, Bedford, N. Y.

—

PHILADELPHIA, PA., *April 5, 1916.*

Senator GEORGE E. CHAMBERLAIN,
Chairman of Senate Military Affairs Committee,
Washington, D. C.:

The defeat of Federal reserve plan, as embodied in section 56 of the Senate bill, will be a sad blow to true Americanism. We ask your assistance in the passage of the Federal reserve plan.

S. L. KENT.

—

NEW YORK, *April 5, 1916.*

Senator G. E. CHAMBERLAIN,
The Capitol, Washington, D. C.:

I protest against attempt to defeat Federal reserve plan embodied in section 56 of Senate bill, and strongly urge the passage of this section. The dominant party will be held strictly accountable for failure to provide for adequate defense.

CHARLES D. ROBISON,
Member American Society of Electrical Engineers.

—

NEW YORK, *April 5, 1916.*

Hon. GEO. E. CHAMBERLAIN,
Chairman Senate Military Affairs Committee,
Capitol, Washington, D. C.:

Gravest alarm over attack on section 56 of Senate bill providing Federal reserve. Strongly urge enactment of this provision.

ELIHU ROOT, Jr.

—

PHILADELPHIA, PA., *April 5, 1916.*

Senator GEORGE E. CHAMBERLAIN,
The Capitol, Washington, D. C.:

I emphatically urge the passage of the Federal reserve plan embodied in section 56 of the Senate bill and protest against the attempt to defeat it.

EDWIN N. BENSON, Jr.

PRINCETON, N. J., *April 5, 1916.*

GEORGE E. CHAMBERLAIN,
Chairman of Senate Military Affairs Committee,
Capitol, Washington, D. C.:

Understand that an attempt is being made to defeat section 56 of the Army bill, and, believing firmly that this section is necessary for the proper protection of the country, I urge you to use all your power for its passage.

WM. C. VANDEWATER.

—

NEW YORK, *April 5, 1916.*

Hon. GEORGE E. CHAMBERLAIN,
Washington, D. C.:

I strongly urge you to use your influence to secure approval of section 56, in regard to Plattsburg camps. Personal experience convinces me that they are a sound factor making for national defense.

FRANCIS W. AYMAR.

—

NEW YORK, *April 5, 1916.*

Senator G. E. CHAMBERLAIN,
Washington, D. C.:

Am greatly interested in seeing section 56 of Senate military affairs bill preserved unchanged. Hope you will save it.

E. S. BENEDICT.

—

PHILADELPHIA, PA., *April 5, 1916.*

Hon. G. E. CHAMBERLAIN,
Washington, D. C.:

Having taken one voluntary course of military training at Plattsburg and contemplating other courses, I respectfully protest against the defeat of the Federal reserve plan embodied in section 56 of the Senate bill, and urge its passage.

WM. H. HOLLAR, Jr.

—

NEW YORK, *April 5, 1916.*

Senator CHAMBERLAIN,
Washington, D. C.:

Personally and as representative numerous friends, emphatically protest against any attempt to defeat Federal reserve plan in your bill. Funds will be spent by myself and associates at the next election to defeat those voting against the Federal reserve plan.

CLARENCE FAHNESTOCK.

—

NEW YORK, *April 5, 1916.*

Senator G. E. CHAMBERLAIN,
Washington, D. C.:

Assured of your interest in the matter, I protest against the attempt to defeat the Federal reserve plan in section 56 of the Senate bill, and strongly urge its passage.

H. R. SHURTLEFF.

—

NEW YORK, *April 5, 1916.*

Senator CHAMBERLAIN,
Washington, D. C.:

Can not too emphatically urge the passage of the Federal reserve plan in your bill. We can promise concerted action at the polls against its opponents, and promise you our determined assistance.

McCOSKY BUTT,
Brigadier General, New York.

—

BRISTOL, PA., *April 5, 1916.*

Senator GEO. E. CHAMBERLAIN,
Washington, D. C.:

Section 56 of Senate bill vitally important. Please urge passage.

HUGH B. EASBURN.

—

NEW YORK, *April 5, 1916.*

Senator GEORGE E. CHAMBERLAIN,
Washington, D. C.:

Hope your committee succeeds in securing passage of section 56 of Senate bill. Consider that elimination of this section would be a national calamity.

Washington, D. C.:

I earnestly urge you to give fullest support to Federal reserve plan embodied in section 56 of the Senate bill, and to secure its passage.

W. R. MAY,
121 West Thirty-eighth Street, New York.

—

NEW YORK, *April 5, 1916.*

Senator CHAMBERLAIN,
Washington, D. C.:

Hope that you will use your best efforts to pass section 56 of the Senate Army bill.

CHARLES D. MILLER.

Mr. CHAMBERLAIN. Mr. President, I have received about 150 additional telegrams in favor of retaining section 56 in the bill besides those which I have already had inserted in the RECORD. I shall not ask that these additional telegrams be printed in the RECORD, but I desire to call the attention of the Senate to the fact.

Mr. HITCHCOCK. Mr. President, before we vote on the pending motion to strike out this important section of the military bill I want to call the attention of the Senate to some thoughts which have occurred to me.

There is no part of the bill which was more carefully considered by the Committee on Military Affairs than this particular section. It was before the committee for a number of days and received the most careful consideration of the members, and then, without a dissenting vote, your committee recommended this section to the Senate.

I mention this fact, and I bring it before the Senate, because it seems to me we are in danger here of overriding if not ignoring the very carefully considered decisions which our committees reach. If this had been a divided decision, or if it had been a matter which had not been carefully considered, I would not feel like appealing to Members of the Senate now to view this provision with favor——

Mr. HARDWICK. Will the Senator yield to me for a moment?

Mr. HITCHCOCK. But it stands here to-day as a strong recommendation of the committee without a dissenting vote, after the most careful and painstaking investigation. I yield to the Senator from Georgia.

Mr. HARDWICK. I want to ask the Senator if he does not draw a distinction about matters of this sort along this line? If the committee's recommendation dealt with matters of detail, information on which could rest solely with members of the committee, or more with members of the committee because of their investigation of the subject, the matter might occupy the plane the Senator suggests; but when the proposition is merely the suggestion of a plan that one Senator can understand about as well as another, whether he is on the committee or not, what difference does it make whether the Senators who happen to be on the committee favor a plan involving that principle or not, except that they

are just so many Members of the Senate? In other words, does it involve any particular investigation of detail or any knowledge of detail or any information that one Senator can not obtain and does not possess as well as another Senator?

Mr. HITCHCOCK. Mr. President, I am generally able to agree with my friend from Georgia, but it seems to me that in this particular case he makes a serious error.

This is not a trifle, it is true. It is a very important matter. It involves a great principle. It involves a great controversy. Now, upon that great principle, in the face of that great controversy, after careful consideration your committee has reported without a dissenting voice. I say this not because I think the Senate ought always to accept the recommendation of committees. Far from it. I occasionally myself have filed dissenting opinions; but I am speaking of the fact that this unanimous recommendation at least comes to the Senate with a presumption which entitles it to favorable consideration.

Mr. HARDWICK. The Senator did file a minority report on this very bill, did he not, generally opposed to the bill?

Mr. HITCHCOCK. I filed minority views as to one or two provisions of the bill. As a whole I commended it. On the provisions to which I excepted the committee was divided; but I am now talking about a matter in which there was no dissenting opinion in the committee, and of which there was careful consideration.

But, Mr. President, this much is only by way of introduction to what I desire to say. I mention it so as to give the presumption of excellence and favor to this recommendation before I speak of its merits.

Mr. CLAPP. If the Senator will pardon me, I should like to ask him one or two questions, not in any captious spirit but to ascertain, if I can, what section 56 means as construed by the Senator?

In the first place, I ask the Senator if he is satisfied that under the language of section 56 and existing laws in case there was a call to arms in excess of the Regular Army, that call would have to be first made upon the National Guard or whether it could be first made upon the men who would avail themselves of whatever there is in section 56?

Mr. HITCHCOCK. Mr. President, I do not want to go into a discussion of the details of section 56 at this time, because we have first to decide whether it is to remain in the bill in any form; but I assume that the emergency to which the Senator refers would probably result under the existing law in first calling for the National Guard except in a condition such as we are now confronted with in the case of Mexico, where the National Guard would be impossible.

Mr. President, the point I wish to make is this——

Mr. CLAPP. If the Senator will pardon me, it does seem to me the first thing for us to determine, in voting for or against this section, is, What does it provide for?

Mr. HITCHCOCK. Mr. President, I must decline to yield on that point, because I want to confine myself to the question whether or not this section should be stricken from the bill.

Mr. CLAPP. Regardless of what it is?

Mr. HITCHCOCK. If it is retained in the bill, then any amendment the Senator may propose will be considered at the proper time in the discussion of the details of the section; but now the great question before the Senate is, Shall Congress provide a Federal reserve back of the Regular Army, or shall it leave the country without any Federal reserve, dependent entirely upon a State militia, concerning the availability of which and concerning the possibility of the federalizing of which there is the gravest doubt?

Mr. SMITH of Georgia. Mr. President, will the Senator allow me to ask him a question?

Mr. HITCHCOCK. Yes.

Mr. SMITH of Georgia. Does not the Senator's bill provide for a large Federal reserve from the men who have served two years in the Regular Army?

Mr. HITCHCOCK. It does, Mr. President; and I am glad of it; but it is yet an experiment whether there will be any Federal reserve from that source and of that character. We do not yet know whether we can enlist the number of men necessary to enlarge the Army. We have now been calling for 20,000 men to enter the service on account of the Mexican difficulty, and in 16 days throughout the country, in all the recruiting offices combined, we have only been able to recruit 3,200 men. We do not know, even if we pass this bill, whether we shall be able to enlist in the Army anything like the number of men for which the bill calls; and even if they do enlist, it will be a number of years before enough men will pass from active service to the reserve to make it a body of any particular size. After it is in successful operation and a considerable reserve is created it will even then not be large enough to satisfy this country. This country, which I believe is opposed to a large standing army, is in favor of the largest possible reserve of men in civil life, drawn from all possible sources—from the militia, from the standing army, and from the source provided for in this section.

Mr. LEE of Maryland. Mr. President——

The VICE PRESIDENT. Does the Senator from Nebraska yield to the Senator from Maryland?

Mr. HITCHCOCK. I yield to the Senator from Maryland.

Mr. LEE of Maryland. I should like to ask the Senator whether there is not really an uncertainty not only as to the reserve, but as to the existence of a first line, and whether, there being uncertainty as to the existence of a first line, it is not a great deal better to apply the powers and the money of Congress to the organizing, arming, and disciplining the great military force that is in sight, consisting of 134,000 militia, than to speculate in these other directions?

Mr. HITCHCOCK. Mr. President, I will say in answer to that, that the committee has done that thing. There is almost nothing that has been asked on behalf of the militia of the United States that has not been granted in this bill, which has been recommended by the committee. The committee has gone further toward recognizing the militia, toward paying the militia, toward equipping the militia, toward honoring the militia than has ever been done or even thought of in the past. Nevertheless, Mr. President, we know that there are in the militia certain inherent characteristics which raise difficulties and doubts. We know that the militia is in part a State body and only in part a national body; we know that it is subjected to a duality of control, and we know that some of the greatest lawyers in the country have questioned whether or not Congress has the constitutional power to Federalize the State militia. That declaration was made by the former Secretary of War, Mr. Garrison, who ranks as one of the leading lawyers of the United States, and he made that statement after most careful consideration. We have heard upon the floor here leading lawyers of the country point out the difficulties and the inherent weaknesses of Federalizing the State militia, and yet the committee has attempted it; it has presented a bill for the purpose, and I believe, although there are some elements of experimentation in the bill, that it ought to be passed; that we ought to Federalize or attempt to Federalize the State militia.

But, Mr. President, there are characteristics in the State militia that can not be lost sight of. There are many able-bodied men in the United States who will never enlist in the State militia. Go through all the industrial regions of the United States, where the labor unions are strong, and you will never get those men to enlist in the State militia. Because of the fear that the State militia can be used in strikes, because of the realization that it must be used in strikes, those men will never enlist in the State militia.

There are other reasons why men of certain classes will not enlist in the State militia. They will not do so because the regulations and the acts of Congress and the State regulations require weekly meetings of the State militia, and many men are not willing or able to give the time to drill each week. So I say that the State militia, while it affords an admirable reserve in some particulars behind the standing army, is defective in others, and we need this other Federal reserve, the volunteer army, made up of men who will not perhaps be tempted to go into the State militia, but who will be willing to enlist and drill for a month each year.

Mr. President, reference has been made to the fact that I filed minority views at the time the Military Committee made this report. I did so. I believe that the proposed increase in the standing army is excessive. I think there were some other members of the committee who agreed with me, and I believe there are Senators on the floor who agreed with me. When the time comes I shall make an effort to reduce the size of the standing army which is proposed in this bill. I think, also, the General Staff is too large and the increase in officers excessive. But, Mr. President, while I am opposed to a large standing army, while I believe we should have an army no larger than is proposed in the House bill, I am in favor of the largest possible reserve, composed of men who can remain in civil life, subject to the call of their country in case of need. You can not get that reserve too large to suit me. It is economical and it is effective, and its organization will place this country in a position of confidence which it can not feel when dependent alone for safety on the Regular Army.

Mr. HARDWICK. Mr. President——

The VICE PRESIDENT. Does the Senator from Nebraska yield to the Senator from Georgia?

Mr. HITCHCOCK. I yield to the Senator from Georgia.

Mr. HARDWICK. I want to ask the Senator from Nebraska this question: If those are the opinions the Senator holds in regard to this matter, why not support a proposition—which is not carried in this bill—to create the reserves in the schools from boys 18 years old and over?

Mr. HITCHCOCK. Well, Mr. President, this bill goes further in that direction than we have ever gone before. This bill provides over 300 officers for the purpose of affording young men in the schools, colleges, and universities of the country military training. Those same young men, as they are graduated from the schools and go to their homes, will naturally enter the volunteer army or the State militia. They will be the ones, in my opinion, who will enlist in the volunteer army and take the annual drill and discipline, or go into the militia and take its brief weekly drill. At least, many of them will do this; but in any event they will be available in case of need.

This bill has seized upon every possible means to provide a reserve. It proposes to develop it in the schools under the training of military officers; it proposes to develop it in the National Guard by developing the National Guard and making the appropriation for the National Guard seven times as large as it has ever been in the past. It also proposes to provide a reserve by establishing, or attempting to establish, this Federal reserve, which we call the Volunteer Army.

So, Mr. President, I desire to repeat that while I do not believe in militarism, while I am strongly opposed to a large standing army, I am in favor of making the civilian reserves behind the army as large as possible; and I sincerely hope the Senate will not repudiate the careful work of the committee by rejecting section 56.

Mr. McCUMBER. Mr. President, I understand that the pending motion before the Senate is to strike out section 56. That being the case, I wish, first, to ask a parliamentary question; and that is, whether at this time I can move a substitute for section 56?

The VICE PRESIDENT. There is not any doubt about that.

Mr. McCUMBER. Then, Mr. President, I offer the substitute for section 56 which I send to the desk, and which I ask the Secretary to read.

The VICE PRESIDENT. The Secretary will read, as requested.

The SECRETARY. In lieu of section 56 as amended, it is proposed to insert the following:

SEC. 56. That the Secretary of War be, and he is hereby, authorized and directed to prepare such abandoned or unoccupied military posts of the country and other places as may, in his judgment, be best fitted for use as military training camps during the months of July and August of each year, where the male high school, academy, and college students of the United States may be given military training and instruction in the same general manner as is now provided for the training of the cadets at the Military Academy at West Point during the summer months; that any male student of any high school, academy, or college in the United States shall be allowed to enter such camp by complying with such rules and regulations as the Secretary of War may promulgate, including regular company drills at stated intervals during the school year, such rules and regulations being framed to include physical, mental, and moral qualifications; and that the Secretary of War is authorized to provide transportation to and from such camps, uniforms, tents, and equipment, and all necessary facilities for the care and training in such camps of such high-school students in military tactics; and he shall detail for duty in such camps such officers of the Regular Army, including medical officers, as may be needed to provide suitable superintendence, instruction, and control of such camps; and that the Secretary of War may employ such physicians and surgeons, not connected with the military forces of the United States, as, in his judgment, may be necessary to preserve and protect the health of such students while in camp.

The said Secretary of War shall prepare all needful rules and regulations for enlistment of such high school, academy, and college students for training and for carrying out the provisions of this act: *Provided*, That all enlistments shall be voluntary and no boy under the age of 21 years shall be received without the consent of his parents or guardian.

Mr. McCUMBER. Mr. President, this provision is along the line just suggested by the Senator from Nebraska [Mr. HITCHCOCK]. Under our present system of high schools, colleges, academies, and universities we could have military training and organization in every one of them; and if there was the slightest incentive, the least encouragement given, the number of students who would join military organizations would be much greater than it is to-day. My idea has been that we could organize, beginning in our high schools and our academies and colleges, young men who would have weekly training under the instruction of competent officers, and during the vacation of their school year they would have an opportunity to have training at different convenient points in the State that would fit them for such military service as would be required for a private soldier.

Mr. NORRIS. Mr. President, I should like to ask the Senator three or four questions in regard to his amendment.

Mr. McCUMBER. I yield for a question, Mr. President.

Mr. NORRIS. From the reading of the amendment, I judge that it applies to high-school students and to university students. Is there any provision in it that provides for the payment of the expenses of the university students to the places of encampment?

Mr. McCUMBER. Yes; there is a provision that the expenses of all the classes of students mentioned shall be paid.

Mr. NORRIS. As I caught the reading, I thought the payment of expenses applied only to high-school students.

Mr. McCUMBER. No; it is not so intended.

Mr. NORRIS. Now, I should like to ask the Senator another question. I ask, is there any power given to the Secretary of War to provide any rendezvous except at abandoned military reservations?

Mr. McCUMBER. Yes; the amendment includes "and other places," convenient places in the State.

Mr. President, I am in harmony with the views of the senior Senator from Georgia [Mr. SMITH] with reference to educational facilities being afforded to the soldiers in the Regular Army, and, as I can not discuss this amendment without discussing to a certain extent the whole question and some side issues which have been raised in connection with it, especially with reference to the attitude of the Central States, I will make my discussion rather broad, though not long.

Mr. OVERMAN. Mr. President, before the Senator begins, will he allow me to ask him one question? The amendment reads:

That the Secretary of War be, and he is hereby, authorized and directed to prepare such abandoned or unoccupied military posts of the country——

Mr. McCUMBER. Yes; but before submitting the amendment I added the words "and other places."

Mr. OVERMAN. Oh.

Mr. McCUMBER. The words "other places" are included in the amendment which I offered and which has just been read. They were omitted in the original print.

Mr. OVERMAN. I was going to observe that in the South we have no abandoned or unoccupied military posts; so that the provision could hardly apply to that section of the country.

Mr. McCUMBER. I am aware of that, and the amendment has been changed to meet that exigency.

Mr. President, the science of war has progressed to such a degree that all matters of detail in army organization must be left to experts—to those whose life study and special training authorize them to speak with authority on such matters. Acknowledging my deficiency in such expert knowledge, I have refrained from expressing my views on that particular branch of the subject. But the general policy of adding materially to our standing and auxiliary army, and the sources from which the auxiliary force is to be drawn, is for Congress, and not for army experts. This calls for the exercise of legislative judgment and discretion.

Mr. President, it has been intimated, not only on this floor, but also in the eastern press of the country, that the central sections of these United States, being less liable to suffer from invasion in case of war, look with complacency on what is called our defenseless condition, and with a degree of displeasure on any increase in our Military Establishment. Mr. President, this is not true in any respect. We are one country, with one undivided interest. If there is any difference between us it is in the state of mind with which we view the subject—whether calmly or excitedly. The fear of an imminent danger naturally first affects those of the immediate vicinity of the real or supposed danger—in this case the coast sections. Their excitement surpasses that of the interior; they are more liable to exaggerate the danger, more vociferous in their demands for protection, and to that extent less liable to exercise a conservative judgment.

We all remember at the outset of the Spanish-American War the panic that seemed to seize the people of New York and other Atlantic coast cities. If the press were any indication of their mental condition, these cities were in the throes of a wild panic of fear lest Cervera's fleet should suddenly appear and destroy them. Reason was thrown to the winds, and the Government was fiercely assailed because it did not congregate all its warships at New York Harbor. And all this time Cervera's fleet was seeking every available means to get away from our well-known vastly superior naval armament. It may be that our people would have become equally excited and unreasonable if placed in the same situation. As it was, the scare tremor did affect some of them, but not many.

Now, that is our present situation. The only charge you can make against us is that we are not sufficiently scared, not sufficiently panicky, and our judgment will be deliberative.

I shall try to express what I believe to be the sentiment of the people of the interior, who give the subject serious consideration. First, let it be distinctly understood that we believe in full and ample preparedness for any eventuality; second, we are willing that this preparedness shall go beyond

what we regard as adequate. If we err, we prefer to err on the side of safety.

I shall support the Senate bill. I believe the vast majority of the people of the country would rather be long on expense than long on apprehension. They want to feel absolutely safe, and are willing to pay the cost of such tranquillity. While the bill reported is not such an increase as extremists demand, neither does it provide for such a great increase as many pacifists would have the country believe.

Our present standing army numbers 103,660. The proposed bill increases that army to 194,586. Both include Quartermaster Corps and Hospital Corps, and so forth. The actual fighting force under this bill would be about 174,500. All told, that means 1 soldier for about every 500 of population.

I certainly am as much opposed to militarism as anyone, but this proportion of military to civil population is so meager that it can not arouse the fear of militarism in any reasonable mind. With such a vast preponderance of the civil population, military sentiment and influence will be readily absorbed in the great civil activities of the country.

Mr. President, I believe the world has outlived one feature of militarism that has been responsible for most of its faults and nearly all the criticisms directed against it; that is, the nonproducing standing army, that unit of society whose sole function is destruction in war and consumption in peace. There ought to be no such army in the world. Military exigencies require no such army. In my opinion, every male citizen ought to be physically and mentally capable of serving his country in time of war in some capacity.

But all the citizen needs in order to fit him for military service in the ranks is sufficient training to acquaint him with the manual of arms in the particular service to which he is assigned, marksmanship, camp fare, and camp life. He does not need years of training to meet this requirement. The portion of time expended in daily routine to meet this demand would be but little, if any, more than any student ought to take in daily exercise. The remainder of the time, outside of some routine work, ought to be given to such instruction as should fit this soldier of the standing army for his civil duties, such as should make him a self-supporting citizen whose energy should be a practical asset in time of war and add to the enrichment of his country and the happiness of his community during the longer years of peace. Whether the enlistment be for two years or three years—and in my opinion it should be no longer than necessary to fit him for military service—in consideration for the benefit bestowed upon him in giving him a civil education in connection with his military training, he should then be subject to the first call of his country in case of war so long as he is within the age limit.

Mr. President, as the real, the highest, duty of mankind is to prolong and embellish life rather than to shorten and mutilate it, so men's thoughts, efforts, and occupations should primarily be along the divers pathways of civil life, and they should devote only such portion of their energies to war instruction and training as should be necessary to preserve their civil rights, and all should share alike in both military and civil duties. There should be no private soldiers enlisted except those who are of the student age, and as rapidly as both civil and military education is completed they should be sent back into civil life with the knowledge that their few years of military service have been well expended and they are better prepared to fulfill their civil duties. That is the way that our Regular Army, 200,000 strong, in round numbers, should be recruited and kept up. With such a system of recruiting our Regular Army and changing its units we need never have any fear of the military idea, the war sentiment of the country, submerging the peace sentiment and leading us into an unnecessary conflict. The danger of militarism lies in a war organ whose units do not change and are not reabsorbed into the avenues of civil life. I agree entirely with the senior Senator from Georgia [Mr. SMITH] that in our standing army civil instruction should go hand in hand with military training. This much for the Regular Army.

How then should we provide for the Volunteer Army, that vast auxiliary upon which we must draw in case we should be engaged in a great war? We should do just what I have provided in an amendment which I have offered to this bill, and the principle of which is contained in sections 42 to 50, inclusive. The principle of my amendment is injected into the bill in that it provides, in the sections mentioned, for training camps and training of students in educational institutions, without mentioning the character of such institutions. The method of carrying these provisions into effect is left with the President.

Mr. President, I have gone further than that in my amendment, and have indicated how all of this vast student army, without any loss of the energy that should be directed to their studies, could be made a great army, constituting from 750,000 to 1,000,000, capable of performing military duties whenever the exigencies of their country demanded their services.

I believe that the bill should have gone further and provided for several camps in each State, where high-school and college students, with their organizations, could be gathered together by the Government and their expenses paid and given from two to two and a half months' camp life and training each year. Rules and regulations could be adopted which should provide for the continuation of such training at intervals, say weekly, during the school year. And this is what I hope will be the final result and outcome of these provisions of the bill.

We should, up to a proper number, to be apportioned among the several States according to their high schools, academies, and colleges, give military instruction for two or two and a half months at one or more convenient training camps in every State to such portion of high-school cadets or college students as would care to take advantage of it each year during the vacation period of such schools or colleges. This would, of course, not be compulsory. It would not need to be. I feel that 90 per cent of the parents would be gratified to have their sons secure the benefits of this kind of a vacation. The training would be of incalculable benefit to the students. One of the insidious dangers of our present-day environments, when invention has made it possible to relieve our children from labor during their school lives, is the danger of idleness during the vacation. The tireless energy of youth demands employment. More bad company and bad habits flow from this source than we are wont to consider. Such training camps would teach the boy obedience, attention to duty, regularity, and good habits. It would not only fit him for military duty, should his country ever demand his services, but it would give to the country a clean, moral, healthy, and useful citizenship, and this with no cost to the parent and with but slight cost to the Government.

But it has been asked, Why limit this to schools? Why not take anyone who might desire to take the summer drill? My first answer is that the student drill should cover at least three years; that the student of a high school, academy, or college will, in all probability, remain as a component part of his school or college in one vicinity. Second, that there is scarcely such a school in the country that does not have its military organization, its company, and its drills. These students would go in as companies, with their own organizations, inspired with the class spirit to excel in their drill work. And, third, under the system which I have suggested, an enlistment in the Regular Army would be open to those whose education had not advanced to a high-school plane, to secure vocational education at the same time they are serving their country.

Like those who had passed through the service of enlistment in the Regular Army, I would have the boys of this auxiliary army during the enlistment age subject to call in the country's need. This would give us a civil army of between 750,000 and 1,000,000 men, trained and ready at a moment's call to join the colors, but whose thoughts and inclinations would be along the lines of peaceful pursuits.

By this method of training our young citizens to meet the emergencies of war we should never violate the historical policy and sentiment of this country in the creation of a mighty military organ whose only function would be war. By thus utilizing the otherwise waste time of these students we should have in a few years an army of sufficiently trained men to meet the demands of war at a minimum of expenditure and with practically no interference with the business pursuits and no diminution of the business ambitions of our people.

Mr. President, while a certain degree of military training on the part of the private soldier is absolutely necessary, the vast changes in methods of warfare during the past few years have rendered of little practical value much of the old-style drill and manual of arms. The present war in Europe is a chemistry war. It is fought with pick and shovel, in digging trenches, burrowing under the enemies' trenches, exploding mines. It is fought with chemical fire jets, curtains of fire, asphyxiating gases, blinding gases, and long-range and powerful guns. The training I have suggested would meet the requirements of the private soldier.

On the other hand, Mr. President, if the private soldier does not require as much training as under the older systems of warfare, the officers of the Army require far greater training and military learning than ever before. All the successes scored

In this great European war on either side can be expressed in two phrases—efficient officers, long-range guns. All the failures recorded in this war can be expressed in two phrases—inefficient officers, short-range guns. This is the grand lesson of this war. To provide the greatest possible efficiency in officers and guns is the goal toward which the main efforts of this country should now be directed.

Mr. President, in a previous discussion of this preparedness question I sought to show how ill-founded was the growing fear of the danger of invasion of this country in case of war. I tried to show by what I considered conclusive evidence the remote possibility of any country attempting to invade the United States. I sought to allay unfounded fears and to direct public thought to two most important facts that seemed to have been overlooked: First, that none of this preparedness created by this legislation could be utilized if circumstances should make it necessary that we enter into conflict with any belligerent during the present European war, because it would require about five years to produce this additional war power, and this European war can not last more than two years more at the longest. Second, that if we have a war it will be a war which we will make on the other power, and such power would act on the defensive only. We would have to cross the ocean to find our enemy. At some length I sought to point out the grave difficulties and obstacles which any country across the ocean, and especially a maritime nation, would encounter in a war with us. I sought to show their far greater vulnerability and our vast advantages, and how foolhardy it would be for any nation to attempt an invasion. I had not at that time read the testimony of Gen. Miles given before the Committee on Military Affairs. Gen. Miles is one of those American citizens who won his position through his own force and competency. Those of the American people who know him have, and may well have, faith and confidence in his views on Army and Navy questions. Speaking on the question of fortifications and danger of invasion, Gen. Miles testified:

Senator FLETCHER. Speaking about fortifications, as I remember the views of some experts who testified, they held that the concrete walls and emplacements are rather a back number; that the way to place a gun now is to place it behind a sand embankment.

Gen. MILES. Ours are both, about 16 feet of solid concrete and about 30 feet of embankment in front of that. You can examine any of these fortifications and you will find that is the condition they are in. Certainly the most powerful ships of the British Navy and the French Navy have not been able to make any impression on the fortifications of the Dardanelles, although they have lost 125,000 men and expended a billion six hundred million of treasure.

Senator FLETCHER. What do you think of the plans for moving heavy guns on railroads and by motor transportation?

Gen. MILES. I do not know that we need to consider that at present. The fortifications have been selected with great care by the best engineers in the country, and constructed by the best engineers, and are in good condition for the defense of the harbors. If we were contending against a country that was fortified with permanent fortifications, then it might be necessary to construct those heavy 16-inch mortars, that have to be transported by rail and put on a concrete base, to be used to batter down fortifications. But an enemy that would undertake to invade the United States would not bring that kind of fortifications along with them, so that it has not been thought necessary to construct that kind of guns. The guns that will be placed near the Panama Canal will be very heavy, high-power guns, as good as any in the world.

Senator FLETCHER. General, perhaps you would not want to express any opinion about it; but, frankly, it seemed to me rather far-fetched and absurd that it was a feasible thing for an army to be transported across the ocean and landed on Rockaway Beach or Block Island in such a way that it could take that portion of the country and then come on down and string a 400-mile line from Chesapeake Bay to Lake Ontario. That is one of the important dangers, apparently, in the minds of some people. I would like to get your views about that, if you care to express them.

Gen. MILES. I dislike to give my views on that, as I consider it is an unreasonable and impossible proposition. That is assuming, I presume, that some enemy had transportation enough to embark 400,000 men, with 80,000 horses, with all the ammunition transportation and munitions of war required, and supplies enough to feed the men and the animals for at least 90 days, because it would be easy to burn anything within their reach, then supposing our own Navy at the bottom of the sea, it might be possible to reach our shore. The placing of an army on American soil is the last thing any European Government would attempt; it could never be reembarked. It would dissolve like the snow beneath the midday sun. Whenever it has been attempted it has resulted in disaster. Many of the French soldiers deserted in Mexico and are now citizens of the great Republic.

Senator FLETCHER. It would be impossible for those ships to carry coal enough to bring them over here and take them back, would it not?

Gen. MILES. If they could not be destroyed by the patriotism and the valor of the American people before they could send their ships back and get another load, then I would want to live in some other country.

Senator FLETCHER. That is rather my view of that situation.

Gen. MILES. But as a safeguard, as I suggested a little while ago, I think you could very wisely make a liberal appropriation for the new engines of war—that is, the aeroplanes and the submarines. If you can imagine a great fleet of transports moving slowly across the Atlantic or across the Pacific, you would not want a better target for a fleet of submarines, which could go out among them.

The testimony of Admiral Grant and many others agrees with that of Gen. Miles. Gen. Weaver declares our coast defenses equal to the best in the world. All they need is more men to man the guns and in some instances newer and more powerful guns. President Wilson himself declares that no sensible man for a moment will believe that any foreign nation will attempt to invade us, and yet that continues to be the stock argument of the alarmists.

I am aware that this invasion scare is a potent element in overcoming the natural hostility of the country to a large standing army, and it has been developed for that purpose. This proposed legislation, Mr. President, should have rested on its true foundation. No one in this Senate anticipates that this Army is for defense of the realm. No one who has a judgment and will use it is afraid of an invasion, and by that I mean an invasion of continental United States. However, we shall need these soldiers if we ever get into a war. To-day we own the Philippine Islands. In a war with any great power we should need every one of these 200,000 men to defend those islands. How we would get them over there with no merchant marine is a question yet to be solved. We would need them if the Hawaiian Islands should be attacked. We would need them to guard Porto Rico and the Canal Zone and entrances. And, Mr. President, if we are to be sponsor for the good behavior of every Latin-American country in the Western Hemisphere, and also to guard these countries of everlasting revolutionary tendencies, assume responsibility for their misdeeds, and cover them under the protecting wing of the Monroe doctrine, we shall need this standing army of approximately 200,000 men.

We know where our vulnerable points are in case of a war, and we are providing for an army to meet the situation. With the additional coast defenses which are included in our preparedness program, long-range and powerful guns, harbor mines, submarines, scout ships, and aeros, we are invasion proof. But if we war with any other great naval country we have outlying possessions which must be guarded, and there is where we shall need these soldiers.

Mr. President, the bill reported by the Committee on Military Affairs will give us a Regular Army sufficient to cope with any condition that can arise within continental United States, and a Volunteer Army many times greater than we could possibly transport to any foreign country with all the transports we can possibly have or could purchase in event of a land war carried on far from our shores.

Mr. President, this amendment, which I introduced originally in the form of a bill, has had consideration by others than by myself. Shortly after it was introduced I received from the Secretary of the Interior a letter—which I am certain he would have no objection to having read—in which he spoke favorably of this proposition, and inclosed me a formula which is called the Wyoming system. I ask that the Secretary may read the letter and that I may insert this formula at the end of my address.

The VICE PRESIDENT. Without objection, it is so ordered. The Secretary read as follows:

THE SECRETARY OF THE INTERIOR,
Washington, January 25, 1916.

MY DEAR SENATOR: The Commissioner of Education has called my attention to Senate bill 3062 and has talked over with me the general principle of providing opportunity for military drill for boys in our high schools. The commissioner is of the opinion that the opportunity which this bill seeks to provide would prove attractive to many thousands of boys in the public and private high schools of the United States; that the military instruction and drill which could be given in the two vacation months would have considerable value, especially to those boys who went into camp for a second and third summer; and that the general educational results of the outdoor life and the discipline of the camp would be good. In this opinion of the commissioner I concur.

In this connection I desire to draw your attention to the accompanying plan for training high-school students which has been drafted by Lieut. E. Z. Steever, of the United States Army, which is presented in rough outline. He calls this the Wyoming plan, because it has been put into effect in the high schools of Wyoming. He is at present engaged in introducing it in the high schools in the city of Washington. He tells me that, while the system is voluntary, from 90 to 98 per cent of the students adopt it. Its foundation is to give physical and military training as a game rather than as a forced task by making the game attractive, and to work the boys in gangs, thereby calling upon the gang spirit, each gang or group being competitive with the other and disciplining itself. I have no doubt but that the States would in large part adopt some such plan if it were presented to them, and that teachers could be found in each of the high schools who could make it effective.

Cordially, yours, FRANKLIN K. LANE.

Hon. P. J. MCCUMBER,
United States Senate.

Mr. McCUMBER. Mr. President, having prepared for a more than adequate Army to defend our outlying possessions and our Monroe doctrine and to defend ourselves against invasion were that a possibility, we must give our attention to our naval power. And here again, because of so much erroneous litera-

ture on the subject, we are compelled to remove certain errors so that the public will freely comprehend the purpose of our naval preparedness.

Warships are primarily for offensive war—not for defensive war. The only sense in which they can be said to partake of defensive character is that they are supposed to go out on the sea in search of the enemy's navy and destroy it, and thereby prevent it from destroying our commerce.

In case of a war with any country having foreign ocean commerce our warships would not be hovering about our coasts. Their first purpose would be to destroy the enemy's commerce, and if the enemy had a navy too powerful for us to hazard battle with, we should try to avoid the encounter with them and seek out and destroy their unprotected merchant vessels. As no maritime nation can convoy any considerable portion of its merchant fleet, we could create havoc among its merchant vessels. If the enemy's sea power was less than ours, we would do as we did in the Spanish War, first destroy their navy and render their commerce subject to our mercy.

Our coast guns, our submarines, aeroplanes, and mines will take care of our coasts. So, outside of the submarines and aeros, the purpose of our Navy is, first, to protect our commerce on the sea and destroy the commerce of the enemy; second, to convoy ships to defend our outlying possessions. And, Mr. President, to do that we should have a Navy at least the equal of that of any country we are liable to have a war with, unless that enemy has such vulnerable points of attack as would more than offset any advantage it may have in naval strength. I have shown in a previous address on the subject of general preparedness the disadvantages of Great Britain in a war with us, due to the fact that her very life depends on of her principal possession, subjecting it to our easy invasion. Though she had a navy of four times our naval power she keeping open channels of trade all over the world that her people may be clothed and fed, while we can produce everything we need in peace and war, though we were cut off entirely from the outer world. I have pointed out the proximity could not strike us a vital blow. No person who has studied the situation has ever claimed that we needed a Navy as large as that of Great Britain in order to prevent a war with her or to meet her advantageously in case such war was a possibility. Our other advantages and her other weaknesses more than offset her superiority in naval equipment.

But neither Germany, France, nor Japan has great possessions on this continent subject to our seizure, and neither is so dependent as Great Britain on ocean commerce to feed and clothe its people. We should, in my judgment, in order to be absolutely safe, have a Navy equal to any of them. While my belief is that our far greater population and far vaster resources, our capabilities of recovery, even though at the outset of a war we might be weaker in some particulars, would of themselves deter any nation from warring with us except in self-defense, nevertheless I believe the people of this country wish this Congress to provide for a Navy able to cope with any of these three powers. And, Mr. President, that has been our policy right along. But the increase in naval power of these countries of late has been more rapid than ours, and the increase here provided enables us to overtake them and, in my judgment, surpass them, gives us a commanding position, and places us on an absolutely safe basis.

Mr. President, the committee of neither House has as yet perfected a proposed naval bill. We can, therefore, only premise what kind of a bill will be presented. In all probability it will not materially differ from the administration's naval program as recommended by the Secretary of the Navy. In order to more clearly show what this proposal is, I have prepared a table showing our present naval power and what it would be at the expiration of five years if the Secretary's program should be carried out. In the preparation of this table allowance has been made for those war vessels which must be eliminated because of age or inefficiency.

	Present number.	Number built or building in 1921.
Battleships, first line	17	27
Battle cruisers		6
Battleships, second line	25	25
Armored cruisers	10	10
Scout cruisers		13
Cruisers, first class	5	5
Cruisers, second class	4	3
Cruisers, third class	15	10
Destroyers	74	108
Fleet submarines	76	18
Coast submarines		157
Monitors	9	6
Gunboats	30	20
Supply ships	5	4
Fuel ships	25	15
Transports	6	4
Tenders to torpedo vessels	9	3
Special types	8	8
Ammunition ships		2

I also ask to have printed here the table prepared by the Secretary of the Navy, showing the numbers of ships of each kind to be constructed each year and their annual cost for each year from 1917 to 1921, inclusive.

	1917	1918	1919	1920	1921
Dreadnaughts	(2) $15,560,000	(2) $26,580,000	(2) $37,600,000	(2) $37,600,000	(2) $37,600,000
Battle cruisers	(2) 11,158,000	11,921,000	(1) 17,500,000	(2) 17,118,500	(1) 23,460,500
Scout cruisers	(3) 6,900,000	(1) 6,350,000	(2) 10,000,000	(2) 8,650,000	(2) 10,000,000
Destroyers	(15) 10,500,000	(10) 16,900,000	(5) 10,000,000	(10) 10,300,000	(10) 13,600,000
Fleet submarines	(5) 4,425,000	(4) 5,577,500	(2) 5,437,500	(2) 4,215,000	(2) 3,400,000
Coast submarines	(25) 5,750,000	(15) 13,950,000	(15) 9,750,000	(15) 9,750,000	(15) 9,750,000
Gunboats	(2) 760,000	(1) 1,140,000	380,000		(1) 380,000
Hospital ships	(1) 1,250,000	1,200,000			
Ammunition ships				(1) 799,587	(1) 1,766,000
Fuel-oil ships	700,000	(1) 655,250		(1) 700,000	655,250
Repair ship					(1) 1,175,000
Total	57,003,000	84,273,750	90,767,500	89,133,087	101,786,750
For completion of ships previously authorized	28,369,127	20,149,000			
Total	85,372,127	104,422,750			
Aviation	2,000,000	1,000,000	1,000,000	1,000,000	1,000,000
Reserve of munitions	8,000,000	5,000,000	5,000,000	5,000,000	2,000,000
Grand total	95,372,127	110,422,750	96,767,500	95,133,087	104,786,750

Grand total for 5 years, $502,482,214.

This grand total of $502,482,214 is for construction only. The maintenance and cost of operation will add enormously to this sum.

Notwithstanding the testimony of some of our naval experts that the dreadnaught must still remain the commanding power of the sea, I am glad to note that the Secretary advises the continuation of our old policy of two dreadnaughts yearly. The testimony of one of our experts is to the effect that Great Britain has been able to maintain the supremacy on the sea because of her dreadnaughts. How on earth this claim can be made surpasses my comprehension. There has not been a single dreadnaught engaged in a naval battle. The only engagement of large vessels of the dreadnaught or predreadnaught type was at the Dardanelles, and vessels of that type to the number of six, I believe, with their entombed victims of this colossal blunder, are at the bottom of the sea.

The only battle craft that have won renown in this war are the fleet cruisers, carrying long-range guns, and the submarines, whose toll of death and destruction is appalling. In one respect, and only in one respect, can you say that the British dreadnaught has assisted in holding this sea supremacy. Their number has possibly made it too dangerous for the German dreadnaughts to come out of their protected harbors to engage them.

But, Mr. President, because of the mines and submarines neither of these dreadnaught fleets dares come out. Within the limits of the mine-strewn, submarine-infested war zone, these dreadnaughts are practically bottled up. While I would not entirely discontinue them, I would not greatly increase them at the expense of a sufficient number of swift cruisers. The dreadnaught has not proved a success. The cruiser has demonstrated its value. We should give special attention to perfecting and increasing the efficiency of the under-sea craft—not that I do

not hate them as I do a rattlesnake, but every day demonstrates their awful destructiveness to the enemy's commerce and war vessels. So long as "war is hell"—and hell is adopted as the means of settling international differences or of satisfying national greed—these diabolical instrumentalities will be used. I may, however, harbor a hope, Mr. President, that the very hideousness of these many new instrumentalities of death will be a potent influence in bringing nations to a proper sense of their responsibility to humanity.

And right here, Mr. President, I shall have the temerity to suggest to our naval experts another thing to which I think they have not given sufficient attention; and here again we must draw our lesson from this war. I can not but believe that if the same attention had been given to means of defense against an enemy's war craft that is given to offense against it, we would not behold a great nation almost helpless against mine, submarine, and areo. Against the submarine the genius of invention seems almost hopelessly paralyzed and only weakly responsive to the other dangers. Here is a field for American genius and originality. Why it is that no simple device which could be attacked to a vessel to find a mine and explode it before the vessel proper has reached it, has not been invented? This is a question to which we have had no satisfactory answer. But the most important of all, and one which demands most speedy solution, is some proper method of coping with this undersea destroyer, either by such contrivance as shall shield the vessel from its torpedo or one that shall make the life of the undersea craft more hazardous than that of its present helpless victims.

If this is not done, Mr. President, the commerce of no nation in the world can long survive these rapidly increasing serpents of the sea, whose unseen stroke is death, and against which no vigilance can guard. The number of vessels already destroyed by submarines is greater than the number of merchant vessels in the marine of most of the maritime nations of the world.

While the bomb-dropping aeros have so far proven of no great value, because of inaccuracy of aim at heights of safety to themselves, there is a field of wonderful possibilities for these new war machines. With telescopic apparatus and instruments which will measure and make accurate allowance for reflection of different strata of atmosphere, with divers densities, I have no doubt that in a short time these machines will be so perfected that they will be able to drop bombs with accurate aim from distances beyond the range of any gun that could be developed.

There should be a bureau in the War Department whose sole purpose should be to originate and develop new devices of both defensive and offensive utility; and this should be open to the competitive efforts of all our people.

Mr. President, the false philosophy that preparedness for war is the best assurance of peace is responsible for most of the wars of the world. It is a philosophy which is never wholly true and is nearly always absolutely untrue. If each of two great nations were equal in military and naval strength, equal in wealth and resources to carry on a war, the fact of such equal preparedness and capacity might cause each to pause before proclaiming a war against the other that must result in the annihilation of one or both. But as those conditions of equality can never obtain in the world, as no two nations are ever just equal in preparedness or resources, such ever-increasing preparation is not only a menace to every weaker nation on the globe, but is also an assurance of a final outbreak between the greater and better-prepared nations. The present European war is due to the preparedness of nations for war, not their unpreparedness. What is really meant by this philosophy is that a country whose position in the world is such as to invite the attack of another prepared nation coveting its territory or desiring to supplant it in the commercial world, the preparedness of the former might operate to prevent the latter from attempting to carry into effect its hostile designs. Within this rather narrow limitation, preparedness for war is an assurance of peace. On the other hand, it might just as logically be stated that unpreparedness for war is an absolute assurance of peace; for if neither nation is prepared, then surely there could be no serious war; and in this enlightened age of the world, before either could get ready for modern warfare, before they could change unpreparedness into preparedness, in nine hundred and ninety-nine cases out of a thousand, the incident which would cause war would be amicably settled. The human mind working normally recognizes justice, and given time for anger and resentment to subside, an offending nation or people will make amends for every international wrong.

But here, Mr. President, we are confronted by a condition, not a theory. Other great nations are armed. One of them at least believes we have slighted it in our immigration laws; others may be jealous of our prominence and dominating influence on this side of the ocean. These known facts, considered in connection with our outlying possessions, some of them on the far side of the Pacific, our necessity to protect such possessions, including the Panama Canal, our assertion of the Monroe doctrine may well, it seems to me, require the construction and maintenance of the program proposed by the administration. While I do not believe there is a single nation in the world that would be likely to declare war upon us, though we should follow a less rapid program of development for our Navy, with the present trend of world conditions, I am not so certain that this country, in order to maintain what it believes to be its rights, might not be the one to declare the war. And no matter by whom the war was declared, the war measures would be both offensive and defensive in character, and would require the same naval power to protect our possessions as though the other nation made the declaration.

Mr. President, I am one of those optimists who believe that there will come a time when great wars will cease, and this notwithstanding the fact that one of the most horrible wars of all the ages is now drenching the world with blood. It may be that the world needed such an experience, such an impressive object lesson as this to make it realize its duty to provide against war rather than to provide for war.

We have no more reason, Mr. President, for asserting to-day that war will continue to devastate the earth than there was reason to assert 5,000 years ago that the right of the individual to settle his own disputes with his neighbor in his own way, to rob him if he saw fit, to murder him if he resisted, would continue forever.

The same process of evolution, carrying with it the same sense of public justice, which caused the organization of communities, then tribes, and then nations, to compel the individual who could wield the biggest club to lay down that ancient weapon of warfare and submit his dispute to the judgment of his fellow beings—the same evolution that evolved from this meager beginning the great courts of to-day, which settle every human grievance and punish every crime, is an unending immortal force ever working toward nobler ideals and higher standards of rights and duties. And, Mr. President, this process of evolution will not be completed until the same sense of justice which culminated in the protection of the weaker individual against the stronger shall be enlarged and broadened until finally it shall bring every nation of the world within its scope and settle every international difference.

The people of the world to-day, even those engaged in the conflict, are asking questions which will not down, which will not be settled until the answer satisfies the world conscience. They are asking why nations, which are but collections of individuals, should not abide by the same code of morals in their international relations that they by law enforce upon their citizens in their individual relations. Why should any nation be exempt from that moral code which governs its people? Why should not each and every nation submit itself to the rule that it rob no other nation of its liberty or its territory; that it murder not its people; that it deprive it not of its natural rights; that it take no advantage of its weakness; and why should not all the great nations of the world unite to check international wrong and compel international right, just as the people unite to check individual wrong and enforce individual right?

The present obstacle to an international agreement is the everlasting fear on the part of every great nation that it might in some slight degree surrender its sovereignty. Every individual, in order to secure protection, is compelled to surrender a moiety of his sovereignty; but in that security he is able to achieve a thousandfold more than would be possible without the surrender and the corresponding security. What is true of the individual is equally true of the nation.

Let us pause for a moment to consider what could be done for humanity, what blessings could be purchased with the more than a hundred billion of expense and damage that this war has cost to the present time; let us stop to contemplate what even the expenditure for war in time of peace means to the world. The most beautiful structure ever conceived by the mind, or wrought by the hands of man, one of those which have filled the world with pride and wonder as the achievements of the human intellect, costs less than one battleship. A mighty structure that will continue for a thousand years, a glory to the world, would cost less than one hour's expense of this brutal conflict which is to-day bringing the blush of shame to the cheek of every thinking man and woman in the world.

Think of the energy, now a slave of the god of war, which could be released and brought into service for the happiness

and comfort of humanity if the nations of the world would unite to form an international compact, signed by every great nation of the world, prescribing the rights, duties, and obligations of nations, endowing a court for the settlement of every international question and the enforcement of the decrees of the court by the combined power of all the nations against the offending one.

Mr. President, we have reached a stage where nations, great and small alike, should unite to compel international arbitration. And this bloody conflict, covering more than three-fourths of the world, reddening every stream with slaughter and filling the earth with misery and want and death, brings this truth home to us with ever-increasing force.

For the benefits which we and the remainder of the world might secure we could well afford to surrender that little moiety of our sovereignty which would be required to bring us into the family of law-abiding, law-enforcing, right-living nations of the world.

Mr. President, as this Nation was the first which gave to the world the fullest realization of human liberty, that first united and gave under a great written constitution the idea of liberty governed by law, that first demonstrated the success of popular government, that first made itself the haven for all the oppressed peoples of the world, it may well be its crowning glory and achievement to inaugurate and bring all countries of the earth into one family, ruled by one great code of international law, such as the enlightened justice and judgment of the world shall approve—a code that shall pledge the physical power of the whole to uphold its standard of ethics and enforce its provisions against any whose ambitions may override the rules enacted for the common good.

If one one-hundredth part of the energies of the nations of the world which are directed toward the destruction of each other could be utilized in providing means for the protection of each other, war would be no more.

APPENDIX.

There are instances where "militarism" accompanies "preparedness." There are also instances where "militarism" does not accompany "preparedness." Switzerland is surrounded by warring nations, yet Switzerland, nonmilitaristic, is "prepared," and at "peace." The Swiss train all boys of high-school age, and with that idea we should find no fault, at lease those of us who believe in "a nation with arms," not "a nation in arms."

It may surprise you to know that in the schools of a Western State there has been developed in the past four or five years, quite apart from any idea of "militarism," a State-wide "citizenship training," that embraces some of the elements of "preparedness."

CITIZENSHIP TRAINING IN THE PUBLIC SCHOOLS.

THE WYOMING PLAN.

Good citizenship is the fundamental principle underlying the Wyoming State-wide high-school cadet system.

The Wyoming school authorities hold:

1. That good citizenship involves a willingness on the part of each able-bodied youth to make such effort and sacrifice as will prepare him for the obligations and duties of citizenship.

2. That this preparation embraces the following:

(a) National defense preparation.
(b) Moral preparation.
(c) Civic preparation.
(d) Educational preparation.

(a) National defense preparation.

It is unsound to assume that any system of training its adolescent youth will remove from the Nation the responsibility of training its manhood.

Trained youth can not take the place of trained manhood.

A thorough preliminary national defense training of its adolescent youth has been recognized in primitive as well as modern civilizations as the first step in the greater training of the tribe or nation.

With the civilized as with the primitive youth, the "game" is the medium of all successful training. "Competition" is to youth what "security" is to old age.

According to the Wyoming plan, all cadets are organized into competition units.

Leaders take "turnabouts" choosing the members of their units, so that each unit (squad, platoon, or company) is made up of an equal number of strong, medium, and weak lads.

After final choosing up, these units are fixed and can not be added to nor substracted from.

All the work is done by competition units.

There are: Wall-scaling units, troop-leadership units, scholarship units, field-firing units, camp-and-field units.

Sponsors are elected from the girls in the mixed schools and assigned to the competition units. The sponsors are in every sense members of the cadet organization. They attend all drills, are the leaders in all social functions, and while they do not actually drill, the young ladies are entitled to and receive such individual rewards as may be won by their units.

Medals, ribbons, and distinctive marks on the uniform are given each member of a winning unit, the sponsor, of course, included. The sponsor idea obtains in some schools only. It is rather an addition and is not a fundamental part of the plan.

Each cadet organization is based on the voluntary-enlistment plan. Form for joining the cadet class is inclosed herewith. The cadet classes are held generally during, and not after, school hours, and credit toward graduation is awarded therefor.

Cadet tournaments are held during the school year between the different high schools, to which the public is invited, and at which are held the wall-scaling, field-firing, and camp and field troop leadership competition "games."

From the Wyoming experience is deduced the following theoretical system of training, adapted to the adolescent American youth. Local conditions will necessarily modify the application of this so-called theoretical system of training, but the general principles on which it is based will obtain in any part of the United States:

1. Cut the school year into separate, short, intensive training periods, working up through preliminary to final competition dates, with the fixed competition units.

2. September 1 to December 31, wall-scaling calisthenic events; minimum of drill, maximum of body building.

3. January 1 to February 28, troop leadership competitions, 12-inch Gettysburg map.

4. January 1 to February 28, minimum of drill, maximum of gallery practice, group competitions.

5. March 1 to May 15, minimum of drill, maximum of range practice and field-firing competitions.

6. May 16 to June 15, minimum of drill, maximum of camp and field problems, competitive between high schools.

7. All through school year, commencing in the spring and running through the following fall and winter, take boys into camp each week end and harden them to the rigors of camp life. Teach them sanitation, cooking, woodcraft, plains craft, simple field engineering, castrametation, sketching, scouting, patrolling, the service of security and information, and qualify them as guides in their own immediate surrounding territory.

8. Summer camp, immediately after closing of school, 14 days.

The modified Washington High School cadet season, January to June, 1916, follows: (Please note that this does not represent a normal-school year, but shows a transition from an old antiquated, close-order drill system to the new Wyoming system.)

RIFLE PRACTICE.

January and February: Drill period—close-order drill, 20 minutes; gallery practice, 70 minutes.

March 1 to April 15: Outdoor shooting period, target ranges, Congress Heights and Winthrop.

April 17 to 24: Field-firing competition between platoons of each company to determine marksmanship platoons. Decorations awarded to winning marksmanship platoons.

April 27 to May 1: Interhigh-school competitions between marksmanship platoons to determine winners of semifinal decorations.

May 6: Competition between four semifinalist platoons, competitive field firing for championship of the District of Columbia.

TROOP LEADERSHIP COMPETITIONS (12-INCH GETTYSBURG MAP).

Friday and Saturday evenings, from January 7 to 29, inclusive, lectures on patrolling and battalion combat exercises.

February 4 to 12: Preliminary troop leadership game competitions between Eastern, Western, Central, McKinley, and Business High Schools. Winners to receive first preliminary ribbon.

February 18 to 19: Semifinal competition. Winners awarded semifinal ribbons.

February 25: Final troop leadership competition. Winners to be awarded District of Columbia championship.

Review on White Lot about May 25.

Competitive drill about June 15, preceded by try-outs in different high schools the week immediately preceding competition.

WEEK-END CAMPS.

Officers and faculty advisors, April 7 to 15.
Selected cadets, April 21 to 29.
All cadets, May 12 to June 3.

SUMMER CAMP.

June 23 to July 6, inclusive.

DISCUSSION OF COURSE IN MILITARY PREPARATION.

The organization that puts into effect the "game" idea differs fundamentally from the modern American athletic system. The cadet leaders choose up each in turn, so that each fixed competition unit represents a certain proportion of strong, of medium, and of weak lads.

In football and basket ball and track only the few physically fit take part. In this system each squad represents an average. Every boy takes part. There is as much "in it" for the weak as for the strong, and the survival of the fittest units—whether they be squads, platoons, or companies—insures the competition spirit.

(b) Moral preparation.

A nation stands or falls, succeeds or fails, just in proportion to the high-mindedness, cleanliness, and manliness of each succeeding generation of men. There can be no question but that the single standard of morality is the only one worthy of a great people, and history shows countless examples of nations that have fallen when they departed therefrom.

In the Wyoming system the fundamental factor is the competition between equally balanced units. The individuals are forced by public opinion amongst their fellows to go into training, and this training means clean thinking and nonsmoking. It is shown conclusively in the various competitions that those clean morally are the surest kind of winners. Smoking and immoral practices must go. Under the fiercest kind of competition the adolescent youth is better enabled to negotiate that difficult period of life.

It is only necessary to point to the Casper, Wyo., third squad, all of them boys, no one of whom had ever smoked, and a squad that successively lowered the world's wall-scaling record from 10 seconds to 8 seconds, 7⅘ seconds, to 6⅘ seconds, to 6⅕ seconds. This squad was not a picked squad—just an average squad.

The single standard of morality is taught frankly and fearlessly and efficiently to each and every individual in the Wyoming cadet organization.

(c) Civic preparation.

It is almost a fundamental principle of a military organization that the leader should not be voted for. The Wyoming system is not intended to make soldiers. The Wyoming schoolmasters are of the opinion that soldiers can only be made from mature manhood, and that the preparation of the adolescent youth should be such that when he reaches manhood he may then be made into the highest type of citizen. Hence the objection to voting for leaders, perfectly valid in a military organization, does not obtain in the cadet organization.

The cadet leaders are chosen at the beginning of each year by vote of the older cadets. The leaders are selected on merit, very much as

the captain of the football team is selected for his merit. It has been noticeable that on the first organization boy politics elect a certain percentage of popular and inefficient leaders, whose very inefficiency is a terrible punishment to the members of their own units. The stress of competition soon brings out the real leaders. The cadets never repeat their mistake. After the first election they insure a very wise and careful selection of leaders.

This civic lesson can not be wholly lost to them in years to come, when they are called upon, as citizens, to elect leaders of their city, county, State, and National Governments.

(d) Educational preparation.

This subject is a matter wholly within the province of school boards and schoolmasters, and embraces the entire school curriculum, which obviously can not be discussed here.

However, the cadet organizations have their competition scholarship squads made up of equal numbers of good, medium, and poor scholars. These compete for group scholarship honors.

Mr. BRANDEGEE. Mr. President, the Senator from North Dakota [Mr. MCCUMBER] alluded, in the early part of his speech, to the value of an expert's opinions on this highly technical question of the military art. As is well known, one of the most celebrated American military experts was Maj. Gen. Emory Upton. I have here a short pamphlet entitled "Epitome of Upton's Military Policy of the United States," which was an unpublished manuscript by Gen. Upton, found after his death and rescued by ex-Secretary Root. It has been printed by the War Department for the War College, I believe. I think it is a very important document, and I ask unanimous consent that it may be printed in the RECORD.

The VICE PRESIDENT. Without objection, it will be so ordered.

The matter referred to is as follows:

EPITOME OF UPTON'S MILITARY POLICY OF THE UNITED STATES.

PREFACE.

"Bvt. Maj. Gen. Emory Upton, United States Army, who graduated from West Point in 1860, and who became while almost a boy one of the most distinguished officers of the Civil War, rising to the command of a division of cavalry, left upon his death, in 1881, an unpublished manuscript bearing upon our military history and military policy. In 1904 the Secretary of War, Hon. Elihu Root, rescued this work from oblivion and directed its publication at the Government Printing Office, Washington, under the title "The Military Policy of the United States," for the reason that—

"The work exhibits the results of such thorough and discriminating research, such a valuable marshaling of the facts of our military history, and such sound and ably reasoned conclusions drawn from those facts as to the defects and needs of our military system, that it clearly ought to be made available for the study of our officers and for the information of all who may be charged with shaping our military policy in the future.

"A preface was written by Secretary Root, who, after showing that many of the mistaken practices pointed out by Gen. Upton in 1880 had been abandoned by 1904, went on to say:

"One other field of great importance remains to be covered by legislation; that is, the establishment of an adequate system for raising, training, and officering the volunteer forces of the future. It is of first importance that the distinction between volunteers and militia shall be observed, and that, while the selection of officers of militia shall continue, as it must under the Constitution, to rest with the States, following such mode of selection as they prefer, the officers of the volunteer forces of the United States shall hold their commissions from the President, who is to command them during the war for which they are called out, and shall look to their Commander in Chief for the promotion which should reward their good conduct, as well as for such discipline as they may merit; and that an adequate system shall be provided for the selection of such officers and the direct recruitment of the enlisted volunteer force under the authority of the National Government. In this work will be found collected the facts, which it is sometimes unpleasant to consider, but which ought not to be ignored, supporting this view.

"In order to bring to the attention of our citizens the facts of our military history as bearing upon the present problem of national preparedness for defense, the following extracts from Gen. Upton's work are republished.

"H. L. SCOTT,
"*Secretary of War ad interim.*

"FEBRUARY 18, 1916."

THE MILITARY POLICY OF THE UNITED STATES.

INTRODUCTION.

"Shortly after the disastrous battle of Camden Washington wrote to the President of Congress 'What we need is a good army, not a large one.' Unfortunately for the country, the object sought by this assertion, so thoroughly in harmony with our cherished institutions, has only been partially attained in time of peace.

"Our military policy, or, as many would affirm, our want of it, has now been tested during more than a century. It has been tried in foreign, domestic, and Indian wars, and while military men, from painful experience, are united as to its defects and dangers, our final success in each conflict has so blinded the popular mind as to induce the belief that as a nation we are invincible.

"History records our triumph in the Revolution, in the War of 1812, in the Florida War, in the Mexican War, and in the great rebellion, and as nearly all of these wars were largely begun by militia and volunteers, the conviction has been produced that with us a Regular Army is not a necessity.

"In relating the events of these wars the historian has generally limited himself to describing the battles that have been fought, without seeking to investigate the delays and disasters by which they have been prolonged till, in nearly every instance, the national resources have been exhausted.

"All of our wars have been prolonged for want of judicious and economical preparation.

"To such volunteers as enlisted for the period of the Mexican War, and particularly for two and three years during the War of the Rebellion, with whom it is my pride to have served and to whom I owe all of my advancement in the service, I but express the opinion of all military men in testifying that their excellence was due not to the fact that they were volunteers, but to the more important fact that their long term of service enabled them to become in the highest sense regulars in drill, discipline, and courage.

"Up to the Mexican War there was little that was glorious in our military history.

"In the Revolution the Continentals or Regulars often displayed a valor deserving of victory, but which was snatched away by the misconduct of undisciplined troops.

"In the War of 1812 the discipline and victories of the Navy alone saved the country from dishonor. On the land the historian of the Army was glad to slur over needless disasters, to dwell on the heroism in the open field displayed by the Regulars at Chippewa and Lundys Lane. The Mexican War was a succession of victories. The Volunteers as well as the Regulars were disciplined troops.

"The Rebellion began with the defeat at Bull Run, but a multitude of subsequent battles again proved that the valor of disciplined American troops, be they Regulars or Volunteers, can not be excelled by the best armies of Europe.

"In order that this work may not be misjudged, we will first indicate to the reader the chief causes of weakness of our present system, and next will outline the system which ought to replace it.

"The causes of the weakness are as follows:

"First. The employment of militia and undisciplined troops commanded by generals and officers utterly ignorant of the military art.

"Second. Short enlistments, from three months to three years, instead of for or during the war.

"Third. Reliance upon voluntary enlistments instead of voluntary enlistments coupled with conscription.

"Fourth. The intrusion of the States in military affairs and the consequent waging of all our wars on the theory that we are a confederacy instead of a nation.

"Fifth. Confusing Volunteers with militia and surrendering to the States the right to commission officers of Volunteers the same as officers of militia.

"Sixth. The bounty—a national consequence of voluntary enlistments.

"Seventh. The failure to appreciate military education and to distribute trained officers as battalion, regimental, and higher commanders in our volunteer armies.

"Eighth. The want of territorial recruitment and regimental depots.

"Ninth. The want of postgraduate schools to educate our officers in strategy and the higher principles of the art of war.

"Tenth. The assumption of command by the Secretary of War.

"The main features of the proposed system are as follows:

"In time of peace and war the military forces of the country to consist of—

"The Regular Army;

"The National Volunteers; and

"The Militia.

"The Regular Army in time of peace to be organized on the expansive principle and in proportion to the population, not to exceed 1,000 in 1,000,000.

"The National Volunteers to be officered and supported by the Government, to be organized on the expansive principle, and to consist in time of peace of 1 battalion of 200 men to each congressional district.

"The militia to be supported exclusively by the States, and as a last resort to be used only as intended by the Constitution, namely, to execute the laws, suppress insurrections, and repel invasions.

"Military resources are one thing and military strength another. For military resistance the strength of a government is the power it can wield on the field of battle. In the War of 1812 the strength of the Government at the Battle of Bladensburg was measured by 6,000 militia, at Bull Run it was measured by 35,000 of the same kind of troops. In one case the Capital fell into the hands of the enemy, while in the other our existence as a nation possibly depended upon the irresolution and supineness of a band of insurgents. At Gettysburg the wave of rebellion was resisted by 80,000 veteran troops; had we trusted to the same number of militia the Capital would have been captured and the Government hopelessly destroyed. Unable to suppress in two years an insurrection which culminated in a great rebellion, the representatives of the people were forced to adopt conscription and to concentrate in the hands of the President all the war powers granted by the Constitution, whereupon weakness gave place to strength, but at the expense of a needless sacrifice of life and property.

"If in time of rebellion our own Government grew more despotic as it grew stronger, it is not to be inferred that there is any necessary connection between despotism and military strength.

"Twenty thousand Regular troops at Bull Run would have routed the insurgents, settled the question of military resistance, and relieved us from the pain and suspense of four years of war.

"E. U.

"FORT MONROE, VA., 1880.

THE REVOLUTIONARY WAR.

BATTLE OF BUNKER HILL.

"As early as the year 1774 several of the colonies began to make preparations for an armed conflict with Great Britain. In Massachusetts, although the royal governor had countermanded the summons convening the colonial assembly, the members came together and resolved themselves into a provincial congress, with John Hancock as president.

"The Massachusetts troops were organized by giving a captain's commission to anyone who could enroll a company of 59 men, and the commission of a colonel to anyone who could get together 10 such companies.

"This system, under which ability to raise men is made the sole qualification for command, deserves particular attention, since it has come down to our own times and has been employed, without exception, at the beginning of all our wars.

"Immediately after the engagement of Lexington, militia and minute men from all the New England colonies—individually, by company, and by regiment—began to assemble near Boston, and these half-organized troops, which only by courtesy recognized a common commander, fought, on the 17th of June, the Battle of Bunker Hill.

"In the three assaults upon the redoubt and breastworks held by the Americans the British lost 1,054 men, including 85 officers, an aggregate in killed and wounded almost one-half greater than that sustained in any subsequent battle of the war; the casualties on the American side, 490 in all, mostly took place while the troops were retreating across Charlestown Neck, after the capture of the works.

"The lesson to be learned from this remarkable conflict is the value of trained officers in command of raw troops, a lesson which neither our statesmen nor our historians have ever been able to appreciate.

"In the battle, conspicuous above all for bravery, were Prescott, Putnam, Stark, Knowlton, and many other officers who had received a military training in the French and Indian Wars.

"The troops in the redoubt and behind the rail breastworks were rendered calm and determined by the coolness, judgment, and resolution of their commanders.

"Without pausing to discover the secret of the defense of Bunker Hill, the mistaken conviction seized the public mind that the militia were invincible and that patrotism was the sole qualification for a soldier's calling—a fallacy which paralyzed the military legislation of the Revolution and constantly jeopardized our liberties by inducing the political leaders of the time to rely too confidently upon raw and undisciplined levies.

CONTINENTAL ARMY MILITIA.

"Soon after the troops began to arrive in the neighborhood of Boston it became evident that the contest would extend beyond New England, and that to prevent the dissolution of the force already gathered together it must be adopted as a Continental Army.

"Recognizing the importance of having a body of men to reenforce the Regular Army in times of emergency, Congress recommended 'to the inhabitants of the United English Colonies that all able-bodied, effective men, between 16 and 50 years of age, be formed into companies of militia. That the officers of each company be chosen by the respective companies.'

"The militia could only be called out with the consent of the State legislatures. They were specially intended for home defense and to make head against forays of the enemy in the absence of the Regular or Continental Army.

"The slow increase of the Continental Army shows that Congress was committed to a dual Military Establishment, one class of troops being Continental or Regular, the other militia. In the former the gradual extension of enlistments to two and three years enabled the men to acquire the discipline which ultimately proved the salvation of our cause. The natural disposition of men to seek the easiest and shortest service prompted them to enlist in the militia in preference to the Continental regiments, and thus the only force which could be depended upon to cope with the British, both offensively and defensively, was always from one-third to one-half below its prescribed strength.

JEALOUSY OF A STANDING ARMY.

"During the Revolution the intense feeling of opposition to a standing army almost wrought the ruin of our cause. Since then this feeling has been diligently kept up and has formulated itself into the maxim that 'A standing army is dangerous to liberty.' Without considering the distinction between the hirelings of a despot and an army of citizens created by the representatives of a free people, it has been and still is the policy of our Government to maintain an inexpensive Military Establishment and upon the smallest possible basis. To such an extent has this been carried that our Regular Army has not been able to meet even the ordinary exigencies of times of peace.

"The annals of the Revolution show conclusively that for the lack of a well-disciplined Regular Army, enlisted for the war, we were continually forced to call out double and treble the number of raw troops. So far as the Army is concerned, it is believed that a careful study of the history of this period will convince the candid inquirer that our liberties can be imperiled only by a policy which eschews well-grounded principles of military organization and compels us in time of danger to call forth vast bodies of men, when smaller numbers should suffice.

"Washington writes:

"The jealousy of a standing army and the evils to be apprehended from one are remote and, in my judgment, situated and circumstanced as we are, not at all to be dreaded; but the consequence of wanting one, according to my ideas formed from the present view of things, is certain and inevitable ruin. For if I was called upon to declare upon oath whether the militia had been most serviceable or hurtful, upon the whole I should subscribe to the latter.

BOUNTY.

"The bounty system was a child of the Revolution, called into being when the colonies denied Congress the power of compelling enlistments. It grew steadily during the long struggle for independence, only to reach its full maturity in our late Civil War.

"Any system of voluntary enlistments necessarily places a Government in the position of a suppliant, and when patriotism and popular enthusiasm no longer suffice to fill the ranks resort must be had to the vicious practice of giving bounties to recruits. Even at that early day the letters of Washington refer to the bad effects of this practice.

"While Congress was thus bidding for men the States began to bid in opposition, both for recruits for the Continental Army and for the militia. October 30 Congress asked Maryland to reconsider its resolution giving a $10 colonial bounty in lieu of 100 acres of land, assigning as a reason that other soldiers would demand the same bounty and require Congress to grant it.

"While the patriotism of a people, taken collectively, is quite equal to keeping up a prolonged struggle for liberty, cost what it may, we find that the patriotism of the individual utterly fails to induce him to undergo, voluntarily, the hardships and dangers of war.

"As the war went on the increasing difficulty of procuring recruits necessitated the payment of larger bounties. In addition to the bounty of clothing, of land, and of money already voted, Congress, on the 23d of January, 1779, authorized Washington to grant a bounty not exceeding $200 to each able-bodied veteran or new recruit who would reenlist or enlist for the war.

STRENGTH OF THE ARMY, 1777.

"At the very beginning of the year our lack of military wisdom had reduced Washington's regular soldiers to less than a thousand, while the enemy had more than 20,000 veterans in and about New York. It is needless to point out how much the fortunes of our cause at that junction were furthered by the inaction of the English commander.

"The number of men raised for the Continental Army was less than one-half of the quota, while the total number of troops fell short of the number furnished in 1776 by 20,931.

"This decline in military strength must be attributed to the system of enlistments rather than to any want of determination to carry on the war.

WASHINGTON'S CRITICISM OF THE MILITIA.

"Further confirmed in his convictions by the defeat of Gen. Gates, Washington wrote to the President of Congress on the 15th of September, 1780:

"I am happy to find that the last disaster in Carolina has not been so great as its first features indicated. This event, however, adds itself to many others to exemplify the necessity of an army and the fatal consequencies of depending on militia. Regular troops alone are equal to the exigencies of modern war, as well for defense as offense, and whenever a substitute is attempted it must prove illusory and ruinous. No militia will ever acquire the habits necessary to resist a regular force. Even those nearest to the seat of war are only valuable as light troops to be scattered in the woods and harass rather than do serious injury to the enemy. The firmness requisite for the real business of fighting is only to be attained by a constant course of discipline and service I have never yet been witness to a single instance that can justify a different opinion, and it is most earnestly to be wished that the liberties of America may no longer be trusted, in any material degree, to so precarious a dependence. I can not but remark that it gives me pain to find the measures pursuing at the southward still turn upon accumulating large bodies of militia, instead of once for all making a decided effort to have a permanent force. In my ideas of the true system of war at the southward, the object ought to be to have a good army rather than a large one.

STRENGTH OF THE ARMY.

"The number of soldiers furnished by the several States to the Continental Army during the war was as follows:

Massachusetts	67,907
Connecticut	31,939
Virginia	26,678
Pennsylvania	25,678
New York	17,781
Maryland	13,912
New Hampshire	12,497
New Jersey	10,726
North Carolina	7,263
South Carolina	6,417
Rhode Island	5,908
Georgia	2,679
Delaware	2,386
Total	231,771

"The number of militia furnished by the several States during the war, according to the returns and conjectural estimates of the Secretary of War, was 164,087.

"Total Continentals and militia furnished during the war, 395,858.

"If we examine these figures, it will appear that in 1776, when the aggregate number of our troops reached 89,600, the British had but 20,121, and that from that time our number steadily dwindled down to 29,340 in 1781, while the British strength constantly increased till it reached 42,075.

"Looking back at the whole Revolutionary struggle, notwithstanding our employment from first to last of almost 400,000 men, we find that but two military events had a direct bearing upon the expulsion of the British. One of these was the capture of Burgoyne; the other that of Cornwallis—an event which was only made possible by the cooperation of a French army and a French fleet.

PENSIONS.

"The statistics of the Revolution, already quoted, show that our extravagance called out from first to last more than 395,000 men, all of whom, under our pension system, had a claim upon the gratitude of the Nation. The greatest number of troops that Congress was able to raise during any one year of the war (1776) was 89,600 men, of whom 42,700 were militia.

"The largest force, Continental and militia, that Washington could lead to battle at any one time was less than 17,000, while at the Battles of Trenton and Princeton, during the time of our greatest peril, his effective strength was less than 4,000.

"If we now turn from the reports of the small armies in the field to the report of the Commissioner of Pensions, it will be found that a feeble military policy gave us an army of pensioners numbering 95,753, of whom 39,287 were widows.

"Unlike the dissolving armies in the field, the pension rolls for 1875 show that 92 years after the close of the war the army of the Revolutionary pensioners was still represented by 379 widows. The last Revolutionary soldier expired in 1869, 86 years after the close of the struggle.

"The total amount paid to Revolutionary pensioners up to June 30, 1876, for periods of service of six months and over was $46,177,845.44.

"To widows of soldiers who served six months the total amount paid to June 30, 1876, was $19,668,795.70.

"If to these figures be added $15,000,000, the approximate amount paid to invalids disabled in the Revolution, the total of pensions, in round numbers, amounts to $80,000,000.

EXPENSE OF THE WAR.

"Exclusive of bounties paid by individuals, towns, and counties, and of provisions seized by impressment for the use of the Army, the debt of Congress and of the States at the close of the war amounted to $170,000,000. If to this sum be added the two hundred millions of currency, for the redemption of which the faith of the Continental Congress and the Confederation was twice solemnly pledged, the debt actually incurred by the war amounted to $370,000,000.

"Small as this sum may appear when compared with the Rebellion war debt of three thousand millions, investigation will show that the indebtedness of the Revolution was greater in proportion to population.

"Assuming three millions as the total number of our people at the beginning of the Revolution, the whole cost of this war to each man, woman, and child was $123, while, upon the basis of a population of 31,000,000 in 1861, the total cost per capita of the War of the Rebellion was but $96.

"Both of these wars were waged upon the same extravagant system, and so long as we blindly adhere to it similar pecuniary sacrifices are sure to follow in the train of every great military contest of the future.

LESSONS FROM THE REVOLUTION.

"The lessons to be drawn from the Revolution are:

"That in proportion as the General Government gives the States authority to arm and equip troops it lessens the military strength of the whole people and correspondingly increases the national expenditures.

"That when a nation attempts to combat disciplined troops with raw levies it must maintain an army of at least twice the size of that of the enemy, and even then have no guaranty of success.

"That neither voluntary enlistments based on patriotism nor the bounty can be relied upon to supply men for the army during a prolonged war.

"That the draft, connected or not connected with voluntary enlistments and bounties, is the only sure reliance of a Government in time of war.

"That short enlistments are destructive to discipline, constantly expose an army to disaster, and inevitably prolong war, with all its attendant dangers and expenses.

"That short enlistments at the beginning of a war tend to disgust men with the service and force the Government to resort either to bounties or the draft.

"That regular troops, engaged for the war, are the only safe reliance of a Government, and are in every point of view the best and most economical.

"That when a nation at war relies upon a system of regulars and volunteers, or regulars and militia, the men, in the absence of compulsion or very strong inducements, will invariably enlist in the organizations most lax in discipline.

"That troops become reliable only in proportion as they are disciplined; that discipline is the fruit of long training and can not be attained without the existence of a good corps of officers.

"That the insufficiency of numbers to counterbalance a lack of discipline should convince us that our true policy, both in peace and war, as Washington puts it, 'ought to be to have a good army rather than a large one.'

—

BETWEEN THE REVOLUTION AND THE WAR OF 1812.

MILITIA ACT, 1792.

"The constant Indian troubles and the possibility of a conflict with foreign powers brought about a widespread conviction that the national defense could not be neglected. The statesmen then turned to the militia and tried to satisfy public opinion by establishing a uniform militia throughout the United States.

"The first section of the act laid down the truly democratic doctrine that every able-bodied male citizen owed military service to his country and likewise provided for a system of enrollment and territorial recruiting. These two features of the law were so praiseworthy and of such vital importance that all its other defects may be overlooked. Again and again the Continental Army was on the verge of dissolution because both of these principles were ignored, and to their subsequent neglect we shall be able to trace most of the weakness and waste which still characterize our wars.

"Aside, however, from the military defects of the system, it is only when we examine it from the standpoint of the taxpayer that its fundamental errors became fully apparent. For 1 National Army were substituted 13 or more State armies. In place of having a small but efficient force of regulars, supported by indirect taxation, the citizens of each State were called upon to pay over their hard-earned dollars to maintain undisciplined bodies of militia, totally ignorant of the first principles of the military art. Even had all the States, with patriotic regard for the welfare of the whole country, maintained their quotas of militia during the long intervals of peace they would have been

at the expense of a large military force for the benefit of the General Government, and that, too, without compensation, except in time of war. If, on the contrary, as has since happened, certain States should fail to keep up a militia, the burden of their shortcomings would be unjustly borne by the remainder.

"View it in whatever light we may, the conversion of the militia into an army of the first line, as designed by the law, was a wild and impracticable scheme. This class of our citizen soldiers will never take the place wisely reserved for them by the framers of the Constitution until it becomes our settled policy to call them out as a last resort only, in case of actual invasion.

"Although this army, of which Washington was appointed commander in chief, with the rank of lieutenant general, was never called into service, the provisions of the law show that the country proposed to rely upon Regulars and Volunteers, instead of upon Regulars and militia, and that so far as the Regulars were concerned, the mistake of short enlistments was not to be repeated.

PROVISIONAL ARMY, 1798–99.

"Had this force been raised, the Regular Army would have numbered about 40,000 men.

"Thus, in addition to the Regular Army, the military legislation of that period, profiting by our Revolutionary experience, had provided a body of National Volunteers, officered by the President, to take the place of the State militia troops. Had this organization come down to the beginning of the late war, it is more than probable that in one-half the time 300,000 men would have done the work finally accomplished by little less than 3,000,000.

—

THE WAR OF 1812.

CAUSE OF THE FAILURE OF THE CAMPAIGN.

"The failures and disasters of the campaign can be plainly traced to the pernicious military organization established by the act of 1792. It will be remembered that, instead of relying upon a small but well-disciplined Regular Establishment, this law intrusted the safety and honor of the Nation to armies of militia supported by the several States during the long intervals of peace. These armies, though elaborately organized on paper into battalions, brigades, and divisions, were only to receive such drill and instruction as the various States might think proper.

"Though an alarming defect became apparent at the very outset of the war, when the unlooked-for opposition of two State governors deprived the President of the control of a portion of the militia, and was thus able to paralyze for the time being the military power of their respective States and defeat the plans of the General Government, it remained for the fruitless campaigns at the West and the cruel and disheartening experiences at Queenstown to fully reveal the utter worthlessness of the new system.

"Led to a certain extent by those who had gained actual military experience during the Revolution or on the Indian frontier, endowed with perhaps more average intelligence and education than the Regulars; supplied with the same food, clothing, and equipments as they were, the marked inferiority of the militia troops was largely due to the brief period of their service, to the conviction that their time would soon be 'out,' and that others must take their places and bear the burdens and dangers of the contest.

"While their pay was no greater than that of other troops, when we deduct the time lost in coming and going, as well as that consumed in partial and unavailing instruction, their real cost to the country was infinitely greater.

THE CAPTURE OF WASHINGTON.

"No better example can be given of the mismanagement of this war than the measures adopted by the President and his Cabinet for the defense of the Capital in 1814.

"Although a British fleet with about 3,000 troops on board had been hovering along the shores of the Chesapeake for nearly a year, it was not until June that the attention of the administration was first turned to the danger that confronted the Capital. It was then found by the Secretary of War that the Regular troops in the fifth military district, embracing the States of Maryland and Virginia, numbered but 2,208 men. These troops, composed to a large extent of recruits, were dispersed at various points along the Chesapeake from Baltimore to Norfolk, and were therefore incapable of speedy concentration.

"The downfall of Napoleon having made it possible for Great Britain to reenforce her troops in America, July 2 the tenth military district was created, consisting of the State of Maryland, the District of Columbia, and that part of Virginia lying between the Rappahannock and the Potomac.

"The command of the new district was devolved upon Gen. Winder.

"July 12 and 17 Gen. Winder was authorized 'in case of actual or menaced invasion of the district under his command' to call out the entire Maryland quota of 6,000, as also 2,000 from Virginia, 2,000 from the District of Columbia, and 5,000 from Pennsylvania—in all, 15,000 men.

"On the 24th of August the army, described by its commander as 'suddenly assembled, without organization,' or discipline, or officers of the least knowledge of service, numbered 5,401, of whom 400 were Regulars, 600 marines, and 200 sailors, the remainder being Volunteers and militia.

"The same day the army thus hastily assembled was as hastily formed in order of battle at Bladensburg, where, in the presence of the President and the Cabinet, it was attacked and routed, with the loss of but 8 killed and 11 wounded.

"The British force numbered 3,500, of which only a part of the advanced division of 1,500 were engaged.

NUMBER OF TROOPS.

"The number of troops employed at different times from the beginning to the end of the war was:

Regulars (including about 5,000 sailors and marines)	56,032
Volunteers	10,110
Rangers	3,049
Militia	458,463
Total	527,654

"The terms of service of the troops were as follows, for—

12 months or more, including sailors and marines	63,179
6 months or more	66,325
3 months or more	125,643
1 month or more	125,307
Less than 1 month	147,200
Total	527,654

"The officers of this army of more than half a million of men numbered:

Regulars	2,271
Volunteers, rangers, and militia	31,210
Total	33,481

"The number of officers who had received a professional education at the Military Academy up to June, 1814, was 120.

"In default of an efficient Regular Army, the number 458,463 shows to what extent the administration was compelled to rely upon the States in pursuance of the military system of 1792; the number 398,150, which represents the number of men who served for periods less than six months, shows but partially to what extent we adopted, as in the Revolution, the policy of raw troops and short enlistments.

"The failure of Congress at the beginning of the war to declare in favor of territorial recruitment and obligatory service affords another result equally striking. The Army voted in January, 1812, was 35,000 men; the number of inexperienced officers ultimately called out and whose average pay was at least four times that of the private soldier was 33,481.

"Instead of falling upon the 5,000 British regulars who held Canada, at the beginning, and crushing them in a single battle, we allowed them to baffle every attempt at invasion, and to prolong the war till our loss in killed and wounded numbered 5,614.

"In contrast with our reckless extravagance in employing more than a half million of men the largest force of British regulars opposed to us was 16,500.

COST OF THE WAR.

"These figures, $198,000,000, which do not embrace the millions paid for pensions since 1823, may be accepted with slight variation as the immediate cost of the war.

"Had Congress from 1808 to 1811 applied one-fourth of this sum to the maintenance of an army of 15,000 men, so organized as to have been capable of expansion by the aid of voluntary enlistments and obligatory service to double or triple its numbers, there is little reason to doubt that Canada would have been ours, and the war brought to a close on a single campaign.

"In the Revolutionary War, notwithstanding the steady decline of our military strength, two British armies of more than 6,000 men each were made captive; in the War of 1812 less than 5,000 men for the period of two years brought war and devastation into our territory, and successfully withstood the misapplied power of 7,000,000 of people.

—

FLORIDA (INDIAN) WAR.

1836–1841.

"The lessons taught by this war are:

"First. That its expense was tripled, if not quadrupled, by that feature of the law of 1821 which gave the President in

times of emergency no discretion to increase the enlisted men of the Army.

"Second. That, as in every previous war, after successfully employing for short periods of service militia and volunteers, and exhausting their enthusiasm, Congress found it more humane and economical to continue hostilities with Regular troops, enlisted for the period of five years.

"Third. That for want of a well-defined peace organization a Nation of 17,000,000 of people contended for seven years with 1,200 warriors, and finaly closed the struggle without accomplishing the forcible emigration of the Indians, which was the original and sole cause of the war.

—

MEXICAN WAR.

CAMPAIGNS OF GEN. TAYLOR.

"The army of occupation on arriving opposite Matamoras, May, 1846, was composed of 3,554 officers and men, all of the old establishment. The weakness of its numbers in no way daunted its commander. He knew that four-fifths of his officers had received the benefits of professional training at the Military Academy or in the Florida War. Beyond this he was conscious that the discipline and esprit de corps of his troops had been brought to the highest point by six months of training in the camp of instruction at Corpus Christi. With this preparation and with practically no authority to increase his force till an invasion should actually take place, the commander was soon destined to confront a large and well-organized Mexican army.

"In concluding his official report on the battles of Palo Alto and Resaca de la Palma, Gen. Taylor stated:

"Our victory has been decisive. A small force has overcome immense odds of the best troops that Mexico can furnish—veteran regiments perfectly equipped and appointed. Eight pieces of artillery, several colors and standards, a great number of prisoners, including 14 officers, and a large amount of baggage and public property have fallen into our hands. The causes of victory are doubtless to be found in the superior quality of our officers and men.

"The effect of this brilliant initiative was felt to the end of the war. It gave our troops courage to fight against overwhelming numbers, demoralized the enemy, and afforded a striking proof of the truth of the maxim, "That in war, moral force is to physical as three is to one." In all of the subsequent battles our troops were outnumbered two or three to one, yet they marched steadily forward to victory, and for the first time in our history temporarily convinced our statesmen, if not the people, of the value of professional education and military discipline.

BATTLE OF BUENA VISTA.

"In January, 1847, nearly all the Regular troops, as also a large number of Volunteers, were withdrawn from Gen. Taylor at Monterey to take part, under Gen. Scott, in the campaign against the City of Mexico.

"This detachment reduced the force to about 6,000 men. Availing himself of this division of our forces, Gen. Santa Ana advanced to Buena Vista, where, on the 22d and 23d of February, he sought to overwhelm and capture our Army. In this battle, the most desperate of the war, our forces, numbering 4,759 men, of whom but 517 were Regulars, defeated the entire Mexican Army, estimated at 20,000. Our losses were 746 killed, wounded, and missing. The Mexican loss was estimated at 1,500. In his official report Gen. Taylor gave the Regular Artillery, composed of the celebrated batteries of Washington, Sherman, and Bragg, the credit of saving the day. But the Battle of Buena Vista, like all great battles, was fought chiefly by Infantry, and the gallant Volunteers, who, against overwhelming numbers, successfully maintained the honor of our arms, had been undergoing field training for nearly eight months, a period twice as long as the time considered necessary to transform a recruit into a Regular soldier.

CAMPAIGN OF THE CITY OF MEXICO.

"After advancing from Vera Cruz to Puebla, fearing exposure to the yellow fever, and beginning to look forward to their discharge six weeks before the expiration of their term of enlistment, Gen. Scott, on the 4th of May, 1847, parted with 7 of his 11 regiments of Volunteers, numbering in the aggregate 4,000 men. Thus reduced by discharge, by expiration of service, and by disease to 5,820 effective men, our Army, which had advanced to Puebla, within three days' march of the enemy's capital, was compelled for more than two months to remain on the defensive, while the enemy, profiting by the delay, reorganized an army of five times its number.

"Had the small force of Gen. Scott, embracing nine-tenths of the Regular Army, been captured, experience teaches us that with the system of short enlistments and inexperienced officers, 100,000 raw troops could not have retrieved the disaster.

"Reinforced in the aggregate to nearly 14,000 men, of whom 3,000 were sick or in hospital, while other detachments were made to guard the line of communications, Gen. Scott, on the 7th of August, resumed the offensive against an army estimated by the Mexicans themselves at 36,000 men and 100 pieces of cannon.

"The four Volunteer regiments with Gen. Scott had been organized in December of 1846, had had the benefit of eight months' training, had already participated in the siege of Vera Cruz and the Battle of Cerro Gordo, and were worthy of being called reliable troops. Advancing with an army of less than 10,000 effectives, the brilliant victories of Contreras, Cherubusco, El Molino del Rey, and Chapultepec opened the gates of the capital, which Gen. Scott entered on the 14th of September. In the series of battles, beginning on the 20th of August, our largest force engaged was 8,479; our loss in killed and wounded was 2,703, which reduced the Army when it reached the city to less than 6,000 men.

"The aggregate strength of the three regiments of Volunteers which participated in these battles—the fourth being left to garrison Puebla—was, on the morning of the Battle of Contreras, 1,580. The aggregate strength of the Army, Regulars and Volunteers, on the same date was 11,052.

NUMBER OF TROOPS.

"With the salient facts before us, that Gen. Taylor fought the first battles of the war with 2,100 Regulars, when, but for the defect of the law, he might have had, by a simple increase of the rank and file, a force of 8,000; that the 13 regiments of the Regular Army with which Gen. Scott landed at Vera Cruz could have been raised to 15,000 men; that with such an Army he could have entered the City of Mexico on the heels of Cerro Gordo; that at no time before the event his maximum force exceeded 13,500, and that after a brilliant series of battles he finally entered the Mexican capital with less than 6,000 men, let us next consider the number of troops the Government employed:

Regulars	31,024
Volunteers	73,332
Total	104,356

"From these figures it will be perceived that the Regular troops, 31,024, exceeded more than six times the number of Regulars and Volunteers with whom Taylor at Buena Vista defeated the entire Mexican Army; while, omitting the three and six months' men and adding 31,024 to the 60,659 Volunteers for 12 months and the war, the aggregate, 91,683 Regulars and Volunteers, was nine times as great as the effective strength of the Army with which Scott fought the decisive battles around the City of Mexico. The greatest strength of the Mexican Army was never estimated to exceed 36,000 men.

LESSONS OF THE WAR.

"Notwithstanding its unnecessary prolongation, the Mexican War marked a great change, if not a revolution, in our military policy. This result was due to the decay and gradual abandonment of the militia system, which up to that time had been regarded as the "great bulwark of national defense." Bearing in mind that the laws under which military operations were prosecuted were almost identical with the laws of 1812, let us examine the composition of the forces employed in the two wars:

	War of 1812.	War with Mexico.
Regulars	50,000	31,024
Militia	458,463	12,601
Volunteers and Rangers	13,159	60,659
Total	521,622	104,284

"A comparison of these figures shows that while in the War of 1812 the combined force of Regulars and Volunteers of 12 or more months' service was but 12 per cent of the total number of troops employed, the same force in the Mexican War was no less than 88 per cent. The contrast does not stop here. In the first war, relying upon the States instead of appealing directly to the people, as intended by the Constitution, Congress became a witness of disasters like those which occurred in the Revolution; in the second, the national troops, organized and supported by Congress, achieved a series of victories unmarred by a single defeat.

"In one war an army of more than 6,000 raw troops, posted in the defense of our own Capital, fled with a loss of but 19 killed and wounded; in the other a force of less than 5,000

trained Volunteers, supported by a few Regular troops, overthrew a Mexican army of four times its number.

"In one war an enemy numbering less than 5,000 men baffled all of our efforts at invasion; in the other our Army, with less than 6,000 combatants, entered in triumph the enemy's capital.

"But the difference between the results of the two wars is not wholly to be ascribed to the substitution of national volunteers for the militia. In the War of 1812 the Regular Army, which had itself to be created, was unable to furnish a standard of skill and discipline. In the Mexican War, aside from sustaining the principal losses in killed and wounded, it furnished able commanders, and in every field set an example of skill, fortitude, and courage.

"As to the influence of military education in producing such diversity of results, Gen. Scott, who in 1814 was compelled to teach the Regular officers of his brigade the elements of squad drill, left his views to the Senate in the memorable words:

"I give it as my fixed opinion that but for our graduated cadets the war between the United States and Mexico might, and probably would, have last some four or five years, with, in its first half, more defeats than victories falling to our share; whereas in less than two campaigns we conquered a great country and a peace without the loss of a single battle or skirmish.

—

THE WAR OF THE REBELLION.

CONDITIONS AT THE OUTBREAK.

"At the close of the year 1860 we presented to the world the spectacle of a great Nation nearly destitute of military force. Our territory from ocean to ocean exceeded 3,000,000 square miles; our population numbered 31,000,000 people.

"The Regular Army as organized consisted of 18,093 officers and men, but according to the returns it numbered only 16,367.

"The line of the Army was composed of 198 companies, of which 183 were stationed on the frontier or were en route to distant posts west of the Mississippi. The remaining 15 companies were stationed along the Canadian frontier and on the Atlantic coast from Maine to the Gulf of Mexico.

"The militia for a sudden emergency were scarcely more available than the Army. Nominally they numbered more than 3,000,000, but mostly unorganized. So destitute were they of instruction and training that—a few regiments in the large cities excepted—they did not merit the name of a military force.

"Such was the condition of the national defense when, on the 20th of December, 1860, South Carolina in convention passed the ordinance of secession.

"Alarmed at the impending danger, the President, as had been done so often before, turned to the militia. On the 9th of April, 1861, a call was made upon the District of Columbia for 10 companies, but when paraded for muster many, through disloyalty, refused to be sworn, while others imposed the condition that they should not be required to serve beyond the limits of the District.

"In the meantime, so prompt was the response to the Confederate call for 100,000 volunteers that by the middle of April 35,000 men were equipped for the field. Conscious of their strength, they at once seized our arsenals and began the siege of our forts.

"For the want of an expansive Regular Army or a system of national volunteers, the President was again compelled to look to the States, and therefore, on the 15th of April, issued his proclamation calling for 75,000 militia for the period of three months.

"The advantage, so far as related to the forces in the field, was at the time decidedly on the side of the Confederates. The Government had called for 75,000 militia for the period of three months; the Confederates had called for 100,000 volunteers for the period of one year. Both had repeated the blunder of short enlistment.

"Nevertheless, in default of further measures on the part of the President, the Government at the end of three months would see the forces dissolved, while the Confederate Army, constantly improving in discipline, would still be available for nine months of field service.

USE OF THE REGULAR ARMY.

"To anyone familiar with our military history the difficulties of recruiting Regulars in competition with Volunteers would have suggested the reduction of the line of the Army to a cadre and the dispersion of its officers as commanders and instructors among the new troops. Had this course been adopted every regiment of Volunteer Infantry, Cavalry, and Artillery might have had a Regular officer for a leader, and, with these to guide the instruction, three months would have sufficed to give us an Army in fair drill and discipline.

"The Volunteers themselves felt the need of this policy, and when first called to arms eagerly sought trained commanders.

"At the time Congress indicated the desire that trained officers should be employed in positions of the greatest usefulness it had at its disposal more than 600 captains and lieutenants who would have made able and efficient colonels. Yet by giving to governors the authority to appoint officers, without reserving to the President the right to designate at least one field officer in each regiment, Congress not only thwarted its own intentions but needlessly jeopardized the national success.

"While our military legislation relating to the line deprived the Government of all right to appoint trained leaders to the regiments of the Volunteer Army, the great departments of supply, on the contrary, were placed wholly under the supervision and control of Regular officers.

BATTLE OF BULL RUN.

"The acceptance before the 1st of July of more than 200,000 volunteers for the term of three years did not deliver the Government from the temptation of again testing the folly of short enlistments.

"Mistaking numbers for strength and forgetting, too, that the fame of the militia at Bunker Hill and New Orleans was acquired behind formidable entrenchments, Congress and the Cabinet, the press and the people united in demanding that before their discharge the 75,000 three-months' men should be led into battle.

"The disaster that ensued demands that the causes leading to it be carefully considered. First among them was the popular but mistaken belief that because our citizens individually possess courage, fortitude, and self-reliance they must necessarily possess the same qualities when aggregated as soldiers. And next to this error was the fatal delusion that an army animated by patriotism needed neither instruction nor discipline to prepare it for battle.

"The effect of this disastrous battle (Bull Run), which gave the enemy all the advantages of the initiative had he chosen to use it, was to paralyze military operations for more than six months.

MILITARY LEGISLATION IN 1861.

"The military system under which, in two campaigns of seven weeks each, Prussia humiliated Austria in 1866 and subverted the French Empire in 1870 was the joint product of soldiers and statesmen, who began their labors (1806) immediately after the disastrous battle of Jena. The military system under which we subdued the rebellion was established by Congress in less than four weeks.

"In 1792 Congress organized the militia and declared in favor of obligatory military service, on the theory that the militia were the bulwark of the Nation. Subsequently, Indian difficulties and armed conflicts with two foreign nations compelled it to raise and support a Regular Army. Both of these organizations in 1861 it summarily rejected. Instead of expanding the Regular Army and making it the chief instrument in executing the national will, it violated the practice of every civilized nation by calling into existence an army of a million untrained officers and men.

"It should not surprise us that under a system so improvident voluntary enlistments finally proved a failure. The enormous demands for men are easily accounted for. The laws, like those at the beginning of each previous war, encouraged short enlistments by giving the President the power to call out volunteers for any term of service from six months to three years. The number of men furnished was to be equalized among the States according to population. The men having been organized into regiments no provision was made for their recruitment; there were no regimental depots, no assignments of regiments to congressional districts, no requirement that any regiment raised in any State or district should be kept full by voluntary enlistment or draft. There was but one method to prevent depletion, and that the one which, since the siege of Boston, had always proved ineffective—detaching recruiting parties from the field.

"The fourth section of the first law was prolific of causes for protracting the war; it was based on the theory of confederation; the troops were to be State and not National, and, as a consequence, the officers were to be commissioned by the governors and not by the President.

CAMPAIGN OF THE ARMY OF THE POTOMAC, 1862.

"On the 31st of March, 1862, the Government had in service an Army of 637,126 men, nearly all of whom were enlisted for the term of three years.

"The Confederate Army, composed largely of one-year volunteers, whose enlistments were on the eve of expiring, scarcely exceeded 200,000 men.

"The failure to subdue the rebellion in 1861 had already been explained by our total want of military organization and prep-

aration. The failure to subdue it in 1862, with the amazing advantages possessed by the Union, proceeded from a cause entirely different—the mismanagement of our armies.

"Humiliated and made wiser by the defeat at Bull Run, the President, the Cabinet, and the people were at first disposed to give the new commander all the time necessary to organize and discipline his troops; but when several months had passed with no indication of an advance, the Army in the meantime having increased to above 200,000 men, impatience for action returned with accumulated force.

"When Gen. McClellan assumed command he found his Army 'cowering on the banks of the Potomac,' the troops and the people alike demoralized by the defeat and panic at Bull Run. He knew that but two things—men and the time to make them soldiers—were necessary to restore the ascendancy of the Government. The men were given liberally, but time to drill them could not be accorded. When the armies throughout the country, with scarcely a shadow of discipline, had swelled to the aggregate of 600,000, the expense of supporting them was so great that the President was forced to declare if something was not soon done 'the bottom would be out of the whole affair.'

"At the time of the appointment of Gen. McClellan the fate of the Nation seemed to depend upon this single individual. In the organization of his army he stood alone. None of his brigade, division, or corps commanders had ever seen service as such. None of them, as in Europe, had exercised command at maneuvers or had been practiced in handling large bodies of troops. The colonels, from whom the future brigadiers were mostly to come, were nearly all from civil life, with but little knowledge of tactics or standard of discipline by which to gauge the proficiency of their troops. A difficulty of nearly equal magnitude confronted him in the staff. The Adjutant General's Department, for want of interchangeability with the line, could not, as in European services, furnish competent chiefs of staff to himself or to any of his corps and division commanders.

"It was during the month lost by the delay at Yorktown that the Confederate Congress abandoned voluntary enlistments, adopted conscription, and took away from the governors the power to commission Confederate officers; it was during this month, when the Army of the Potomac should have been at the doors of Richmond, that almost every regiment of the Confederate Army was reorganized; it was during this month that Confederate conscripts began to pour into the old regiments instead of being formed into new organizations; it was during this and the two succeeding months, while McDowell was held back, that these conscripts, associated with veteran comrades, acquired courage and discipline; and it was by concentration during the last month that the Confederate Army was made to equal its opponent. The loss of battles was but a trifle compared with the other consequences of this one month's delay. It arrayed against us a military system which enabled the Confederate Government to call out the last man and the last dollar, as against a system based on voluntary enlistment and the consent of the States. It was no longer a question of dealing a dissolving army its deathblow. We had permitted a rival government to reorganize its forces which we now were compelled to destroy by the slow process of attrition."

THE SUGAR INDUSTRY.

Mr. RANSDELL. Mr. President, I rise to a question of personal privilege.

On the 26th ultimo my colleague, Senator BROUSSARD, made an address in this Chamber in which he severely criticized Hon. Robert Ewing, Democratic national committeeman from Louisiana, and myself, because of certain statements about Col. Ewing, alleged to have been made by me in recent political speeches in Louisiana, in behalf of the Democratic candidates for governor and other State offices, and which were characterized by Senator BROUSSARD as untrue. This address was sent in advance of its delivery to some large newspapers in Louisiana, which published it in full under flaring headlines, especially the allegations denying the truth of my statements.

At the close of Senator BROUSSARD's speech I expressed regret that he had brought into the Senate a question of purely local politics, which did not interest or concern Senators, and after declining to enter into a controversy on the subject, I secured permission to print in the RECORD a copy of one of the Louisiana speeches which had given offense, although none was intended. His address and mine appear in the RECORD for the 27th ultimo, pages 4907 to 4920.

Self-respect compelled me to reply to Senator BROUSSARD's attack in order to establish the truth of my remarks, which he had denied, and I did so in an open letter to him, which was published in the Louisiana papers. Ex-Senator Murphy J. Foster, who for 12 years was a member of this body, and Col. Ewing issued statements confirming my allegations, which were also published. Postmaster General Burleson and Secretary of the Navy Daniels, at my request, wrote me confirmatory letters. In order to complete the record in this controversy, which no one regrets as much as myself, I ask that the statements of Senator Foster, Col. Ewing, and myself, also the letters of the Postmaster General and the Secretary of the Navy, be printed in the RECORD in order that the truth of what I said may be established beyond peradventure.

The VICE PRESIDENT. Without objection, it will be so ordered.

The matter referred to is as follows:

WASHINGTON, D. C., *April 1, 1916.*

Hon. ROBERT F. BROUSSARD,
United States Senate.

DEAR SIR: In view of the sensational attack made by you upon Col. Robert Ewing and myself on the 21st ultimo in the Senate of the United States, I have determined to address you this open letter as an answer to your diatribe. I select this mode of response because, as stated by me immediately after the delivery of your speech, I do not think the Senate, the highest and most dignified legislative body on earth, the proper forum in which to wash soiled political linen in the discussion of purely personal and local controversies.

Your address greatly magnifies your own importance. I had no idea of antagonizing you when touring your old congressional district in the interest of Democracy. I was asked to go there by the Democratic campaign managers, because they knew it was the hotbed of Republican progressiveism, and it was thought I could have some effect because of my loyalty to sugar, the principal interest of that section. You take yourself too seriously and imagine that when I gave Col. Ewing more credit in the sugar fight than to anyone in Louisiana, including Senator Thornton and myself, I intended an attack on you. My efforts were solely to aid Democracy by making the real truth known to the sugar people, who were being prejudiced because of the alleged shortcomings of Robert Ewing. I disavow absolutely any intention of humiliating or belittling you in any of the speeches made by me during that tour.

The remarks to which you took exception were published in the daily papers of Louisiana, and I doubt if they were known to a single United States Senator except ourselves. The press of the State is the medium through which you should have circulated your reply. Its columns were open to you, and while your discourse was pertinent to Louisianians it did not interest or concern Senators from other States.

For your information, let me say that while you were reading your carefully prepared treatise Members of the Senate expressed to me their regret that your sense of propriety permitted you to transgress so grossly the traditions of that body.

Your remarks purport to be a denial of certain statements made by me in recent campaign speeches in Louisiana in regard to the activities of Mr. Ewing three years ago during the fight to prevent placing sugar on the free list, but in reality, as I shall show later, they are Progressive-Republican utterances which should never have fallen from the lips of a Democratic Senator. As to charges which you bring against Col. Ewing, of which I have no personal knowledge, I shall let him make answer, confident that he will do so completely and to the satisfaction of the Democracy of Louisiana. I shall concern myself merely to prove there was no substantial misstatement of fact made by me to repel the attacks which you made upon me personally, either openly or by innuendo, and then shall expose the motive which prompted you to speak.

A newspaper account of my Lafayette speech quoted me as saying that Robert Ewing had done "more for the sugar industry than all the Louisiana delegation combined." This is not correct, and you knew it. What I said was that "to Robert Ewing, a great deal more than to any other one man, is due the extension for three years of the duty on sugar."

I told you of this misquotation on March 21, six days before your speech in the Senate, and in its delivery you admitted, under my questioning, I had so informed you; but in your address sent to the New Orleans papers you failed to take into account that significant fact.

I desire now to call your attention to other inexcusable misstatements of facts that were available from the record before you when preparing your speech.

You would lead one to believe that you did not know it was ex-Senator Foster and not yourself who accompanied me to the White House for the 15-minute interview, though when questioned by me in the Senate you admitted that I had likewise so informed you. Why, in writing your speech which was published in the press, did you fail to make frank admission of this fact instead of trying to mislead by bringing in the name of Senator Thornton? And why did you attempt to attach any importance to these matters which you admitted under my questioning were relatively unimportant?

Why, with the record before you, did you fail to say that the Underwood tariff bill was introduced in the House on April 7, the second day after Col. Ewing, yourself, and I talked to President Wilson? And that the bill when so introduced by Mr. UNDERWOOD contained the three-year sugar extension clause, practically substantiating the truth of the statement made by me, although it was not reported by the Ways and Means Committee until April 21? Why did you thus quibble?

Another point on which you lay much stress is that you, and not Col. Ewing, remained behind with the President? Col. Ewing's recollection sustains by statement that it was he, and not you, who remained, and I am positive of it.

When I gave Mr. Ewing this high credit, I did so with full knowledge of the splendid fight made by Louisiana Representatives and Senators for the retention of sugar duty. The record of Senator THORNTON and myself in regard to sugar needs no apology. We did all that mortal men could do. In Democratic caucuses and on the Senate floor we fought as desperately as we knew how, and the pages of the CONGRESSIONAL RECORD for the special session of the Sixty-third Congress show how earnestly we appealed to our colleagues not to put sugar on the free list. We voted against the Democratic tariff bill, the greater portion of which we approved, because of the free-sugar provision, thereby straining our relations with the Democratic administration almost to the breaking point, and did so because of our pledges to the people of Louisiana. And, as you know full well, six members of the Louisiana delegation in the House did their utmost

against the enactment of the free-sugar clause, although two of the six voted for the tariff bill on final passage.

My office was the rendezvous of the sugar representatives, and I was a party to every council and cognizant of every fact in the campaign, hence I am as well qualified as yourself to say to whom credit belongs.

You attempt to make it appear that I am subservient to Mr. Ewing in giving him praise for his efforts. This is the first time in my life I have been charged with subserviency to any man, and I spurn it with all the force of my being. I glory, however, in being fair enough to give honor to whom honor is due, regardless of whom the truth may offend.

You attempt to deride and belittle Col. Ewing, and to destroy his standing at the Nation's Capital, at a time when another crisis is confronting the sugar industry, merely to serve your personal feelings, recklessly disregarding the possible consequence of your act. You make it appear that Robert Ewing was false to sugar, and have the temerity to style him as the most "persistent and consistent enemy of the Louisiana sugar industry," well knowing that the highest place in the struggle waged was freely accorded to him then by all who were posted. That your memory may be refreshed on this point, I will quote the resolution adopted by the American Cane Growers' Association under date of March 22, 1913:

"Whereas the leading industry of Louisiana is confronted with the gravest crisis in its history, the last Democratic House having passed a bill placing sugar on the free list, which action promises to exercise marked influence in the pending revision of the tariff; and

"Whereas such a course would not only be a departure from the time-honored policy of the party and a violation of its platform pledges, but would mark the industrial ruin of this State: Therefore be it

"*Resolved*, That the American Cane Growers' Association of Louisiana calls upon Hon. Robert Ewing, national Democratic committeeman, to visit Washington at once and lay before the President and the party leaders the gravity confronting our people.

"The American Cane Growers' Association is mindful of the valuable services already rendered the people of Louisiana in this struggle by Col. Ewing, and of the inconveniences and sacrifices that a second trip to Washington would entail, but considering the seriousness of the situation and the fact that he, of all Louisianians, is especially qualified to make the representations, it feels warranted in calling upon him to make this sacrifice, confident that he will be willing now, as in the past, to sink personal consideration when the interests of so many of his fellow citizens are at stake.

"CHAS. A. FARWELL."

That the praise here bestowed was well merited is amply borne out by the statement of Senator Foster, whose fidelity to the cause of sugar can not be doubted, and also by the letter of Postmaster General Burleson to me, dated the 30th ultimo, which has been given to the press, and in which appear these pertinent words:

"He [Ewing] worked night and day, and I believe without disparaging in the least what may have been done by others, that it can be truthfully said that Bob Ewing did more than any one person toward those things which finally resulted in the retention of the 1 cent per pound duty on sugar, with free sugar after three years."

The purpose of this letter was not to eulogize Ewing but to repudiate the baseless attack you directed against its author, Gen. Burleson, whose friendship for the people and the industries of his neighboring State has never been questioned. Other statements equally as strong from sources as well qualified to speak may easily be secured.

And now a word or two in regard to Federal appointments in Louisiana. The importance you ascribe to Col. Ewing in regard to these offices is grossly exaggerated, and I am sure no such power is claimed by him. But one minor appointment was made individually on his recommendation, and even that could not have been confirmed had it not been agreeable to Senator Thornton and myself. We were glad in several others to have his assistance, though there were a number in which he had no part whatever. Senator Foster, at whom you slur, was appointed upon the recommendation of the entire Louisiana delegation, including yourself. In defeat at the last election he received more votes than you in victory. Gov. Sanders, at whom you also sneer, was appointed upon the recommendation of Senator Thornton and myself, though it was clearly recognized that it was Senator Thornton's patronage. In regard to the other Federal officeholders in the State, I shall not attempt to particularize, except to say that I take direct issue with you in imputing that they are not in every way worthy of the honors that have been conferred upon them, and it is my belief that they are acceptable to the great majority of the Democrats of Louisiana. A number of enthusiastic recruits to the Progressive-Republican Party, who are close friends of yours, come from the ranks of disappointed seekers for office at the hands of President Wilson.

Now, Senator BROUSSARD, I wish to expose the motive which prompted you to describe "Robert Ewing and his kind" as "hangnails on the hands of the Louisiana Democracy," and then, in another flight of imagination, as the giant "boss" of the "bosses" in whose grasp the people of Louisiana are held powerless. This has a familiar sound. It is the rallying cry of the Progressive-Republican candidate for governor of our State. "Ewingism" is the issue on which he would deceive the people and ride into office, and you now openly strike hands with him. No such muddying of the waters will be permitted. Democracy's candidate, Ruffin G. Pleasant, could never be the creature of any ring or boss. He is one of the bravest, truest, and most independent spirits ever produced in Louisiana, and, if elected governor, will represent all the people honestly, wisely, and impartially. His candidacy is due to the support of the people of the country parishes. Their loyalty to him was secured in the fight he made against the constitutional convention, which was supported by both the State and city administrations at Baton Rouge, and was looked upon in its incipiency as invulnerable. The combination was so strong that everyone said it could not be defeated. But do you not recall what took place? Have you forgotten that it was Ruffin Pleasant who, at Baton Rouge, against these assembled powers, with the mighty force of the people of the country parishes behind him, changed the convention bill materially in the legislature, and later crushed it in one of the most remarkable political battles in the history of the State? Ewing and all the leaders of New Orleans whom you deride, backed by the almost unanimous support of their people, gave the convention measure an overwhelming majority; but the people of the country parishes heard the voice of Ruffin Pleasant, enlisted under his banner, and decreed that the convention should not be held in the midst of a political campaign.

Pleasant under the control of the bosses! Why, the mere thought of such a thing is absurd. The fight against the convention is the reason for his candidacy for governor. He did not go to the New Orleans organization, but those in charge of the administration of that great city, seeing his remarkable popularity and desiring to bring together in harmonious concert the people of both country and city and to set at rest the idea that it had designs on the control of the State administration, accepted Pleasant as its candidate for governor, to confront and conquer John M. Parker, who had announced on the Republican-Progressive ticket.

Then followed the Democratic primary election, in which Pleasant received considerably more than one-half of the total possible vote of the State, inclusive of Progressive, Socialist, and Republican.

He ran as strong in north Louisiana as in south Louisiana. Organs of the Progressive-Republican candidate stood aghast. Their candidate and his campaign committee and supporters had been prophesying a total vote of only eighty to ninety thousand. They had inserted, during the primary campaign, advertisements appealing to the people to remain out of the Democratic primary. They freely admitted that one who voted for either Democratic candidate for governor was morally bound to support the nominee, but when they saw that the Democrats had polled 114,000 votes out of a total of 145,000, and that there were only left 30,000 votes for their candidate, they set about to revise their moral code and to create an issue with which to deceive the people of the State. And what is their issue? "Bossism" and "Ewingism!"

Senator BROUSSARD, permit me to say that while your address purports to be an attack on Robert Ewing and a correction of my alleged misstatements, it is, in fact, a Progressive campaign document. It is meat and bread to Louisiana Democracy's bitterest enemies; it is a sharp criticism of an address made by a Democratic Senator in behalf of the Democratic nominees for governor and the other State offices; it is an assault upon a staunch Democrat, Bob Ewing, who is drawing the heaviest fire of the Progressives and Republicans; it was played up in glaring headlines by several big dailies in Louisiana; it is heralded by Peterman, campaign manager for the Progressive-Republican candidate, John Parker, as insuring his triumph in the election now only 17 days off; it is a Progressive-Republican speech, out of the mouth of a United State Senator, chosen in a Democratic primary.

Regardless of your purpose in making this address, the fact is that it can and will be franked by the Progressives and Republicans all over Louisiana, and I venture the assertion that no true Democrat will mail a single copy of it to influence votes for Democracy. I understand that many thousand copies of this speech, so warmly welcomed by Progressives and Republicans, have been ordered, and I anticipate that they will be circulated in Louisiana either under your frank or that of some Republican or Progressive Member of Congress. Your duty to your Democratic constituency should have caused you to hesitate long before placing ammunition in the hands of the enemies of Democracy, though it may prove a blank cartridge, and I believe it will.

Does not your party perfidy stand revealed by this speech, and will not the Democracy see through your cunning? You, a Senator holding commission from the Democracy of the State, would covertly sacrifice it as a victim to John Parker, who for years has been false to Democracy's teachings and by every means at his command has attempted its destruction. He it was who brought to Louisiana Theodore Roosevelt, who may be the candidate of the national Republican Party for the Presidency of the United States against Woodrow Wilson, in whom the plain people of this Nation believe, and who they are determined shall continue in control of our country in crises such as it has never faced before. Has this been your game? Was this your reason when, two years ago, in the campaign in the third congressional district, you failed to respond to the call of the party to support the candidacy of its nominee, Gueydan, against Martin, the Progressive, who had obtained the nomination over Peterman, campaign manager for Parker, and Edwin Broussard, your brother, and the present candidate for lieutenant governor with Parker?

Was it on this account that when the Times-Picayune, in its editorial of August 13, 1914, entitled "A Democratic Campaign," called upon you to declare where you stood, John Parker came to your defense in an open letter published the following day in the same paper?

It is time in the history of the affairs of Louisiana for men to step forward and be counted. Come out, Mr. BROUSSARD, and fight in the open.

In the name of Democracy I ask, Do you intend to support and vote for Pleasant and his Democratic associates?

Do you intend to visit Louisiana before the election and make at least one speech in support of the Democratic ticket? If you should reply that you can not leave your duties here, will you issue a statement in favor of the Democratic candidate and urge your friends to support the ticket?

If you are not in favor of the Democratic ticket, does not common fairness in a great fight like the present require you to make your position perfectly clear? Where do you stand? There is no middle ground. You must be for Democracy or against it. The people of Louisiana have a right to an answer to these questions, and, as their representative, I demand it.

If you do not promptly avow your support of the regular Democratic candidates, I shall assume, and every honest man will be justified in assuming, that you are opposed to them and in favor of their Republican-Progressive foe, Parker. Fight, if you so desire, with all the power of your being for the destruction of the Democratic Party in Louisiana, if you will not fight in favor of it, but stand forth like a man and be counted. Even should you decide to espouse the cause of Parker, the cause of the Republican Party in both State and Nation, against the party which has so highly honored you I have no fear of the result. The 114,000 loyal Democrats who voted in the primary insure victory. The united voice of the unconquered party of the State of Louisiana, the party of the South, which for the first time in 16 years is in control of the affairs of this Nation thunders "Victory." Under the matchless leadership of Pleasant it will sweep on to a glorious triumph on the 18th, forever crushing the hopes of Parker and Roosevelt to break the solid South.

How can any Democratic Senator halt or hesitate in such a battle? Whatever others may do, I shall stand by my party and its flag. I shall stand by that flag because it is the flag of the Democratic Party and represents what is best in the hopes and aspirations of the surging mass of America. If that party should fall through the conduct and utterance of those it has trusted and raised to power, at least no man can say accusingly to me, "Through this rent was thrust the dagger of an envious Casca."

Respectfully, yours,

JOS. E. RANSDELL,
United States Senator.

[From the New Orleans States of April 2, 1916.]

MR. EWING'S STATEMENT.

Although I am a candidate for no office, Senator R. F. BROUSSARD has seen fit, in a speech in the United States Senate, to make me the object of a bitter and uncalled-for personal attack in connection with the present campaign in Louisiana.

The character of the speech, the time of its delivery, the fidelity with which it follows the line of attack here in Louisiana, the promptness with which the manager of Mr. Parker's campaign, who, as does the Senator, holds the commission of the Democratic Party, has announced Mr. BROUSSARD as a recruit to the movement to defeat Col. Pleasant, the Democratic nominee, leave no room to doubt its political purpose.

I regret the necessity which compels me to ask the public's indulgence of a reply to this attack which is a tissue of misstatement and suppression of fact. I am not an issue in the campaign, and I have no interest in its outcome except as a citizen of Louisiana who believes that the efficiency of our Government and the supremacy of our race alike require the triumph of the Democratic Party over the mongrel elements which Mr. Parker has organized in opposition to it. But justice to truth and a duty I owe to myself leave me no alternative.

THE CHARGES MADE BY MR. BROUSSARD.

Mr. BROUSSARD'S charges fall mainly into four parts:

(a) That by voting for the unit rule at the Democratic convention in Baton Rouge, June 4, 1912, I was insincere in my support of Woodrow Wilson.

(b) That I have been a "persistent and consistent enemy of sugar," and that Senator RANSDELL and ex-Senator Foster did not bear truthful witness in telling the people of the third district that it was due to my efforts more than any other man's that sugar was saved from immediate destruction in 1913.

(c) That I permitted an agent of the Sugar Trust to embody an attack on sugar in the Democratic textbook in violation of the doctrine of the Baltimore platform.

(d) That I am the dispenser of Federal patronage in Louisiana and have filled the Federal service with men repudiated by the white people of Louisiana.

I shall take these charges up in turn and show them to be without foundation.

I.

The attitude of the States, from its foundation by the late Maj. H. J. Hearsey until now, has been that the only real and permanent security for the sugar industry lay in the Democratic policy, maintained until three years ago, of treating sugar as an ideal article of revenue taxation. Such treatment was consistently advocated by Cleveland, Carlisle, Morrison, Mills, Wilson, and other conspicuous advocates of Democratic tariff policy.

At the inception of the last national campaign I felt that the most serious blow which could be dealt the industry would come from the nomination of either Mr. CLARK or Mr. UNDERWOOD, because of the extreme position each had assumed in favor of immediate free sugar. I opposed both unrelentingly, personally and through the columns of the States and the Shreveport Times.

M'COMBS'S ASSURANCES IN CONFERENCES HERE.

On the other hand, my inclination was to Gov. Wilson, who then loomed large on the political horizon, provided Gov. Wilson was found to be in sympathy with the tariff policy as respects sugar which the party had always maintained. In the spring of 1912 Mr. William F. McCombs, now the chairman of the Democratic national committee and then Gov. Wilson's manager and personal representative, came to Louisiana seeking support for Gov. Wilson. He invited me to a long interview in the Grunewald Hotel. Mr. J. Walker Ross and myself called on him. In reply to my inquiry regarding Gov. Wilson's probable position on sugar, Mr. McCombs pointed to his recent speeches, and particularly one delivered at Brooklyn, as a guaranty that Gov. Wilson's election would involve no injury to any legitimate industry. During the tariff fight Mr. McCombs, at my request, went to Washington to confirm to President Wilson that he had given this assurance.

It was clear, well before the meeting of the Democratic convention at Baton Rouge, on June 4, that the whole drift in Louisiana was to Wilson, with south Louisiana bitterly antagonistic to CLARK and UNDERWOOD because of their stand on sugar. Theodore Wilkinson; Thomas H. Lewis; J. Zach Spearing, chairman of the State executive committee of the Good Government League; Donelson Caffery; ex-Gov. Newton C. Blanchard; J. P. Parker, of Monroe, all conspicuous Democrats and supporters of Gov. Hall, and the Times-Democrat, were for Wilson.

THE GOVERNOR'S ENTRANCE UNEXPECTED.

It is characteristic of the "littleness" of the Item that its policy invariably is gauged by the States. It is against what I am for and for what I am against, without reference to the merits of any given proposition.

The fact that the States was for Wilson therefore led the Item to espouse the cause of Mr. CLARK. But up to May 26, when Gov. Hall suddenly and unexpectedly declared for Mr. CLARK, following the visit of CLARK agents here with rainbow promises in the event of his election, no one in Louisiana accepted seriously the Item's agitated attacks on Wilson or dreamed of the possibility of a CLARK man on the Louisiana delegation.

Nevertheless it then became clear that, with his prestige and influence as the newly elected Democratic governor and his power as the party leader over the State convention, the governor would be able at least partially to change the complexion of the delegation.

Since, however, the Times-Democrat was pronounced for Wilson, my expectation was that an evenly divided delegation was possible, and my hope that the exigencies of the political situation in the Nation would make Mr. CLARK'S nomination out of the question and give a chance for the eventual nomination of Wilson or some other candidate not an avowed enemy of sugar.

MR. MOORE'S INTEREST IN THE MATTER.

When I reached Baton Rouge June 3 it was my understanding that, as a result of the protest of Mr. Moore, who, feeling keenly the rebuke to the Times-Democrat in the governor's espousal of the Item's candidate, had sent Mr. Norman Walker to the governor on Sunday, the governor would be satisfied with a divided delegation without instructions, it being the expressed judgment of the Times-Democrat, Picayune, and States, and of many of the leading men of the State, that an uninstructed delegation of big men should be sent to Baltimore with ample freedom of action to enable them to protect the interests of the sugar industry and the Democratic Party.

I did at that time visit the governor and did in casual conversation say, in answer to his inquiry, that I saw no objection to a unit rule; but the details were not discussed, and it is absurd for Mr. BROUSSARD to say, in the light of my strong feeling on the subject, that I did assent or could have assented to any plan of gag based on a bare majority of the delegation.

The governor's own position at that time is explained in a dispatch which Mr. Stanley Ray, his closest newspaper friend, sent to the Times-Democrat and which was printed the morning of June 4. It said:

"The governor is willing to accept an uninstructed delegation and have some Wilson men named on it, but he desires the majority of the delegation friendly to CLARK. The delegation then would be free to use its discretion, but would be prone to favor the Speaker if his chances looked good."

I did not disagree with the principle of the unit rule, but it was a matter of the conditions of its application. Such was, I think, the position of a large majority of the delegates.

MR. BROUSSARD'S ATTACK ON HALL ADMINISTRATION.

Mr. BROUSSARD, with characteristic lack of modesty, claims credit for having defeated the unit rule. I concede the vigor of the fight he made against Mr. CLARK, resenting as he did the fact that it was Mr. CLARK and Mr. UNDERWOOD who had dismissed him from the Ways and Means Committee for his apostasy in the CANNON fight. But I do not believe any attempt would have been made by Mr. Claiborne, always a disturbing element, to inject the unit rule into the proceedings, but for the feeling engendered by Mr. BROUSSARD'S attack on the State administration for its support of Mr. CLARK.

Mr. BROUSSARD says I voted for the unit rule, and that if it had been carried Louisiana would have gone to Baltimore solidly against Wilson. That is false, as are so many of Mr. BROUSSARD'S statements.

I did not vote for the unit rule. The unit rule was never voted on by anybody at Baton Rouge June 4, 1913.

The record shows the convention had met; seated its delegates; listened to the fiery speeches of Mr. BROUSSARD and Mr. Wickliffe; grown excited when as Mr. BROUSSARD mounted the rostrum the second time some one in the chamber shouted to him, "Go back to Ireland, where you belong, you Republican scoundrel"; elected its delegates at large; ratified the selections of the congressional districts; named the presidential electors; chose the national committeeman unanimously; and was about to adjourn in a perfect bubble of harmony when Mr. Claiborne appeared and sprang his motion for the unit rule.

Mr. Webber, of Ascension, promptly moved to adjourn, and the convention did so. It did not, as Mr. BROUSSARD says, vote on a motion to table Mr. Claiborne's resolution.

WHY HE VOTED AGAINST AN ADJOURNMENT.

I voted not to adjourn. I never run away from a fight. I was perfectly willing to have Mr. Claiborne's motion discussed, in full confidence that the sentiment of the convention was against it; and, so far as my vote on the proposition was concerned, I should have felt that any implied obligation in my casual statement to the governor would have been fulfilled by my support of a resolution leaving it to the discretion of the delegation at Baltimore, by a two-thirds vote, to apply the rule whenever in its judgment such a step was to the interest of the State and the Democratic Party.

Any insinuation that I was ever for a hard-and-fast unit rule by a bare majority of the delegation is without foundation.

The record of the Baltimore convention shows that Mr. CLARK received 11 votes on the first ballot and Mr. Wilson 9. On the fourth each received 10. Thereafter until the end of the struggle Mr. Wilson never received less than half the delegation, even when Mr. CLARK'S vote reached its high-water mark of 556 on the tenth ballot, and it increased to more than two-thirds of the delegation before the decisive ballot.

The only unit rule which I would have supported could therefore never have operated to the advantage of Mr. CLARK. But it would have given Mr. Wilson the solid vote of Louisiana on the forty-third ballot.

II.

Mr. CLARK'S nomination, assuming he was thereafter elected, would have meant immediate free sugar. A sense of modesty restrains me from referring to my own share in achieving the defeat of Mr. CLARK and the nomination of Mr. Wilson

But the fact that I was invited by Giv. Wilson to be one of the 14 Democrats to manage his campaign, the second time Louisiana and both times in my person was so honored since the late Senator F. B. Jonas similarly served in the first campaign of Mr. Cleveland, sufficiently attests the President's appreciation of those services and explains why the financial and commercial interests of New Orleans and the sugar planters themselves felt that perhaps I could do more than anyone else at Washington to persuade the President to include sugar in the Democratic tariff bill.

THE BRYAN FREE-SUGAR RESOLUTION.

I have no wish to detract from the earnestness with which Mr. BROUSSARD labored at Baltimore. But at least I may mention, as part of my own service there, that when Senator-elect RANSDELL came to me with a message from Mr. BROUSSARD that Mr. Bryan had a free-sugar resolution to be introduced in the resolutions committee, which he feared, if offered, would become a plank in the platform, and invoked my intimate personal relations with Mr. Bryan to prevent its introduction. I pressed my views with so much earnestness upon Mr. Bryan that free sugar was not mentioned by the resolutions committee and Mr. Bryan's indorsement of the work of the Democratic House of 1912, as the resolutions will show, became general in its terms. This was in the face of the fact that Senator JAMES, of Kentucky, the permanent chairman, in his speech on taking the chair, declared emphatically for free sugar.

If the secret history of the Ways and Means Committee which in 1912 reported the first free-sugar bill is ever written, it probably will be found that Mr. BROUSSARD'S own betrayal of the Democratic Party in his support of Speaker CANNON and Republican robber tariff bills was not the least of the influences which led the Democratic House to reverse a traditional policy of the party. However that may be, the passage of the bill gave the excuse for the sugar passages in the campaign text book, and gave Democratic Congressmen in nonsugar States, who were candidates for reelection, an opportunity to go before their constituencies and preach the doctrine of a cheaper breakfast table through free sugar, with the result that when Mr. Wilson and the new administration came into power there was a widespread sentiment in Washington, supported by the country, in favor of free-listing sugar;

and it was this sentiment which I believe inclined the President to let it be known that he was favorable to free sugar in the new tariff bill.

SHARED DISAPPOINTMENT OF LOUISIANIANS.

I shared the disappointment of the people of Louisiana over his attitude. I thought it a departure from the spirit of the plank adopted by the Baltimore platform and the policy of the party in the past to treat sugar, an article of universal consumption, as an ideal article on which to lay a revenue duty. Moreover, I felt that to free list sugar was to discriminate against a Louisiana industry which, while properly subject to tariff reductions along with the industries of the North and East, should not be ruthlessly destroyed; and more particularly did I feel that, if the industry was to be destroyed, it should not be suddenly, leaving ruin and bankruptcy in its wake, but that ample opportunity should be given to the people of south Louisiana to readjust themselves to new agricultural and economical conditions.

At Washington, following the inauguration, I urged these views with all the vigor of which I was capable on the President and those who were influential in the party councils, and then came back to Louisiana to pick up the threads of my business, which necessarily had suffered from eight months' absence in the interest of the Democratic national campaign.

I had no wish to return to Washington. I did not feel that I was called upon to make further sacrifices of my time. Mr. BROUSSARD had not been modest in saying to the people of Louisiana that at Seagirt, before the Democratic convention, he had had understandings with Gov. Wilson which assured the protection of sugar and that as a member of the resolutions committee at Baltimore he had incorporated into the platform a resolution which he had drafted at Seagirt with the President to safeguard the industry. I had no desire to usurp any of the functions of the Louisiana delegation, in whose patriotic devotion to the interests of the State I had the fullest confidence, and I was justified in feeling that if Mr. BROUSSARD reminded the President of the understandings which he represented they had had at Seagirt the threatened blow at sugar eventually would be averted

SUGAR PLANTERS INSISTED UPON HIS RETURN.

But notwithstanding that my attitude was well known the financial interests in general and the sugar planters in particular insisted upon my return to Washington as the man who, in their judgment, could do more than any other to bring the President and the administration to stay the paralyzing attack on the industry which was then impending.

The planters were not my friends nor friends of the States. Merely because I conscientiously believed in and continued to preach the doctrine of Maj. Hearsey and the Democratic Party that sugar ought to have a revenue rather than a protective tariff for many years they ranked the States and myself as enemies of the industry rather than its friends. But in this instance they believed that my relations to the Democratic President and his campaign and the consistency with which I had preached the Democratic tariff doctrine put me in a peculiarly favorable position to serve them and their industry in the crisis then upon it.

Neither the States nor its publisher has ever cried from the housetops his services to the industry and the local financial interests so deeply involved in its welfare. I have remained silent under the aspersions of Mr. John M. Parker and his ranting menagerie. I have ignored the consistent misrepresentations of envious competitors who, if they had rendered similar service and been the recipient of similar testimonials to those I refer to for the first time, they would long since have capitalized and commercialized these testimonials and paraded them in flaming advertisements in all the trade papers of the country. I even refrained from comment when after the 1915 extra session of the legislature the Sugar Planters' Association met and thanked the Item and the press for aid rendered in the passage of the so-called antitrust sugar legislation and concluded with a gratuitous paragraph thanking the Porto Rican delegation for valuable assistance rendered two years prior in the 1913 struggle at Washington to prevent the adoption of free sugar, although these gentlemen never by word or letter had indicated any appreciation of my work undertaken at their own earnest request. I attributed their course to ignorance of the facts and not ingratitude and said nothing.

Neither the States nor myself is given to horn blowing. It is only because of Mr. BROUSSARD'S wanton assault that I am moved to make use of these testimonials.

After I had said repeatedly to gentlemen who had come to me that I did not feel it was fair to ask me to make further business sacrifices, the American Cane Growers' Association, the official body of the sugar planters, summoned a meeting and embodied their appeal to me to return to Washington in a resolution never heretofore made public.

As an evidence of their earnestness, a large delegation, headed by President Charles A. Farwell and including Charles Godchaux, James Davidson Hill, and Mr. Burgieres, came to my office and presented the resolution with verbal assurances of their profound desire that I should act favorably on them. The resolution follows:

THE RESOLUTION OF THE PLANTERS.

"Whereas the leading industry of Louisiana is confronted with the gravest crisis in its history, the last Democratic House having passed a bill placing sugar on the free list, which action promises to exercise marked influence in the pending revision of the tariff; and

"Whereas such a course would not only be a departure from the time-honored policy of the party and a violation of its platform pledges, but would mark the industrial ruin of this State: Therefore be it

"*Resolved*, That the American Cane Growers' Association of Louisiana call upon Hon. Robert Ewing, Democratic national committeeman, to visit Washington at once and lay before the President and the party leaders the gravity of conditions confronting our pepole.

"The American Cane Growers' Association is mindful of the valuable services already rendered the people of Louisiana in this struggle by Col. Ewing and of the inconvenience and sacrifices that a second trip to Washington would entail, but considering the seriousness of the situation and the fact that he, of all Louisianians, is specially qualified to make these representations, it feels warranted in calling upon him to make this sacrifice, confident that he will be willing now, as in the past, to sink personal considerations when the interests of many of his fellow citizens are at stake.

"I hereby certify the above and foregoing is a true and correct copy of the resolution passed by the American Cane Growers' Association at its meeting of March 22, 1913.

"CHARLES A. FARWELL, *President*."

SAID BROUSSARD URGED THAT HE BE SENT.

Notwithstanding the appeal which the resolution made to me, I still was unwilling to make the trip to Washington unless my doing so carried with it the approval of the Louisiana Senators, the congressional delegation, and especially of Mr. BROUSSARD, whose political antipathy to me was a matter of wide knowledge. I was assured that Mr. BROUSSARD had been consulted and had urged my going.

These telegrams, which were published in the Times-Democrat of March 23, 1913, show how scrupulous were the planters to remove any ground for friction:

NEW ORLEANS, *March 20, 1913.*

Senator JOSEPH E. RANSDELL,
United States Senate, Washington, D. C.:

Noticing that the Senate committee and the House committee are trying to frame tariff legislation without any interference from outside, we are very much worried and are trying to get Messrs. Foster and Ewing to go to Washington to give you assistance and cooperate with you. What do you think of the plan, and have you any suggestions?

AMERICAN CANE GROWERS' ASSOCIATION,
CHARLES A. FARWELL, *President.*

To which Mr. RANSDELL answered:

WASHINGTON, *March 20, 1913.*

CHARLES A. FARWELL,
President American Cane Growers' Association,
New Orleans:

Responding to your telegram, think it quite important for your association to have several able representatives come here as soon as possible and remain until understanding is reached in regard to duty on sugar. Senator Foster and Col. Ewing can both be of great assistance. I am doing my utmost but need help.

J. E. RANSDELL.

Under the circumstances, I did not believe that I could refuse to go to Washington. I so told the delegation, but said I would only consent to do so at my own expense.

The intense interest of the financial institutions of the city in the mission was evidenced in the letters which came to me from their heads and which not only portrayed the calamitous conditions which free sugar would bring but attached what I considered an undue value to the results which my trip would bring.

BANKERS PRAISE HIM FOR AGREEING TO GO.

These letters were from Sol Wexler, vice president of the Whitney-Central National Bank; W. R. Irby, president of the German-American; J. J. Gannon, president of the Hibernia Bank & Trust Co.; and Charles Janvier, president of the Canal-Louisiana Bank & Trust Co., and I give herewith that of Mr. Wexler as typical of these letters, showing how grave the bankers, as well as the planters, considered the situation from a financial, commercial, and industrial standpoint and how anxious they were that I should go:

NEW ORLEANS, *March 24, 1913.*

Col. ROBERT EWING,
Daily States, New Orleans.

MY DEAR COLONEL: I learn with great pleasure from Mr. Godchaux that you are going to Washington to-night to see whether you can not be of some assistance in the framing up of the present tariff bill, especially that portion referring to sugar.

I am sure that your cooperation will help matters materially. Your views are well known, and, being more or less disinterested, you can give facts concerning sugar which many others could not.

The report that sugar is liable to be placed on the free list must surely be a mistake. The Government can not ruin an industry without giving due notice. It is the opinion of many that the facts which have been placed before Congress are not correct, in so far as the sugar industry of Louisiana is concerned. That sugar can be grown without a tariff is believed by many, but I know it to be a fact that this is absolutely impossible; in fact, it is questionable whether it can be grown with any reduction in the tariff whatsoever. Therefore it is urgent that only a small reduction be made, and we sincerely trust that the view you have expressed of a 25 per cent reduction will be the maximum.

Should the sugar industry in Louisiana be destroyed or crippled, the injury to New Orleans will be very great; in fact, with the disaster of 1911, due to the freeze of the sugar crop, and the disaster of 1912, due to the floods and weather conditions, New Orleans has been crippled materially. The bank deposits, owing to the failure of the two successive sugar crops, have been reduced almost $10,000,000. This shows in a few words how much Louisiana, and especially New Orleans, is dependent upon the sugar industry.

The statements made by the sugar planters as to the cost of production, etc., are correct, and, as I have had occasion recently to investigate same, although not directly interested, I desire to state that you can place the utmost confidence in the figures which have been submitted.

As above stated, any reduction in the tariff on sugar in excess of 25 per cent will be most disastrous not only to New Orleans but to the entire State of Louisiana; and I trust you will endeavor to convince the powers in Washington of our critical condition.

If I can be of any service, please do not hesitate to call upon me, as the time has now come when every patriot and citizen of Louisiana, and especially New Orleans, must put their shoulder to the wheel to save an industry which means so much to the State at large.

Thanking you sincerely in advance for anything you may do on behalf of the sugar planters, I am, with kindest regards,

Yours, very truly,

SOL WEXLER, *Vice President.*

THE SITUATION HE FOUND AT WASHINGTON.

When I reached Washington on March 26, I found the situation most serious, with the President, who had not then publicly committed himself but was believed to be strongly inclined to free sugar, holding the situation in the hollow of his hand.

There was a powerful element in the Senate favoring free sugar. From Mr. UNDERWOOD, then chairman of the Ways and Means, I learned that the passage of a free-sugar bill by the House was inevitable, owing to the feeling of Democratic Members who had declared for it on the stump, that they were under an obligation to make good.

The only ray of hope I found was Mr. UNDERWOOD'S statement to me that if the Senate should amend the act and provide a reasonable duty, it was his judgment that the House would agree in conference to a reasonable but reduced duty.

Mr. UNDERWOOD having given me authority to do so, in one of my early interviews with the President I urged Mr. UNDERWOOD'S suggestion as opening the door to a just compromise. I was greatly disappointed to find the President apparently immovable in the position that he could not consent to an administration measure in the Senate carrying a different provision from a similar measure in the House.

In view of the attitude of the President and Mr. UNDERWOOD, I could see no hope of escaping free sugar. There was left only a campaign to stave off the evil day; and I then began to press upon the President with all my earnestness the justice of allowing a space of seven years before the final extinguishment of the duty.

MR. BROUSSARD INVISIBLE FOR SEVERAL DAYS.

Mr. BROUSSARD reached Washington March 27, the day after I did. He neither saw the President nor put himself in touch with Senator RANSDELL, ex-Senator Foster, or myself on Thursday, Friday, or Saturday; and I violate no confidence when I say that it was the opinion in many quarters that his violent criticism of the President in public, soon begun by him, made him so lacking in influence with the administration as to hold out little hope from him of useful service.

Sunday he visited Gov. Hall at the Willard, and on Monday, the 31st, for the first time he went to the White House to present Gov. Hall. The visit was brief and fruitless, as the Washington dispatch to the Times-Democrat the following day showed. On Thursday of the same week he saw the President with Mr. Wexler to suggest the Canadian plan of taxing sugar, but while the President was interested he said the suggestion ought to have been made 10 days before and was then too late. Why it was too late I shall show.

Between the day of my arrival, March 26, and Wednesday, April 2, one of the two vital days in the struggle, I saw the President on several occasions, alone and in company with others. Senator RANSDELL will not want for witnesses to bear out the implication in his statement that, in these critical days, it was my good fortune to get audiences when others failed.

THE ACCESS HE HAD TO THE PRESIDENT.

Dispatches to the New Orleans papers of the time showed that I was with the President an hour on Tuesday, April 1. Tuesday is Cabinet day, and callers are rarely received and their time is limited.

When Mr. Wexler returned from Washington he gave the press an interview. In it he said:

"The presence of Democratic Committeeman Ewing and of Senator Foster has been of inestimable benefit. Mr. Ewing has had the ear of the President because of his association with him before and after the campaign, and because of his services during the campaign he enjoys a prestige which enabled our representatives and others to at least obtain audiences and an opportunity to protest against the proposed measure."

It will be denied by no one at this time that if the sugar industry, by the act of the present session of Congress, is preserved for four years or indefinitely, it will be because, after the President first declared for immediate free sugar, he yielded to argument and importunity and authorized Mr. UNDERWOOD to write into the tariff bill the three years' provision under which the administration may now continue the duty on sugar without reopening the tariff law.

If Mr. BROUSSARD, who has constituted himself for many years the special champion of the sugar industry, was responsible, directly or indirectly, for this change in the President's attitude, a natural assumption is that he would have been the medium through which the concession, with its conditions, was offered. That he was not and I was will be accepted as circumstantial proof, I take it, that Mr. BROUSSARD has a doubtful claim to the credit he is trying to appropriate and as warranting the statements of Senator RANSDELL and ex-Senator Foster which have so upset the junior Senator.

SENT FOR EWING TO OFFER THREE YEARS' GRACE.

Early on the morning of April 2, while still in my room at the Powhatan Hotel, I was called to the telephone by the White House and told that the President desired to see me at 9 o'clock. I was in good condition and I responded to the summons on time.

It was to communicate to me the fact, to be in turn communicated to the planters and the Senators, that, while he was definitely committed to free sugar, he had been moved to see the justice of the plea that time ought to be given to those directly and indirectly dependent on the industry to adjust themselves to the new conditions. The condition was that the planters should accept the concession and the Senators agree to support the bill.

I laid the matter promptly before the congressional delegation and the Louisianians then in Washington in the interest of sugar, and wired it to New Orleans.

"You have saved the State $30,000,000," was Sol Wexler's statement to me in Senator RANSDELL'S room, in the Senator's presence, when I told him of the President's proposition.

I submit these telegrams as suggestive of the medium through which the planters were seeking relief:

NEW ORLEANS, *April 3, 1913.*

Col. ROBERT EWING,
Powhattan Hotel, Washington:

Proposition as wired, while unsatisfactory and can not be accepted, shows that President has receded from his previous position and is now open to argument, no doubt thanks to your good work, which we all highly appreciate. Now that you have gotten him in this position, hope you will keep at it and get better deal, as we can not accept one he has proposed.

CHARLES GODCHAUX.

—

NEW ORLEANS, *April 3, 1913.*

Messrs. EWING, FOSTER, and MILLING,
Powhatan Hotel, Washington:

At your suggestion have called together such planters as could be assembled. They are of the opinion that the proposition made by the President should not be agreed to. Ultimate free sugar would be ruinous. They believe that our Senators, Congressmen, and Representatives in Washington, by continuing the good fight they are now making and which the justice of our cause warrants, will obtain better consideration at the hands of the President and Congress.

CHARLES A. FARWELL, *President.*

These telegrams were not conclusive, pending a formal meeting of the American Cane Growers' Association. But the President grew impatient for an answer. On Friday afternoon, April 4, he sent Senator HUGHES, of New Jersey, and Secretary Tumulty to see Senator RANSDELL and myself, finding us in Senator RANSDELL'S office. They wanted an immediate answer, saying the bill was ready and must include either free sugar or the President's concession, subject to the condition already referred to. We advised them the planters had called a meeting in New Orleans for Saturday, and that we would inform the President at an appointment Saturday night, April 5, at 8 o'clock, of their action.

On Saturday the planters acted, declining the proposition. It was evident then that we had reached a critical phase of the negotiations, and that our only hope was to persuade the President to withdraw the condition accompanying his concession. Meeting Mr. BROUSSARD at Saturday evening's conference, we invited him to go with us to the White House.

The President received us at the hour appointed. We consumed the full 50 minutes of our time, during which Senator RANSDELL made a powerful appeal for the continuation of the three years' clause despite his inability to vote for the bill. In the conference neither side yielded.

MR. EWING REMAINED WITH PRESIDENT.

Mr. BROUSSARD now contests Senator RANSDELL'S statement that when they left I remained, and Mr. RANSDELL'S inference that what occurred after their departure influenced the President's eventual decision to yield the three years without condition.

Mr. BROUSSARD is mistaken. Mr. RANSDELL'S recollection is perfect with respect to who remained. I did. I told Mr. RANSDELL as we rose it was my desire to do so.

I cite Mr. BROUSSARD himself as a witness against himself. In his statement he says:

"As we walked out of the front door of the White House we met and stopped and shook hands with Congressman UNDERWOOD on his way to keep his appointment."

Our conference was held in the President's library on the second floor of the White House. The front door is downstairs. I myself met and stopped and shook hands with Mr. UNDERWOOD as he entered the library. Mr. RANSDELL and Mr. BROUSSARD had gone 10 minutes before.

WHAT WILSON SAID TO UNDERWOOD.

What occurred between the President and Mr. UNDERWOOD was narrated in a dispatch printed on the first page of the States, April 8, 1913. Here it is:

"Mr. UNDERWOOD was informed that the Louisiana interests had refused to agree to the alternative proposal, and that he might go ahead with the bill. This would have meant free-sugar immediately.

"'What is your desire that we should do?' asked the Ways and Means chairman during the hesitation that followed the President's announcement.

"'Notwithstanding their declination, I would like to see those fellows get the benefit of the three years anyway,' said the President.

"'Then the bill shall be changed,' replied Mr. UNDERWOOD."

On the next day, Sunday, April 6, it was announced that the President had agreed to the three-year clause. On April 7 the bill was reported to the House—not 16 days later, as Mr. BROUSSARD, erring again, alleges.

This extract from the second paragraph of the press report printed in the newspapers on Monday, April 7, 1913, convicts Mr. BROUSSARD of this misstatement, all the more remarkable from the fact that at Washington he had full access to the facts and ample time to verify them:

"WASHINGTON, *April 7.*

"* * * Just as Speaker CLARK was dropping his gavel in the House, Majority Leader UNDERWOOD dropped the tariff-revision bill into the hopper, and thereby officially started a business that promises to keep Congress at work through the Washington 'dog days' and well into August."

This practically completes the record of my activities at Washington. A later service, however, I was called upon to render the planters.

ANOTHER SERVICE TO THE INDUSTRY.

When the Ways and Means Committee presented the bill it set March 1 as the date of the first cut in the duty. Evidently Mr. BROUSSARD, pretending always to be alert to the interests of sugar, did not realize the injustice to the third district growers of a reduction before the season was entirely over.

Be that as it may, Congressman ESTOPINAL, on the representation of the planting and financial interests, subsequently introduced a bill to extend this date to June 30.

Is it not significantly indicative of Mr. BROUSSARD'S poor standing with the Democracy that it was Mr. ESTOPINAL, and not Mr. BROUSSARD, who was asked by these gentlemen to introduce their bill?

On October 24 I was handed this telegram from Col. James D. Hill and Mr. Paul Christian:

WASHINGTON, *October 24, 1913.*

Hon. CHARLES A. FARWELL,
New Orleans, La.:

It is very important that Col. Ewing see UNDERWOOD, when he goes to Mobile, and impress on him the necessity for passing the Estopinal joint resolution. UNDERWOOD left for Alabama last night. ESTOPINAL wrote Ewing strong letter to-day, and this office also wrote him.

HILL and CHRISTIAN.

It was also desired that I should see the President, and I make this excerpt from the letter of Mr. Christian, now closely identified with Mr. BROUSSARD, to show how little foundation there is for Mr. BROUSSARD'S present statement that I have been a consistent and persistent enemy of sugar.

WANTED HIM AGAIN TO SEE PRESIDENT.

"I believe, Colonel, that if you were to lay this matter before the President he would see the justice of our contention and at least agree not to interpose his objection to any relief that Congress may see fit to extend to the people of Louisiana.

"Postmaster General Burleson spoke in the most sympathetic tone for our people, stated how he had always been for a duty of 1 cent, and dwelt on the hard fight you had made for the Louisiana sugar industry. To use his own words, he said that the people of Louisiana would never know how hard you had worked to save their industry, and that the concession that had been secured from the administration was entirely due to your efforts, as the President had been intent on making sugar free at once. He said that you had secured the three-year clause."

I went to Mobile and spent several hours with Mr. UNDERWOOD. I found him most sympathetic toward the State and the industry. I failed only in my mission because he said he and the President feared the amendment might open the door to a general attack on the tariff

law. But he took occasion to add that the committee had amended the bill to protect the planters on the crop of 1913–14; that they had extended the date exactly as requested by the Louisiana people, and that they would as readily have made the extension to June 30 if at the time they had been requested to do so.

Why did Mr. BROUSSARD, setting up title to a monopoly of knowledge of the sugar question and the self-constituted and anointed apostle of the industry, let this golden opportunity slip to save a considerable fortune to the district he then represented?

MR. BURLESON GIVES HIM THE CREDIT.

It is appropriate to include in this record an extract from a letter written by Postmaster General A. S. Burleson to Senator RANSDELL, dated March 30, 1916, in answer to Mr. BROUSSARD'S attack. Mr. Burleson is the political adviser of the President and, among the Cabinet, one of his most intimate friends. He said:

"I know Col. Ewing labored without ceasing in his efforts to keep sugar from going on the free list, and he left nothing undone at that time to accomplish his purpose. He worked night and day, and I believe, without disparaging in the least what may have been done by others, that it can be truthfully said that Bob Ewing did more than any one person toward those things which finally resulted in the retention of the 1-cent duty on sugar, with free sugar after three years."

Thus completing a record, unimpeachable by Mr. BROUSSARD or anyone else, I am willing the public shall judge whether I have been a "persistent and consistent enemy of sugar"; whether, as Parker headquarters has said, I merely "went along with the others to Washington" or responded to a call of distress of the planting and financial interests, and whether Senator RANSDELL and ex-Senator Foster spoke within the record when they told the people of the third district that, in the matter of the three years' concession, their real debt of gratitude was to me.

III.

Mr. BROUSSARD charges that, through the indifference or forgetfulness of the national committeeman, F. G. Lowry, the hired agent of the Federal Sugar Co., was permitted to write into the Democratic Campaign Textbook "a vicious attack on the leading industry of his State."

The charge is gratuitous. He might as reasonably have laid the war in Europe at my doors.

Mr. BROUSSARD quotes at length from the official proceedings of the Senate lobby investigating committee to prove that Mr. Lowry furnished the material for the book. Mr. Lowry's own evidence offers sufficient proof that the charge is without foundation.

The campaign committee was divided in halves, one with headquarters in New York, the other with headquarters in Chicago. I was placed at the head of one of the bureaus in Chicago. The textbook was prepared and issued from New York.

My first knowledge of the gross attack on sugar came through a newspaper. I was outraged. I considered the attack a clear breach of faith after what I had done to persuade Mr. Bryan not to introduce a free-sugar resolution at Baltimore. I considered it a violation of the tariff plank we had written into the platform.

As soon as my attention was directed to the matter I left Chicago for New York in the hope that there was still time to have the obnoxious matter expunged. Unfortunately, it was too late. The book was printed and already had been widely distributed. The damage could not be repaired; but I did not hesitate to express to the New York headquarters my disapprobation of the lack of foresight which had permitted the inclusion in the book of matter affecting an industry in my State unwarranted by anything in the party platform.

Since Mr. BROUSSARD has seen fit to charge the injury done to sugar to my "indifference or forgetfulness," I am justified in retorting that Mr. BROUSSARD'S "indifference or forgetfulness" has cost it more.

The levying of an income tax was long advocated by the Democratic Party. Was it "indifference or forgetfulness" which led Mr. BROUSSARD, always proclaiming his readiness to sacrifice everything—even "party regularity"—for sugar, to join in its advocacy and vote for it in Congress? For everyone with common sense knew that the tax would yield so great a revenue that the reason for keeping sugar on the dutiable list would disappear; and, as a matter of fact, it was the income tax which was largely responsible for and made possible the free-sugar legislation of 1913.

John Marks gave that very reason in the Louisiana Senate in 1910 for his vote against ratification of the amendment. Did Mr. BROUSSARD really care nothing for sugar when he urged and voted for the amendment or was he merely too stupid to recognize the consequence of his course?

IV.

Mr. BROUSSARD'S charge that I am seeking to become the political boss of the State and that I have claimed "the credit for every Federal appointment made in Louisiana" are the vaporings of a man with a grouch. They but echo the mouthings of Mr. John M. Parker and his spellbinders and organs, and they prove nothing except that Mr. BROUSSARD has joined the pack now barking at my heels.

Since the pack is made up of men no longer in sympathy with the Democratic Party or its principles, Mr. BROUSSARD, who is a Democrat in name and a Republican in faith, must find himself in congenial company. But if he were honest he would not continue to hold goods obtained by false pretenses. He would resign his senatorial commission, as did Dr. Labbe, of St. Martin Parish, and become an open rather than a covert enemy of the party which for many years has provided him with his bread and butter.

I am neither a boss nor do I desire to become one, and Mr. BROUSSARD can not galvanize Mr. John M. Parker's dead issue.

It is known to all in Louisiana that I have no political ambitions or desire to fill any salary office, nor do I derive, directly or indirectly, any pecuniary interest or gain from my political activities; while, on the other hand, Mr. BROUSSARD has held public office continuously since early manhood.

ONLY INFLUENCED THREE APPOINTMENTS.

I have made no claim to the credit of having controlled every Federal appointment made in Louisiana. I have not sought to control them. The only appointments which I personally requested are those of Mr. B. P. Sullivan, whom the Times-Democrat praised as an exceptional official and criticized the governor for failing to reappoint; of Dr. M. M. Bradburn, a leading druggist of this city, to the minor position, emoluments considered, of inspector of drugs; and Mr. Whitfield Jack, district attorney at Shreveport, than whom there is no cleaner man at the bar of Louisiana nor higher-toned citizen in the State.

All three of these appointments had the cordial concurrence of the incumbent Senators; and at least it can be said of them, as it can not be said of many of Mr. BROUSSARD'S appointments in the third district, that they are true blue in their Democracy and that they are not conniving with Mr. Parker and the Republican enemy.

Mr. BROUSSARD refers to the Federal appointments here, which he charges me with dictating, as of men who, "when appointed," scarcely had recovered from the political defeats which they had met at the hands of the white people of the State."

HIS SNEERS COME WITH POOR GRACE.

Such an utterance comes with poor grace from a man who, but for a political accident and the possession of an unusual faculty for dissimulation, would not now be wearing so uncomfortably the mantle which once graced a Benjamin, a White, a Eustis, and a Gibson.

He can not, of course, refer to ex-Gov. Sanders as an appointee of mine, for he knows I had no connection, near or remote, with that appointment.

If he refers to ex-Senator Foster, who polled more votes in the last campaign than he did himself, and who deservedly enjoys the respect and affection of his people for service worthily performed, his own indorsement of Senator Foster must have been a mere pretense of friendship.

If he refers to Gen. Guion, the present United States attorney, or to former Gov. Heard, the present subtreasurer, I have only to say that I have no excuses to offer for having joined with Senators RANSDELL and Thornton in recommending men who served Louisiana with so much credit in every station to which the people called them.

The fact that Mr. Fauntleroy, the collector of internal revenue, was Mr. RANSDELL'S secretary and Mr. Burch Lee, the surveyor, Mr. BROUSSARD'S, acquits me, I think, of having controlled the selection of either.

AT LEAST THESE MEN ARE NOT LIKE HIM.

But whether I exerted myself actively or passively or not at all in the cases of these gentlemen, against none of them can the charge be brought, as it has been brought against the junior Senator, that in a campaign sharply drawn between the Democracy and its enemies he turned to bite the party hand that fed him and treacherously raised his voice in aid of a cause inimical to the interests of his people.

Mr. BROUSSARD'S slurs are beneath my notice. They can not affect my standing among the people, among whom I have lived for 35 years.

If Mr. BROUSSARD desires it understood that he wants no comparisons with me, nor desires to follow the banners of me or my class, the feeling is reciprocal. The comparisons would be to his disadvantage, and my class is not made up of political mongrels and deserters.

Finally, whatever faults I possess, there is some consolation in the knowledge that I have never aspired to rank with the double-dealer or the ingrate, and Mr. BROUSSARD was the one in the campaign of four years ago, as he was the other in the Gueydan congressional campaign of 1914 and is in the campaign of to-day.

ROBERT EWING.

RANSDELL RIGHT, SAYS M. J. FOSTER.

Former United States Senator Murphy J. Foster, now collector of the port, confirms the statements of Senator RANSDELL in his Franklin speech as to Mr. Ewing's part in postponing the free-sugar schedule. Mr. BROUSSARD had said in his tirade on Messrs. RANSDELL and Ewing that he would not believe Mr. Foster had "concurred."

He not only "concurs," but goes into the matter at length in support of Mr. RANSDELL'S declarations in a statement as follows:

"Senator BROUSSARD, in his late speech in the Senate, stated:

"'I can not conclude this explanation, Mr. President, without notice of the fact that former Senator Foster, of Louisiana, is reported in the account of the Franklin meeting to have concurred in the statement made at that place by my colleague.

"'I will not believe, I can not believe, upon the mere statement of a publication of the character of the Daily States, under the controlling management of Robert Ewing, that former Senator Foster concurred in what my colleague stated. Nay, Mr. President, I would not believe it on the statement of any man short of the former Senator himself.

"'In the many talks which I had with the former Senator regarding the details of these matters I am quite clear in the statement that the facts which I recited to him are at utter variance with the statement of my colleague, in which the former Senator is reported to have concurred.'"

"In reply to these remarks of the Senator, I wish to state that at the meeting in Franklin I did concur in what Mr. RANSDELL stated in reference to the services which Mr. Ewing rendered in the sugar fight. I stated that I knew he had been requested by the Louisiana Sugar Planters' Association to go to Washington in behalf of the sugar interests.

"I was upon the ground during practically the whole of that fight.

"I further stated at the Franklin meeting that I knew Mr. Ewing, in and out of season, by day and night, had labored assiduously for the cause of the sugar interests of Louisiana, and that in my judgment he had rendered valuable assistance in the defeat of the passage of a free-sugar tariff measure; I further declared that, in my opinion, it was largely, if not entirely, due to his efforts that the rate of duty provided in the bill had been extended three years. That was my opinion when I was in Washington; I have repeatedly stated this opinion in private conversation, and it is now my opinion.

"In making this statement I had no intention or purpose to reflect upon the efforts of the Louisiana delegation of Congress or upon the efforts of any other friends representing the sugar interests at Washington or in Louisiana. There was nothing in my remarks that could possibly bear any such construction.

"This sugar fight has many sides to it, and I do not feel that just at the present time it would be wise on my part to go into any detailed history of that struggle.

"Mr. BROUSSARD further says, speaking of Mr. Ewing:

"'He has claimed the credit for every Federal appointment made in that State. And what sort of appointments have been made there? With few exceptions, those who have been appointed to Federal office had scarcely, when appointed, recovered from the political defeats with which they met at the hands of the white people of the State.

"'With scarcely an exception all of them had gone down to overwhelming defeat and had to be picked up from their place of retirement to take charge of the Federal affairs in the State of Louisiana. This has been done over the protest of the right-thinking independent Democracy of that State. With scarcely an exception, no one else was given recognition.'

"Of course this fling at the appointments of President Wilson includes, and was intended to include, myself among the other defeated candidates.

"It is true that I was defeated by Mr. RANSDELL in the last senatorial contest. The voice of the Democratic Party, as expressed in a Democratic primary, is a law unto me. I did not sulk in my tent after my defeat, nor did I for a moment falter or waver in my support

and allegiance to the great party which had so often honored me. Neither did I know or suspect that my defeat in a Democratic primary would be considered by my Democratic friends as a bar to my recognition for appointment to any office to which I might subsequently aspire.

"When some of my friends were kind and thoughtful enough to suggest my name as collector of this port, I stated to one and all that, while I would be pleased to accept the appointment, I would not consider or even apply for the position if my appointment was not acceptable to the Democratic Members of the House and Senate from this State. At a meeting of the Members of the House and Senate held in Washington I was unanimously indorsed and recommended to the President for this appointment by the entire Louisiana delegation. This recommendation was indorsed by National Committeeman Ewing. I felt then, and feel now, deeply grateful for the cordial and unanimous support which my friends at that meeting accorded me. It is true that Mr. Ewing supported me, but his support was voluntary, and the only comment or reference that he ever made to me on the subject of his indorsement was that he believed I was entitled to this recognition by the party.

"I wish further to state that I did not know that my appointment was made over the protest of the right-thinking independent Democracy of my State. I thought, and still think, that the indorsement of the Democratic Members of the lower House and of both Senators is a pretty fair reflex of the Democratic sentiment in Louisiana.

"I can at present recall only two appointees to Federal offices besides myself who had been lately defeated for positions which they had sought at the hands of the Democratic electorate of this State. These appointees are ex-Gov. Sanders and Judge Guion. Gov. Sanders has stated publicly that Mr. Ewing had nothing, either directly or indirectly, to do with his appointment; and if the national committeeman joined the two Senators in their recommendation of Judge Guion, it is to his credit that he did so, for there is no citizen of Louisiana who bears a more enviable reputation for professional ability, for personal integrity, and for all those qualities which go to make a splendid citizen than does Judge Guion."

—

OFFICE OF THE POSTMASTER GENERAL,
Washington, D. C., March 30, 1916.

Hon. JOSEPH E. RANSDELL,
United States Senate, Washington, D. C.

MY DEAR SENATOR RANSDELL: Your letter of this date has just been placed before me. I recall quite well the activity of yourself, ex-Senator Foster, and Col. Robert Ewing, in the spring of 1913, to retain a tariff duty on sugar. Personally, I was in sympathy with the effort being made to retain 1 cent duty on sugar, believing that it was an excellent means of raising revenue. I had voted for the Underwood tariff bill in July, 1912, which placed sugar on the free list, but Mr. UNDERWOOD and those who had the responsibility of framing that measure knew quite well at that time that I did not favor free sugar, and that I had earnestly urged that a tariff tax be continued on sugar strictly for revenue purposes.

In the conduct of the national campaign I was closely associated with Col. Robert Ewing at the Chicago headquarters, and during its progress more than once he made known to me his deep concern about the effect the coming revision of the tariff would have on the sugar interests of his State. I told him what my own attitude had been with reference to the retention of a tariff duty on sugar. In 1913, while the Underwood bill was in course of preparation, Col. Ewing was in Washington and stopped at the hotel where I was living. He again made known to me his anxiety about the action to be taken by the Ways and Means Committee with reference to sugar. Because of his knowledge that I had favored the retention of a duty on sugar he talked freely with me about his efforts in that direction. After our first talk he had a number of interviews on the same subject with me, and on two occasions I recall that you and ex-Senator Foster were present. I know Col. Ewing labored without ceasing in his efforts to keep sugar from going on the free list, and he left nothing undone at that time to accomplish his purpose. He worked night and day, and I believe, without disparaging in the least what may have been done by others, that it can be truthfully said that Bob Ewing did more than any one person toward those things which finally resulted in the retention of the 1 cent per pound duty on sugar, with free sugar after three years.

Col. Ewing at that time was indefatigable in his efforts in behalf of the retention of a duty on sugar, and it is thoroughly unjust for anyone now to attempt to make on any mind an impression to the contrary.

My attention has been called to a statement made by Senator BROUSSARD in his speech on the 27th instant that "the effort in the House to put a production or consumption tax on sugar met with the approval of the Postmaster General." I am at a loss to know why such a statement should have been made. It is of small consequence, but the truth is I was not aware that such an effort had been made until the Senator alluded to it in his speech. I not only did not favor such effort, but did favor the action taken by the House, and am opposed to fixing any limitation of time on the continuance of the 1 cent per pound duty on sugar, and I sincerely hope the Senate will pass the bill in the same terms as it passed the House.

In conclusion, permit me to express the hope that you may succeed in the splendid fight you are making for the Democratic ticket headed by Attorney General Pleasant, and that the hypocritical thrust being made at our party by the so-called Progressives, who are but thinly disguised Republicans, will fail as such efforts have always failed in the past.

Very sincerely, yours, A. S. BURLESON.

—

THE SECRETARY OF THE NAVY,
Washington, April 5, 1916.

DEAR SENATOR RANSDELL: Replying to your inquiry with reference to the attitude of Hon. Robert Ewing, member of the Democratic national committee from Louisiana, as to tariff tax on sugar, I have the honor to make the following statement:

The duty of issuing the Democratic Handbook for the campaign of 1912 was intrusted to me, and one of the chapters in the book was headed "The family sugar bowl," which favored putting sugar on the free list. When the handbook was printed and was being circulated Hon. Robert Ewing, member of the national Democratic committee, as soon as he had seen the book—he never had the opportunity of seeing it while it was in the making—protested with vigor against the free-sugar chapter, and insisted that I call in the edition and omit all reference to free sugar. This I firmly declined to do. Mr. Ewing complained bitterly of the position taken in the textbook and contended in favor of continuing a tariff tax on sugar. When Congress met and the tariff act was in the making Mr. Ewing spent much time in Washington and was most earnest and insistent in advocacy of a tax on sugar. When it became clear that free sugar would prevail in spite of his opposition, which he exerted with all the influence he could command, he was zealous in advocacy of the postponing of the date when the schedule for free sugar would go into effect. In view of the serious efforts Mr. Ewing made and his attempt to secure a recall of the handbook when he learned of its advocacy of free sugar, and his insistence upon a tax upon sugar, I am astounded that anyone should think that Mr. Ewing failed at any time to espouse the cause for which the sugar producers were making an earnest fight. Upon this question my view and the views of Mr. Ewing were wide apart, for I favored the free-sugar legislation, and the most persistent opponent of such legislation with whom I talked was Robert Ewing. He tried to convince me that he was right, and failed. I would as soon have tried to make the Mississippi River run upstream as to induce Mr. Ewing to abate one jot or tittle of his unceasing and untiring advocacy of a tax on sugar.

Sincerely, yours, JOSEPHUS DANIELS.

Hon. JOSEPH E. RANSDELL,
United States Senate, Washington, D. C.

NATIONAL DEFENSE.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States.

Mr. THOMPSON. Mr. President, I am favorable to the general plan of military preparedness proposed by this bill, except as to some of the nonessential details. I am opposed to a large standing army, but a reasonable increase, such as provided for in this bill to meet new conditions, is absolutely necessary. I am against militarism and against enforced military service in time of peace, and if this bill contemplated either proposition I would vote against it. Militarism is obnoxious to the thought and spirit of the American people. It is contrary to their high ideals. If the spirit of militarism had not prevailed in Europe, the terrible European war would never have occurred. But an army of less than two men per thousand of our population, as provided by this bill, can not be said to be a large standing army or any indication that this country is advancing toward militarism.

There can be no objection to reasonable preparedness to preserve peace, but there is serious objection to such extensive preparations as would tend to promote war. It is necessary to be prepared to defend ourselves as a Nation so long as there is militarism anywhere in the world, just the same as it is necessary to be prepared to defend ourselves as individuals against unlawful attack so long as there are law violators abroad; but this is the only extent to which any nation or any person is justified in going.

Under existing conditions we would be derelict in our duty if we did not profit by what we have learned from observing the awful conflict in Europe.

The experience of the nations engaged in this deplorable war has demonstrated that we need plenty of guns and ammunition, manufactured by the Government itself, and a sufficient number of experienced men and officers to make proper use of them, and strong coast defenses, an adequate number of submarines and aeroplanes, to prevent the landing of any foreign foe.

This bill simply provides an adequate armed force for defensive purposes only. There is a great difference between preparation for defense to maintain peace and preparation for war. One may involve an additional expenditure of perhaps $100,000,000 annually, while the other would involve an expenditure of more than $100,000,000 per week. There are two extreme views on this question: One, that there should be no additional preparation whatever; and the other, that we should go the limit and build up a large Army and Navy second to none in the world. The President in his program proposed a sensible middle ground. He simply recommended a reasonable increase in armaments for defensive purposes, which he believes necessary to maintain the honor and integrity of the Nation.

Mr. President, the report of the Committee on Military Affairs sets out the proposed increase in the Army and the changes in the military forces of the United States so clearly and completely that I wish to insert that portion of the report as a part of my remarks.

The PRESIDING OFFICER (Mr. SIMMONS in the chair). Without objection, it will be so ordered.

The matter referred to is as follows:

The bill increases the Regular Army by the addition of the following units:

34½ regiments of Infantry.
10 regiments of Cavalry.
15 regiments of Field Artillery.
5 regiments of Engineers.
93 companies of Coast Artillery.
2 battalions of Mounted Engineers.
7 aero squadrons.

And the necessary increases of other auxiliary troops and staff departments.

These new organizations will increase the authorized Regular Army in time of peace about 74,789 enlisted men. The authorized strength of the Regular Army under ordinary circumstances will be about 174,789 men, or less than two men per thousand for our population, and can in emergency be raised to about 236,000 by the addition of men trained in its own ranks and then passed to the Regular Army Reserve.

These numbers need some explanation as do all statements regarding the strength of the Army, for otherwise no accurate comparison can be made. The present authorized strength as limited by law is 100,000 enlisted men of the line, including Philippine Scouts, but to this must be added 6,000 Quartermaster Corps enlisted men, 4,012 enlisted men of the Hospital Corps, and 4,000 unassigned recruits, which, under existing laws, are not to be counted as part of the strength of the Army, making a total force authorized of 114,012 enlisted men. The present actual strength is 89,324 so-called "line including the Philippine Scouts," plus 4,900 enlisted men of the Quartermaster Corps, 4,436 enlisted men of the Hospital Corps, and 4,000 authorized unassigned recruits, a total actual strength of 103,660. This number is limited by appropriations for the support of the Army and is fixed by the President.

The proposed force will include 174,789 enlisted men "line of the Army and Philippine Scouts," plus 6,409 enlisted men of the Quartermaster Corps, plus 7,290 enlisted men of the Hospital Corps, plus 6,098 unassigned recruits, an actual total of 194,586, or an actual increase in the authorized strength of 74,789 enlisted men of the "line and Philippine Scouts," 409 Quartermaster Corps men, 3,278 Hospital Corps men, and 2,098 unassigned recruits, a total actual increase of 80,574 enlisted men.

The total commissioned strength at present is 5,045. The proposed bill increases this number to 10,726. This number seems out of proportion to the proposed increase in the enlisted force, but in this number are 124 veterinarians not heretofore counted as officers, 822 officers for detached service with the National Guard and at educational institutions, etc., and a largely increased number of officers (88) for aviation service. The proportional increase in reality is not as large as the increase in enlisted men because of the increased size of the company units.

The proposed Regular Army will consist of seven Infantry divisions and two Cavalry divisions, in addition to the Porto Rico Regiment of Infantry, the Philippine Scouts, and one regiment for Alaska, and the various small detachments for special purposes throughout the Army.

The principal changes in the Infantry, Cavalry, and Field Artillery consist in the addition of a headquarters and a supply company to each such regiment, the addition of a machine-gun company to each Infantry and Cavalry regiment, and an increase of the minimum strength of the Infantry companies.

No detailed argument is required to show the necessity for a separate organization to operate and care for the machine guns of a regiment. The instruction of the personnel charged with this weapon is so essentially different from that of the other companies of the regiment that such companies should be permanent and self-contained, as are the other companies of the regiment. The proposed company will be armed with six machine guns, with one extra gun in case of breakage.

The minimum strength of the Infantry companies is increased from 65 to 100 men. This is an exceedingly important provision. A company of only 65 men, out of which the sick, the furloughed men, and other inevitable absentees must come, leaves only about 40 or 50 men for duty, a number totally inadequate for purposes of instruction either of officers or enlisted men. The proposed strength of 100 men will provide a company double the size of the old one and will far more than double the efficiency of the company units. A company of 50 men can not be raised to 150 men in case of war without seriously impairing the company's efficiency, but a company of 100 men can be increased by 50 men, some of whom will be from the reserve, and the company will still be an efficient organization.

The commissioned personnel of the Medical Corps will furnish approximately 1 surgeon to each 200 men in the field forces. This is an adequate provision for both the medical and sanitary duties in the Army and compares very favorably with the numbers of that corps in foreign armies.

The Signal Corps is increased sufficiently to provide the necessary telephone, telegraph, and wireless companies and the aero squadrons and staff officers necessary for the proposed increase in the rest of the Army, and the aviation section has been more than doubled to provide for that important branch of the service.

The Ordnance Department is increased by a sufficient number of officers to provide for the increased staff duties of that department and for the designing and experimental work involved in the production of new arms and armament shown to be necessary by the present European war.

The Corps of Engineers is increased by the necessary officers for the proposed increase in engineer troops and by additional 51 officers necessary for duty with the National Guard, at educational institutions, and for other similar detached duties not heretofore provided for.

The Quartermaster Corps, the Inspector General's Department, the Adjutant General's Department, and the Judge Advocate General's Department have each been increased sufficiently to provide for the increased staff duties required of each department incident to the increase in the Army.

The General Staff Corps has been increased sufficiently to perform its proper functions. Heretofore it has been very inadequate in numbers and has never been able to undertake the solutions of many of the problems devolving upon the general staff in foreign armies. Germany has a general staff of 309 general staff officers, with 228 other officers attached for general staff work. France has a general staff of 612 general staff officers, with 263 other officers attached for duty. Austria-Hungary has a general staff of 508 general staff officers, with 421 other officers attached for duty. Great Britain has a general staff of 171 general staff officers. In view of these numbers the increase in our general staff to 88 must be considered as very moderate indeed.

The so-called detached officers list is increased from 200 to 1,022. This will provide officers for duty with the National Guard, at educational institutions, as military attachés, and other detached duty authorized by existing law without depleting the commissioned personnel of the companies, troops, batteries, and higher units and thereby crippling the efficiency of the Army to a deplorable extent.

The status of dental surgeons and veterinarians is materially improved in this bill. The dental surgeons and veterinarians are commissioned as dental surgeons and veterinarians, respectively, but inasmuch as they are never called upon to command troops they are not given rank, but only the pay and allowances of the grade in which commissioned. The number of chaplains has been increased to meet the increased strength of the Army.

Provision is made for citizens of the United States who have served as officers of Philippine Scouts who, after having served faithfully therein, are permitted to retire with the highest pay and allowances of a retired enlisted man of the Regular Army.

The enlisted period has been retained as heretofore, but provision has been made to encourage men to enlist by making it possible for a bright, intelligent man to qualify in his duties and pass to the reserve in a shorter time than possible heretofore. Young men are also to be encouraged to enlist by giving men who have served honorably and faithfully further preference in regard to appointments under the civil service of the Government.

A new class of reservists is created, to consist of men who, by the nature of their civil occupation or profession, are peculiarly fitted for the special technical work of the Quartermaster, Engineer, or Signal Corps, or the Ordnance or Medical Departments of the Army. The number of this class of men that would be needed in time of war is far in excess of the numbers that will ever be maintained in the Regular Army. This class of men do not require drilling and training in field exercises as do infantrymen or cavalrymen, but they must be technically skilled in their own particular occupation, whether it be that of chauffeur, automobile engineer, railroad man, bridge builder, surveyor, gas-engine man, telegrapher or telephone engineer, wireless operator, machine-shop expert, powder expert, doctor, nurse, or pharmacist. The daily occupation of these men in civil life is the best training they could have for the functions that they would perform in time of war, and therefore all that is required of them is that they should enlist in some reserve so that the Government may be sure of their services when it needs them. It is not expected that these men will be called out in time of peace for any drill or training, but it is expected that they will be arranged in organizations and that officers of the officers' reserve corps will be assigned to such organizations, thereby creating units which will be immediately available for active service upon the very shortest notice.

The members of the Regular Army reserve will be paid a small sum of $2 a month to keep them in touch with the War Department, but the large bonus contemplated in existing law will be done away with and more assurance of service in time of need and more economy will result under the proposed law.

One of the greatest causes of delay in training a force of citizen soldiers is usually the lack of training that exists in its commissioned personnel. The officers must learn their functions at the same time that they are endeavoring to teach the enlisted men the part that they have to play. It is proposed to create an Officers' Reserve Corps, consisting of men who have been partially educated and trained along military lines for use in such an emergency. They will have few or no functions to perform in time of peace, but the idea is to have them examined mentally, morally, and physically in time of peace to determine their fitness for command in time of war. This will allow the examinations to be carefully conducted when there is no emergency and will insure a far better personnel than could possibly be raised in the confusion incident to a state of war. It is proposed to commission these men in time of peace as reserve officers in the various arms, corps, or departments, and their commission renders them liable for service when called upon by the President, but his authority so to call them is limited to the time of actual or threatened war, except for short periods of training and for other purposes when authorized by Congress and with the consent of the reserve officers concerned, as, for instance, the use of certain of them as Medical Reserve officers are now authorized to be used. This reserve of officers is intended to supply wastage amongst the forces in active operation, to officer the depot battalions and companies which train the recruits, and to officer new organizations of volunteers raised in time of war. Of all the proposed provisions for preparedness there are few of more importance than this one, and none from which the Government will receive so great a return for the small expenditure involved.

To furnish the personnel for the Officers' Reserve Corps it is proposed to utilize the educational institutions of the country which have adopted or will adopt approved courses of study, including a certain amount of military instruction. The students who enter into this plan will form the Reserve Officers' Training Corps, and the provisions for this corps have the approval of the representatives of the educational institutions concerned and of the War Department. These provisions for an Officers' Reserve Corps and the Reserve Officers' Training Corps do what no previous legislation has ever done—i. e., they give the members of those organizations certain rights and responsibilities and make them a real and valuable asset to our military strength and in a true sense will mobilize, in time of peace, our national assets in trained military and professional men for time of danger.

Section 56 proposes to create a volunteer force in which citizens can be enrolled who for any reason can not join the National Guard or the Regular Army. This is to be purely a Federal force, not to be used except in case of actual or threatened hostilities. The plan to maintain such a force in time of peace being an entirely new idea, it was deemed best to give the greatest possible latitude to the President regarding the rules and regulations under which these volunteers should be raised, limited, however, by certain fundamental restrictions which, in addition to those imposed by a voluntary enlistment and public sentiment, will prevent any abuse of such a force.

The volunteer force so created will have a maximum strength of about 261,000 officers and enlisted men.

The patriotism and enthusiasm that has animated the members of the Organized Militia during the many years of our national indifference on the subject of preparedness has received its just recognition in the bill as submitted and the National Guard, as it is now called, will be found to be amply provided for. The bill increases the scope of usefulness of the National Guard and binds the 48 small disconnected detachments, that now exist, into one great national force as far as constitutional limitations will permit. Pay is provided for the members of the National Guard who give a great deal of time to that work and largely increased appropriations for the National Guard are anticipated in the provisions of the bill. Under the new plans the future of the National Guard looks brighter and better than ever before in our history. Existing defects regarding the appointment of officers and the system of training have, to a large degree, been remedied. No constitutional right of the States is invaded, but certain rules are laid down, upon compliance with which is based participation in the Federal appropriations for the support of the National Guard, and in addition thereto certain heretofore unused powers of the Federal Government under the Constitution have been assumed.

An increased number of Regular Army officers for instructing the National Guard is provided for. A uniform law governing enlistments

in the guard and uniform methods of administering discipline through National Guard courts-martial are laid down in the bill.

The National Guard authorized under the proposed act will be about 280,000 officers and enlisted men in the active guard.

A National Guard Reserve is created to which men who have served can be furloughed so that their services will not be lost when they leave the active organizations of the guard. The annual period of training is somewhat increased, but is still well within the limits of time that any man can give to his country without injuring his personal interests, especially in consideration of the pay involved. The period is still too short to produce trained soldiers, but it will enable them to acquire the rudiments of military training and will be a great improvement upon existing conditions.

Mr. THOMPSON. Mr. President, the most objectionable feature of the original Army plan was the continental army proposition, which has been practically eliminated by this bill and superseded by the increase and betterment of the National Guard, which change I heartily approve. The only remaining vestige of this scheme is embraced in section 56, which I shall vote to strike out because of the enormous expense, amounting to $25,000,000 annually, with so little benefits to be received, and also because of the injury it would cause to the National Guard. If we are going to adopt the National Guard plan, which I understand to be the sentiment of the country and the Congress, we should do so in a manner to get the best results from that plan, and should at least do nothing that would in any way cripple it. The National Guard has always given a good account of itself in the past when called upon in any emergency, and will do so again should occasion ever arise to require it. There is a great difference in the National Guard of to-day and its feeling toward and relations with the Regular Army than in times past. In the past there was an estrangement and jealousy between the two institutions which have practically disappeared to-day.

The National Guard organization to-day is anxious to cooperate with the Regular Army, and the Regular Army organization is anxious to have it do so. This bill gives the National Guard the chance it has wanted for these many years. Give these brave men, who have freely and voluntarily, without compensation or consideration in the past, left their places of business and their usual avocations of life to devote time to aid their country in preparation for defense, a fair opportunity, which this bill contemplates, and no one will be ashamed of the showing the National Guard will make.

In our plan for preparation we have already doubled the number of cadets at West Point and the number of midshipmen at Annapolis, for which I am especially glad, because it embraces ideas presented in bills introduced by myself on the same subjects. We have also passed the Government armor-plate bill, which will result in great good. When any private industry becomes so arrogant and greedy as to take advantage of its own Government, it is high time that the Government should step in and take a hand in the business itself, and I am glad it did so in this important matter, so essential for preparation for defense at this time. We should also provide additional plants for the manufacture of arms and ammunition by the Government. This should not be left to the greed and avarice of private corporations, who sometimes think more of the almighty dollar than the safety and life of the Nation.

This bill also provides for military instruction in our high schools and colleges, which I regard as one of the best features of the bill, for I believe that this after all is the greatest and best source from which to secure a reserve for our Army. I am especially favorable to this feature of the bill, and to any other plan that will secure military training for our boys who may desire it during school age, and of making it attractive and advantageous to them to take such a course. There is a time in the life of nearly every young man when he craves military training; and the time to give it to him is when he wants it, and once mastered, it will always remain with him. He will not only be personally bettered by it physically and intellectually, but he will be more valuable as a citizen of the Nation should his Government ever need his services in this direction. If called from the reserve, he will be in a much better position to not only take care of himself but to defend his country. I believe from this source alone the very best military preparation for a citizenry army could be had for the least expense, the least sacrifice to the citizen, and with the least danger of the Nation developing an aggressive military spirit, which no good American wants.

While we all regret that in this day and age it has become necessary to make any additional preparation along military lines, yet with war raging on all sides, in most every other great country on earth, it is only the part of wisdom to make proper preparation for any aggressive action toward us. We can all rest assured, however, that whatever this administration does toward preparation will be for the purpose of maintaining the rights of our citizens and the honor of the Nation, and is in the interest of preserving peace. The time has about arrived in the history of this country when nothing short of invasion, or a direct attack on our citizens on land or sea, will justify war. Certainly nothing that can be recompensed in dollars and cents will ever again justify it. The dawn of a new day is near at hand, and the position of America in the pending crisis is doing more than anything else to bring it about.

President Wilson at the Fiftieth Gettysburg Anniversary used language equaling the famous classic delivered by President Lincoln years before at the same place, which is extremely appropriate for to-day:

"Do not put uniforms by. Put the harness of the present on. Lift your eyes to the great task of life yet to be conquered in the interests of righteous peace, of that prosperity which lies in the people's hearts and outlasts all wars and errors of men. Come, let us be comrades and soldiers yet to serve our fellowmen with quiet counsel, where the blare of trumpets is neither heard nor heeded, and where the things are done which make blessed the nations of the world in peace and righteousness and love."

May the day soon come when it will be demonstrated the world over, and the accepted policy of all the nations of the earth, that "The pen is mightier than the sword"; when "Spears shall be beaten into pruning hooks and swords into plowshares," and war shall be no more.

Mr. KENYON. Mr. President, I only desire to take a very few moments to place in the RECORD my reasons for my vote as to this section, which it seems to me is really the vital part of the whole bill at this time.

As I understand, there are only two ways of raising troops under the Constitution. In Article I, section 8, paragraph 12, the power is given to Congress "to raise and support armies." Second, in Article I, section 8, paragraph 15, Congress is empowered "to provide for calling forth the militia to execute the laws of the Union, suppress insurrections, and repel invasions."

The constitutional question is plainer of discernment than its solution.

Section 4 of the act of 1908 provided, among other things, that the militia "shall secure to serve either within or without the territory of the United States." The Attorney General held, February 17, 1912, with reference to this law—and part of his opinion I quote:

I think that the constitutional provision here considered not only affords no warrant for the use of the militia by the General Government, except to suppress insurrection, repel invasions, or execute the laws of the Union, but by its careful enumeration of the three occasions or purposes for which the militia may be used, it forbids such use for any other purpose.

I realize, of course, that the opinion of such an eminent lawyer is entitled to great weight. Eminent constitutional lawyers of this body have disagreed on the floor as to whether or not the National Guard, under the Constitution, can be federalized. Strong arguments can be made on both sides of that proposition, and I confess to very grave doubt on the proposition. I am unable to see, as yet, just how Congress could train the State militia, and what Congress could do if the States declined to train them. However, I am going to resolve that doubt in favor of the proposition of the federalization of the National Guard, because when trouble comes these questions melt away, and I do not believe these constitutional questions will ever arise. To assume that they will is to assume that the States and their governors will not do their duty. The patriotism of the men of the National Guard is sufficient guaranty that they will not seek to avoid service to their country because of fine-haired constitutional distinctions.

The country is asking now for some reasonable and adequate preparedness. Just what that preparedness is or just what preparedness is adequate no one is prophetic enough to know. It must embrace a strong Navy as the first line of defense; a Regular Army of such size, in cooperation with the National Guard, as may hold any invading force, if the first line of defense, the Navy, should be broken down, and hold that force until volunteers in sufficient quantity would be raised and trained to repel the invader. The invader, of course, is a somewhat mythical institution just now, but for the purpose of any argument for preparedness we must assume a possible invader.

It has always seemed to me that the stronger our Navy the less the need of a large standing Army, though I have heard argument here to the contrary. How to secure an Army that shall be efficient is the question. It is unfortunate, I think, that any conflict should exist between the Regular Army and the National Guard. The membership of both are equally patriotic. There is no particular monopoly of patriotism in this country with anyone.

I do not agree, as was expressed in debate the other day, that there is no unity of American citizenship. Our people naturally differ in their opinions, as all thinking people will, in a democracy, but any flame of war would quickly melt all elements of our population into one great citizenship, with an abundance of patriotism and a unity of devotion to our country.

In any scheme of national defense, as is shown by the provisions of this bill, the National Guard must be a great asset. I confess, as did the Senator from Illinois [Mr. LEWIS] on Saturday, something of a prejudice in favor of the National Guard. The guard consists of the best boys of our States, representing its highest development, of young men who have made sacrifices in order to keep up a military spirit. They are anxious to serve their country. They have given their time, foregone pleasures that they might have otherwise indulged in. They are, of course, compelled to make their living, and so can not give all their time to the work of drilling and training. In my judgment they are our very best asset for defense.

The militia of to-day can not be compared with the militia of olden times, which, it must be confessed, was not satisfactory in its operations.

I have heard various objections raised to the National Guard, such as, "If certain governors do not sympathize with the work it would make the guard inefficient." The incident has been cited by some of the governor of South Carolina some years ago mustering out the militia. Others suggest that if one section of our country was attacked political pressure would be brought to bear to prevent the guard from going to the relief of that section if their own section might perchance be fearful of attack; that the guard do not receive so much instruction as the Regulars and can not be so efficient.

I am familiar with the fact that the last report of the Chief of Staff states that "over 30 per cent failed to attend 24 drills," and that "it is believed to be a safe conclusion that not a single unit at its maximum strength marched a distance of 10 miles fully equipped and armed," and, of course, other objections can be cited.

The Volunteer Army plan as proposed by this section, it seems to me, does conflict with the National Guard proposition.

The Volunteer Army plan as it appears in the bill now is practically good for nothing. It creates no unit of an army.

The Senator from New York [Mr. WADSWORTH] a few days ago in his brief address seemed to puncture the proposition full of holes. It appears merely as a sort of a 30-day outing for some distinguished gentlemen who think thereby they are giving a very patriotic exhibition for the people of the country.

One may have serious doubts as to what most of them would do if they were requested to walk up and sign the muster roll.

It seems to me, considering especially the question of expense, that we are called upon to decide between the continental army and the National Guard. We can not well have both.

Aside from the Regular Army, the only organized military force of the United States is the National Guard. Many of its officers have been enthusiastic students of military affairs. The members themselves evidence a desire for military knowledge and a patriotic devotion to country highly commendable.

They have not had, it seems to me, a fair chance. The antipathy of the Regular Army toward them has been rather marked—and I say it in no spirit of criticism, because I have the greatest respect for the Regulars and for our Army officers. They have shown their splendid ability to render service to their country, as they are doing now in the deserts and the mountains of Mexico. The Regulars are made of the right stuff, and just the same stuff as the guard, but I fear some of the Army officers are determined to force the Nation into a process of conscription, which is not desired by the great body of our people. Everyone wants an effective Army. That is the main consideration.

Some of the newspapers in the last few days have said that politics are creeping into this matter, because it was claimed the members of the National Guard had great political influence. I had hoped that this question of preparedness might be discussed and settled without any thought of politics. I believe every Member of Congress absolutely eschews any thought of politics in this matter. It is to be hoped that all local interest and all political interest may be set aside, and that this leigslation at least may be for the good of the entire Nation and on a broad national basis. I shall vote as at present advised on the various amendments to this bill in favor of what seems to me giving the National Guard a fair trial. If that trial does not prove successful, then I am willing to favor different legislation. But for the years of devotion and sacrifice that the members of the National Guard have passed through they ought to have a fair chance to show what they can do along military lines.

Agreeing that our need is an effective Army, the question suggests itself, Is the Regular any more effective than the guardsman?

There are three great things in training a soldier:

First. He must be trained to discipline.

Second. He must be trained to take care of himself and his health.

Third. He must be trained to be an expert in the use of his arms.

As a comparison in this debate is being made between the efficiency of the Regular Army and the National Guard, the results of the achievements of the National Guard in rifle practice, which is the third great requirement of the trained soldier, would be interesting.

In order to develop the highest and the best systems of training in rifle practice the national board for the promotion of rifle practice provides for a national rifle match each year. In this match each State has a team of 12 shooting members from the National Guard and like teams from the United States Infantry, United States Cavalry, the Navy, and Marine Corps, and sometimes from the Naval Academy and Military Academy.

In 1910 the Iowa rifle team of the National Guard not only defeated all the National Guard teams but defeated two of the regular service teams.

In 1911 Sergt. Charles M. King, National Guardsman and blacksmith at the city of Waukon, Iowa, won the military championship of the United States, defeating many hundred competitors from the Army, the Navy, Marine Corps, the National Guard, and the experts of the powder companies, and his score was 11 points higher than his closest competitor.

The same year Lieut. Don A. Pruessner, a bank cashier at Manchester, Iowa, won the special medal for rapid fire in the national individual match.

In 1912 Col. Brookhart selected three Iowa National Guardsmen—Capt. Fred S. Hurd, of Des Moines, who has charge of the State arsenal; Capt. Don A. Pruessner, the same banker from Manchester; and Sergt. John E. Jackson, a farmer from Washington—and after giving them one week's training sent them to Winthrop, Md., to the Marine Corps rifle range, to compete for places on the American Olympic team. These Olympic matches were a part of the great international Olympic games held in Sweden that year. These men had to compete with the best riflemen of the regular service and the best experts of the powder companies. At the end of the competition Sergt. Jackson was in second place, Capt. Hurd in seventh place, and Capt. Pruessner in ninth place. Ten men were selected to make up the team, and the National Rifle Association reserved the right to select the two lowest arbitrarily and without reference to their standing in the try out. As two Iowa men had won places on the team, Capt. Pruessner being in ninth place, was ruled out, and another rifleman chosen who had not done so well. Sergt. Jackson and Capt. Hurd both went as members of the Olympic team, Sergt. Jackson shooting as a principal and Capt. Hurd being an alternate.

The American team won first place and the Olympic gold medals for the championship of the world.

In the individual matches Sergt. Jackson won third place at the longest range of 600 meters and Capt. Hurd won first place in the short range of 50 meters and the Olympic gold medal.

In 1912 Canada challenged the United States in the famous Palma match. This was for the long-range military championship of the world.

Col. Brookhart was selected as team captain of the American team, and held the tryout at Seagirt, N. J., almost in the dooryard of Woodrow Wilson's home, who was then governor of that State. All branches of the regular service, except the Navy, competed for places on this team, but the places were won by National Guardsmen. The only member from the Regular Army was Capt. Mumma, whom Col. Brookhart selected as adjutant. This team went to Ottawa, Canada, defeated the Canadian team for the world's championship and made the world's record score, which is to-day the world's record score in that match.

In 1913 the Iowa rifle team defeated the United States Infantry in the national match, and the Oregon rifle team defeated two of the regular service teams.

In 1915 Sergt. Jackson, of Iowa, won the long-range championship of the United States in the famous Wimbleton cup match.

At the conclusion of the national matches each year there is held a final rifle match called "The United service match." This match is made up of a team of 16 from the National Guard of the United States, 16 from the Regular Army, and 16 from the Marine Corps and the same from the Navy, if present.

In 1915 Col. Brookhart was coach of the National Guard team and Sergt. Durchdenwald, of Waterloo, Iowa, and Capt. Hurd were shooting members of the team. The National Guard team defeated the Army and the Marine Corps, which were the only other competing teams, and to-day hold the medals as the winner of the united service match. This match consisted of 10 shots rapid fire at 200 yards, 10 shots slow fire at 600 yards, and 10 shots slow fire at 1,000 yards for each member of the team.

Col. Brookhart has the official record of all the above achievements, in so far as they relate to the State of Iowa, and there is not another record in the world which contains so many high triumphs in national and international events in military rifle practice.

In addition to winning in these high places the Iowa National Guard has developed two dozen officers who are the equal of any officers in the world for efficiency in rifle practice.

Many of the other States also have a like record, and all of the States are showing very great development.

I cite this because in the course of the debate there has been a great deal said about the lack of efficiency on the part of the National Guard. I cite it as showing that at least as to one of the great requisitions of the soldier the National Guard have held their own and even surpassed their own in contests with the Regular Army.

The amendment adopted a few days ago proposed by my colleague [Mr. CUMMINS] was not dependent upon any of the constitutional propositions discussed, and the general argument has gone on more along the general line of the federalization of the Guard. Under that amendment the General Staff will have 92 officers and the National Guard 5. Certainly those who are advocates of the Regular Army and opposed to the Guard ought to have no fear of the advice of these officers of the National Guard being persuasive on the General Staff unless their views from a military standpoint are absolutely sound.

Section 56 will mean heavy expense. It is nothing but an experiment. I believe it will be useless if the Guard is recruited to its full strength, and its adoption in itself may make more difficult the recruiting of the Guard to its full capacity. It seems to me that we are compelled to choose between the Guard and section 56, and being compelled to do that, as I view it, I shall vote in favor of the Guard by voting to strike out section 56.

Mr. SIMMONS. Mr. President, I do not propose to detain the Senate more than 5 or 10 minutes at the outside. Aware, as I am, of the anxiety of the Senate to reach a vote on this section and the amendments, I would not trespass upon the time of the Senate to any extent at this late hour in the discussion but for the fact that when in favor of a general scheme of legislation proposed by a committee of this body, as I am in favor of the idea of enlarged military preparedness provided in this bill, it is with reluctance that I antagonize the details and methods by which it is sought to work out that general purpose. For these reasons, Mr. President, I feel constrained to take a few minutes to state the reasons which impel me to vote against the Volunteer Army provided in the Senate committee bill as a part of the general scheme of preparedness provided in that measure.

The Volunteer Army provided in the fifty-sixth section of the bill—by whatever name it may be called, whether a volunteer army or a continental army—is in essence and in substance nothing more than a national militia. The National Guard, as it exists under the present law, by whatever name it may be called, is in essence and in substance nothing except the old State militia a little more closely connected with the Federal Treasury. The amendment of the committee federalizes the present National Guard by enlarging the powers of the Federal Government over it and makes it in essence a national militia, notwithstanding its State connections.

So, Mr. President, we have an amendment here which will in effect establish two national militia systems, one absolutely controlled by the Federal Government in all its details, in all its functions, and in all its operations, and the other under certain conditions and circumstances equally subject to the control of the Federal Government.

So far as the method of training, so far as the course of discipline under which the training is to take place, so far as the hours of training during the year, and so far as the general control of the Government are concerned, if this federalizing process is constitutional, there will be substantially little difference between the national militia called a volunteer army and this national militia called the National Guard.

I repeat, so far as the methods of discipline, of training, and of governmental control is concerned, exercised in the one instance directly by the Federal Government and in the other instance indirectly by the Federal Government, I do not see very much difference between the two systems. I do not believe that the proposed volunteer army, compared with the federalized National Guard, as a result of discipline and training and control, directly in one case and indirectly in the other case, will in all probability result in giving us any better trained and better prepared soldiers than we will get under the method and system provided for the same purpose in the bill with regard to the National Guard.

Both the old militia system and the present National Guard system have been severely criticized and the charge of inefficiency has been emphasized. I do not deny that these charges with respect to the past are more or less justified, but I do not think this altogether the fault of the system. It was due as much, and probably more, to the indifference and inadequate assistance both from the State and National Governments. Certain it is when the old State militia, which had been but little encouraged, if not neglected, by the States, was merged into the National Guard the assistance given by the Federal Government in connection with training, equipping, arming, and so forth, this force was immediately felt and seen in the greater interest and improved conditions in many, if not all, the States of the Union. I know that in my State there has been a distinct revival of interest in the National Guard since this change, and I firmly believe that with the additional encouragement which will come from the assistance provided in this measure we will see that the National Guard will take on new life; that it will become immensely more attractive than it is now; and that the results in a short time will be the establishment in every State of the Union of a National Guard that will turn out trained and efficient soldiers.

Mr. President, I doubt, when you analyze like conditions with reference to the proposed Volunteer Army, whether you will find them any more conducive, if they are as conducive, to better training, equipment, and preparation for active and effective service than those provided in the bill with reference to the National Guard.

Mr. President, with this help from the Federal Government, with this supervision of the Federal Government, with the aid in various ways that will be given the Guard by this bill in developing and to strengthen their efficiency for war purposes, I have no doubt that the highest expectations of those who have seen fit to present this as a proper method for supplementing our Regular Army will be realized.

The House ignored the scheme for a continental army so much pressed by the War College and the Regular Army. Instead, they federalized, I think in an effective and a constitutional way, the present National Guard and substituted it for the proposed continental army.

That, Mr. President, made a logical and a consistent measure. It provided for a Regular Army, and it provided for an effective method of increasing its strength in times of stress and of need. It did not inject into our military system two different systems operating in practically the same field, trained and developed along practically parallel lines and subject to the same general control of the Federal Government.

The Senate committee, departing from the precedent set by the House, provided not only for the federalization of the National Guard but for a national militia, thus setting up two distinct and independent forces, one wholly controlled by the Government and the other practically controlled by the Government, working upon lines of rivalry, almost certain to produce demoralization of the one force or the other, resulting in the end, in all probability, in one swallowing up the other or in the hopeless disorganization of both.

Mr. President, because I believe the National Guard can be made an effective system, because I do not desire two systems maintained and developed on practically the same lines, I am constrained, although I regret to disagree with the committee, to vote for the elimination from the bill of section 56.

Mr. President, if the National Guard is to be federalized, I do not think we need the volunteer army; and if we are to have the volunteer army, I do not see any great reason for federalizing the National Guard. These are both volunteer forces. They can be maintained only at a large public expenditure, and I think it is better for us to work out the problem of a reserve force exclusively through the one or the other rather than through both combined.

Mr. SHERMAN. Mr. President, very reluctantly I take the time at this stage of the discussion to submit some views which I have on the motion proposing to strike out section 56 of the bill. I shall not address myself to the part of the measure which requires military knowledge, for the very evident reason that I myself have none. So far as the State militia, the Volunteer

Army, or the Regular Army connect themselves with congressional action, I desire to submit some observations which I consider pertinent.

It is a matter of regret always when it becomes necessary in a legislative body to read or even to quote from musty law books. A large part of this discussion, however, Mr. President, has been devoted to the power which Congress has over the State militia. That necessarily connects itself with adjudicated cases on this branch of congressional power. One of the decisions has been referred to a great many times in Fifth Wheaton, as I remember it, of Houston against Moore. I do not desire to quote from this opinion more than to say that the decision is now nearly 100 years old. The opinion was filed in 1820. There is a separate opinion, scarcely to be dignified with the designation of a dissenting view of Justice Story. The majority opinion, in which five of seven justices seemed to concur, prepared by Mr. Justice Johnson, presents the view of the court. Justice Story takes the precaution to observe in his separate opinion that at least one other of his brethren concurred with him in his expressed views.

This decision—calling it a majority decision—is more remarkable for what it does not decide than for what it does. The point in issue does not require the part of the opinion alluded to with considerable satisfaction by those who question congressional power over the State militia. The part of the opinion often quoted in this discussion in the last two weeks says:

> Indeed, extensive as their power over the militia is, the United States are obviously intended to be made in some measure dependent upon the States for the aid of this species of force. For, if the States will not officer or train their men, there is no power given to Congress to supply the deficiency.

This part of the decision, Mr. President, is a dictum. It is not required in the decision of the case presented to the court. That part of the reasoning or that portion of the opinion could be left out and still every valid argument drawn from the majority opinion would be as powerful as if it were there. The point to be decided in this case, Mr. President, was whether an act of the State of Pennsylvania passed in 1814 authorized the conviction of a member of the Pennsylvania State militia who refused to respond to the call of the President for volunteers in the War of 1812. Having failed to respond he was prosecuted under a State statute. The question was, How far had Congress in the act of 1795 covered the question of the failure of a private in the ranks of the State militia to answer a call for the public defense?

In deciding this question Justice Johnson expressly refers to the fact that Congress has not covered fully the domain it might have covered. He refers especially to the fact that the State of Pennsylvania was intending to supplement defective action of Congress in the act of 1795. This portion of the opinion I desire to embody in the CONGRESSIONAL RECORD. It says:

> With regard to militiamen ordered into service there exists a peculiar propriety in leaving them subject to the coercive regulations of both Governments. The safety of each is so worked up with that of all the States, and the honor and peculiar safety of a particular State may so often be dependent upon the alacrity with which her citizens repair to the field that the most serious mortifications and evils might result from refusing the right of lending the strength of the State authority to quicken their obedience to the calls of the United States.
>
> * * * * * * *
>
> The Legislature of Pennsylvania—

Continuing reading from the opinion and omitting part of another branch of the discussion of the opinion—

> The Legislature of Pennsylvania, influenced, no doubt, by views similar to those in which I have presented the subject, saw the defects in the means of coercing her citizens into the service; and unwilling to bear the imputation of lukewarmness in the common cause, legislated on the occasion, just so far as the laws of the United States were defective or not brought into operation.

So the point to be decided in this case, Mr. President, was not the validity or the extent of the power of Congress over the State militia, but a question of whether an act of Pennsylvania was valid in going into territory already covered or not covered by the act of Congress. It is to that particular territory to which this portion of the opinion refers. The act of 1795 not having provided for the punishment, it seems, in a like case, the court very properly alludes to the fact that a State legislature may supplement a defective act of Congress where it leaves the matter unoccupied by the exercise of power constitutionally vested in Congress. The State may act concurrently with Congress until the latter does act. The power of Congress becomes exclusive only when exercised in such instances. So upon this ground the decision rested.

The part referring to the helplessness of the General Government in the event that the States refused to support militia, refused to appoint officers, refused to make appropriations, refused to furnish headquarters, refused to train, is not drawn necessarily into the issues decided in this case. This part of the opinion is more powerful in deciding what this opinion does decide and the weight it has in this discussion than anything else. In the concluding paragraph of Justice Johnson's opinion he says:

> In this case it will be observed that there is no point whatever decided, except that the fine was constitutionally imposed upon the plaintiff in error. The course of reasoning by which the judges have reached this conclusion is various, coinciding in but one thing, viz, that there is no error in the judgment of the State court of Pennsylvania.

That was the point decided—not whether a State might be so negligent of the public defense as to refuse to provide a State militia or to appoint officers or to provide for the training of the troops at proper intervals.

There has been a good deal said here with reference to the fathers of the Republic. I have no special guardianship over the fathers of the Republic, Mr. President, nor have I any special means of information about what they intended, save the records that they preserved. Happily, those records, as records went in those days before the art of shorthanding had been perfected, are, for a long-hand transcript, fairly complete.

Who was in the convention which framed the organic instrument from which the Senate derives its powers in connection with the other House? During the greater part of the time, Mr. President, there were representatives or delegates from 11 States in the Union, among which the State of New Jersey, which the present occupant of the chair [Mr. MARTINE] has the honor to represent in part, was continuously present by its delegates. The States of North Carolina and South Carolina were present, through names that are historically high in the annals of legislation and statesmanship. New York was represented. Virginia at that time was the great mother among the States—greater in her population and in her resources, but infinitely greater, Mr. President, in the personality and the power of her men. Edmund Randolph was present in that convention at Philadelphia. He sat on the committee that framed vital portions of this charter. At the time he was in the convention he was also the governor of the Commonwealth of Virginia. James Madison was another. George Washington was the chairman. From Pennsylvania came the philosophic Franklin, who was 82 years of age at the time he shed upon that convention the beneficence of his knowledge. Why, if the bill that proposes to retire the Federal judges had been applied to Franklin, he would have been out of the public service 12 years before that time. There sat with him, as his colleague, James Wilson, one of the early lawyers whose reputation has survived more than a hundred years, and who was a most eminent chief justice of the Supreme Court of Pennsylvania. These, with the other States, including Massachusetts, Maryland, Delaware, Connecticut, New Hampshire—altogether, 12 out of the 13 States—were present when this document was framed.

I do not care to quote extensively from what they said or what they did. I shall at the proper time ask to have printed in the CONGRESSIONAL RECORD such parts as I think material, in order to save time and preserve what I consider to be material in the investigation of this question. It is sufficient to say that we are no better and no worse than those men who sat in the convention to frame our Constitution. They differed from each other; they had radically divergent views on this identical question. They had only recently emerged from the Revolution. There was no General Government save that—and it is only by mere courtesy that we call it "national"—which the Articles of Confederation gave to them. So the States met, and their purpose was, if possible, to obtain a more stable form of organization. I think they succeeded.

When it came to the provision in question, clause 16, section 8, of Article I, and other provisions of Article I of the Constitution affecting the incidental powers of the General Government over the militia, the same controversy arose. Mr. President, some of the delegates from the States refused to surrender any power over the State militia. They said it was a matter of purely domestic concern; that if they surrendered the power sought to be taken by others, those of the Alexander Hamilton school, it would result in a military dictatorship; that it would destroy the State militia and would give such power to the General Government as ultimately would be tyrannical in character.

There was the other school, the Hamilton school, from whose articles a great deal has been quoted and placed in the CONGRESSIONAL RECORD. I do not care to say very much except to allude to this difference. Out of it came the sixteenth clause of section 8, which is in controversy, and which has very often been quoted in the course of this discussion. I want to read, Mr. President, very briefly from certain of the arguments

offered by these gentlemen. I read first from the observation of Charles Pinckney, of South Carolina. He says:

> The exclusive right of establishing regulations for the government of the militia of the United States ought certainly to be vested in the Federal councils.

That was one of the early names by which Congress was known in the discussions—

> As standing armies are contrary to the constitutions of most of the States, and the nature of our Government, the only immediate aid and support that we can look up to in case of necessity is the militia. As the several States form one government, united for their common benefit and security, they are to be considered as a nation, their militia therefore should be as far as possible national, and uniformity in discipline and regulation should pervade the whole, otherwise, when the militia of several States are required to act together, it will be difficult to combine their operations from the confusion a difference of discipline and military habits will produce.

From the opinion of Luther Martin, who was a delegate from the State of Maryland, I read the following. He was opposed to it, both in the convention and in his own State when the question of ratification was considered, and before the State Legislature of Maryland he presented a lengthy argument against ratification. When he referred to the power contained in clause 16 of section 8, Article I, he uses the following language:

> By organizing the militia Congress have taken the whole power from the State governments; and by neglecting to do it and increasing the standing army, their power will increase by those very means that will be adapted and urged as an ease to the people.

Alexander Hamilton later presented his views, in which he criticized the grant of power as not being sufficient. He thought Congress ought to have more power over the State militia than they were given finally in the perfected draft of the Constitution. In some things I suppose those of the party with which I am affiliated regard Alexander Hamilton as a patron saint. As to some of them I uniformly possess about the same opinion, but as to a good many of them, Mr. President, I totally dissent. Hamilton wished to build too strong a central Government. I doubt very much, even in his most extravagant moments, in his greatest flights of imagination as to the power he sought for the Federal Government, he ever conceived it in its present form, in its development brought down by a process of liberal construction, until we have it to-day with all of its expressed powers, carrying with them a mass of incidental or implied powers greater than the original conception of the granted power, which sometimes go to the extreme verge, not only of legislative, but judiciary construction.

So these gentlemen debated it pro and con, and after many proposals were submitted, they committed all of the propositions to a committee of 11, being one delegate from each of the 11 States constantly represented in this convention. I wish to insert in the CONGRESSIONAL RECORD, Mr. President, the membership of this committee, made up of John Langdon, of New Hampshire; Rufus King, of Massachusetts; Roger Sherman, of Connecticut; William Livingston, of New Jersey; James McHenry, of Maryland; George Clymer, of Pennsylvania; John Dickinson, of Delaware; George Mason, of Virginia; Hugh Williamson, of North Carolina; Abraham Baldwin, of Georgia; and Charles Cotesworth Pinckney, of South Carolina.

Going through all of the records, comprising many hundreds of pages, Mr. President, all of the propositions submitted as to the power proposed to be lodged in Congress over the State militia were at last referred to this committee whose names I have just given. They considered all of the questions, and finally, in August, 1787, they reported the present form, found in clause 16, with the change of simply the word "Congress" substituted for the words "United States." So practically this committee presented exactly the same form that vests in Congress the power we are now discussing.

These 11 men, after hearing all the reasons that could be submitted, presented it in this form as a unanimous report. They gave it the strength of their influence on the floor of the convention. Arguments were made, some of which I have cited, for or against the power proposed to be vested in Congress. What was the purpose? Was it to leave it as it was under the Articles of Confederation? Hardly. It was to strengthen and not to weaken; it was to build up and not to destroy; it was for the purpose of creating a power in Congress that would be adequate to the remedy desired for the evils that were admitted, and which grew out of the old Articles of Confederation.

What is clause 16, section 8, of Article I of the Constitution? Is it an incidental power? Is it something to be found by construction? Hardly. It is a grant of power; it is an affirmative act; it is the creation of a power where before there was no power. It gave to Congress, which was created under the same charter, a power it would not have had and that did not before exist under the Continental Congress. It is no construed power; it is an express power; it is an enumerated power; and it was put there for the purpose of curing an admitted evil which existed under the Articles of Confederation.

There is an old rule of construction that is just as powerful to-day as it was when our ancestors evolved it. As exception strengthens in things not excepted, so enumeration would weaken in things not enumerated. The power excepted out of the general power is to the States, reserving to them the appointment of officers and the training of the militia. Those powers being excepted, it strengthens in Congress every other part of the granted power not so reserved. We have enumerated powers here; all of them specific. Constitutional sections—in fact, the entire document—are always to be considered, even as statutes are, so as to advance the remedy and not to delay it or destroy it. This was a remedial section, as so many of the powers lodged in Congress are found to be upon a close examination. They were made to remedy existing evils. Many thought that all that had been gained in the Revolution would be lost in the anarchy and quarrels and jealousies among the States. There was no power to maintain an army in time of peace, save as the 13 States maintained their National Guard or State militia. So this power was taken from the States by their voluntary action and vested, under clause 16, section 8, Article I, in the National Government. It is an affirmative grant of power; it is to be construed for the purposes of advancing the remedy and curing the evil complained of.

There have been no authoritative decisions for 100 years on the direct question, and the last decision rendered only contains consolation for the critics of this power when they refer to a dictum in the opinion, not required to be decided by the judge in connection with the question presented.

Since that time, Mr. President, you and I may think that courts have gone a long way in extending the construed powers or incidental ones to granted powers. Consider for a moment what has been builded up under the interstate-commerce clause. Consider what has been builded up around the power of Congress over post offices and post roads. Consider the whole drift of judicial construction of the powers of Congress when it was designed to cover a national problem and required plenary powers in Congress to remove the evils which existed under the old Articles of Confederation.

To my mind, these lights drawn from the history of an earlier day are illuminating. Courts have constant recourse to these records. Lawyers constantly cite them in their briefs. The historian makes note of them, and it is eminently fit that occasionally we statesmen have something to do with them ourselves. For that reason I am burdening the RECORD with these citations.

Now, it being a granted power, we can use the language, we can use the application of the power to the case in point, to the remedy designed to be advanced, in deciding what it means as applied to section 56.

I recognize, in my limited knowledge of affairs military, but one Federal Army. There never will be but one Federal Army that is capable of rendering service in the public defense, and that is the Regular Army of the United States. The volunteer army contemplated in the original section 56, without regard to any of the amendments or substitutes that have been offered, is necessarily but an organization that is here to-day and gone to-morrow. It possesses neither form nor substance. It has no headquarters. It has nothing to recommend it in permanence. It possesses nothing except a name; and Shakespeare, many years ago, spoke of the advisability of things having both a local habitation and a name.

The Federal volunteer army provided for in section 56 has a name, but it never will have a local habitation on the earth, except in war, and it can not reach the point of danger then in advance of the militia of the several States.

It is said, and truthfully said, that the regular organization of the National Guard has never as a unit volunteered in times past. Some of them went in the Spanish-American War. They volunteered; the whole Guard went. It was not a lack of patriotism—and of this I speak from memory. I think we had nine regiments in Illinois at that time in the National Guard. They all volunteered. This is as near as I ever got to the front. We made up a number of provisional regiments. In the Rock Island district, where I lived at that time, across from the Iowa shore, we had a provisional regiment, properly officered. I think there were 11 law students of mine in it—young men who had read law in my office. We took the drill under a Regular Army officer. I was a private, thank the Lord. I remained so during all the chances of service that occurred. It was at one time proposed to elect me as an officer, and that is the only time I ever refused. I said: "No; you will never make a military hero out of me. I have not the knowledge and have not had the preliminary drill, so I will go as a private."

Mr. President, whatever they may have done in the War of 1812 I do not know. I read about it. Possibly some of them would not go across the river; they did not go over on the Canadian side, because they stood on their constitutional right to remain inside of the United States. That may be true; but look at the evidence of the adjutant general of one State, his record during the Spanish-American War, the record of the whole regiment in the congressional district where he lived—an infantry regiment that wanted to volunteer. They were drawn up—and you will find it in the hearings of the committee in the evidence of Adjt. Gen. Dickson, of Illinois. He asked all who wished to volunteer for the service to step three paces forward, and every solitary one of them advanced the necessary three paces except three of them, two of whom had valid excuses; and one of them, Gen. Dickson says, was a coward pure and simple, who never even went back home.

They might have done that way in the War of 1812, but that was more than 100 years ago. The allegiance to the General Government was not strong then. A man's loyalty was to the State. Let us settle this problem now in the Senate by conditions that exist now, and not the conditions that existed 100 years ago.

One hundred years ago there was no loyalty to the General Government like the spirit that now prevails. It proceeded to the point where the War between the States occurred. In 1861 it had to be decided by the sword who was right; and all the way from the disastrous field of Balls Bluff, only a few miles from this Capitol, when Baker fell, until the closing of the drama on the clay fields of Appomattox, we fought out the question by the sword, not by the argument of lawyers or by the opinion of statesmen, of whether the Union was strong enough to command the allegiance of a sufficient number of soldiers to write by force what the fathers had peaceably written in the convention at Philadelphia, and the Union was sustained.

But before that, reflect what preparation had occurred, what development of public sentiment, the many appeals that had fallen upon the ears of Senators and Representatives in the old Chamber where Webster and Calhoun debated the respective merits of the powers of the States. There was the day when threats were made; when the Virginia and Kentucky resolutions were passed; when even Massachusetts laid herself under suspicion in the Hartford convention; when Ohio, my native State, opposed an act of Congress and an opinion of the courts, and forcibly resisted the writ of injunction served upon a State officer who was trying to collect taxes on a branch bank of the United States. It grew, Mr. President—and I refer to these gradual developments only to show that it was not entirely a matter of section—until a higher loyalty to the Union came in the fullness of time. All of the questioning of the powers of the Federal Government did not come from the Southern States that seceded in 1861. They succeeded in bringing it to a head; but there were other States, just as loyal in later years as the Southern States are now, that gravely questioned the powers of the General Government to coerce a State.

So by argument, by legislation, by judicial decision, by campaign after campaign, by the power of the sword, Mr. President, we have arrived in 1916 at a point where there is a stronger, higher allegiance, a greater loyalty to the laws of the country and to the Union than there ever has been before. So when we talk of the dictum in the Fifth Wheaton case, upon which an argument has been builded, let us apply it to the existing facts.

Why, let me suppose a case. There is no reason why this Government should continue to exist if we indulge in speculative fears. It is in the power of the people, without a single revolutionary act, to cause the Government to cease its operations. Suppose—it is rather a violent assumption—but suppose everybody should cease to become a candidate. Suppose people should cease to go to the polls. A voluntary, unanswerable, unpreventable destruction of the Federal Government could occur by the negligence or the lack of public spirit of the people of the States. Suppose everybody should cease to vote. Out of the fifteen or sixteen million people that vote, out of many hundreds or thousands of candidates, suppose all of them refused to permit their names to be voted upon. There is no way under existing laws by which you can compel the people to vote or compel anybody to run for office, outside of a New England township.

I suppose up in Vermont and New Hampshire the old rule is in force yet to fine a town officer who will not accept an office. We adopted that rule in my State, and it is the only one I know of where you have to pay a $3 fine if you will not accept the office of town clerk or town supervisor, for instance—the old New England township provides the only compulsory public service. But on that slender foundation, Mr. President, this Republic could never endure if the people lost their desire for public service. If they ceased to vote, that would be the end. This Chamber would be empty. The dust would gather upon the desks and the voices of distinguished Senators would no longer echo for the enlightenment of the galleries.

But, happily, there is some such thing as public spirit. It is the only spirit upon which a republican form of government can be successfully builded. So I shall have no fears in regard to the dictum of this opinion cited by the Senator from Idaho [Mr. BORAH], that if the State authorities will not appoint officers in the militia and the militia will not train, we are at an end and the Government helpless. I would rather be in the State militia than run for office in my part of the country any time. It is a much easier task. A good many would rather be shot at than be subjected to indiscriminate attack by everybody and criticized by newspapers the way they criticize us out in the western country, with a pleasing abandon you do not know anything about. It is an argument ad hominem all the time—no general characterizations prevail.

Let us see, Mr. President, how these unpatriotic people act—those of no public spirit, those who will haggle and delay or stop, and if I may be permitted in this august presence to use a colloquial phrase, suppose somebody or some States should throw a monkey wrench in the governmental works, what would happen? Suppose all the States should neglect or refuse to provide a militia and so no officers and no training could call into operation the power of the States; nothing for Congress to regulate. There would not be anything then for us to act on. It is the same figment of a strong imagination which, if true, would destroy by inaction the actual operation of every department of the Government. We could not even draw our salaries, which is too horrible to contemplate. It is worse than hostilities by a foreign foe.

But I looked over the list that was presented by the Senator from Maryland [Mr. LEE] of the States having militia, and it is a goodly list. It is a very material table to be in the CONGRESSIONAL RECORD. Even little Arizona—small in her population but strong in her representation in this body—has between four and five hundred militia. Delaware, not large territorily, has 430 members in its State militia. Call the roll of the 48 States of the Union, Mr. President, and not a solitary State has abdicated its function. Not one of them has refused to support a State militia. How many are there in the aggregate? Why, New York has—how many is it, Senator—16,000 or 17,000, is it not?

Mr. WADSWORTH. Just under 18,000.

Mr. SHERMAN. Yes, sir; and in 1915 I note the appropriations made by the Legislature at Albany. The State of New York appropriated, in 1915, $1,768,000 to be paid in a direct tax by the property owners of the State of New York to maintain a State militia. Many of the States like Pennsylvania, Ohio, and others of the larger States appropriate from $400,000 to $700,000 annually.

While I am on that branch of the controversy, about these States that it is feared might be void of patriotism, that would no longer elect militia officers, that would let their National Guard fall into decay, I want to show, by figures given me by the department, the State appropriations for two years preceding 1915.

The total appropriations for the Organized Militia made by the legislatures of the several States up to December 31, 1913, including such appropriations as are provided here in the District of Columbia and in Hawaii, aggregate $5,834,000, and for the year ending December 31, 1914, they aggregate $7,729,000.

Here are the appropriations from the United States Treasury under the late act on that subject. In 1915 there was paid out by the United States to the 48 States and the District of Columbia and Hawaii a total of $3,858,000. Now, we are under no immediate apprehensions of bankruptcy, not even under a Democratic administration, by reason of this payment, Mr. President—$3,800,000 in 1915, as against the figures read of the aggregate appropriations made by State legislatures in 1913 and 1914. Again, in 1914 there was paid out of the Treasury $4,288,000. The marked effect of this support by the Government promises what the future will be. We have only begun. The organizing, arming, and training under general Army regulations have shown now what can be done.

I have remarked a bit ago, and I now reach it in regular order, that the Volunteer Army contemplated in section 56 must stay somewhere. We can not mobilize it on an instant's notice. We must have armories; we must have the usual equipment that goes along with a mobile force. Where will we get it in the Volunteer Army? If we get it anywhere, it must come from the Regular Army of the United States. How much time is contemplated to be used? Thirty days, say. How much money is it estimated will be necessary? Nearly $25,000,000

under section 56—$24,944,000—for a volunteer army. Less than $4,000,000 was paid in one year—1915—to all the State militias from the Treasury under congressional appropriations, and a little over $4,000,000 the preceding year of 1914. How much, under this bill, is estimated to be paid to the National Guard organization the first year? Forty-six million dollars; to the Regular Army $126,000,000, and the Volunteer Army under section 56. So it has occurred to me, Mr. President, that Congress takes no risk in depending upon the loyalty and the public spirit of the States to maintain their National Guard; this is more so when the support proposed is extended. It is now an organized body, with headquarters, equipment, and training.

I have listened patiently for two weeks to the discussion of the question of the extent of the power of Congress in organizing, arming, and disciplining the National Guard with the reserved power to the States of the appointment of officers and training of such forces. This reservation is in the nature of an exception to a granted power. The exception is that the States reserve to themselves the power of appointment of the officers and the training of the militia. This, of itself, if it were not an exception or a reservation out of a general power, might be enlarged into a serious disability. However, here are the general powers that go along with the grant:

First, to organize. What does "organize" mean? I have heard several explanations of it, but I do not think any of them have gone far enough. To organize is to furnish with organs, to give such coherent units, agents, or officers as may act with each other as an organic whole for the production of given results. The company, the battalion, the regiment, the brigade, the division, are all included in the term "organize."

Suppose, Mr. President, some act of the general assembly of a State should create different units and provide a different method of organization with different officers? They can do so with the State militia within their own domestic affairs; but no one for a moment thinks that an act of the General Assembly of New Hampshire, for instance, would change the organizing power vested in an act of Congress made for that purpose. No State would attempt it. In other words, the organization provided by Congress is authoritative.

The next is to "arm." What is that? It is to furnish with the necessary weapons of offense or defense. Congress, in other words, acting through the proper officers in detail or department, can require the militia, when Federalized, to use all of the arms provided for the Regular Army in every branch of the service. All of it is included in the term "arming."

The next thing is "disciplining." Mr. President, you and I went to school at a time when they did not spare the rod and spoil the child. What did "disciplining" mean to us? When the rules of a board of education, or in the old-fashioned district school out on the farm the board of directors, said that the power to discipline would be vested in the teacher, I know what kind of discipline I got. It embraced something equal to a court-martial; it embraced the usual methods of discipline by which the necessary results were produced.

It is said here that all these provisions for court-martial written in this bill are invalid. A letter written from Col. Young is in the CONGRESSIONAL RECORD. Col. Young saw long service in the Illinois National Guard. He has a good record as a soldier. I would have some question—just as he would have if I undertook to instruct him on military tactics—about his constitutional views embraced in his letter. If the Senator from Connecticut [Mr. BRANDEGEE] had not placed in the CONGRESSIONAL RECORD his letter, I should have done so at the proper time. I had a copy, and notwithstanding I do not agree with some of his conclusions on matters of constitutional law, I should have been glad to have given the matter publicity in the CONGRESSIONAL RECORD for whatever it might add to clear up this situation. But the disciplining is included in the grant of all three powers—organizing, arming, and disciplining.

"Disciplining" has a fixed meaning. I have spoken my mother tongue for a long time, but it happens that every once in a while I refer to a dictionary, either to refresh my memory or to furnish me with the necessary information. I think I looked at all the dictionaries that are extant on the subject, and here is a collection of them:

> Systematic training or subjection to authority, or its result; to train to obedience, subjection, or effectiveness; to drill; to educate; to punish; to chastise.

I believe the powers of organizing, arming, and disciplining the militia are so plenary that this bill lawfully federalizes most effectively the National Guard of the States. The appointment of officers will not disable those powers. The training is under the discipline prescribed by Congress. This bill defines the discipline in detail under which the State-appointed officers must train the militia. It provides for that uniformity of which the fathers spoke in Philadelphia when they wrote, debated, and labored for us and our descendants.

The spirit of the officers and men of the National Guard has been too much ignored. If the country needed it, such is their spirit that entire organizations would, with hardly a break in the ranks, volunteer.

Federal appropriations are granted on conditions. I do not doubt the validity of any terms imposed. I believe every State would respond, and the doubts and misgivings and fears of unseemly jealousies between the States and the Government would melt in thin air on actual application.

I think courts-martial under an act of Congress, under this section provided, are valid. I have no question but that if they imposed a penalty upon anyone derelict in the service it would be sustained by proper authority.

Some criticism has been made, and in some instances properly made, of acts of State militia in holding courts-martial in places where the civil law had not been suspended, where martial law had been improperly declared, where the courts still exercised their civil and criminal jurisdiction, and where the ordinary processes of those courts were still capable of being served upon offenders.

The act in individual cases in States of the National Guard ought not to condemn, and I do not believe will condemn upon a fair consideration, the National Guard of the several States. What will you do, Mr. President, in time of disorder? As I have heretofore suggested, I have been through several riots in my time. I have marks on my person from missiles as a living memorial, and while I was not in military life, I have had all the substantial results that the most ambitious officer could have desired. What will you do? It is easy enough to criticize public officials. It is easy enough to criticize government and the acts of military officers, but when you see public disorder, when you see life taken, property by the millions being burned, when you see a riotous mob in possession, civil authority suspended and neither person nor property longer safe in the community, what will you do? Not for an instant will any live governor in public authority, although unhappily, as has been done in some cases, call upon the General Government for assistance and confess the governmental imbecility of the State government. He exercises his lawful power to restore order. I know of no Southern State or New England State that has ever conferred its inability to suppress its domestic trouble. It is reserved for certain Western States to have achieved that unenviable distinction.

So, in order to avoid these difficulties, governors and military officers, acting under their authority, have undertaken to preserve order and safeguard life. They have in most instances suppressed the disorder. Sometimes they may have gone beyond the limits of military procedure and interfered with civil jurisdiction. That of itself is no cause to condemn the military of the States. They are acting under great stress, without opportunity to weigh nicely what shall be done, with the primary purpose in view of carrying into execution the laws of the State and of maintaining order within the troubled area. Remember the doubts that destroy action are:

> Some craven scruple
> Of thinking too precisely on the event.

I shall omit much of what might be said. This grant of power, it is said in some of the arguments I have listened to in the last few weeks, is limited by the second and tenth amendments to the Constitution. It is well known that the second and tenth amendments wer added almost simultaneously with the adoption of the Constitution itself. It was known they would be adopted. They are universally regarded a bill of rights. They take away no express grant of power. The utmost that can be said is that they restrain the extension of power by too liberal a construction. They are merely precautionary.

In the controversy between the States of Colorado and Kansas the Federal Supreme Court referred expressly to these amendments, and referred to them for the purpose of limiting the powers of the General Government to the grant of powers found in the Constitution itself, using them as an argument against the importation into that document of powers not theretofore found, saying that only such implied powers can be had as necessarily grow out of a granted power. That is all these two amendments do. They are merely precautionary signals, added by way of amendment to guide the court and to enlighten those charged with the duty of legislation.

I take up another matter which has been alluded to many times, sometimes on the floor of the Senate, about the extreme cost of our military and naval forces. Privates are paid the first year $15 a month, and thereafter, as successive years of

service are added, their pay may reach $25 a month, if my memory serves me correctly. What are some of the wages paid in other countries? Herein you will find that all things—equipment, commissary, arms, and the like—go in proportion, and this is a large part of the reason for our large cost of the maintenance of our Army and Navy. I turn to those without reading, and as I shall conclude shortly, I will ask later on that the whole table of the rates paid privates and officers in the various principal powers of the world be incorporated in the RECORD.

If section 56 is retained, the volunteer army will sap the strength of the State militia. The two can not exist side by side in the same State and both answer the purpose hoped. Let the Government keep the Regular Army as its department.

The training in educational institutions both for the ranks and for officers will answer the purposes desired and add to the reserves. I feel a regret in the necessity that leads me to support the amendment offered by the Senator from Maryland. The chairman of the committee [Mr. CHAMBERLAIN] has met his great duties with equally great patience and ability that commend him to all, and striking out the section will to some degree set aside that much of his and the committee's labors. But I believe it ought to be done.

One thing I would like greatly, Mr. President, to allude to before I conclude what I have to say on section 56 and the motion of the Senator from Maryland to strike it out: Every one is in favor of preparation. I have the result of a poll taken by the Illinois Bankers' Association, which I will at the proper time incorporate, which shows among the poll taken an almost unanimous sentiment among that portion of the 6,000,000 people that inhabit Illinois for adequate preparation. The press has agitated it; the military experts have favored it, not only now, since it has become popular, but during the time it was somewhat unpopular. So all of us in the ardor of preparation are likely not so carefully to watch the details of preparation.

If I had my way about it—and I am aware that this is exceedingly unpopular, and especially in the western country—I would provide for universal military training. I do not believe, if war continues in the world as it has in the last two years, the United States will ever be able to protect herself or survive against any first-class military power unless every able-bodied citizen between certain designated ages in this country takes it upon himself—or has it imposed upon him, rather, by law—to receive the necessary military training. In the absence of such an act of Congress I believe it our duty to direct the public mind to the imperious necessity of universal military training.

I wish to read, and with great satisfaction, these words from a military authority—not one who prepares military treatises, but one who by deeds is greater than he is even by words:

> To raise such an army as is proposed, we shall without doubt be compelled to adopt some system of universal military training. It would be wise to place such a law on the statute books, even though it should not be considered necessary to put it into force at this time. The law could then be invoked in time of war without further legislation, and much valuable time could be saved.

These extracts are from an address of Gen. John J. Pershing made February 17, 1916, before the Woman's Club of El Paso, Tex., on the subject of national preparedness. That, however, is not undertaken by this bill. Unless future Hague conventions shall be able to combine enough of the principal powers of the world, and by an armament in the nature of an international police be able to preserve peace among civilized nations and enforce penalties upon an outlaw nation attacking any that may be within the league; unless that shall be done ultimately I am willing to say that the American people must inevitably come to a system of universal military training, and the sooner the better. Let us not deceive ourselves on this momentous issue.

We may talk all we please about volunteers; at last there is but one great directing head in time of war. It is the Regular Army of the United States. Everything must at last be subordinate to it when we face an enemy. Everything in the way of either offense or defense must finally be in the hands of the Regular Army, and for my part I care nothing for the volunteer forces provided in section 56. The reserve corps for officers provided in other sections and the training sought to be provided by the amendment offered by the Senator from North Dakota [Mr. MCCUMBER] will, in my judgment, be of more actual value than the entire volunteer army contemplated in section 56, though it were multiplied many fold.

If we are to have an Army on a peace footing, Mr. President, I do not want it as in section 56. Section 56 authorizes the President to call out nearly 300,000 men in time of peace. I myself would much rather vote this afternoon for a bill for universal military training than to vote to put in the hands of any President in time of peace these vast powers of conscription.

Not only these matters but other things are coming along apace, Mr. President. I voted against the bill to establish an armor plant. The junior Senator from Pennsylvania [Mr. OLIVER] was unjustly criticized, I think. If anybody can find I own any steel stock I will gladly acknowledge it, only I want it delivered to me so I can use it as a collateral in the event my credit is exhausted.

I voted against the establishment of such a plant because I could see in it no element of preparation. I saw in it rather a hindrance in the way of adequate preparation. If the Government does not move quicker and more economically than a host of other governmental undertakings, Washington would be in ashes and the Great Lakes would be bearing the forces of a hostile power long before we got a ton of armor plate out of a Government plant. Yet that is not the only thing.

It is proposed that the Government shall establish a nitrate plant. It is no use to fight unless you have explosives, and nitrates are important as an element in the manufactures for that purpose. To make nitrates requires cheap power; and eighteen or nineteen million dollars are to come along in due course of time for the development of water power.

It is proposed to take nitrogen out of the atmosphere; and it is the only time I have ever known the agitation of the atmosphere to get any definite results. We do that a great deal ourselves in this Chamber, but it results only in appropriations most of the time. So it is a kindred measure after all, because it requires money.

The shipping bill will again thrust itself with its unwelcome presence upon this Chamber, and I do not know whether we will be physically able to withstand it this time or not. If it is started before the respective national conventions, it imposes upon the gentlemen who are endeavoring to beat it in that way a task beyond which all others pale into insignificance. But it will appear in due time. What is it based on? More preparation. Our merchant ships are tied up by the war, and we must have a Government ship line going into the freight business with forty or fifty million dollars as an initial expenditure.

I would rather vote a decent sort of a subsidy. I am aware again that that is another unpopular measure in the West and Northwest, but I would rather vote directly for fair subsidies than to vote for a single shipping bill that embarks the Government in the freight and passenger business. That is a part, though, of preparation. The Secretary of the Treasury last summer or fall made a somewhat extended address at various points in the United States, in which he showed that we needed a vastly increased tonnage in order that we might utilize it in time of war for transport and freight service, for colliers, and the like, and everything that would be needed as an auxiliary part of the Navy.

Then we come to the development of water power as an incident to the nitrate development. When they get through with that we will be told the soldiers wear khaki suits, that they wear divers kind of footgear, that they eat a variety of hardtack and Army rations. Why not, then, start a bakeshop? Why not start a cotton mill and a tailoring establishment? Why not start a chemical factory to get sulphate of quinine and all the medicine? What is the use of paying 300 per cent profit to wholesale druggists when the Government can start some kind of a plant of its own for everything from pills—I am quoting that. I heard a socialist say that on the curbstone one time on Jackson Boulevard. He said, "Everything from pills to battleships ought to be made by the people as a grand cooperative commonwealth." The Cavalry use saddles and harness, so start a tanyard and a cattle ranch to prepare and produce hides and a factory for manufacturing leather.

Well, we are getting to it here on preparedness, and that leads me to remark it is reaching a point now where there is more "pork" in preparedness than there is effectiveness or economy. There is more "pork" now in sight here than there is public defense; it makes a river and harbor bill look like a poor relation already; and we will be extremely lucky if we get out of the furnace without the smell of fire on our garments.

Is there a lobby prowling about? I do not know. No lobby has ever bothered me in the last 25 years. I talk to everybody. I may have talked to a million of them and I did not know it. I am a guileless, unsophisticated gentleman, when anybody comes to me in broad daylight, and I may have been in communion with them daily here and did not know it. But I hear a good many reports, and so in conclusion I intend to read the following resolution into my remarks and then ask for its unanimous consideration in order that we may find whether or not, like Cæsar's wife, we are above suspicion. I think we are, but

I should like to have a certificate of that kind, in view of the numerous rumors floating about the corridors, in order that I may carry it back to my beloved constituents. This is a Senate resolution. I shall ask unanimous consent to consider. If any Senator objects, I am aware it is out of order, but I shall place the matter before the Senate, as well as the responsibility, for the objection to its consideration. It can not delay final action on this bill and will result in clearing some of its provisions from aspersions which it is beyond the power of the individual Senator to answer or repel.

Whereas charges and countercharges have been made on the floor of the Senate, in correspondence and statements incorporated in the CONGRESSIONAL RECORD concerning legislation pending on water-power development and the manufacture of fixed nitrogen from atmospheric sources, and it is alleged that a lobby has been and is at present engaged in promoting or opposing pending measures in Congress affecting such matters; and

Whereas it is alleged, among other things, that a lobby is now actively engaged in endeavoring to secure an appropriation by Congress for the development of a site or sites owned by private interests, and it further appearing that under House Committee Document No. 20, of the Sixty-third Congress, the Army engineers have recommended an expenditure of public funds for the purpose of loaning $18,700,000 to a private corporation now the owner of a water-power site which it is desired to develop, it is claimed; and

Whereas certain private interests engaged in the manufacture of explosives have made proposals to the Government of the United States on matters affecting the public defense which have been the subject of criticism; and

Whereas the various interests concerned, both public and private, as well as certain departments of the Government, have been charged with seeking to affect pending legislation, and such matters have reached that stage that it is material to such pending legislation as well as to the Senate to know if any improper influences have been brought to bear or efforts made to unduly promote or defeat any pending bills: Therefore be it

Resolved, That the Committee on Manufactures be, and is hereby, authorized and directed to investigate the entire question of the activity of any alleged lobby or private interests of any kind, as well as of any department which has concerned itself with such legislation, if it has, concerning the development of water power and the manufacture of fixed nitrogen from any source; and that said committee is hereby given power to procure any witness or witnesses and documentary evidence it deems proper, and may issue proper process therefor under the hand of the chairman of said committee, and the expenses of the investigation shall be audited and allowed by the Senate Committee on Contingent Expenses.

If there is anything, Mr. President, in much that has been said, and some of it in the CONGRESSIONAL RECORD, the Senate owes to itself, to the departments of the Government, and to the public an investigation of those charges. I believe it to be the easiest and most expeditious way to promote the final steps of preparedness for the public defense. These matters cast their sinister shadow over the Senate. There may be merit in these water-power propositions; I do not know; but I know when such charges are made that many sound and safe and economic questions have been beaten because Members preferred so to vote as to take no chances.

If this investigation is made it will be by the Committee on Manufactures. The chairman of the committee has had experience in such investigations. I have confidence in his integrity and ability and in the individual members of that committee that it would be done adequately and promptly and fully.

To that end, Mr. President, without taking further time, I will offer the resolution before I take my seat and ask unanimous consent for its consideration in the interest of preparedness, first asking that there be incorporated in the RECORD the rate paid to privates and officers in the various countries, which I will designate as Exhibit A, and to insert in the CONGRESSIONAL RECORD the whole of the very illuminating article on the public defense, by Gen. John J. Pershing, heretofore referred to, which I will mark Exhibit B.

The PRESIDING OFFICER (Mr. MARTINE of New Jersey in the chair). Without objection, that course will be pursued.

Mr. SHERMAN. I also ask that the pages which I will designate, and which I will not take the time to read, be printed in the CONGRESSIONAL RECORD from the record of the Constitutional Convention of 1787, with the argument of the delegates in that convention, with Exhibit C, showing the poll made by the Illinois State Bankers' Association.

The PRESIDING OFFICER. If there be no objection, that course will be pursued.

The matter referred to is as follows:

[From Charles Pinckney, of South Carolina.]

The exclusive right of establishing regulations for the Government of the militia of the United States ought certainly to be vested in the Federal councils. As standing armies are contrary to the constitutions of most of the States and the nature of our Government, the only immediate aid and support that we can look up to in case of necessity is the militia. As the several States form one Government, united for their common benefit and security, they are to be considered as a Nation. Their militia therefore should be as far as possible national. A uniformity in discipline and regulations should pervade the whole, otherwise, when the militia of several States are required to act together, it will be difficult to combine their operations from the confusion a difference of discipline and military habits will produce. Independent of our being obliged to rely on the militia as a security against foreign invasions or domestic convulsions, they are in fact the only adequate force the Union possesses, if any should be requisite, to coerce a refractory or negligent member and to carry the ordinances and decrees of Congress into execution. This, as well as the cases I have alluded to, will sometimes make it proper to order the militia of one State into another. At present the United States possesses no power of directing the militia, and must depend upon the States to carry their recommendations upon this subject into execution. While this dependence exists, like all their other reliances upon the States for measures they are not obliged to adopt, the Federal views and designs must ever be delayed and disappointed. To place, therefore, a necessary and constitutional power of defense and coercion in the hands of the Federal authority and to render our militia uniform and national, I am decidedly in opinion they should have the exclusive right of establishing regulations for their government and discipline which the States should be bound to comply with, as well as with their requisitions for any number of militia whose march into another State the public safety or benefit should require.

In every confederacy of States, formed for their general benefit and security, there ought to be a power to oblige the parties to furnish their respective quotas without the possibility of neglect or evasion. There is no such clause in the present confederation, and it is therefore without this indispensable security. Experience justifies me in asserting that we may detail as minutely as we can the duties of the States, but unless they are assured that these duties will be required and enforced the details will be regarded as nugatory. No Government has more severely felt the want of a coercive power than the United States; for want of it the principles of the confederation have been neglected with impunity in the hour of the most pressing necessity and at the imminent hazard of its existence, nor are we to expect they will be more attentive in future. Unless there is a compelling principle in the confederacy, there must be an injustice in its tendency; it will expose an unequal proportion of the strength and resources of some of the States to the hazard of war in defense of the rest. The first principles of justice direct that this danger should be provided against. Many of the States have certainly shown a disposition to evade a performance of their Federal duties and throw the burden of government upon their neighbors. It is against this shameful evasion in the delinquent, this forced assumption in the more attentive, I wish to provide, and they ought to be guarded against by every means in our power. Unless this power of coercion is infused and exercised when necessary, the States will most assuredly neglect their duties. The consequence is either a dissolution of the Union or an unreasonable sacrifice by those who are disposed to support and maintain it.

[From Luther Martin, of Maryland.]

Other and more certain engines of power are supplied by the standing army, unlimited as to number or its duration. In addition to this, Government has the entire command of the militia, and may call the whole militia of any State into action, a power which it was vainly urged ought never to exceed a certain proportion. By organizing the militia Congress have taken the whole power from the State governments; and by neglecting to do it and increasing the standing army their power will increase by those very means that will be adopted and urged as an ease to the people.

For this extraordinary provision, by which the militia, the only defense and protection which the State can have for the security of their rights against arbitrary encroachments of the General Government is taken entirely out of the power of their respective States and placed under the power of Congress, it was speciously assigned as a reason that the General Government would cause the militia to be better regulated and better disciplined than the State governments, and that it would be proper for the whole militia of the Union to have a uniformity in their arms and exercise. To this it was answered that the reason, however specious, was not just; that it would be absurd; the militia of the western settlements, who were exposed to an Indian enemy, should either be confined to the same arms or exercise as the militia of the Eastern or Middle States; that the same penalties which would be sufficient to enforce an obedience to militia laws in some States would be totally disregarded in others; that, leaving the power to the several States, they would respectively best know the situation and circumstances of their citizens and the regulations that would be necessary and sufficient to effect a well-regulated militia in each; that we were satisfied the militia had heretofore been as well disciplined as if they had been under the regulations of Congress, and that the States would now have an additional motive to keep their militia in proper order and fit for service, as it would be the only chance to preserve their existence against a General Government armed with powers sufficient to destroy them.

Madison's note of June 18, 1787, gives Hamilton's address on the proposition of Federal Government reported by Mr. Patterson and Mr. Randolph of New Jersey and Virginia, respectively. Hamilton said:

That no amendment of the confederation, leaving the States in possession of their sovereignty could possibly answer the purpose. * * * The States sent us here to provide for the exigencies of the Union. To rely on and propose any plan not adequate to these exigencies, merely because it was not clearly within our powers, would be to sacrifice the means to the end. * * * A certain portion of military force is absolutely necessary in large communities. Massachusetts is now feeling this necessity and making provision for it. * * * A doubt has been raised whether Congress at present has a right to keep ships or troops in time of peace.

Madison says Hamilton leans to the negative on the power of Congress to keep ships or troops in time of peace. Mr. Hamilton then presented his plan of government, the eleventh paragraph of which is—

No State shall have any forces, land or naval, and the militia of all the States to be under the sole and exclusive direction of the United States, the officers of which to be appointed and commissioned by them. (Farrand, Vol. I, Records of the Federal Convention, pp. 283, 285, 287, 291, 293.)

The Wilson plan, found among his papers and in his handwriting, was referred to the committee of detail and contained the following:

The Legislature of the United States shall possess the exclusive right of establishing the government and discipline of the militia and of ordering the militia of any State to any place within the United States. (Farrand, Vol. II, p. 159.)

Another draft of the Wilson papers in his handwriting, with changes in Rutledge's handwriting, was also preserved. It contained the following proposal:

To regulate the discipline of the militia of the several States, to subdue a rebellion in any State on the application of its legislature, to make war, to raise armies, to build and equip fleets, to make laws for calling forth the aid of the militia in order to execute the laws of the Union, to enforce treaties, to suppress insurrections and repel invasions.

The foregoing were among the powers proposed to vest in "the Legislature of the United States." (Farrand, Vol. II, pp. 167–8.)

On August 18, 1787, certain additional powers, proposed to be invested in the Legislature of the United States, were submitted to the convention and referred to the committee of eleven. On this day it was proposed and carried in the affirmative to vest in Congress the power—

To make rules for the government and the regulation of the land and naval forces.

It was proposed at the same time to annex to the foregoing power the following proviso:

Provided, That in time of peace the Army shall not consist of more than ——— thousand men.

Which was lost. It was further proposed to—

Establish an uniformity of exercise and arms for the militia and rules for their government when called into service under the authority of the United States; and to establish and regulate a militia in any State where its legislature shall neglect to do so.

Just preceding this it was proposed—

to make laws for regulating and disciplining the militia of the several States, reserving to the several States the appointment of their militia officers.

On motion the above were referred to the Committee of Eleven. (Journal of the Convention, Vol. II, Farrand, p. 323.)

Madison's notes of same date (Aug. 18, 1787) show that Mr. Gerry in the discussion of the clause "to raise and support armies" said that—

there was no check here against standing armies in time of peace. The existing Congress is so constructed (under the Articles of Confederation) that it can not of itself maintain an army. This would not be the case under the new system The people were jealous on this head, and great opposition to the plan would spring from such an omission. He suspected that preparations of force were now making against it. (He seemed to allude to the activity of the governor of New York at this crisis in disciplining the militia of that State.) He thought an army dangerous in time of peace and could never consent to a power to keep up an indefinite number. He proposed that there should not be kept up in time of peace more than ——— thousand troops. His idea was that the blank should be filled with two or three thousand.

He further noted the proposal to—

make rules for the government and regulation of land and naval forces—

added from the existing Articles of Confederation.

Luther Martin and Elbridge Gerry now moved:

Provided, That in time of peace the Army shall not consist of more than ——— thousand men.

Gen. Pinckney asked whether no troops were ever to be raised until an attack should be made on us.

Mr. Gerry said:

If there be no restriction, a few States may establish a military government.

Mr. Williamson reminded him of Mr. Mason's motion for limiting the appropriation of revenue as the best guard in this case.

Mr. Langdon saw no room for Mr. Gerry's distrust of the representatives of the people.

Mr. Dayton remarked that—

preparations for war are generally made in peace and a standing force of some sort may for aught we know become unavoidable. He should object to no restrictions consistent with these ideas.

Mr. Mason moved as an additional power—

to make laws for the regulation and discipline of the militia of the several States, reserving to the States the appointment of the officers.

He considered uniformity as necessary in the regulation of the militia throughout the Union.

Gen. Pinckney mentioned a case during the war in which a dissimilarity in the militia of the several States had produced the most serious mischief. Uniformity was essential. The States would never keep up a proper discipline of their militia.

Mr. Ellsworth was for going as far in submitting the militia to the General Government as might be necessary, but thought the motion of Mr. Mason went too far. He moved—

that the militia should have the same arms and exercise and be under rules established by the General Government when in actual service of the United States, and when States neglect to provide regulations for militia it should be regulated and established by the Legislature of the United States. The whole authority over the militia ought by no means to be taken away from the States whose consequence would pine away to nothing after such a sacrifice to power. He thought the general authority could not sufficiently pervade the Union for such a purpose, nor could it accommodate itself to the local genius of the people. It must be vain to ask the States to give the militia out of their hands.

Mr. Dickinson said:

We are come now to a most important matter, that of the sword. His opinion was that the States never would nor ought to give up all authority over the militia. He proposed to restrain the general power to one-fourth part at a time, which by rotation would discipline the whole militia.

Mr. Butler urged—

the necessity of submitting the whole militia to the general authority which had the care of the general defense.

Mr. Mason said—

had suggested the idea of a select militia. He was led to think that would be, in fact, as much as the General Government could advantageously be charged with. He was afraid of creating insuperable objections to the plan. He withdrew his original motion, and moved a power "to make laws for regulating and disciplining the militia, not exceeding one-tenth part in any year, and reserving the appointment of officers of the States."

Gen. Pinckney renewed Mr. Mason's original motion. For a part to be under the General Government and a part under the State governments would be an incurable evil. He saw no room for such distrust of the General Government.

Mr. Langdon seconds Gen. Pinckney's renewal. He saw no more reason to be afraid of the General Government than of the State governments. He was more apprehensive of the confusion of the different authorities on this subject than of either.

Mr. Madison thought the regulation of the militia naturally appertaining to the authority charged with the public defense. It did not seem in its nature to be divisible between two distinct authorities. If the State would trust the General Government with a power over the public treasure, they would from the same consideration of necessity grant it the direction of the public force. Those who had a full view of the public situation would from a sense of danger guard against it; the States would not be separately impressed with the general situation nor have the due confidence in the concurrent exertions of each other.

Mr. Ellsworth considered the idea of a select militia as impracticable; and if it were not it would be followed by a ruinous declension of the great body of the militia. The States will never submit to the same militia laws. Three or four shillings as a penalty will enforce obedience better in New England than 40 lashes in some other places.

Gen. Pinckney thought the power such a one as could not be abused, and that the States would see the necessity of surrendering it. He had, however, but a scanty faith in militia. There must be also a real military force. This alone can effectually answer the purpose. The United States had been making an experiment without it, and we see the consequence in their rapid approaches toward anarchy.

Mr. Sherman took notice that the States might want their militia for defense against invasions and insurrections and for enforcing obedience to their laws. They will not give up this point. In giving up that of taxation, they retain a concurrent power of raising money for their own use.

Mr. Gerry thought this the last point remaining to be surrendered. If it be agreed to by the convention, the plan will have as black a mark as was set on Cain. He had no such confidence in the General Government as some gentlemen possessed, and believed it would be found that the States have not.

Col. Mason thought there was great weight in the remarks of Mr. Sherman, and moved an exception to his motion "of such part of the militia as might be required by the States for their own use."

Mr. Read doubted the propriety of leaving the appointment of the militia officers in the States. In some States they are elected by the legislatures; in others, by the people themselves. He thought at least an appointment by the State executives ought to be insisted on.

All of which propositions were referred to the committee.

On August 21, 1787, Mr. Livingston, from the committee of eleven, to whom was referred, among other things, a proposi-

tion respecting the militia entered on the Journal of the Convention August 21, 1787, reported the following:

The Legislature of the United States shall have power * * * to make laws for organizing, arming, and disciplining the militia, and for governing such part of them as may be employed in the service of the United States, reserving to the States, respectively, the appointment of the officers and the authority of training the militia according to the discipline prescribed by the United States.

The foregoing is the exact language of clause 16, section 8, Article I of the Constitution of the United States, except the words "United States" are changed to "Congress." The Journal of the Convention, Mr. Madison's notes, contains the same record. (Farrand, Vol. II, pp. 325–326.)

On August 23, 1787, the second clause of the report of the committee of eleven which concerned the militia was considered. It was moved to recommit the second clause, which lost; and the first part of the second clause referring to the organizing, arming, and disciplining of the Army and governing such part of them as may be employed in the service of the United States passed in the affirmative—9 ayes; 2 noes.

The part reserving to the States, respectively, the appointment of the officers under rank of general officers was voted down—ayes 2, noes 9.

On the question of the part of the report "reserving to the States, respectively, the appointment of the officers" it passed in the affirmative, and authority of the training of the militia according to the discipline described by the United States passed in the affirmative—ayes 7, noes 4. (Vol. II, Farrand, pp. 380–381.)

Madison's notes, covering the same period (Aug. 23, 1787), contained the debate by the Members on the second clause of the committee report. Mr. Sherman moved to strike out the last sentence, "and authority of training," and so forth. He thought it unnecessary. The States will have this authority, of course, if not given up. (Vol. II, Farrand, pp. 385–388.)

Above motion was lost by a vote of 3 ayes and 8 noes (p. 388).

Mason in Madison notes is reported as saying that—

Being sensible that an absolute prohibition of standing armies in time of peace might be unsafe, and wishing at the same time to insert something pointing out and guarding against the danger of them, moved to preface Article I, section 8, to provide for organizing, arming, and disciplining the militia, etc., with the words, "and that the liberties of the people may be better secured against the danger of standing armies in time of peace."

Mr. Morris opposed the motion "as setting a dishonorable mark of distinction on the military class of citizens."

Mr. Madison favored it. "Armies in time of peace," he said, "are allowed on all hands to be an evil." It was rejected by 2 ayes and 9 noes. (See Debates Virginia Convention, Robertson, 2d ed., 1805, p. 236.)

EXHIBIT A.

LIBRARY OF CONGRESS,
Washington, March 16, 1916.

SIR: Referring to your telephone request of this morning, I am inclosing herewith a copy of a memorandum, which has been furnished our Legislative Reference Division by the Army War College. This seems to give the information which you desire concerning the rate of pay in the various armies of the world.

Very respectfully,

J. L. FARNUM, *Secretary.*
(For the Librarian.)

Hon. L. Y. SHERMAN,
Room 339, Senate Office Building.

The following tables are furnished through the courtesy of the Army War College:

Pay of the various foreign armies.

Grade and yearly pay in the Austrian Army.

Field marshal	$4,800.00
General	3,360.00
Lieutenant general	2,803.00
Major general	2,280.00
Colonel	1,440.00
Lieutenant colonel	1,200.00 to 1,080.00
Major	802.00
Captain	600.00 to 480.00
First lieutenant	408.00
Lieutenant	336.00

DAILY PAY.

Sergeant	.14
Corporal	.06
Private (1-year volunteers)	.024

Grade and yearly pay in the Belgian Army.

Lieutenant general	$3,700.00
Major general	2,540.00
Colonel	1,900.00
Lieutenant colonel	1,420.00
Major	1,260.00
Captain (first class)	920.00
Captain (second class)	740.00
Lieutenant (first class)	580.00
Lieutenant (second class)	500.00

DAILY PAY.

Adjutant	$0.54
Sergeant major	$0.32 to .43
Sergeant	.28
Corporal	.06 to .20
Privates (first class)	.02 to .07
Privates (second class)	.02 to .06

Grade and annual pay in the Brazilian Army.

(Currency: Inconvertible paper; exchange rate figured at $0.333.)

Marshal	$11,200
Major general	9,400
Brigadier general	7,600
Colonel	5,800
Lieutenant colonel	4,800
Major	3,800
Captain	3,000
First lieutenant	2,300
Second lieutenant	1,800
Sergeant major	480
First sergeant	360
Second sergeant	288
Third sergeant	216
Corporal	144
Private	72

Grade and yearly pay in the Chilean Army.

General of division	$4,000
General of brigade	3,400
Colonels	2,800
Lieutenant colonels	2,400
Majors	2,000
Captains (after 6 years)	1,800
Captains (less than 4 years)	1,400
First lieutenants (after 5 years)	1,200
First lieutenants (less than 5 years)	1,000
Second lieutenants (after 2 years)	720
Second lieutenants (under 2 years)	600
First sergeants	480
5 first sergeants	360
Second sergeants	256
Corporals, first class	216
Corporals, second class	180
Soldiers	145
Conscripts	72

Rate of exchange figured at $0.20.

EXHIBIT B.

CHINA HAS GREATER PROPORTION OF TRAINED MEN THAN THE UNITED STATES—GEN. PERSHING, IN ADDRESS ON PREPAREDNESS BEFORE WOMAN'S CLUB, SOUNDS WARNING—LARGER FLEET OF WARSHIPS NEEDED TO GUARD COAST CITIES OF THIS COUNTRY—TO PREVENT LANDING OF HOSTILE EXPEDITIONS BY ONE OF GREAT POWERS MOBILE FORCE OF 500,000 WELL-EQUIPPED MEN ARE NEEDED; RISKS OF WAR ARE TEN TIMES AS HAZARDOUS AS FIRE; SHOULD PREPARE NOW.

[By Brig. Gen. John J. Pershing.]

"To be prepared for war is the most effectual means of preserving peace. A free people ought not only to be armed, but disciplined; to which end a uniform and well-digested plan is requisite." This was the advice George Washington gave his countrymen in discussing the welfare of the Nation in his first annual address to Congress.

No man in our country has ever been in a better position to appreciate the consequences of unpreparedness than George Washington. During those critical years of war the lack of previous military preparedness had been borne in upon him with impressive force. He had learned that high-sounding phrases and rhetorical declarations of patriotism, no matter how sincerely uttered, could not take the place of well-drilled efficiency, and that the untrained enthusiasm of youth was a poor substitute for military knowledge and military discipline.

SHOULD BE PREPARED.

The Revolution began in real earnest after Colonies had made clear their purpose through the Declaration of Independence. The time for decisive action had an effective military force, but unfortunately the people did not realize that an aggregation of civilians with arms could not hold their own against disciplined soldiers under efficient officers. At the very beginning Washington was forced by the British on Long Island to retire to New York, and the accounts of the movement as given in our histories lead to the conclusion that it was a masterly retreat, but in a letter to the President of Congress Washington describes the results in the following words:

"Our situation is truly distressing. The check our detachment sustained on the 27th ultimo has dispirited too great a proportion of our troops and filled their minds with apprehension and despair. The militia, instead of calling forth their utmost efforts to a brave and manly opposition in order to repair our losses are dismayed, intractable, and impatient to return. Great numbers of them have gone off—in some instances almost by whole regiments, by half ones, and by companies at a time."

FLED IN CONFUSION.

A few days later when the British, in pursuit, crossed over to New York, the Continental Army took fright and, scarcely firing a shot, fled in the utmost confusion. There is little doubt that Washington fully appreciated the difficulties that confronted him, for he at once most earnestly presented to the Congress the weakness of hastily organized militia as follows:

"To place any dependence upon militia is assuredly resting upon a broken staff. Men just dragged from the tender scenes of domestic life, unaccustomed to the din of arms, totally unacquainted with every kind of military skill (which is followed by a want of confidence in themselves when opposed by troops regularly trained, disciplined and appointed, superior in knowledge, and superior in arms), are timid and ready to fly from their own shadows.

"Besides, the sudden change in their manner of living, particularly in their lodging, brings on sickness in many, impatience in all, and such an unconquerable desire of returning to their respective homes that it not only produces shameful and scandalous desertions among themselves but infuses the like spirit in others."

Washington was called upon to combat all the evils of this temporizing system. The uninstructed men sent by the colonies were often worse than none. The terms of enlistment were so short that they barely learned their duties before they left the service, to be replaced by other green recruits. These generally came unequipped, demanding food, clothing, arms, and shelter. Most of the officers obtained their appointments through family or political connections and incompetency was the rule. The Colonies organized new regiments of raw troops and sent them to the front, instead of filling up the seasoned and experienced regiments already in the field.

Both the Continental Congress and the several Colonies finally resorted to the vicious system of offering bounties. This only added to the difficulties, as many men became professional bounty jumpers, and desertion largely increased. Everything was a makeshift and, notwithstanding Washington's continuous appeals for a regular army organization, the Colonies drifted along from bad to worse during the entire period of the Revolution. It was only upon the most urgent appeals by the leaders of the Revolution that the Colonies could be induced to furnish anything like their respective quotas of men. So difficult was it to retain them with the colors that from first to last 400,000 colonials were borne on the rolls. In the year 1776 we had the maximum of 89,000, but this dwindled to the minimum of 29,000 in 1791. Yet at no period of the war did Washington have at his disposal an army of over 16,500 men.

The belief is general that it was the patriotic devotion of the minute men and the untrained farmers of Lexington and Concord who won the war for independence, but the fact is that if it had not been for divided public sentiment in England itself and the sluggishness with which the British conducted the war, together with the timely assistance of the French under La Fayette, the United States might still be a British colony. I can but quote here what Gen. Light Horse Harry Lee said years after the war in writing of the action of one of our regiments at Camden:

"While I record with delight facts which maintain our native and national courage, I feel a horror lest demagogues who flourish in a representative system of government shall avail themselves of the occasional testimony to produce a great result. Convinced as I am that a government is the murderer of its citizens which sends them to the field uninformed and untaught where they meet men of the same age and strength mechanized by education and discipline for battle, I can not withhold my denunciation of its wickedness and folly."

FALSE TEACHING OF HISTORY.

The false teachings of American history are largely responsible for our state of unpreparedness to-day. Should we be forced into war now your boys would go out into the field against very great odds. An Englishman recently wrote to one of our general officers and, speaking of the loss of his son on the western frontier of Europe, said:

"We have lost our only son, but neither he nor his fellows had a sporting chance—they had never had military training."

In spite of the lessons of the Revolution, the War of 1812, 20 years later, found the country still unprepared for defense. The same inexcusable and criminal neglect to anticipate the future made it necessary again to enlist unprepared citizens, mostly boys as usual, and send them into the field under ignorant officers and without proper organization—a method which produced the same needless waste of human life. Under this foolish system we were compelled to put into the field during this war the relatively exorbitant number of 34,000 officers and 493,000 men, while the greatest number of British regulars on the American Continent at any time was less than 17,000.

DISASTERS OF WAR.

Among the disasters of this war was Hull's surrender at Detroit of 1,800 men to a British force of 1,320 without firing a shot. Then Hampton, with a body of 5,000 men moving on Montreal, was put to flight by a force of 400 Canadians and Indians. Gen. Wilkinson, com-

manding 8,000 men, also moving on Montreal, was whipped by 800 British regulars at Crystlers Fields. Another force of 4,000 Kentucky Militia under Gen. Hopkins, marching toward Indian villages on the Wabash and Illinois Rivers, got scared at a prairie fire and, deserting their officers, ignonimously retraced their steps and fled to their homes.

I shall not further recall the humiliating tales of defeat incident to this war. Except a small victory on the Thames, the action at Lundys Lane, where the regular troops covered themselves with eternal glory, and Jackson's victory at New Orleans, won after peace had been declared, the military operations of this war, including the surrender of the Capital City to the British, after the headlong flight of our troops from Bladensburg, were absolutely disgraceful. Nearly all the blunders committed were repetitions in an aggravated form of the blunders of the Revolution, and like them had their origin either in mistakes or omissions of military legislation.

You would think that a sensible people after all our experience would realize the necessity for adequate preparation, but at the beginning of the Civil War we were still adhering to the fatuous policy of previous wars. We pursued the same course; first calling out the militia, then volunteers, then granting bounties with all their demoralizing effect of wholesale desertion and bounty jumping; and we must record the same result—total failure of the volunteer system and tremendous loss of life and property. Fortunately each side in this war was about equally unprepared and neither had the advantage. To a much greater degree than in former wars, reliance in the North upon the voluntary enlistment prevented rational organization, made operations uncertain, ignored the universal obligations of the individual for military service, and encouraged the shirk and the skulker.

These costly experiences have proved that it is impossible, without tremendous losses, to build up a national army by depending upon State governments for cooperation. In the State militia of to-day each of the 48 States has its own policy, which changes almost with every new governor. The officers are usually elected by the votes of the members of the organization, and it is unreasonable to suppose that these troops will be fit for war until they have had several months of hard training in the field under the direction of competent officers. There can not be any reliance upon any plan for immediate preparedness which does not place the details of organization and training of the forces under the control of the Central Government.

MANY CHANGES IN ART OF WAR.

There have been marked changes in the art of war during the last 10 years, perhaps greater than during any century since the invention of gunpowder. While the same method of transporting and supplying armies were used in both Napoleon's and Caesar's time, the adoption of explosive weapons wrought important changes in handling troops on the battle field. Most of the modern improvements in the arts and sciences have been utilized in the art of war, but of all these the perfection of the interior-combustion engine has probably had a greater influence upon military art than any other modern invention. The full effect of these inventions on the methods of conducting warfare have not yet been fully realized by the world at large.

Marvelously quick transportation of troops, the ability to provide food and supplies for inconceivable numbers of fighting men, rapid communication of intelligence, power to fly through the air and scout the enemy, traveling under water 5,000 miles from base to sink his ships, throwing projectiles of unprecedented weight to smash his forts, transporting and treating thousands of wounded who would otherwise perish but for the use of the automobile—these are some of the more striking improvements in modern methods of conducting warfare, improvements which make military preparation before the beginning of war absolutely essential.

As to the size of armies in the field, the actual numbers of armed fighting men in the present war surpass by far the fabled hordes of history and are indeed almost inconceivable. Of the entire population of Europe 78 per cent are now engaged in this conflict; and considering the population of the whole world, 56 per cent are now at war. The almost unbelievable number of 13,000,000 men are actually under arms in Europe to-day; over 2,000,000 have been killed; nearly 4,000,000 have been wounded, not counting the slightly wounded who have returned to the front; and about 2,225,000 are prisoners of war.

We can not grasp these figures, but in comparison with our own Civil War, which was one of the great wars of modern times, this war may be said to be more than ten times as great. The number of men we had under arms at any one time did not exceed 1,300,000, including both North and South, and about 200,000 were killed on both sides during the war.

SUPPLYING FIGHTING FORCE.

The question of supplying these gigantic armies has been a difficult one, and the success with which it has been accomplished has been most astonishing. These results alone speak volumes of the necessity for thorough preliminary organization of the Nation's resources. The work of supply has been made possible by the combined use of railroads and large numbers of motor trucks moving over military highways. The motor truck under these conditions has proved itself to be about forty times as efficient as the four-mule team.

Another surprising thing in this war is the very extended theater of operations. Along the western war frontier in Europe the present stage consists of two lines of infantry, 300 miles long from the ocean on the west to the mountains on the east, occupying deep trenches, in many instances only a few hundred yards apart. These trenches are often made of concrete, and are supplemented by many supporting trenches and lines of approach and ample underground habitations. This line is held by approximately 2,500,000 men on either side, or nearly 5 men to every yard, and would reach from New York City to Lake Ontario. The other 8,000,000 men are battling in other sections; but if they too manned trenches similar to those in the west, the whole line would reach from Washington to Mobile.

UNITED STATES UNPREPARED.

Let us compare the number of trained soldiers permanently maintained by the different great nations. Germany has over 5,000,000; France, 5,000,000; Russia, 5,000,000; Austria-Hungary, 4,320,000; Italy, 2,600,000; Japan, 2,212,000; England, 695,000; United States, about 100,000, including Coast Artillery, but there is to-day a mobile force of only 30,000 men of the Regular Army within the limits of the United States. Adding to these about 60,000 fairly trained National Guard troops and we have about 90,000 men scattered from the Atlantic to the Pacific. The trained soldiers in the United States are less than 1 in every 1,000 of population, while the average among our possible enemies is 65 per 1,000.

Even China has a greater proportion of trained soldiers than the United States has. At this time when trained military men and modern organization are more important to the life of any nation than they have been at any other period in history, this Nation can not afford to drop behind in its solicitude regarding the future, but with firm resolve should profit by its own bitter experience and prepare against the evil day that is sure to come.

SEACOAST DEFENSE.

With reference to seacoast defense it may be said that they are primarily for the protection of important cities and harbors, and for that purpose should possess an armament equal to that of the most powerful warships. Naval armament has lately been greatly developed as to caliber, range, and rapidity of fire. The 15-inch guns on foreign warships of the *Queen Elizabeth* class are so powerful that they exceed the range of our coast defense guns by 2,000 to 3,000 yards, or nearly 2 miles. Our artillerists have a plan to overcome this advantage. The main point is to prevent an enemy from landing an expedition at some other place and capturing the defense from the rear.

Last August the allies secretly moved by sea from Australia, in one convoy of 98 vessels, an army of 125,000 men, completely equipped with transportation, guns, and supplies, and landed it on Gallipoli Peninsula, where the beaches were difficult and where there were barbed wire entanglements under water and the seas were strewn with mines. Sea transportation nowadays is the best, quickest, and safest method of moving troops. The larger trans-Atlantic passenger steamers can be fitted up to carry 7,500 to 10,000 soldiers each, together with all the arms, ammunition, and supplies necessary for a campaign. More than one of the leading powers of Europe could land an expedition of 350,000 men on the Atlantic coast within 15 days and an additional 400,000 by the end of 15 days more. It would be the Army's duty to prevent such landing, if possible.

The Navy's work is securing and maintaining control of the sea, and it must be free to seek out and defeat the enemy's fleet. Any use of the battle fleet for local coast defense is an extravagant use of naval power. If the fleet is defeated and beyond the protection of an adequate Army, it is powerless to prevent either invasion or its own destruction, and so the Army and Navy must cooperate. Any plan of defense that does not consider this fact is defective.

STRENGTH OF NAVIES.

The relative strength of navies is in general measured by dreadnaughts. There have been built, or are building, in the world 162 dreadnaughts, so far as public records show. Leaving out of the count our battleships *South Carolina* and *Michigan*, which are not now considered dreadnaughts, we find that England has 50, Germany 30, France 17 (including 4 already begun), United States 17 (including 5 not yet begun), Japan 10, Italy 10, Austria 8.

Our Navy stands fourth among the navies of the world, but with all of our seacoast to defend that is no place for our Navy to remain. It ought to move up to the top, but if that is not practicable at present, then it ought to be an unquestioned second. A poor Navy for a Nation like ours is worse than none, and is an extravagance that ought not to be indulged. Let us be at least a good second or quit building ships altogether.

MODERN SHIPS NEEDED.

If we are to have a Navy we must scrap all obsolete craft and build more light cruisers for blockade and patrol work, innumerable submarines and destroyers, more hydroplanes for scouting, plenty of trawlers for sweeping the sea of mines, and a large increase in big-gun ships of high speed. All these we need in their proper proportion as recommended by our naval experts, with plenty of seamen for active service and reserves to fill up war losses. To sum up, as has been wittily said, "What this country needs is a battle fleet strong enough to make the landing of an expedition impossible, also an Army strong enough to drive it back if it did land."

The attractiveness that this unprepared Nation offers to any well-armed, well-equipped, aggressive, first-class military power seeking revenge or gain will appear evident when it is realized that we have greater accumulated wealth than any other two nations; twice as many motor cars and motor trucks as all Europe; that we produce more iron and steel than any other three nations; more copper than all the rest of the world, and have a greater mileage of railroads than the nations of Europe combined. These are important elements of military strength, but they are as certainly elements of weakness if they fall into the possession of an enemy to be used against us.

Within from an hour to a six-hour's run by automobile from New York City there lie Boston and Philadelphia and many other important cities, also the Pennsylvania coal fields, and practically all cartridge works, smokeless-powder works, small-arms works, torpedo-boat works, and heavy gun and armor-plate works in the whole country. With the landing of a hostile expedition near New York City and the capture from the rear of its seacoast defenses, the enemy's guns could bombard the coast cities and his army could overrun this area and collect billions of dollars in ransom before we could possibly mobilize even the small number of Regulars and National Guard we have, much less enlist and train an adequate army of volunteers. Along the Atlantic coast will be found accumulated wealth to the value of over $50,000,000,000, or about one-third the total in the United States, quite undefended as far as the Army is concerned, and hence subject to the command of the guns of an enemy's warships, or within easy reach of his expeditionary forces. An enemy once on our shores and in possession of this area would deprive us of all the means of supplying our armies with munitions for the conduct of war, without which he could not be dislodged for years, if at all. Such an enemy certainly could not be driven out by a million of unarmed and untrained men, who, as one of our public men recently boasted, would rise up in defense of the flag between sunrise and sunset.

NEED OF TRAINED TALENT.

To prevent a landing of a hostile expedition by one of the great powers the very ablest and best military talent in the country is agreed that we should have under arms and available for immediate dispatch to the threatened point a well-balanced and well-equipped mobile force of at least 250,000 men, with an additional force of 500,000 trained reserves that could be mobilized within 10 days. Back of these to conduct a war there must be at least 2,000,000 men trained, officered, organized, equipped, and ready for call within 20 days. These are the very least numbers that should be considered. If there is any necessity of being prepared, then it should be done thoroughly. A nation prepared for war can usually protect its rights without having to fight, but to be halfway prepared is only to invite disaster and ruin. This Nation has too much at stake to take chances.

During the past two years new conditions affecting the fundamental rights of nations have been created by this cataclysm of war. "The world to-day is in the most anomalous condition mankind has ever seen.

The greatest human struggle of all the ages is going on between the most powerful combinations of nations. Wise men ought to take warning and peer into the future and prepare to-day for what may come to-morrow." Whatever may have been our national policies in the past, whatever may be our political beliefs, we can no longer view the future with unconcern, nor fail to be physically prepared squarely to meet emergencies.

A desire for universal harmony and perpetual peace bespeaks a noble aim, but in the face of dangers that have already befallen nations unprepared it is first of all our duty to marshal our forces and organize our resources. The time is here for the people of this country to arouse themselves, show their wonted courage and revive their devotion to the principles of the fathers. Americans have been dazed, uncertain, and perplexed. They have taken counsel of timidity, and in consequence they appear unable to do any positive thing. It is high time for plain talk and practical performance.

RISKS OF WAR.

The risks of war are ten times as hazardous as fire risks, and although the average man insures against fire he gives little thought to national insurance against war. During the life of this Republic we have had 25 years of war, including the Florida War, not counting Indian wars and other internal disturbances, where the Army has been used. That is to say, we have had one year of war to every five years of peace during the time of our national existence.

It has been declared that the nations engaged in the present deplorable struggle will be so exhausted in the end that they will be in no condition to wage another war. The history of nations, including our own, does not bear out any such theory. When this country emerged from the Civil War it was for the only time in its history prepared for war, and was without doubt the strongest military nation in the world. As such it did not hesitate to demand the immediate withdrawal of France from Mexico, which had been occupied in violation of the Monroe doctrine, a demand that was promptly complied with. At the end of the present war the nations involved will, no doubt, be stronger from a military standpoint than ever before. The population will be no less, as enough male children have been born during this war period to compensate for the losses incurred.

A few peace-at-any-price advocates argue that to prepare for war invites war, and that a nation prepared is likely to go about looking for trouble. If that is so, then the leading nations of the world are seeking war; and if they are all spoiling for war, then the most profitable field that presents itself in the world to-day is unprepared America.

UNIVERSAL MILITARY TRAINING.

To raise such an army as is proposed we shall without doubt be compelled to adopt some system of universal military training. It would be wise to place such a law on the statute books, even though it should not be considered necessary to put it into force at this time. The law could then be invoked in time of war without further legislation, and much valuable time could be saved. While primarily for purposes of military defense and not for aggression, the system determined upon should also have for its object the making of brave and courageous citizens, ready to uphold law and order in their own communities and able to defend their homes with sturdy vigor and a distinct sense of efficiency and preparedness. It would be difficult to imagine any discipline that would be of greater value, not only to the individual, but to the industrial, political, and military future of this country, than to provide for the 1,000,000 young men reaching 18 years of age each year five or six months' consecutive military training, under some such intensive system as that followed in the conduct of our summer encampments for citizens.

But when we speak of universal military training a few "little Americans" immediately rise up and begin to parade the familiar specter of militarism. Nobody should be frightened at this apparition. There is no militarism in Switzerland, Australia, or New Zealand, and yet universal military training is compulsory in those countries. Everybody, except those who will not see, should know that the very surest way to avoid militarism, if such a thing were at all possible under our democratic institutions, is to give every man military training. That is the safeguard of individual rights. Militarism for conquest is the dream of monarchs, and is contrary to all our traditions. It means rule by an aristocratic military hierarchy. It can not obtain a foothold in a nation free from class distinction. If all citizens are trained in military tactics, they are at once on an equal footing, and there is no such thing possible as a militafy caste.

WILSON ON CONSCRIPTION.

In the President's "History of the American People" we find this reference to conscription in the South during the Civil War:

"Almost every white man of fighting age, and many who were too young or too old for the field, came first or last into the Confederate ranks, and the war seemed to be using the whole capacity of a proud and capable race.

"Hundreds of thousands volunteered; the rest were drawn in by conscription. Where it was necessary to use the entire fighting population it was impossible to rely upon voluntary service, and the South with its scant numbers for the field resorted to conscription sooner than the North."

Thus, if it were necessary to add further testimony in favor of the principle of compulsory service, we have it from our own war, and, similarly, we have it in the very recent experience of one of the leading nations now at war in Europe.

It is far better to adopt in time of peace universal training with service by lot than to have general conscription forced upon you, perhaps too late, by the fear of national failure in war. The folly of neglecting military training is without doubt the regret of more than one nation in Europe to-day, and more than one will never again rely upon the vagaries of peace propagandists or on the diplomatic promises of friendly, though warlike, neighbors.

DUTY OF EVERY YOUNG MAN.

With military training every young man would learn that he owes his country the duty of preparing himself to defend her rights if called upon to do so. The instruction would strongly impress upon him his military obligation to the Government. Service for one's country can not be measured by the mercenary standard of wages, but it ought to be given and accepted as the antecedent price of suffrage and for the mutual benefit of both the Government and the citizen. The principle of compulsory service is to require every man to do his part, but there are always those who will hang back when war comes, while the flower of our patriotic young manhood go to the front. We want to get hold of this would-be shirk and teach him to defend the flag that protects him. We want to anticipate and prevent in this country the development of the poltroon or the mollycoddle.

Show me a man, whether native or foreign born, who is not willing to do his share, and prepare himself to be a soldier by giving his services, gratis, to his Government for at least six months' military training, when present world conditions appear ominous and the future is fraught with danger to the Nation, and when, without reference to political party, the leading statesmen are appealing to the country for adequate preparedness, and I will show you a man who places self-interest above patriotism; I will show you a man who would skulk while others defended his home and his family, and I will also show you a man who does not deserve the protection of this great Republic.

—

EXHIBIT C.

ILLINOIS BANKERS ASSOCIATION,
Chicago, March 31, 1916.

Hon. LAWRENCE Y. SHERMAN,
The Senate, Washington, D. C.

DEAR SIR: As indicative of the intelligent, sober judgment of the Central West, we call your attention to what we believe to be the first poll with respect to the subject of national preparedness, which has been fairly taken by a representative organization covering a wide area.

The poll is particularly significant, as the majority of the members of the association are small institutions owned and controlled by local farmers and business men, intimately in touch with the sentiment of the public they serve, and for the further reason that the poll was taken without making any reference to the present international situation, the urgent need for better defense or an appeal to patriotism.

The referendum was ordered by President Woodruff in the current number of the Association Bulletin as a guide for the action of this committee.

The results are so overwhelmingly in favor of a larger Army and Navy, and the adoption by Congress of the recommendations of the Army and Navy officers that this committee feels obligated to bring the matter to the attention of the Members of Congress from Illinois.

The nonpartisan character of the inquiry and the intimate relationship between the men in the small banks and the public justifies the assertion that the expression is that of public opinion in the agricultural, industrial, and other communities in which the banks are located.

The details of the poll are shown in the following tabulation:

Question No. 1. Do you believe our Navy should be enlarged and strengthened?

	Votes.
Yes	572
No	23

Question No. 2. Do you believe our Army should be enlarged and strengthened?

	Votes.
Yes	569
No	28

Question No. 3. In adopting any plan for Army and Navy enlargement, do you believe that Congress should be guided by the recommendations of our Army and Navy officers, who are experts on the subject of Army and Navy matters?

	Votes.
Yes	558
No	24

(Sixteen qualify their answers by saying "To a certain extent.")

It will be seen that to question No. 1, 96 per cent voted in the affirmative; to question No. 2, 95 per cent voted in the affirmative; and to question No. 3, 96 per cent voted in the affirmative; 3 per cent qualifying their vote.

To further justify your confidence in the cosmopolitan character of the replies, attention is called to the fact that over 90 per cent of the votes were cast from the smaller communities in the State, where the relation sustained between the bank men and depositors is that of confidential advisor, thus making the returns a reflection of public opinion. It should also be borne in mind that the vote was given by a conservative element and in a secret ballot.

Without urging upon you the very positive convictions of this committee and that the rank and file of the people in the Central West are emphatically in favor of adequate measures of defense commensurate with the wealth and exposed position of the Nation, we leave you to draw your own conclusions from the very significant poll, which we have pleasure in reporting.

Emphatic comment as to the urgent need for action appears on numerous ballots, while opposed to this are several explanations of the votes against an increase. In only one case is reference made to international disarmament. The "peace at any price" propaganda seems to have few, if any, adherents.

Yours, very truly,

COMMITTEE ON PREPAREDNESS,
OMAR H. WRIGHT, *Chairman.*
N. M. HARRIS.
JOHN W. THOMAS.

Mr. SHERMAN. This completes all the exhibits which I will submit.

I now ask unanimous consent for the consideration of the resolution I have read.

The PRESIDING OFFICER (Mr. MARTINE of New Jersey in the chair). There is a question pending before the Senate. If unanimous consent is given for the consideration of the Senator's resolution, of course it will take precedence.

Mr. CHAMBERLAIN. Whenever the resolution is reached in its proper order I shall be very glad to have the subject investigated, but I do not care to have anything taken up at this time. I object.

The PRESIDING OFFICER. Objection is made.

Mr. SHERMAN. Let me suggest, with the permission of the Senator from Oregon, that the resolution lie on the table with the understanding that it goes over under the rule.

Mr. SMITH of Georgia. What is the resolution?

The PRESIDING OFFICER. It is a resolution presented by the Senator from Illinois [Mr. SHERMAN]. Objection has been made to its consideration at the present time, and the Senator from Illinois requests that it may lie on the table.

Mr. SMITH of Georgia. It can not be presented except by unanimous consent.

Mr. SHERMAN. Let it go over under the rule to be considered when the pending bill is out of the way.

Mr. HARDWICK. The Senator has not had a right at all to present it. He merely read it for information.

The PRESIDING OFFICER. That was all.

Mr. SMITH of Georgia. Can it be read at the desk for information?

The PRESIDING OFFICER. The Chair is informed that objection being made the resolution will go back to the Senator from Illinois; that it can not be introduced. It may be reintroduced at another time.

Mr. CHAMBERLAIN. I have no objection to its being presented and lie on the table. I did object to its being taken up for disposition at this time.

The PRESIDING OFFICER. Is it agreeable to the Senate that the resolution shall be received and lie on the table?

Mr. SMITH of Georgia. I think the resolution ought to come in regularly in the regular way.

The PRESIDING OFFICER. Objection is made, so that the resolution will be returned to the Senator from Illinois.

Mr. CHAMBERLAIN. Mr. President, I am very reluctant to say anything more than I have said in reference to section 56 of the proposed Army organization bill, but I feel that I ought to say something in regard to the matter, in view of the broad range the discussion has taken.

I want to say, Mr. President, that the committee that has reported out this bill does not arrogate to itself any superior knowledge upon this or upon any other subject connected with the reorganization of the Army. All that it claims for itself is that it has gone into this subject at very great length, and I question very much if the individual Members of the Senate have given it the same careful consideration that the Committee on Military Affairs has given the whole subject. That is the most that the committee claims. There are distinguished Senators here who possess the same means of information, and of superior ability, no doubt; but I question if any Member of the Senate has taken up these various subjects embodied in the bill and considered them as a whole in connection with each other. We have listened to experts in the Army, as well as to prominent civilians, in undertaking to reach a proper conclusion.

I think, Mr. President, it would be a very great mistake to eliminate section 56 from this bill. I want to go further and to say that I believe I can safely say that no member of the committee felt that the National Guard was an entirely dependable force. The history of this country from its earliest times to the present has vindicated the suggestion of many of the Senators here that the National Guard and the militia of this country have never proved a dependable force in time of emergency. I say that without intending to discredit either the patriotism or the efforts of the National Guard to make of themselves a dependable force both in times of peace and in times of war. Appropriations that have been made for the National Guard from time to time, Mr. President, have been made for the sole and only purpose of undertaking to make it an efficient and effective force whenever it might happen to be called upon.

Aside from the standing army, there is no other force in this country that could be utilized immediately for the service of the Government in case anything happened to us; and it was the purpose of the committee to try, so far as it was possible under the limits of the Constitution, and even further, we feared, than the Constitution warranted us in going, to make the National Guard a more efficient force than it has been in the past.

I differ from some of my colleagues here as to the power of Congress over this subject. I realize, however, that there are great differences of opinion amongst the strongest men in this Republic as to the power of Congress over the National Guard or the National Militia. It was in view of this difference of opinion that the Military Committee, so far as it was concerned, did not propose to depend absolutely upon the National Guard, but intended to try to make it more dependable than it was, and at the same time to endeavor to bring within the control of the National Government another force that can and will be made an effective force under complete Federal jurisdiction.

I know what will happen, Senators, in case differences occur between this country and some other country. History tells us what has happened in the past, and we can only judge of what may happen in the future by what has happened in the past. That will be that when the emergency is upon us Congress will get together within a very short time and pass—what? Pass a bill that will enable the President to call a volunteer army for the purpose of a defense of this country against any attack that might be made upon it. We have always done it, and we shall do it again. In an emergency which confronted up a few days ago we did the same thing, and without a dissenting voice this Congress authorized the President of the United States to enlist 20,000 troops.

The friends of the National Guard will say, "Why did the President not call on the National Guard?" The same question suggested itself in the past, Why did not the President of the United States call upon the National Guard, the National Militia? Simply because, Mr. President, the absolute mainstay and defense of this country in time of emergency is the Regular Army; and the second dependable force is that part of our citizenship that can be mustered into the Regular Army when the time arrives, and be mustered in promptly.

Why, Mr. President, some of our friends here have talked about conditions that may exist when the millennium arrives. Until you can eradicate from the individual human heart greed and selfishness and the desire to get something that belongs to his neighbor, you can not eradicate from the hearts of the nations the same desire that animates the animal man when he comes to deal with his neighbor. The time was when the predatory nations of the earth went unassisted in search of prey; they did not need assistance. While I do not mean to say that the French were a predatory nation, we do know that in the days of Napoleon he went without allies and conquered Europe. Frederick the Great did not need any assistance to accomplish his ends. But predatory nations, Mr. President and Senators, nowadays, like the predatory animals, travel in packs.

One of the peculiar and amazing things in the war that is now devastating Europe is the fact that while one great power that is now involved in it was spending 40 years in training its soldiery and accumulating munitions of war and things that went to destroy human life, another of the great powers was burying the hatchet with its hereditary foes of an hundred years, and fighting battles in diplomacy by which it hoped to overcome its enemies who proposed to fight battles with arms, munitions, and with trained soldiery. We find to-day arrayed upon the one side are nations imbued with the militaristic spirit, and on the other side are nations that have been fighting battles in diplomacy. We find these latter fighting side by side with peoples who for a hundred years have been at each other's throats, either from a spirit of revenge or a desire for commercial supremacy.

While this condition is prevailing we snugly sit here, Senators, with a feeling of security that this country will have nothing to do when this war is over, challenging the powers of the earth to reach us. It may be true that they will not attempt to reach us; God grant they may never be able to reach us; but no man in business in this Republic is going to wait until fire assails his home to get out an insurance policy. Every man of sense and every man of business integrity and ability takes out such a policy before the risk comes.

To profit by the lessons of the last 18 months we ought not to measure the value of our liberty and of this splendid Republic and Government of ours by the standard of the dollars necessary to be expended for preparation to meet any emergency that may come, and we ought to be willing to spend whatever is necessary to do that, even if in 12 months from now we disband every soldier and undo all that we have sought to do. The people of the country demand it and expect it, and no man who loves his country will raise his voice in protest against the action of a patriotic Congress in doing its duty toward our country in the time of emergency.

Somebody speaks of the Monroe doctrine. Mr. President and Senators, if the same spirit animated us to-day that animated Monroe and Congress in 1823, when this doctrine was first announced, there would not be very much reason to fear that our commerce may soon be swept from the sea. Let us take conditions as they are. The time has come when we ought to be candid with each other and be candid with the American people. We do not need any military preparation, Senators, unless we intend to assert the Monroe doctrine and to make it a live force in this Republic. We do not need any preparedness if we intend to allow one of the belligerents to take the lives of our people who have the right to travel in other lands than our own. We do not need any preparedness if we intend to let another of the belligerents take our ships into its ports—and not only our ships, but the ships of other powers that are neutral and carrying our commerce to neutral nations—and search them and take passengers off in violation of all rules of international law. We do not need any preparation if we intend to submit to these indigni-

ties; but, for one, I insist that the same spirit that induced our forefathers to throw cargoes of tea into Boston Harbor; the same spirit that animated our forefathers in the War of 1812; the same spirit that animated them in the Mexican War and in the later wars of the Republic, ought to animate us in this emergency, and we ought to be prepared, if for nothing else that when this war is over we may demand some recompense, if recompense be possible, for the lives that have been destroyed.

If we intend to demand any recompense for the property that has been destroyed, if we intend to demand any recompense for the rights that have been asserted and exercised to go upon American bottoms and remove citizens as well as property, if we are going to demand any satisfaction for the unjust treatment which our people and our interests have received at the hands of those who are engaged in the present war, then we ought to be prepared to back all just demands, all legal demands, all righteous demands, by the force of arms if necessary.

In what shape are we? Like Glendower, we might "call spirits from the vasty deep," but, as Hotspur retorted, "Will they come?" We have not the power to insist upon the performance of a single demand that we have made upon any of the Governments that are now engaged in the European war.

Mr. LEWIS. Mr. President, I am sure the Senator from Oregon does not mean to have that go to the world. The Senator does not mean to say here in the Senate of his country that America has not the power to enforce any just demands against the world. The Senator, I assume, means that is the condition as the Army is now organized, but not that we have not that power within the people of our country.

Mr. CHAMBERLAIN. Oh, yes, Mr. President; but at what sacrifice! Even Gen. Miles, who has been cited by the lovers of peace—and we all love peace and will fight for it, if necessary—even Gen. Miles says that to send an army of untrained men against a regular force of any of the great powers would be death and destruction to them. My friends, if I want to be advised about conditions as to my health I am not going to a blacksmith or a carpenter, I am going to a physician or a surgeon; and if we want to know about the proper way to organize an army, Senators, we want to consult men who have made military studies their life work.

Mr. WORKS. Mr. President——

The VICE PRESIDENT. Does the Senator from Oregon yield to the Senator from California?

Mr. CHAMBERLAIN. I yield.

Mr. WORKS. I should like to ask the Senator from Oregon whether he thinks the force that is provided for in the bill now before the Senate would be adequate to do the things about which he is talking?

Mr. CHAMBERLAIN. I do not, to be perfectly frank with the Senator. Everything that we do in life, Mr. President, is a compromise. You heard one of the members of the committee say this morning that he thought the army which we propose is too large; I think it is too small. The bill is a compromise. We have undertaken to meet these very conditions and to enable us to place ourselves in a position to put an adequate army in the field, if we have to do so, which God grant we may never have to do.

It is not easy to adjust these differences, I will say to the Senator. A distinguished gentleman, who recently held a place in the Cabinet, claimed that in 24 hours we could raise a million men if an emergency ever arose when our country needed them. I have not any doubt about that; I have not any doubt, Mr. President, of the patriotism of the National Guard or of the citizens of this country. I have every confidence in the world in them; but every man who stops for a moment to think knows that to send 1,000,000 untrained soldiers against a division of trained men would simply mean to send 1,000,000 to their absolute and certain death. There is no question about that.

They say we are not going to have any such condition in this country; they say we can not be invaded. We have been invaded in the past. Within the last few weeks 100 or more bandits from the south of us invaded the United States, and we have not caught them yet. It seems to me, Mr. President, that we were invaded in 1812. Lying off the mouth of Chesapeake Bay was a small British fleet, with how many troops? A few thousand; and against a militia, organized as they were in the State of Maryland and in the District of Columbia, they marched into Washington and set fire to the Capitol. Oh, no; we are not going to have any invasion! It would not take a very large force transported to the United States to wipe us off the map. With a part of our soldiery in the Philippines, a part in Hawaii, a part in Porto Rico, a part at the Panama Canal, and about 25,000 of them in the United States, how large a body of men from any other country would it take to put us out of commission, Mr. President?

The very distinguished Senator from California [Mr. WORKS] not long ago in a speech made by him stated—and truly stated—that on the Pacific coast alone there were trained veterans of the Russo-Japanese War in excess of our own continental Army. There is not any question about that. I do not apprehend any trouble from these people. They are, however, the constructors and builders of railroads from the Pacific coast into the interior of this Republic. They are the dynamite and powder carriers, and as reasonable men, representing a constituency of 100,000,000 people, it behooves us, Mr. President, to act with judgment and discretion and determination to place our country in a position where it not only can defend itself, but can also assert its rights and see that its just demands are complied with by the balance of the world.

We sent back more than 40,000 reservists to the Greek Army, men who were here making a living in our country at the bootblack stands, the soda fountains, and places of that kind, and yet when their country called them into requisition they went cheerfully. Why shut our eyes to the conditions? I have no apprehension of war or trouble with Greece; I am merely calling attention to the facts.

Germany, one of the belligerent countries to-day, if I am correctly informed, has over 90,000 reservists in this country, and the name of every one of them is listed in the German consular offices in the United States. I have no fear of war with Germany—not at all; I am not an alarmist—but let us have the facts. Two years ago, because I insisted on an increase in our Military Establishment, I was looked upon as a jingoist, and I presume I am so looked upon yet; but I have no fear of any of these charges. I have greater fear, Mr. President, that the time may come when this country ought to assert herself but that she will not be in a position to assert herself.

It seems to me I remember, since I have been in the Senate of the United States, that a distinguished Senator introduced a resolution protesting against the acquirement of property at Magdalena Bay by one of the powers now engaged in the European war, on the ground that it was an unfriendly act toward the United States. It may have been. The charge has been made since then that efforts have been made by the same military power to acquire a holding in Mexico; and we know that any alliance that might be suggested by almost any power with the people to the south of us would be gladly received, because we have not a friend there. So why blind ourselves to conditions? Because one favors preparedness for the defense of our country it is no indication that he fears war.

Why, if the morning papers have correctly reported the facts, one of the great belligerents in the conflict which is raging in Europe is asserting the right that a vessel shall not leave the United States unless its manifest is visèed by them. How long, Mr. President and Senators, is the United States going to submit to such indignities as these? There is no better preparation against the assertion of such rights than to be prepared to resent them when the insults are offered.

Mr. VARDAMAN. Mr. President, would it interrupt the Senator if I were to ask him if he really thinks the failure of the United States to demand of England that she respect our rights under international law is because of a lack of preparation on the part of the United States?

Mr. CHAMBERLAIN. I do.

Mr. VARDAMAN. Does the Senator really think that?

Mr. CHAMBERLAIN. I do; yes, sir. Did not the President go out on a western tour and say that preparation was necessary? What did he mean by it?

Mr. VARDAMAN. And yet he said that we were absolutely at peace with the world——

Mr. CHAMBERLAIN. We are.

Mr. VARDAMAN. And that he thought that war was not imminent at all.

Mr. CHAMBERLAIN. We are suffering the peace of China right now; and every nation that comes along and wants a slice of poor China takes it; that is all there is about it. Have we reached the period of humiliation and degradation in our national life when we are going to submit to any such treatment as is now being accorded to China and to other nonmilitant powers of the earth?

Mr. President, there has not been an obligation entered into at The Hague conference or a single obligation in the declaration of London that has not been violated and set aside whenever it has suited the nations to violate it.

And now Holland, if the newspapers speak the truth, is about to be invaded from either side or from both sides. Why? For anything that Holland has done? Not at all. But to suit the whim and emergencies of those who are engaged in the war. On the one side they say, "We will cross you to get to the ocean and reach our enemies"; on the other side they say, "We will

cross the ocean and cross you to get to our enemy on the other side of you." It is not because of anything that Holland has done, any more than Belgium was embroiled in the conflict because of anything she had done; and yet, Senators, it may be that the fate of Belgium may be meted out to Holland, than whom there is no more splendid race of people in the world. It is greed in the heart of nations, Mr. President, as it is in the heart of man that brings on these fearful calamities. Who knows when a similar calamity may come to us?

Referring to the Monroe doctrine again—and the Senator from Illinois referred to it—we have set ourselves up as a sort of protector of the South American Republics; not so much for their protection as for the maintenance of our integrity and our existence. You know, as well as I, that colonization has already set in on the east coast of South America by some of the powers that are now engaged in this war; and, if you do not know it, you can very soon ascertain that colonization has set in on the west coast of South America by another warlike power. Is the Monroe doctrine simply the assertion of a barren right or is it the assertion of a doctrine that the United States intends to insist upon and to enforce if occasion ever arises when she ought to assert it? She may have to assert it, and I believe will have to assert it, to maintain her own integrity, if not in the near future, in the not distant future, anyway. The only time it ever was asserted practically against the combined powers of Europe was when, taking advantage of conditions which existed here during the Civil War, certain European Governments undertook to set up a monarchy to the south of us, and the United States practically served notice on the world that that could not go on, and it did stop.

But we may have to assert that doctrine again, Mr. President. We are trying all the time to make our relations more intimate with the Republics to the south, and I think we ought to do that, but in order to assert the Monroe doctrine we ought to be prepared to maintain it; and, in order to maintain it, we must be prepared with an adequate Army to do it, and a Navy, too.

I sometimes am compelled to compare our present condition with the condition that confronted our small population in 1812. There is not a single rule of national or international life, there is not a rule of international law, that was violated then, and which led to war, which has not been violated over and over again in the past two years. And yet, with the martial spirit that had come to our forefathers from the Revolutionary period, our people resented the course that was being pursued by these foreign powers. Why not be in a position to resent it now?

You can take Madison's message to the Congress in 1812, Mr. President, and compare it with conditions as they exist now, and there was not a single condition in that day and age that does not exist to-day; and yet our friends talk about the power of the militia to defend and maintain our country! Mr. President, we negotiated a disgraceful treaty before the War of 1812 was concluded, and there was not a single thing that was in issue between the two Governments that was determined by the treaty of Ghent—not one; and we did not win the War of 1812 until Jackson, with his Squirrel Shooters, reached New Orleans and fought the battle after the treaty had been negotiated, and he did not know it; and we won the war after we had submitted to a disgraceful treaty.

Somebody speaks about the bravery of the national militia at that time, Mr. President. I think a careful examination of the history of that time will disclose that the national militia on the other side of the river had gone into absolute retreat when the British regulars landed and came in contact with Jackson.

I have no disposition to discredit the National Guard. I want to help it. But the National Guard, if it come here with the determination to defeat every other attempt to place ourselves in a condition for national defense, ought to be wiped out of all legislation that comes before Congress. Mr. President, if the National Guard intends to come here as a political force, as it has done—there is not any question about that—and undertake to control legislation that has for its purpose the raising of an army to protect our country against the world, I for one shall favor from now on the elimination of the National Guard as a factor in this country—and I have been their friend, and hope I may continue to be—not because I love Cæsar less but because I love Rome more; and my purpose in this legislation has been to try to assist in making the National Guard an effective military force in this country.

Now, if it is their purpose, as it has been evinced—and I want the Senate to understand that I am not referring to the course of Members of this body or Members of the House, but at it has been evinced by methods that have been adopted on the outside of these bodies—if they intend to make a political as well as a military force of themselves, I for one am in favor of putting them out of business, because in the last analysis this country must depend for its defense first upon our Regular Army and then upon a force that can be controlled by the Central Government.

Mr. McCUMBER. Mr. President——

The VICE PRESIDENT. Does the Senator from Oregon yield to the Senator from North Dakota?

Mr. CHAMBERLAIN. I yield.

Mr. McCUMBER. All of us have received a vast number of telegrams from the several National Guards, and I wish the Senator would explain to us what their real objection and purpose is in desiring to strike out this particular section. Wherein does it conflict with anything that they may desire with reference to their own recognition?

Mr. CHAMBERLAIN. There is an old saying, Mr. President, that if you scratch a Russ you will catch a Tartar. If you scratch the back of a guardsman, and get the actual motive behind his desire to strike out section 56, you will find that it is because he is afraid it will impair the National Guard itself.

Mr. McCUMBER. Wherein?

Mr. CHAMBERLAIN. They say that it raises a competing force.

Mr. NELSON. Mr. President, if the Senator will yield to me I think I can furnish the reason officially for which the Senator from North Dakota asks.

The VICE PRESIDENT. Does the Senator from Oregon yield to the Senator from Minnesota?

Mr. CHAMBERLAIN. I yield, Mr. President.

Mr. NELSON. Night before last I received nine telegrams from officers and members of the National Guard of Minnesota urging me explicitly to vote against section 56. I called the attention of the newspaper correspondents of our evening papers at St. Paul and Minneapolis to these telegrams, and told them I thought the National Guard were trying to hamstring this Army bill. This morning I received from the adjutant general of the National Guard of Minnesota this telegram, which gives the real reason; and I want to read it for the benefit of the Senator from North Dakota:

> According to columns of to-night's dispatch from Washington, the men of the National Guard and the undersigned were criticized rather severely by you for our opposition to section 56, Chamberlain bill. We believe in the Volunteer Army as provided by the act of April 25, 1914, but we do believe that the National Guard could not exist as an effective unit if section 56 became a law. One would most seriously affect the other.

Their opposition is because they are jealous of the Volunteer Army, and they are fighting it because they think it will interfere with their existence. That is the reason. I have another similar telegram from the adjutant general of North Dakota, which I will hand to the Senator from that State, if he has not received one like it.

If the Senator will yield to me further, I want to say that in all my experience here I have never seen an instance of such bald lobbying as there has been by these outside influences to defeat this section of the bill.

Mr. CHAMBERLAIN. Mr. President, those telegrams express just what I said awhile ago. That is the purpose of it. I do not agree with these telegrams. I think the National Guard is mistaken about the purpose of this section, or the effect of it. It is simply undertaking to reach a way of organizing another force to be utilized in time of trouble. That is all there is about it.

It has been stated here, and it is a fact, that there are many young men in this country who would like to perform some military service for their country, but they do not go into the National Guard for reasons which have been explained. The young men of the labor organizations do not want to go into it, because it may be that when it acts as a police force it may be called out against the men with whom they are under some obligations measurably to act. These same young men who would like to assist in performing some military service for the country can not go into the Plattsburg camps, for instance, as they have been conducted, because it costs a good deal of money. These young men who assembled in these camps last summer paid their own expenses. They are young men who are able to do it. In order to make a democratic organization into which the rich man and the poor man, the employer and the employee, the banker and the clerk, can go, we have fixed this bill so that they can all go into it.

In that connection, I can better indicate what I have in mind if I read a letter from Mr. Gompers to Hon. RICHARD OLNEY, 2d, a Member of the House of Representatives, written on the 13th of March last. I am going to ask to have it inserted

in the RECORD, but I am only going to read the last portion of it:

In order to provide for all citizens equal opportunity for participation in training camps, there must be some compensation for loss of wages, otherwise those with small incomes will be unable to benefit by them.

Now, mind you, this bill provides for their transportation to and from the place of the maneuvers, and it gives them the same rate and pay that the soldier gets in the Army. That is small, it is true; but there are thousands and tens of thousands of young men in this country who are willing to sacrifice something in order to get the benefit of a training.

Mr. Gompers says:

There are many indications that there has been a decrease in the virility of our Nation during the past decade. Whatever the cause of this decrease in physical power and resistance it is a matter of grave concern to all.

Agencies that will build up our citizens physically must be a part of our social organization. Nor is this of concern from the military standpoint only or purely as a problem of national defense. The effect of increased vigor and of better health among our citizens will be plainly shown in increased efficiency in all activities of life. If these agencies are in accord with democratic ideals, they will leave an indelible impression upon the mental outlook and the habits of all those who come under their influence.

In addition to what I have written, you may perhaps be interested in my address, at the annual meeting of the National Civic Federation, on the subject of National Preparedness. That address, together with a letter I wrote to the National Security League, was made a public document. I am sending you a copy—

And so forth. I ask to have the whole of the letter inserted in the RECORD.

The VICE PRESIDENT. Without objection, it will be so ordered.

The letter referred to is as follows:

WASHINGTON, D. C., *March 13, 1916.*

Hon. RICHARD OLNEY, 2d,
House of Representatives, Washington, D. C.

SIR: There are many features of the Plattsburg camp idea which I heartily approve, but there are some features that I can not wholly indorse. In reply to an invitation to visit the Plattsburg camp last summer, I wrote Gen. Leonard Wood, calling his attention to some of these. The features and the tendencies that I could not approve were the limitations put upon the democracy of the movement.

Under the provisions for the Plattsburg and similar training camps, it was impossible for men working for wages to avail themselves of the opportunity for military training, physical development, and outdoor life.

To be sure, I fully appreciate the fact that the Plattsburg camp was democratic in spirit, and with this spirit must have had a lasting effect upon those of different walks of life who for a few weeks at least lived together without artificial distinctions, under conditions which brought out the inherent value and good qualities of the men.

But, as I have said before, because of inability to pay their expenses in such a training camp, the wage earners were practically debarred from this opportunity.

In order to provide for all citizens equal opportunity for participation in training camps, there must be some compensation for loss of wages; otherwise those with small incomes will be unable to benefit by them.

There are many indications that there has been a decrease in the virility of our Nation during the past decade. Whatever the cause of this decrease in physical power and resistance, it is a matter of grave concern to all.

Agencies that will build up our citizens physically must be a part of our social organization. Nor is this of concern from the military standpoint only, or purely as a problem of national defense. The effects of increased vigor and of better health among our citizens will be plainly shown in increased efficiency in all activities of life. If these agencies are in accord with democratic ideals, they will leave an indelible impression upon the mental outlook and the habits of all those who come under their influence.

In addition to what I have written, you may perhaps be interested in my address at the annual meeting of the National Civic Federation, on the subject of National Preparedness. That address, together with a letter I wrote to the National Security League, was made a public document. I am sending you a copy, and call your attention specially to the first four paragraphs on page 10.

Very truly, yours,

SAML. GOMPERS,
President American Federation of Labor.

Mr. CHAMBERLAIN. Mr. Gompers in that letter, which I have had printed as a public document, goes further than many of our friends here go, and takes the same position that the distinguished Senator from Illinois [Mr. SHERMAN] does, and says that in the last analysis the only defense for our country and the maintenance of the integrity of this Republic is universal military training. It is going to come, Mr. President—possibly not now, but it is bound to come—in view of the disposition of a great many of the splendid people of this country to object to the expenditure of a dollar for the maintenance of an army.

Mr. CUMMINS. Mr. President——

The VICE PRESIDENT. Does the Senator from Oregon yield to the Senator from Iowa?

Mr. CHAMBERLAIN. I yield.

Mr. CUMMINS. Something has been said about telegrams received from the members of the National Guard against section 56. I ask the Senator from Oregon if it is not true that he has received a great number of telegrams in favor of section 56 and if he did not this morning make them a part of the RECORD?

Mr. CHAMBERLAIN. Yes, sir; that is correct.

Mr. CUMMINS. Is it any greater offense to receive a telegram for the section than to receive a telegram against it?

Mr. CHAMBERLAIN. Let me say to the Senator that there is no evidence in the case of any telegram I got that they were from any others than individuals. I will qualify that statement, however. I believe some of them did come from the Military Training Association, but many of them are from individuals.

Mr. HITCHCOCK. Mr. President——

Mr. CHAMBERLAIN. Let me say to the Senator that I do not object particularly to members of the National Guard expressing their views. The Senator will remember that while he was a member of an investigating committee once I asserted the right of any citizen to come before Congress and assert his views.

Mr. CUMMINS. Mr. President, another question, or rather a suggestion. I did not call the fact to the attention of the Senator from Oregon on account of anything he had said; but there has been a suggestion from another source that it was an offense for a member of the National Guard to express his opinion with respect to this section.

Mr. CHAMBERLAIN. I do not think so. I am in entire accord with the Senator in that respect. My view is that a man has a right to assert his views. But when it comes in the form of a propaganda by any particular organized body in this country, when it begins to assume the complexion of a general movement along the whole line, the danger of it is in making of this body a great political institution. That is the great danger. I think if there is any danger from militarism in this country it is in the danger of the control that is being attempted to be exercised over Congress right now.

I have gone far afield of what I wanted to say, but I really think this is a time when men ought to talk plainly about these things, and if you have any faith in what you are talking about you ought to be willing to say it. Now, I may be all wrong. I believe in peace, but I do not believe the millennium is right here now. I believe that the best way to maintain peace is to be prepared to fight if you have to. I knew an old Presbyterian minister out in my part of the country when I first went out there, 40 years ago, who said he had lived in mining camps, and that everywhere he had preached, in barrooms or on the streets where gambling games were going on, no man had ever insulted him at any time, no matter where he happened to be. I asked him why, and he said: "My size was my protection, and every man was afraid to attack me."

So, Mr. President, the size of the Military Establishment of a country is its protection in time of peace as well as in time of war. I say that without believing in a large military organization. On this subject I would rather have the views of men like Washington and the other celebrated fighters of this country than to have the views of statesmen. We have tried to follow some of the views of Washington. Inasmuch as Washington has been quoted here a little bit, I am going to read what he says about this very subject. I am not sure but that it was read here the other day, but it will bear repetition, because he said it after he had been through the Revolutionary War, and knew what difficulties he had to encounter, and what trouble he had in maintaining an effective and efficient organization:

The jealousy of a standing army—

Says Washington—

and the evils to be apprehended from one are remote, and, in my judgment, situated and circumstanced as we are, not at all to be dreaded; but the consequence of wanting one, according to my ideas formed from the present view of things, is certain and inevitable ruin. For, if I was called upon to declare upon oath whether the militia had been most serviceable or hurtful, upon the whole I should subscribe to the latter.

Now, he had had a little bit of experience—quite a little.

Mr. LEE of Maryland. Mr. President——

The VICE PRESIDENT. Does the Senator from Oregon yield to the Senator from Maryland?

Mr. CHAMBERLAIN. Yes, sir.

Mr. LEE of Maryland. Of course Gen. Washington referred to untrained militia.

Mr. CHAMBERLAIN. Oh, yes; yes, he did. There is not any question about that. I am conceding for the National Guard that they are many, many times more valuable now, as a military force, than they were then.

Mr. VARDAMAN. Mr. President, may I ask the Senator a question?

Mr. CHAMBERLAIN. Yes.

Mr. VARDAMAN. When did Washington say that?

Mr. CHAMBERLAIN. Right after the Revolution.

Mr. VARDAMAN. At what time?

Mr. CHAMBERLAIN. I do not recall the date. I have not it.

Mr. VARDAMAN. Does the Senator remember that in 1783 he said:

The militia of this country must be considered as the palladium of our security and for the first effectual resort in case of hostilities.

Mr. CHAMBERLAIN. Yes; but he believed in a trained one. If the Senator will read a little more about what he said, he will find that he believed in a trained one.

Mr. VARDAMAN. Oh, yes; they all believed in that.

Mr. CHAMBERLAIN. No; some of our friends do not believe in anything, because they are sleeping in the peaceful belief that we never will have any trouble and never will need to be prepared.

Mr. VARDAMAN. I do not think the Senator has any right to impute that to anybody else.

Mr. CHAMBERLAIN. Oh, I am not imputing it to the Senator from Mississippi.

Mr. VARDAMAN. Well, I know; but to anybody. Why does the Senator say that?

Mr. CHAMBERLAIN. Because I have heard such expressions from hundreds of them. What more proof does a man want than that? I venture to say that the Senator has heard the same expressions.

Mr. VARDAMAN. No.

Mr. CHAMBERLAIN. I have heard them. I have received letters, Mr. President, protesting against the expenditure of a dollar for national defense or any other military training in this country. There is not any question about that; and if the Senator will read the hearings before the committee he will find that they contain just such statements as that.

Why, so eminent and distinguished a man as Gen. Miles came before that committee and said he did not think we needed to do anything. He practically said that.

I do not mean to misrepresent anybody; but it has been said that a good many of Washington's writings were collaborated in the field between him and Hamilton. Whether that be true or not, I have often wondered how in the world he found time to organize his troops and fight, because he was writing letters to the Congress all the time asking them for God's sake to do something; and really and truly, until the Congress of the United States got thoroughly scared and handed over to Washington the absolute control of the Continental Army to do with as he pleased the Revolution was not brought to a close.

Mr. President, I believe in the patriotism of our ancestors as thoroughly as anybody. I have a right to, and ought to, because my people on both sides were here during the Revolutionary period. On both sides of the House they participated in the events of those days. But it is not true that our ancestors were always as patriotic as they ought to have been. You do not have to take my word for it. Read what Washington says, or any of those gentlemen who participated in that war, and you will find, Mr. President, that finally it got to be so bad that not only did the States pay bounties to our ancestors to get them to stay in line, but the Colonies paid them bounties, the Government paid them bounties, and toward the end they promised them land, and to the officers of the Revolution they promised to give them salaries for the balance of their days equal to one-half the salaries they were getting as officers in the Revolutionary War. Now, I am not criticising that; but Washington said, and others have said, that you could not depend upon the patriotism of a people to defend their country in case of an emergency. You have got to have some other means of bringing to the standards the men who are necessary and essential to the defense of our country.

Washington's convictions, embodied in his criticism of the militia, were confirmed by the defeat of Gen. Gates, when he wrote to the President of Congress on the 15th of September, 1780, as follows:

I am happy to find that the last disaster in Carolina has not been so great as its first features indicated. This event, however, adds itself to many others to exemplify the necessity of an army and the fatal consequences of depending on militia. Regular troops alone are equal to the exigencies of modern war, as well for defense as offense, and whenever a substitute is attempted it must prove illusory and ruinous. No militia will ever acquire the habits necessary to resist a regular force. Even those nearest to the seat of war are only valuable as light troops to be scattered in the woods and harass rather than do serious injury to the enemy. The firmness requisite for the real business of fighting is only to be attained by a constant course of discipline and service. I have never yet been witness to a single instance that can justify a different opinion, and it is most earnestly to be wished that the liberties of America may no longer be trusted, in any material degree, to so precarious a dependence. I can not but remark that it gives me pain to find the measures pursuing at the southward still turn upon accumulating large bodies of militia, instead of once for all making a decided effort to have a permanent force. In my ideas of the true system of war at the southward the object ought to be to have a good army rather than a large one.

There is not any question about that. A strong, efficient, well-drilled, trained army is worth millions of untrained or partially trained organizations, no matter whether State or otherwise.

Particularly is that true in the present emergency, Mr. President. Why, there has not been a single thing that could be conjured up from the workshop of the devil himself that has not been resorted to in the war that is now pending in Europe. Mr. President, in the face of what is before us every day, it seems to me that this Congress would be absolutely disregardful of its duty to itself and to the people if it did not avail itself of every instrumentality it has to secure not a large trained army but trained men that could go into the Army in case of call.

Section 56 as proposed in the Senate substitute is not perfect by any manner of means, Mr. President. It is simply one of the instrumentalities to undertake to get the young men to train, and partially put themselves in a condition to be utilized in case of trouble.

I have really talked longer than I felt I ought to talk, Mr. President, but I have felt justified in doing so in view of the strictures that have been indulged in, not only with reference to the efforts of the committee but upon the men who are here asking that they may be permitted to render some service to their country. A number of these young men came here and expressed a perfect willingness to become enlisted men of the United States Army and to drill 60 or even 90 days. I think possibly there ought to have been a maximum fixed, not exceeding a certain number of days; but whenever they are discharged from camp, they are still the reserve to be called upon for service in the Regular Army.

How many of them would go, I do not know. I am frank to say that I sometimes fear that we will not have all we want, but it will at least be a beginning. I want to call the attention of the Senate to the result of the enlistment that was ordered to be made by a joint resolution of the House and Senate a short time ago. How many men do you think we have enlisted under the joint resolution calling for 20,000 passed here about the 17th of March? Here it is:

From March 17 to March 20 there were about 372 applicants for enlistment accepted. Total for the five days ending March 25, acceptances, 840. Total for the six days ending March 31, acceptances, 851. Total acceptances, 2,063; and two-thirds of a month has elapsed!

Now, I do not know that we are going to have any trouble in Mexico. I do not think we will. I hope we will not. But no man can tell, Mr. President, where this chase of bandits is going to lead us. It is a physical impossibility for any man to predict what is likely to happen. No man could have told 48 hours beforehand what was going to happen in Europe until a match was struck to a powder magazine that exploded and set the civilized world in conflagration. No man can tell what this will lead to; and yet we are sitting here supinely wasting time, Mr. President—and I am guilty of a part of it myself; we are all guilty of the same thing—wasting time, when we ought to be getting ourselves in a position to meet any emergency that comes up. If section 56 is made a part of the bill, we will at least have 10,000, or 20,000, or 30,000, or 50,000, or 100,000, or possibly at the end of the fourth year 261,000 men who have had some training, and all that is necessary to get them into the service is for the President to issue a proclamation calling them into service. We are not situated that way now. The committee has gone further and has undertaken to bring those into the Federal reserve who have served an enlistment in the Regular Army by paying them a small sum.

The Senate may strike that out, I do not know, but when it does, it will have stricken from the bill provisions which the committee has faithfully endeavored to insert for the purpose of placing this dependable force under the control of the President.

Mr. WORKS. The Senator from Oregon has called attention to the evident reluctance of the American citizen to enlist in the Regular Army. Suppose we should have trouble with Mexico, which we all hope we will not, does the Senator think we would have any trouble in securing volunteers in a case of that kind?

Mr. CHAMBERLAIN. Let me say to the Senator, as I said awhile ago, I have no question about the patriotism of the American people when they feel that their services are necessary, but what I am getting at is that to send out a body of untrained troops into Mexico or anywhere where an emergency

calls for them is simply sending our young men to slaughter. Let me call the Senator's attention to one fact.

Mr. WORKS. I was only calling the Senator's attention to that particular phase of the situation.

Mr. CHAMBERLAIN. They will enlist, I have not any doubt about that. I have too much confidence in our people to feel that they would not, particularly if they could realize that we were in danger, but the great trouble in this country has always been that when an emergency is almost upon us there are those who go about and tell the people there is nothing to fear, that it is all nonsense to talk of danger, and that we do not need to get ready for trouble. There are distinguished gentlemen doing this very thing now.

Mr. BRANDEGEE. Does not the Senator know that the condition in Great Britain was such that when the emergency came and they did get the volunteers they had a million or two million men in training camps for the last year instead of having them meet the emergency?

Mr. CHAMBERLAIN. There is no doubt about that.

Mr. SMITH of Georgia. Thirty days training amounts to practically nothing. They would not be ready for service.

Mr. CHAMBERLAIN. I tried to show the other day that they have in these training camps only 14 hours less training in 30 days than the National Guard has in a year.

Mr. SMITH of Georgia. These are not National Guards. At least 200,000 are to be a part of the Regular Army, and I would like to see them enlisted and trained at once.

Mr. BRANDEGEE. That is the very reason why something like section 56 ought to be passed, so that before the emergency arises you can put these men in training camps for three or four months, and then they will be used when the emergency comes.

Mr. CHAMBERLAIN. I have no doubt about that.

The question of the Senator from California [Mr. WORKS] suggests this to my mind. If ever we have a war, it will be a war of boys, not a war of mature men. That is a broad statement to make, and I will undertake to call the attention of the Senate to the fact. If there is any trouble now, we will find that it will be our boys, and the mothers in this country who did not raise their boys to be soldiers will, nevertheless, be sending their boys patriotically to the front. There are just as many good mothers in this country now as there were in the Revolutionary days. There are just as many patriotic mothers in this country now as there were in the days of the Civil War, when a mother who had five sons sacrificed on the altar of their country received a letter from Lincoln, calling her attention to the sacrifice she had made in sending these sons to die in defense of the Union. But it will be a boy's war, that is what it will be, and the object of this section is to train these boys not only in the manner of conducting themselves when the emergency arises but how to protect and maintain sanitary conditions when they are called into the service.

In the Spanish-American War more young men died in training camps than died as a result of participation in the war, and it has always been so. If these proposed training camps only taught the young men how to care for themselves in camp, it would save thousands and hundreds of thousands of lives, if an emergency ever does come. To show that the Civil War was fought by boys, I call attention to the fact that the ages of the men in the Union Army were as follows:

Those 10 years and under	25
Those 11 years and under	38
Those 12 years and under	225
Those 13 years and under	300
Those 14 years and under	1,523
Those 15 years and under	104,987
Those 16 years and under	231,051
Those 17 years and under	844,891
Those 18 years and under	1,151,438
Those 21 years and under	2,159,798
Those 22 years and over	618,511
Those 25 years and over	46,462
Those 44 years and over	16,071

Of the total men enlisted—2,778,304—less than one-fourth were over 21 years of age.

Mr. WORKS. Does the Senator think that he can get the cream of the American youth to enlist in the Regular Army?

Mr. CHAMBERLAIN. I am assured that they will under this section 56.

Mr. WORKS. That is not in the Regular Army, properly speaking. I am speaking now about the Regular Army.

Mr. CHAMBERLAIN. They are enlisted soldiers and become a part of the Federal forces under this section.

Mr. WORKS. I can understand very well how a mother might consent to her son volunteering in case of an emergency, but I can not very well appreciate the feeling of a mother who is willing to surrender her boy to go into the Regular Army under conditions as they exist to-day.

Mr. SMITH of Georgia. We are going to change those conditions before we get through with the bill.

Mr. WORKS. I hope we will.

Mr. CHAMBERLAIN. That would lead to a discussion that I do not care to enter into now. That feeling is abroad in the land. There are individual instances where the condition of the enlisted man is bad, but it has been exaggerated, with the result that many people in the country think that an enlisted soldier is a mere slave. I think the Senator from California gave a few instances of bad treatment, and I think there are cases of bad treatment, but there are bad cases in every human institution. We will not only find it in the Army, but the pulpit itself is not free from conditions sometimes which are discreditable to it. But that does not affect the pulpit; neither is the fact that an occasional abuse of power and privilege in the Army exists discreditable to the Army. We find a drunken officer once in a while who is cruel to his men; but to that one cruel man there are dozens of patriotic, loyal American citizens who safeguard the rights and the well-being of the enlisted man.

Now, Mr. President——

Mr. SUTHERLAND. Mr. President, will the Senator permit me to ask him a question? There have been a good many suggestions here from time to time that the training which would be given to these citizen soldiers would be practically negligible. I understand some amendment that was adopted here limited it to 30 days. Can the Senator from Oregon tell us how many days or how many weeks annually the citizen soldiers of Switzerland are trained?

Mr. CHAMBERLAIN. I can not now, I will say to the Senator, but I introduced a bill modeled measurably after the Swiss and Australian systems, to fix the time of training. They commence to train when very young.

Mr. LEE of Maryland. I can give the Senator that information.

Mr. CHAMBERLAIN. Very well, if you have the data.

Mr. LEE of Maryland. I have looked into the Swiss system lately, and I think it would be well to study the system of some other republican form of government for military discipline in connection with this bill. This is found in Senate Document No. 360, page 77.

The school of recruits is for 67 days. The first repeated course is 13 days. The school of noncommissioned officers is 22 days. The school of recruits of noncommissioned officers is 67 days. The ordinary soldier in the first year has 80 days; the noncommissioned officer has 169 days. The noncommissioned officer is selected from the apt men among the recruits. Then the commissioned officer has 82 days in the school of officers, with the 67 days that went before, or 318 days are taken under that system of intensive training to make a lieutenant.

Mr. SUTHERLAND. During what length of time is the training for 318 days given?

Mr. LEE of Maryland. It is pretty continuous in connection with the officers, but in connection with the men it is 67 days in one year, 13 days in the next year, and then 13 days every year, with 10 days for mobilizing the Swiss forces. Their forces are brought out completely every summer.

Mr. SUTHERLAND. It is 67 days for the first year.

Mr. LEE of Maryland. Yes, sir.

Mr. SUTHERLAND. And after that only 13 days.

Mr. LEE of Maryland. Of course, it varies a little, I will say to the Senator, in the encampments for the artillery, the infantry, and the cavalry.

Mr. CHAMBERLAIN. Now, Mr. President——

The VICE PRESIDENT. Is there any objection to the Senator from Oregon proceeding? The Chair hears none.

Mr. CHAMBERLAIN. I am perfectly willing to submit to the rule, but I have violated it just once, and there have been many violations of the rule here. I will not do it again.

In view of the statement made by the Senator from Kansas [Mr. CURTIS] a day or two ago, I want to call attention to the question of the cost of volunteers. If the House provision prevails with reference to the National Guard, they are required within a certain time to raise about 450,000 men. If the Senate committee provision with reference to the National Guard prevails, they will be required to have about 265,000 men and the Volunteer Army about 261,000 men; so that the combined force under the Senate committee provision is about equal to the National Guard force required to be raised under the House provision. In other words, the House attempted to make the whole reserve force out of the National Guard and we have undertaken to make it up out of the National Guard and the Volunteer Army.

The Senator from Kansas spoke of the cost of volunteers as being $24,934,938 for the first year. That is true, but the Sen-

ate must not forget that the only cost of the 30 days' training is $3,481,000, while most of the balance of the expense is due to new equipment, ordnance, heavy artillery, and so forth. In other words, the cost of the personnel is not high, but they are continuing to add to the stock that the Government ought to have in case we have any trouble at all. So it is with the second year, and so it is with the third year, and so it is with the fourth year. This is made on the basis of raising increments of one-fourth of the whole number each year. So when you come to the last year the expense is proportionately diminished, because they have the equipment, and all the expense that is made is laying in supplies, which the Government ought to have.

I am going to ask to have inserted in the RECORD a statement which will give these items in detail, so that the Senate may refer to it later. It is a statement of per diem costs and cost of permanent equipment, and so forth, to be furnished from appropriations disbursed by the Quartermaster Corps for equipment and maintenance of volunteer force provided in Senate bill 4840, Sixty-fourth Congress, first session.

The VICE PRESIDENT. Without objection, it is so ordered.

The statement referred to is as follows:

Statement of per diem costs and cost of permanent equipment, etc., to be furnished from appropriations disbursed by the Quartermaster Corps for equipment and maintenance of volunteer force provided in Senate bill 4840, Sixty-fourth Congress, first session.

Appropriations.	First year: 4 Infantry divisions—3,036 officers; 53,793 men; 22,220 animals.		Second year: 8 Infantry divisions—6,072 officers; 107,586 men; 44,440 animals.		Third year: 12 Infantry divisions; 1 Cavalry division—9,542 officers; 169,130 men; 76,233 animals.		Fourth year: 16 Infantry divisions; 2 Cavalry divisions—13,012 officers; 230,674 men; 108,026 animals.	
	Cost of permanent equipment, not including mounts or means of transportation, and other costs not practicable to state at per diem rate.	Per diem cost of equipment and supplies other than permanent.	Cost of permanent equipment, not including mounts or means of transportation, and other costs not practicable to state at per diem rate.	Per diem cost of equipment and supplies other than permanent.	Cost of permanent equipment, not including mounts or means of transportation, and other costs not practicable to state at per diem rate.	Per diem cost of equipment and supplies other than permanent.	Cost of permanent equipment, not including mounts or means of transportation, and other costs not practicable to state at per diem rate.	Per diem cost of equipment and supplies other than permanent.
	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)
Pay of the Army		$52,294.05		$104,588.10		$164,413.97		$225,251.00
Subsistence of the Army		16,137.90		32,137.90		50,739.00		69,202.20
Regular supplies	23,849.21	6,307.00	23,849.21	12,663.60	29,943.21	21,746.82	29,943.60	30,859.09
Incidental expenses		1,344.48		2,016.90		3,023.35		4,538.02
Horses, Cavalry, Artillery, and Engineers (hire of)		14,008.00		28,016.00		49,723.00		71,430.00
Transportation of the Army	400,241.00	18,568.00	824,459.00	37,136.00	1,303,598.00	68,764.00	1,768,875.00	100,392.00
Water and sewers		7,387.77		14,775.54		23,227.36		31,679.18
Clothing, camp and garrison equipage	1,775,169.00		1,952,685.90		2,226,220.59		2,509,357.05	
Total	2,199,259.21	116,047.20	2,800,994.11	231,334.04	3,559,761.80	381,639.50	4,308,175.65	533,351.49

NOTE.—The amounts shown in columns 1, 3, 5, and 7 cover costs under appropriation "Regular supplies" for equipment such as paulins, buckets, etc., which would be required by the troops concerned whether in camp for one day or longer; these supplies are not of the class immediately consumable and will last three or more years, depending on the length of time in use each year. The amounts in the same columns for appropriation "Transportation of the Army" are to cover transportation of personnel and supplies and would be required for the commands involved whether in camp for a day or for a month. The amounts in the same columns for "Clothing and equipage" cover the outer clothing, equipage, and blankets necessary to uniform the commands involved, and are based on uniforms lasting three years. Ten per cent has been added each year to cover losses and shortages of uniforms and other equipage.

The amounts shown in columns 2, 4, 6, and 8 cover costs as follows:

Pay of the Army: The per diem cost of the number of officers and men shown in the respective columns.
Subsistence of the Army: Per diem cost for the number of enlisted men shown at 30 cents per day each.
Regular supplies: Per diem cost of fuel, forage, light, stationery, and ice, etc.
Incidental expenses: Per diem cost of clerks, laborers, telegrams, telephones, etc.
Horses, Cavalry, etc.: Per diem cost of hire of minimum mounts for troops concerned.
Transportation of the Army: Per diem cost of hire of draft and pack animals, harness, and wagons.
Water and sewers: Per diem cost of purchase of water, toilet paper, etc.

There is no amount included in the estimate for hire of camp sites, it being assumed that the troops (Volunteers) would be assembled on military reservations.

No amount is included for tent floors or tent frames or for mess or kitchen shelter or temporary shelter of any kind.

Mr. CHAMBERLAIN. I am not going to trespass further. I should also like to put in the cost of the ordnance.

The matter referred to is as follows:

Estimate of the annual appropriations for the Ordnance Department during each of the next four years to supply the annual contingents of the Volunteers with the full equipment and other material now issued to the Organized Militia; considering this force as coming to full authorized strength in the fourth year and not counting upon using any reserve equipment or material that may be now accumulated.

Fiscal year—	Ordnance stores and supplies.	Manufacture of arms.	Automatic machine rifles.	Armament of fortifications B.	Small-arms target practice.	Total.
1917	$3,651,000	$1,318,000	$744,000	$9,226,000	$120,000	$15,059,000
1918	3,651,000	1,318,000	744,000	9,226,000	120,000	15,059,000
1919	4,677,000	1,557,000	834,000	10,283,000	138,000	17,489,000
1920	4,677,000	1,557,000	834,000	10,283,000	138,000	17,489,000
Total	16,656,000	5,750,000	3,156,000	39,018,000	516,000	65,096,000

Estimate of the annual appropriations for the Ordnance Department during each of the next 4 years to supply the equipment required for field army troops for 6 field armies.

Fiscal year—	Ordnance stores and supplies.	Manufacture of arms.	Armament of fortifications B.	Total.
1917	$144,000	$27,000	$1,190,000	$1,361,000
1918	288,000	54,000	2,380,000	2,722,000
1919	144,000	27,000	1,190,000	1,361,000
1920	288,000	54,000	2,380,000	2,722,000
Total	864,000	162,000	7,140,000	8,166,000

Estimate of the annual current appropriations under the Ordnance Department for the support of the Army for each of the next five years and annually thereafter.

Fiscal year—	Ordnance stores and supplies.	Manufacture of arms.	Ordnance service.	Small arms target practice.	Armament of fortifications, L.	Armament of fortifications, N.	Total.
1917	$444,000	$50,000	$49,000	$81,000	$37,500	$467,000	$1,128,500
1918	883,000	100,000	98,000	162,000	72,000	934,000	2,249,000
1919	1,406,000	210,000	147,000	274,000	111,000	1,401,000	3,549,000
1920 and annually thereafter	1,923,000	420,000	196,000	386,000	147,000	1,868,000	4,940,000

Estimate of the annual appropriations for the Ordnance Department during each of the next four years to maintain the equipment required for field-army troops for six field armies.

Fiscal year—	Ordnance stores and supplies.	Armament of fortifications L.	Total.
1917	$3,000	$3,000	$6,000
1918	9,000	9,000	18,000
1919	12,000	12,000	24,000
1920	18,000	18,000	36,000

Mr. CHAMBERLAIN. Now, there is one other question. somebody was undertaking to make a little fun of the National Guard by asking the question what would be done with all this. Our Army has been over 100,000 sometimes, and then it diminishes. When the appropriations are cut down the Army diminishes. What becomes of the equipment? It is placed in storage. So this equipment that is being accumulated is placed in storage exactly the same as if the Government was buying it and keeping it in storage for future use. There is not any question about that. It is put in storage depots somewhere convenient, under the custody and control of the Government all the time, and is well cared for.

Mr. President, I am not going to trespass longer on the Senate, but I do hope the Senate will not consent to strike section 56 out of the bill, because I believe that it affords the basis for a splendid reserve force.

Mr. OLIVER. Before the Senator takes his seat I should like to ask him a question. I should like to ask the Senator why the committee in framing section 56 took the congressional district as the unit instead of the State?

Mr. CHAMBERLAIN. It was thought it would make it more democratic to do that. It is not confined to the district.

Mr. OLIVER. I see that.

Mr. CHAMBERLAIN. They can go into another district, but it was thought there are a great many young men in some of the States where they could form in a congressional district locally where they could not go to a central place.

Mr. OLIVER. It seems to me that is objectionable. The congressional district is a shifting quantity; it changes every 10 years; and in some States there are more Congressmen than districts. In my own State there are 36 Representatives and only 32 districts.

Mr. CHAMBERLAIN. Let me call the Senator's attention to the fact that it is based on the number of congressional districts and is not confined in its operation to the district. For instance, a State has two congressional districts and it would be entitled to an apportionment of so many Volunteers. It is based upon the proportion of Volunteers, not based on the number of congressional districts, and is not confined to the district.

Mr. OLIVER. In that case the apportionment of Pennsylvania would be only 32, whereas their proper proportion would evidently be 36, and the same way with the State of Texas, which has two Representatives at large; the State of Alabama I believe has one or two at large, and so on. The States that have Representatives at large would have no apportionment based upon those Representatives at large. I expect to vote against the elimination of this section, but I think that is something we ought to take into consideration. I think it would be much better to make the State the basis instead of the congressional district.

Mr. O'GORMAN. Mr. President, I do not intend to discuss at length the questions involved in the pending bill. I shall probably content myself with stating the reasons why I shall vote for the retention of section 56 in the bill reported by the Military Committee. I am not enthusiastic about the bill as it comes to the Senate. I should prefer to see a larger Military Establishment than the bill contemplates. I believe the military forces provided for by the bill are inadequate, considering the vast interests and the great wealth of this country.

The two provisions, however, which seem to have engaged the attention of some of the Senators to-day, that relating to the so-called Volunteer Army and that relating to the National Guard, are at best experimental features. No one can predict with any confidence as to how successful either of these experiments will work out. I am not confident that either of them will work out successfully, because I am persuaded, from such attention as I have given to this question of military preparedness, that the time will come when this country, profiting by the example furnished by the belligerents in the present war, will find it necessary to have a conscriptive or compulsory service; and once that plan is adopted, service in the Army of the United States will become more attractive than it is to-day. Enlistment will then become the manifestation of a patriotic impulse, shared by every citizen, to bear the burdens which are necessarily incident in a democracy such as ours with the rights which are conferred upon every citizen.

I am quite well aware that at this time there is no general sentiment in this country favorable to a compulsory military service. I do not press the suggestion at this time; but I am unable to find any reasonable or adequate justification for the attitude of opposition to section 56, providing for a Volunteer Army, emanating, as it does, largely from those whose interests seem to be centered in the National Guard.

We have had a National Guard in the various States for a long time. That they have disappointed public expectation in most of the States will not be successfully disputed. I take pride in the accomplishments of the National Guard in my own State; I believe that they are efficient, that they are capable, that they are devoted, that they are patriotic, but no Senator could have listened a few moments ago to the recital of the Senator from Oregon [Mr. CHAMBERLAIN], when he referred to the declarations made by Gen. Washington, without being impressed by the fact that the liberties of this country will hang upon a slender reed whenever they are dependent upon the services of the militia of the various States.

The militia of the several States are State organizations; they are designed for State purposes; and it is my opinion that the provision of this bill with regard to the militia of the several States does not add to the value of the recommendations made by the committee. Yet, I would not venture to pronounce judgment on that proposition. I rather content myself with the assertion made a few minutes since that this attempt to broaden the influence of the National Guard is but an experiment; and no Senator will derive more satisfaction from the success of the experiment than I shall. When it is realized that both of these proposition are experimental—the one as to the Volunteer Army and the other as to the National Guard—I can not see the wisdom of those who have confidence in the National Guard insisting upon the absolute suppression of the volunteer system, without giving it at least the opportunity of showing whether or not it can meet the expectations of those who believe that the volunteer system, rather than the National Guard, offers the better protection and safeguard to American institutions. Both plans should have a fair trial.

Mr. President, I am not one of those who believe that danger from abroad is imminent. I am not alarmed at the outlook. I do not believe that any of the belligerents, when this war is over, will have any disposition to invade our rights. It is true they are all doing it now. There is not a single belligerent that feels any restraint in disregarding the rights of neutral nations. Russia has invaded Persia in absolute disregard of the neutral rights of that nation. Germany has invaded Belgium and has invaded Luxemburg in disregard of neutral rights. France and England, in absolute defiance of neutral rights, have taken possession of the islands and the ports of Greece, with the King of that country protesting, and protesting in vain, against the disregard of Grecian rights. The mails of our citizens are taken off neutral ships in absolute disregard of neutral rights. Our commerce is interfered with and disturbed, threatening many of the citizens of this country with absolute ruin—all in disregard of neutral rights. There is not a belligerent—not one—engaged in this contest showing any respect for neutral rights.

Nations when in war, fighting for their very existence, believe, as men do, that self-preservation is the first law of nature; that is the international code that prevails. The protest of a

neutral will receive attention, if at all, only when the protest is backed by a power sufficiently strong to enforce the protest.

While I do not believe that there is the slightest danger of our country becoming involved in a war, I nevertheless realize that war is possible at any time. Of the 11 or 12 nations now involved in this dreadful cataclysm that is oppressing the earth, few of them had any apprehension of becoming involved until within a few days before the conflict was on. In my judgment, the best guarantee of peace, the best assurance of national security, is to be prepared adequately to defend ourselves against any nation whose predatory inclinations might threaten our peace or security.

I believe there ought to be a much larger increase in our Army than is contemplated by this bill, but I believe this bill goes a long way in furnishing the desired security. I am well aware that there are diverse views on this subject, and that perhaps the Military Committee has done all that might reasonably be expected of it in attempting to reconcile them, with the result that this measure—largely a compromise—is now submitted to us; but it is my belief, Mr. President, that the most indispensable feature of this bill is the provision known as section 56, and I shall vote for its retention. I have more confidence in the proposed volunteer army provision than in any other part of this bill, and it is for that reason that I should regard its rejection as most unfortunate.

Mr. WILLIAMS. Mr. President, I always listen with delight to the Senator from New York [Mr. O'GORMAN], even when I differ from him in opinion. I, of course, share the common human weakness of listening with still more delight when I agree with him in opinion. I am glad he said what he has said. He has made it unnecessary for many of us to say a great deal that we otherwise might have said.

The Senator from New York is right upon the main, salient point, which is the cause and occasion of this legislation. The legislation itself is a mere result; it is a mere response. The world condition brought about the response, and the cause, the European war, the legislative American result. The cause is this, that when nations are engaged, as the Senator from New York says, in a world war, each one really or fancifully in defense of its very existence, its liberties, and its peculiar institutions, they do pay no attention to neutrals *unless neutrals have something whereby they can make them pay attention.* That need not be dwelt upon. Everybody knows it. Nobody but a fool ignores it. It might be uttered a priori and left there.

But just to take one phase of this war in Europe. We were disputing here three or four or five or six weeks ago about whether a belligerent warship had a right without warning to sink an unarmed belligerent merchant ship upon the high seas, which belong to no nation, but belong to all the civilized world. It looked as if we were about to bring that argument to a peaceful conclusion. Within the last week, however, things have gone so far beyond that that it has ceased to be the main issue. Within that time not alone unarmed belligerent ships but unarmed neutral ships have been ruthlessly, unwarnedly destroyed upon the high seas with the human freight which they carried and with the material freight which they carried. We are negotiating. Negotiating! What an empty phrase! Why, nothing more? Simply because we have nothing with which to back up our talk and our note writing.

I differ from the Senator from New York about one thing. He says he "expects no trouble; he looks for none, but it may possibly occur." I tell you that as surely as the sun comes up to-morrow morning, unless this country puts itself in a condition where it can resist and withstand bullying, we are going to have trouble with the successful party in this European war unless we surrender the positions which we have diplomatically taken and tamely submit to the rule which the victor may lay down to our demands for compensation or indemnity. We have in one case, where our women and children were murdered on the high seas, demanded a disclaimer, a disavowal, and an apology. Have you any idea that you are going to get either in your present condition of naval and military strength? What are you going to do if you do not get it? If the administration withdraws from its position, from all the enemies of the administration, from all of its political opponents, from many of its friends—and the administration is at this time the Government of the United States—there will come up the cry "the administration knows how to write notes, but it does not know how to do anything to follow up its notes." The stupidity of Congress on the one side or its cowardice on the other will be laid on the President. That is a matter of importance to the entire country, but it is a matter of especial importance to those of you upon this side of the Chamber and to the constituents who, as Democrats, sent you here.

There is no use, Mr. President, upon this or upon any other occasion of burying your head in the sand like an ostrich, and then, because you temporarily *will* not see anything, declaring that nothing exists. This European war is going from bad to worse. It is starving peoples, killing peoples, maiming peoples, bankrupting peoples.

The desperation of motive on each side to win is increasing from day to day. You have got one of two pathways to take. Either simply say, "We will let it all go as a part of the illness of the time," pay no attention to it, excuse it because of the cardinal facts of human nature which have provoked it; or else, upon the other hand, you must stand out as the predominant neutral nation of the world and insist upon neutral rights, and especially upon neutral rights as against those acts of barbarism which destroy American life—even lives of women and little children. You can take the one path or you can take the other; but you can not, with self-respect, take any path between the two. You may quote the Scriptural injunction that when a man slaps one of your cheeks you should turn the other or you may accept the ordinary human idea, which is that when a man slaps one of your cheeks you will slap one of his; or, at any rate, if you do not, you will make him apologize for slapping yours, and give him time to do it; which is a gentlemanly method of procedure, but for the fact that in individual cases you are temporarily too angry to resort to the gentlemanly method. Individually you can not for lack of patience; but, thank God, a nation can. Yes; it can; but if, after patience is exhausted, what then? A nation can always demand an apology, a disavowal, a disclaimer; but after that what? Supine submission or a fight? You may pursue one or the other course.

So I differ with the Senator from New York [Mr. O'GORMAN] when he says that "there is not the slightest danger" of our being provoked into war. That there is not the slightest danger of the English people upon the one side and ours upon the other, or of the German people upon the one side and ours upon the other, wanting war with one another is almost a platitude, is a truism; but that little by little, as the passions of men are aroused and as provocation succeeds provocation, you will reach the point when we must, in response to European contempt and bullying, do something or supinely lie down I have no doubt. Nor have I any doubt that you can avoid all of that by letting the world see that you foresee it and that you are getting ready. You do not have to *be* completely ready to avoid it. You just have to show your teeth; but your teeth you must show.

I agree with the Senator from New York; I want the Regular Army increased to the point that it is increased in this bill. I want the militia strengthened to the point that it is increased in this bill, although I have my doubts, if the question could even be brought up before a judicial tribunal, as to whether or not we could legally exercise some of the powers that we insinuate in this bill. Still, I am willing to chance it; and I am willing, if possible, to make out of the militia of the several States an efficient, or comparatively efficient, instrument for the national defense. I am especially in favor of section 56 of this bill.

What are these men under section 56? In the first place, remember they are "volunteers." You gentlemen from my own section of the country, please remember that. They are not conscripts. They can not be "called into the service" originally by the President of the United States. They are volunteers. *They call themselves* into the service, and after they call themselves they become, and then only become, subject to the President's orders. They are volunteers.

Why, Mr. President, I find that it has been said during this debate, in substance, that "if a man should be elected President who had no sense of the race issue," and of its vital importance in the preservation of white civilization in a part of this country, and who was "politically antagonistic to the white man," and wanted to make the "nigger" and the nigger's civilization—if there be any—supreme, he could use section 56 of this bill to organize "nigger" regiments, and mobilize them for military training "in every congressional district of every State of the South."

Now, just think a moment! A man must volunteer to go to these drills, which under the committee amendment are to last "not more than 30 days," in a whole year. I hope, by the way, before the consideration of the bill is concluded, to amend the amendment by making it 90 days. But say he shall go at not more than 30 days. Now, he is to "volunteer." Can those of you who have a sense of humor, from Texas and Georgia and Alabama and Louisiana and Mississippi, imagine a lot of plantation darkies volunteering to go to Plattsburg and drill 30 days or 90 days, and lose their crops of cotton and corn, and hire somebody while they are gone to take care of their one mule

or their two mules or their three mules, their cow and their calf, or their three cows and two calves, or whatever it may be?

The excited imagination of Macbeth, harassed by the memory of crime, evoked the picture of Banquo, and he carried on conversations with him; but that was not any more remarkable than expecting the negroes to overcome white supremacy in the South by "a Plattsburg drill."

Whether or not the negro is going to carry his mule with him, to be certain he is fed while he is gone, I do not know, but if he left him behind and trusted to another darky to feed him he would probably find his poor old mule either sold or mortgaged when he came back.

And suppose that there was a drill ground, akin in its nature to that of Plattsburg, started in my own State, let us say, and that a lot of darkies did volunteer to go to it; what would happen? Why, the white men who had gone as volunteers would go home before enlistment—disgusted; and they would leave the 15 or 20 darkies in Mississippi that might be able to go and willing to go in sole possession of the camp. The darky would have to be able to go, first, financially, and then he would have to be willing. Now, what would that willingness and that going involve in a State like Mississippi?

Suppose a lot of darkies went into Hinds County, to a so-called Plattsburg drill, as a voluntary force of some sort, and, with arms in their hands, began to be disciplined, so that in the opinion of the white people of the State they became a source of menace to white civilization, what would happen to those volunteer darkies? Echo answers, "What?" And do you suppose the darky does not know that? He knows it better than any other human being on the surface of this globe.

Mr. President, I believe that the future, the civilization, the intelligence, the industrialism, the agriculture, the education, the morality of the South depends absolutely upon white political and social supremacy; and whenever I see anything that really threatens that supremacy I shall resist it. I would resist it not only by my voice here, but by my vote at home, and I would not only resist it by my voice and by my vote, but I would resist it, if absolutely necessary, at the sacrifice of my life, which does not amount to very much anyhow. But you can not scare me *every day in the week* with "a nigger in the woodpile" unless the nigger is in the woodpile. [Laughter.] You can not frighten me to death *every day* with merely alleging that a nigger is in the woodpile, especially if I know the woodpile, and I know that there are not enough sticks of wood in the woodpile for the darky to hide under, as in this case. You might do that once a year—on April 1—not oftener.

I have heard but one real, solid objection made to section 56, and that was made, or rather intimated, in a private conversation between the Senator from Minnesota [Mr. CLAPP] and me, by him, and that was that it looked as if this soldier under section 56 were a sort of "aristocratic citizen" soldier. There is some color of that about it, because the men who go to these drills expect to support themselves, and will pay out twice as much while they are there as the Government will pay them, or probably five times as much. That objection I can understand; but the other objection—to wit, that a poor darky could go there and take possession of the Plattsburg camp or other camps like it and from that vantage ground threaten white civilization—I confess I do not understand. That any President of the United States could draft the darky into Plattsburg camps for political purposes is, of course, mere moonshine. Nobody will contend that a man could be gotten into these volunteer camps by any volition in the world except his own. He must first *want* to go, and then he must go; and then, in order to go, he must not only be willing to go but *financially able* to go. How far from home? Five hundred to a thousand miles. Watch Amos and Sambo going that trip! Watch their welcome by the so-called aristocrats when they get in camp! The welcome of greasers at Columbus, N. Mex., would not be a patching to it.

Mr. President, one additional word upon a subject not exactly cognate to this:

I do not quite agree with the Senator from New York [Mr. O'GORMAN] that the provision in this bill for the increase of the Regular Army is not sufficient. I think it is. I think our difference of opinion grows out of the fact that he regards, as the Senator from Massachusetts [Mr. LODGE] seems, from what he said the other day, to regard, the Army as our "first defense." I not only do not regard it as our first defense, but I do not regard it as our main defense, nor our chief defense. It may be right now our immediate defense. That is a different proposition. Just in our present state of naval unpreparedness I am willing to vote for a greater increase to the Regular Army than I would vote for if we were in a state of naval preparation. By the way, I apologize to the Senate for using the words "preparedness or unpreparedness." I meant lack of naval preparation. I just fell into it by contagion. If we had sufficient naval preparation, I would not vote as much addition to the Army as I shall vote for in this bill. But now, when it comes to your naval bill—and it is going to come to it pretty soon—I am going to vote for every proposition that increases the Navy over and above what any proposition before the House or the Senate fixes it at.

This Government, great and rich and abundant in wealth, in ingenuity, in industrialism, in enterprise, can, if it wishes to do so, build 12 dreadnaughts and 20 battle cruisers and 100 submarines and the adequate number of transports and auxiliaries in a single year. You need not tell me you can not do it. When this country had a third of its present population, at the outbreak of the Civil War, and did not have one-twentieth of its present wealth and great industrial establishments, when the Federal Government was put to it, it did in the way of naval preparation in one year what everybody had prophesied could not be done in 10 years; and we can do it again.

Every shipyard in this country, private and public, ought to be put to work building ships of the several desired types, so that at the end of this war in Europe, which will last from one to two years longer—it can not last much longer than two years more without universal bankruptcy—we shall be ready not to whip on land any force which may be sent against us but to sink at sea any force that may be started against us. Aye, more than that, not even to sink at sea any force that will be started against us, because if we have the ships, and the world knows we have them, none will be started. Aye, even still more, we will be ready to still the bullying voice of menace before it dares even to take a diplomatic stand, before it dares to threaten an ultimatum, much less to issue one. You will save more money in what you do not have to spend for war at sea and war on land if you let war come by overweakness at home, encouraging overconfidence and aggression abroad—five times over—than the amount of money that you would spend now to go into this thing in the right, wholesale way and be done with it. What would you lose?

Say you make up a program for 10 years wherein to build up an irresistible fleet—or not an irresistible fleet, either. I do not mean that; I mean a fleet which can resist anything else, which can defend the country. Suppose that is your 10-year program. Suppose, on the contrary, you do it all in one or two years. What have you lost? Merely the interest on your money; that is all. You have lost the interest upon one-tenth of your money for 1 year, upon nine-tenths of your money for 9 years, and upon ten-tenths of it for 10 years—merely the interest upon your money; that is all—and the United States can borrow money at from 3 to 3½ to 4 per cent. Now why, merely for the sake of the interest charge, postpone to 1920 or 1921 that which you can have completed in 1918? And why, in the meanwhile, my friends, piddle around in a quarrel between the National Guard and the Plattsburg Camp? Tweedledum and tweedledee! What does it all amount to? If there is any virtue in either one, let us have both. If there is virtue in neither, let us have neither. But you get up here and debate with one another, spend precious time, one gentleman holding the affirmative and another the negative upon the proposition:

Resolved, That the National Guard is greater than the Plattsburg drill.

That is what you are doing. You have been at it two weeks, and you must remember meanwhile that this is the august, deliberative assembly which is celebrated in its own opinion for its wisdom. You are talking about the National Guard and Plattsburg, when the main thing in the whole bill is the national defense, and the piece de resistance is the increase in the Regular Army.

It reminds me of something I cut out of this evening's issue of the Washington Star, which I will read in a minute, and it reminds me of it not only on that account but upon this account—that when you want advice, when you want to cure an evil about anything, you ought to go to the man who knows something about it—first the evil, then the remedy—and ought not to take a monkey wrench and try to attend to the job yourself, unless you understand both the mechanism and use of the monkey wrench. That means that the thing that is needed first should be discovered and then afterwards, if we have got to consult with somebody, we should consult with "somebody who knows." In this case the people who know are our men in the Regular Army and our men in the Navy, and if they do not know

we do not stand any chance internationally anyhow. If the men we have educated and equipped for war purposes are to be set aside by men who have been educated and equipped for peace purposes when war questions are involved, then this Nation is gone anyhow and there is no use talking about it. This is what Walt Mason wrote:

My watch wouldn't work worth a dime; it was always a fortnight too slow; instead of recording the time, it monkeyed around, to and fro.

[Laughter.]

I do not mean any disrespect to the Senate by reading that—

The mainspring seemed out of repair; it traveled by spasms and jerks; so I sat me right down in a chair and studied the watch and its works.

I might sit me down in a chair and study naval and military propositions for a week and I would not know very much about them, although I attended a military school for two years and did learn some little things under a set of tactics that have been succeeded since by another set.

But to continue the reading:

I took it apart with a wrench and studied the levers and gears, all piled in a heap on a bench; I studied and wiggled my ears. I put the wheels back in the case and shook them to give them a shock, but the hands didn't go round the face, and the works didn't tick nor yet tock. I asked of the plumber advice, and counsel I asked of the judge, consulted the dealer in ice—and still the blamed works wouldn't budge. "Methinks," I remarked, "and I wist, I must go to the jeweler's shop." He gave it three twists of the wrist, and the watch went along like a top. That plan's kept me down in the past—

It has kept this Nation down—

a plan that is doubtless the worst; I always reserve till the last the thing I should tackle at first.

Mr. President, I see nothing in this bill to threaten public liberty or life in peace, or the pursuit of happiness, which I love better than either. I see nothing in it to threaten the Constitution, for even if we are insinuating certain powers over the militia or National Guard which we do not clearly and indubitably possess the United States Supreme Court can correct it. I think that is a doubtful point. I do not think the unconstitutionality is clear. If so, on my oath I must and would oppose it. I see nothing in it to threaten the sovereignty of the State of Mississippi. I see nothing in it to threaten "the supremacy of the white man's civilization." I shall therefore vote for it. I shall later on offer an amendment to section 56, which will be in order before the amendment itself is voted upon, to change the period of annual drill from "30 days" to "90 days," so that there may be a period of 90 days at most, mind you, because the bill now says "not more than 30," and it will then read "not more than 90."

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by J. C. South, its Chief Clerk, requested the Senate to return to the House the bill (H. R. 13006) to authorize the reconstruction of an existing bridge across the Wabash River at Silverwood, in the State of Indiana, and the maintenance and operation of the bridge so reconstructed.

The message also announced that the House had passed the following bills and joint resolution:

S. 585. An act conferring jurisdiction on the Court of Claims to hear, determine, and render judgment in claims of the Sisseton and Wahpeton Bands of Sioux Indians against the United States;

S. 707. An act for the relief of Beverly E. Whitehead;

S. 922. An act for the relief of Mary E. Nicolson;

S. 1048. An act for the relief of Warren E. Day; and

S. J. Res. 80. Joint resolution authorizing the Secretary of War to receive for instruction at the United States Military Academy, at West Point, René W. Pintó y Wentworth, a citizen of Cuba.

The message further announced that the House had passed the following bills, in which it requested the concurrence of the Senate:

H. R. 1024. An act for the relief of Allen M. Hiller;

H. R. 1373. An act for the relief of W. W. Wall;

H. R. 1592. An act for the relief of George W. Trahey;

H. R. 1609. An act for the relief of S. L. Burgard;

H. R. 1636. An act for the relief of Karen S. Sorenson and James Lyle;

H. R. 2052. An act for the relief of the estate of William D. Allen;

H. R. 2535. An act for the relief of A. H. Rebentish;

H. R. 2554. An act for the relief of Mrs. Joseph Cameron;

H. R. 2555. An act for the relief of the Minnesota & Ontario Power Co.;

H. R. 2814. An act for the relief of George W. Gamble;

H. R. 3794. An act for the relief of Thomas S. Johnson;

H. R. 3895. An act for the relief of F. W. Schultz;

H. R. 4866. An act for the relief of Julia R. Goodloe;

H. R. 5262. An act for the relief of John B. Hoover;

H. R. 5411. An act for the relief of Olaf Nelson;

H. R. 5453. An act for the relief of the State Board of Harbor Commissioners of the State of California;

H. R. 7062. An act for the relief of Erskine R. Hayes;

H. R. 7239. An act for the relief of Philip H. Heberer;

H. R. 7417. An act for the relief of Lawrence J. Kessinger;

H. R. 8068. An act for the relief of E. C. Hornor;

H. R. 8108. An act for the relief of the legal representatives and heirs of Elizabeth Bruce, deceased, widow of the late John H. Bruce;

H. R. 8325. An act for the relief of Borden H. Mills;

H. R. 9353. An act for the relief of Ira G. Kilpatrick and Guy D. Dill;

H. R. 9898. An act for the relief of John E. Jones;

H. R. 9994. An act for the relief of Samuel H. Walker;

H. R. 10049. An act for the relief of Capt. Harvey H. Young;

H. R. 10052. An act to reimburse J. T. Nance;

H. R. 10641. An act for the relief of Fred Henderson;

H. R. 10642. An act for the relief of Louis Jones;

H. R. 10643. An act for the relief of Theodore Bagge;

H. R. 10791. An act for the relief of the occupants of the Tuttle town site;

H. R. 11261. An act for the relief of Mary S. Corbin;

H. R. 11262. An act for the relief of Mrs. C. D. Corbin;

H. R. 11304. An act for the relief of Martha A. Moffitt;

H. R. 11939. An act for the relief of William Guy;

H. R. 12248. An act for the relief of the estate of Mary H. S. Robertson, deceased; and

H. R. 13064. An act for the relief of the M. A. Sweeney Shipyards & Foundry Co.

ENROLLED BILL SIGNED.

The message also announced that the Speaker of the House had signed the bill (S. 4671) to exempt from cancellation certain desert-land entries in Riverside County, Cal., and it was thereupon signed by the Vice President.

PETITIONS AND MEMORIALS.

Mr. CHAMBERLAIN presented a memorial of sundry citizens of Marshfield, Oreg., remonstrating against the enactment of legislation to limit the freedom of the press, which was referred to the Committee on Post Offices and Post Roads.

He also presented a petition of sundry citizens of Pendleton, Oreg., praying for national prohibition, which was referred to the Committee on the Judiciary.

He also presented a petition of sundry citizens of Portland, Oreg., praying for Federal censorship of motion pictures, which was referred to the Committee on Education and Labor.

He also presented memorials of sundry citizens of Oregon, remonstrating against the enactment of legislation for compulsory Sunday observance in the District of Columbia, which were ordered to lie on the table.

Mr. DILLINGHAM presented petitions of sundry citizens of Vermont, praying for national prohibition, which were referred to the Committee on the Judiciary.

Mr. McLEAN presented petitions of sundry citizens of Connecticut, praying for national prohibition, which were referred to the Committee on the Judiciary.

He also presented a petition of the Chamber of Commerce of Hartford, Conn., praying for Federal aid to vocational education, which was ordered to lie on the table.

He also presented petitions of sundry citizens of Hartford and Stafford Springs, in the State of Connecticut, praying for Federal censorship of motion pictures, which were referred to the Committee on Education and Labor.

Mr. THOMAS presented petitions of sundry citizens of Colorado, praying for national prohibition, which were referred to the Committee on the Judiciary.

He also presented a petition of the East Side Woman's Christian Temperance Union, of Colorado Springs, Colo., praying for the adoption of an amendment to the Constitution granting the right of suffrage to women, which was ordered to lie on the table.

He also presented petitions of sundry citizens of Colorado, praying for the creation of a system of rural credits, which were ordered to lie on the table.

Mr. MARTINE of New Jersey presented memorials of sundry citizens of Trenton, Burlington, Lambertville, and Rancocas, all in the State of New Jersey, remonstrating against the enactment of legislation for compulsory Sunday observance in the District of Columbia, which were ordered to lie on the table.

He also presented memorials of sundry citizens of Atlantic City, Pleasantville, Northfield, and Egg Harbor City, all in the

State of New Jersey, remonstrating against the enactment of legislation to limit the freedom of the press, which were referred to the Committee on Post Offices and Post Roads.

He also presented petitions of sundry citizens of Atlantic City, Hackensack, and Manasquan, all in the State of New Jersey, praying for national prohibition, which were referred to the Committee on the Judiciary.

Mr. WARREN presented a memorial of Dutch Flat Grange, No. 11, Patrons of Husbandry, of Lander, Wyo., remonstrating against an increase in armaments, which was ordered to lie on the table.

He also presented a petition of Dutch Flat Grange, No. 11, Patrons of Husbandry, of Lander, Wyo., praying for Government ownership of telegraph and telephone systems, which was referred to the Committee on Post Offices and Post Roads.

He also presented a petition of sundry citizens of Thermopolis, Wyo., praying for national prohibition, which was referred to the Committee on the Judiciary.

Mr. OLIVER presented petitions of sundry citizens of Pittsburgh, Pa., praying for the extension of military training in civil educational institutions, which were referred to the Committee on Military Affairs.

He also presented memorials of sundry citizens of Pennsylvania, remonstrating against the enactment of legislation to limit the freedom of the press, which were referred to the Committee on Post Offices and Post Roads.

He also presented memorials of sundry granges of Pennsylvania, remonstrating against an increase in armaments, which were ordered to lie on the table.

He also presented petitions of sundry granges of Pennsylvania, praying for Government ownership of telephone and telegraph systems, which were referred to the Committee on Post Offices and Post Roads.

He also presented petitions of sundry citizens of Pennsylvania, praying for national prohibition, which were referred to the Committee on the Judiciary.

He also presented a memorial of the Coke Producers' Association, of Uniontown, Pa., remonstrating against the enactment of legislation to further restrict immigration, which was referred to the Committee on Immigration.

Mr. WILLIAMS presented a memorial of sundry citizens of Jackson, Miss., remonstrating against the enactment of legislation to limit the freedom of the press, which was referred to the Committee on Post Offices and Post Roads.

Mr. HUGHES presented petitions of sundry citizens of New Jersey, praying for national prohibition, which were referred to the Committee on the Judiciary.

Mr. BURLEIGH presented petitions of sundry citizens of Maine, praying for national prohibition, which were referred to the Committee on the Judiciary.

Mr. WADSWORTH presented petitions of sundry citizens of New York, praying for national prohibition, which were referred to the Committee on the Judiciary.

He also presented memorials of sundry citizens of New York remonstrating against the enactment of legislation for compulsory Sunday observance in the District of Columbia, which were ordered to lie on the table.

Mr. CLARK of Wyoming presented petitions of sundry citizens of Wheatland and Thermopolis, in the State of Wyoming, praying for national prohibition, which were referred to the Committee on the Judiciary.

Mr. PHELAN presented a petition of the Twentieth Century Club, of Berkeley, Cal., praying that an appropriation of $300,000 be made for the improvement of the Yosemite National Park and for the creation of a national-park service, which was referred to the Committee on Appropriations.

He also presented a petition of the Christian Endeavor Union of Los Angeles, Cal., praying for prohibition in the District of Columbia, which was ordered to lie on the table.

He also presented a petition of Local Lodge No. 148, International Boilermakers, Iron Ship Builders, and Helpers Union of America, of Vallejo, Cal., praying for the enactment of legislation to further restrict immigration, which was referred to the Committee on Immigration.

He also presented petitions of sundry citizens of California, praying for national prohibition, which were referred to the Committee on the Judiciary.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. OLIVER (for Mr. PENROSE):

A bill (S. 5389) granting a pension to Elise Seabel; to the Committee on Pensions.

By Mr. REED:

A bill (S. 5390) granting a pension to Maria Gille (with accompanying papers);

A bill (S. 5391) granting a pension to James Enloe (with accompanying papers);

A bill (S. 5392) granting a pension to Hugh Kesterson (with accompanying papers);

A bill (S. 5393) granting a pension to Eliza E. Miller (with accompanying papers); and

A bill (S. 5394) granting a pension to Julia M. Anderson (with accompanying papers); to the Committee on Pensions.

By Mr. LANE:

A bill (S. 5395) to repeal sections 2588, 2589, and 2590 of the Revised Statutes of the United States; to the Committee on Commerce.

A bill (S. 5396) granting an increase of pension to Alice L. Rix (with accompanying papers); to the Committee on Pensions.

By Mr. BURLEIGH:

A bill (S. 5397) granting a pension to Arthur M. Clark; to the Committee on Pensions.

By Mr. MARTINE of New Jersey:

A bill (S. 5398) to increase the limit of cost of post-office site and building at Millville, N. J.; to the Committee on Public Buildings and Grounds.

By Mr. O'GORMAN:

A bill (S. 5399) granting an increase of pension to Oliver P. Gillson; to the Committee on Pensions.

By Mr. RANSDELL:

A bill (S. 5400) for the relief of the heirs of Mrs. Susan A. Nicholas; to the Committee on Claims.

WABASH RIVER BRIDGE.

The VICE PRESIDENT. The Chair lays before the Senate the request of the House of Representatives to return to the House the bill (H. R. 13006) to authorize the reconstruction of an existing bridge across the Wabash River at Silverwood, in the State of Indiana, and the maintenance and operation of the bridge so reconstructed, and the Committee on Commerce will be discharged from the further consideration of the bill and the request of the House of Representatives will be complied with.

HOUSE BILLS REFERRED.

The following bills were severally read twice by their titles and referred to the Committee on Military Affairs:

H. R. 1024. An act for the relief of Allen M. Hiller; and

H. R. 10049. An act for the relief of Capt. Harvey H. Young.

The following bills were severally read twice by their titles and referred to the Committee on Post Offices and Post Roads:

H. R. 3895. An act for the relief of F. W. Schultz; and

H. R. 10052. An act to reimburse J. T. Nance.

The following bills were severally read twice by their titles and referred to the Committee on Indian Affairs:

H. R. 5262. An act for the relief of John B. Hoover; and

H. R. 11939. An act for the relief of William Guy.

The following bills were severally read twice by their titles and referred to the Committee on Public Lands:

H. R. 4866. An act for the relief of Julia R. Goodloe;

H. R. 9353. An act for the relief of Ira G. Kilpatrick and Guy D. Dill; and

H. R. 10791. An act for the relief of the occupants of the Tuttle town site.

The following bills were severally read twice by their titles and referred to the Committee on Claims:

H. R. 1373. An act for the relief of W. W. Wall;

H. R. 1592. An act for the relief of George W. Trahey;

H. R. 1609. An act for the relief of S. L. Burgard;

H. R. 1636. An act for the relief of Karen S. Sorenson and James Lyle;

H. R. 2052. An act for the relief of the estate of William D. Allen;

H. R. 2535. An act for the relief of A. H. Rebentish;

H. R. 2554. An act for the relief of Mrs. Joseph Cameron;

H. R. 2555. An act for the relief of the Minnesota and Ontario Power Co.;

H. R. 2814. An act for the relief of George W. Gamble;

H. R. 3794. An act for the relief of Thomas S. Johnson;

H. R. 5411. An act for the relief of Olaf Nelson;

H. R. 5453. An act for the relief of the State Board of Harbor Commissioners of the State of California;

H. R. 7062. An act for the relief of Erskine R. Hayes;

H. R. 7239. An act for the relief of Philip H. Heberer;

H. R. 7417. An act for the relief of Lawrence J. Kessinger;

H. R. 8068. An act for the relief of E. C. Hornor;

H. R. 8108. An act for the relief of the legal representatives and heirs of Elizabeth Bruce, deceased, widow of the late John H. Bruce;

H. R. 8325. An act for the relief of Borden H. Mills;
H. R. 9898. An act for the relief of John E. Jones;
H. R. 9994. An act for the relief of Samuel H. Walker;
H. R. 10641. An act for the relief of Fred Henderson;
H. R. 10642. An act for the relief of Louis Jones;
H. R. 10643. An act for the relief of Theodore Bagge;
H. R. 11261. An act for the relief of Mary S. Corbin;
H. R. 11262. An act for the relief of Mrs. C. D. Corbin;
H. R. 11304. An act for the relief of Martha A. Moffitt;
H. R. 12248. An act for the relief of the estate of Mary H. S. Robertson, deceased; and
H. R. 13064. An act for the relief of the M. A. Sweeney Shipyards & Foundry Co.

RECESS.

Mr. CHAMBERLAIN. Mr. President, I understand that one or two Senators desire to address the Senate on the pending bill, and in view of that fact I move that the Senate take a recess until to-morrow at noon.

The motion was agreed to; and (at 6 o'clock and 5 minutes p. m., Wednesday, April 5, 1916) the Senate took a recess until to-morrow, Thursday, April 6, 1916, at 12 o'clock meridian.

HOUSE OF REPRESENTATIVES.

WEDNESDAY, *April 5, 1916.*

The House met at 12 o'clock noon.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

We lift up our hearts unto Thee, O God our Father, from whom cometh our strength to resist the wrong and pursue the right as it is given us to see the right. Increase, we beseech Thee, our strength, that we may be heroes in the daily battles of life. Renew our enthusiasm, our zeal, our courage, that we may climb the heights of intellectual, moral, and spiritual attainments as individuals and as a Nation and be prepared for every emergency in the onward march of civilization. And Thine be the praise through Jesus Christ our Lord. Amen.

The Journal of the proceedings of yesterday was read and approved.

LEAVE OF ABSENCE.

By unanimous consent, at the request of Mr. STEELE of Pennsylvania, indefinite leave of absence was granted to Mr. DEWALT, on account of serious illness.

H. SNOWDEN MARSHALL.

Mr. WEBB rose.

The SPEAKER. For what purpose does the gentleman from North Carolina rise?

Mr. WEBB. Mr. Speaker, I rise for the purpose of presenting a matter of privilege to the House in the nature of a report and statement from the Committee on the Judiciary, which I send to the desk and ask to have read. (H. Rept. 494.)

The SPEAKER. The Clerk will read.

The Clerk read as follows:

Mr. WEBB, from the Committee on the Judiciary, submitted the following report in the nature of a statement:

By direction of the Committee on the Judiciary, I beg leave to make the following report, in the nature of a statement, to the House of Representatives. On the 12th day of January, 1916, Hon. FRANK BUCHANAN, a Representative in Congress from the State of Illinois, arose, in his responsible position, on the floor of the House and impeached H. Snowden Marshall, district attorney for the southern district of the State of New York, charging the said H. Snowden Marshall with numerous malfeasances and misfeasances and with corrupt and improper behavior and conduct in office, all of which charges were read by the Clerk of the House. Immediately after the reading of said charges Representative BUCHANAN offered for the immediate consideration of the House House resolution 90, which provided, among other things, "that the Committee on the Judiciary be directed to inquire and report whether the action of this House is necessary concerning the alleged official misconduct of H. Snowden Marshall," etc. After debate on the resolution, the House, upon motion of Mr. FITZGERALD of New York, referred the resolution to the Committee on the Judiciary for its consideration and action.

The Committee on the Judiciary immediately began the consideration of said resolution and called Representative BUCHANAN before it to make such statement and furnish such information concerning the truth of his impeachment charges, as set out in House resolution 90, as he was able to make and furnish. Thereafter, on the 27th day of January, 1916, by direction of the Judiciary Committee, the chairman thereof offered in the House of Representatives the following resolution:

"House resolution 110.

"*Resolved*, That the Committee on the Judiciary, in continuing their consideration of House resolution 90, be authorized and empowered to send for persons and papers, to subpœna witnesses, to administer oaths to such witnesses, and take their testimony.

"The said committee is also authorized to appoint a subcommittee to act for and on behalf of the whole committee wherever it may be deemed advisable to take testimony for said committee. In case such subcommittee is appointed, it shall have the same powers in respect to obtaining testimony as are herein given to the Committee on the Judiciary, with a sergeant at arms, by himself or deputy, who shall attend the sittings of such subcommittee and serve the process of same.

"In case the Committee on the Judiciary or a subcommittee thereof deems it necessary, it may employ such clerks and stenographers as are required to carry out the authority given in this resolution, and the expenses so incurred shall be paid out of the contingent fund of the House.

"The Speaker of the House of Representatives shall have authority to sign, and the clerk thereof to attest, subpœnas for witnesses, and the Sergeant at Arms or a deputy shall serve them."

The said resolution was on said date unanimously agreed to.

While further considering the House resolution 90 and the said House resolution 110, on the 31st day of January, 1916, the Committee on the Judiciary authorized the chairman to appoint a subcommittee of three to execute the purposes of House resolution 110 to act for and on behalf of the full committee wherever it may be deemed advisable to take testimony for said committee, and on February 1, 1916, the chairman appointed Messrs. CHARLES C. CARLIN, WARREN GARD, and JOHN M. NELSON as members of such subcommittee.

Thereafter the said subcommittee organized and heard the testimony of certain witnesses in the Judiciary Committee rooms in the city of Washington. The subcommittee determined, for its further information and in carrying out the duties assigned it under the resolution of the House of Representatives, that it should hear the testimony of certain other witnesses in the city of New York, and on the 28th day of February, 1916, the said subcommittee, under subpœnas duly signed and attested by the clerk thereof, caused certain witnesses to be brought before it, in the Federal post-office building in the city of New York, and continued the examination of witnesses upon said charges, up to and including the 4th day of March, 1916.

On the 3d day of March, 1916, there appeared in a New York newspaper an article containing, among other things, the following language:

"It is the belief in the district attorney's office that the real aim of the Congress investigation is to put a stop to the criminal investigation of the pro-German partisans."

On the 3d of March, 1916, the subcommittee called before it one, Leonard R. Holme, who testified to the subcommittee that he wrote the article containing the foregoing language, but when asked whether or not he conferred with anybody in the district attorney's office before the article was written replied that he had to decline to give the source of his information. The chairman of the subcommittee then propounded this question to the witness: "Did you confer with Mr. Marshall before you wrote this article," to which the witness replied, "I respectfully decline to answer the question, sir." The chairman of the subcommittee then propounded the following question to him: "Did you confer with anybody in Mr. Marshall's office," to which the witness replied, "I respectfully decline to answer that question, sir."

Whereupon the Sergeant at Arms was directed by the chairman of the subcommittee to take charge of the witness and keep him in custody until the further order of the committee. At 4.10 o'clock p. m. of the same day, the chairman of the subcommittee again propounded the foregoing questions to Witness Holme, and the following proceedings were had:

"Mr. CARLIN. Mr. Holme, the committee has directed me to order you to answer the question which was asked you. Mr. Stenographer, read the testimony of Mr. Holme.

(The entire previous testimony of Mr. Holme was read to the committee by the stenographer in the hearing of the committee only.)

"Mr. CARLIN. Mr. Holme, I hand you this article in the sixth column of page 4 of the New York Times, dated Friday, March 3, 1916. The article is headed "Marshall refuses Buchanan evidence." I now call your attention to this paragraph of the article:

"'It is the belief in the district attorney's office that the real aim of the Congress investigation is to put a stop to the criminal investigation of the pro-German partisans.'

"I ask you from whom you got that information?

"Mr. HOLME. That information, sir, is a deduction. I have known at the time these proceedings were begun in Washington—it was before the indictment of Congressman BUCHANAN—that there had been a considerable amount of talk around this building as to their nature. I am down here practically every day of my life, and I meet with a great many men who are connected with the district attorney's office, and who are in this building in various other regular capacities, and I based that paragraph entirely upon my knowledge of the general gossip around the building and the general feeling in the building.

"Mr. CARLIN. Why did you not state that, instead of saying it is the belief in the district attorney's office?

"Mr. HOLME. Well, sir, it comes to much the same thing, does it not? The district attorney's office is a large organization.

"Mr. CARLIN. Is that your answer?

"Mr. HOLME. Yes, sir.

"Mr. CARLIN. Did you base that part of the article upon a conference held with H. Snowden Marshall or any subordinate of his in the district attorney's office?

"Mr. HOLME. I based that article on my general knowledge of the conditions surrounding this proceeding and the general opinion floating around the building.

"Mr. CARLIN. You state that it is the general belief in the district attorney's office. Now, who in the district attorney's office expressed that belief?

"Mr. HOLME. I don't think I could give you any definite names, because I have discussed this matter with a large number of different people at various times.

"Mr. CARLIN. As a matter of fact, did anybody in the district attorney's office express that belief?

"Mr. HOLME. Yes, sir.

"Mr. CARLIN. Who?

"Mr. HOLME. I can only remember a very few, and I respectfully decline, as a newspaper man, to express their opinions, which are often given to me in general conversation.

"Mr. CARLIN. Was the belief expressed by Mr. Marshall or either of his assistants?

"Mr. HOLME. I respectfully decline to answer, sir.

"Mr. CARLIN. Mr. Stenographer, insert in the record this article which I hand you, and the date line of the paper.

"Mr. GARD. I understand you to say, Mr. Holme, that this extract which has been read to you was written by you?

"Mr. HOLME. Yes, sir.

"Mr. GARD. And the extract is this:

"'It is the belief of the district attorney's office that the real aim of the congressional investigation is to put a stop to the criminal investigation of the pro-German partisans.'

"You wrote that?

"Mr. HOLME. Yes, sir.

"Mr. GARD. And I understand, also, that you decline and refuse to answer questions as to whether you obtained that information from anyone in the district attorney's office of the southern district of New York?

"Mr. HOLME. Yes, sir.

"Mr. GARD. You decline to answer that?

"Mr. HOLME. Yes, sir.

"Mr. CARLIN. Now, then, Mr. Holme, I am directed by the committee to order you to answer that. Do you still decline?

"Mr. HOLME. I do, respectfully, sir.

"Mr. CARLIN. Then, I am directed to say to you, for the record, that this committee determines you to be in contempt of the order of the committee and of the House of Representatives of the Congress of the United States, and that for the present you will be released from the custody of the marshal until the committee, if it sees proper, shall proceed in the matter prescribed by statute in such cases. We want to be kind to you. We have no desire to be harsh with you. We realize to some extent your embarrassment. We have a duty to discharge, and we think under the circumstances we will discharge it in this way and release you from the custody of the Sergeant at Arms of the House."

On Saturday, the 4th day of March, 1916, the said H. Snowden Marshall, as district attorney for the southern district of New York, caused to be transmitted to C. C. CARLIN, chairman of said subcommittee, then in the performance of its duties, as required by the House of Representatives, the following letter:

DEPARTMENT OF JUSTICE,
UNITED STATES ATTORNEY'S OFFICE,
New York, March 4, 1916.

SIR: Yesterday afternoon, as I am informed, your honorable committee ordered the arrest of Mr. L. R. Holme, a representative of a newspaper which had published an article at which you took offense. The unfortunate gentleman of the press was placed in custody under your orders He was taken to the United States marshal to be placed in confinement (I do not understand whether his sentence was to be one day or a dozen years). The marshal very properly declined to receive the prisoner. This left you at a loss, and I am advised that you tried to work your way out of the awkward situation by having Mr. Holme brought back and telling him that you were disposed to be "kind" to him and then discharged him for the purpose of avoiding unpleasant consequences to yourselves.

You are exploiting charges against me of oppressive conduct toward a Member of your honorable body who is charged with a violation of law and of oppressive conduct on my part toward shysters in the blackmailing and bankruptcy business.

I may be able to lighten your labors by offering to resign if you can indicate anything I ever did that remotely approximates the lawless tyranny of your order of arrest of Mr. Holme.

The supposed justification of your order that Mr. Holme be placed in custody was his refusal to answer the question you asked as to where he got the information on which was based the article which displeased you.

It is not necessary for you to place anyone under arrest in order to get the answers to the question which you asked Mr. Holme, because I can and will answer it. I gave Mr. Holme information, part of which he published, and from which he made deductions, so that if your honorable committee has a grievance it is against me and not against him.

What I told him was about as follows:

I said that your expedition to this town was not an investigation conducted in good faith, but was a deliberate effort to intimidate any district attorney who had the temerity to present charges against one of your honorable body.

I said that your whole proceeding here was irregular and extraordinary; that I had never heard of such conduct of an impeachment proceeding; that charges of this sort were not usually heard in public until the House of Representatives had considered them and were willing to stand back of them.

I pointed out to him that you, contrary to usual practice, had come here and had held public hearings; that among your witnesses you had invited every rogue that you could lay your hands on to come before you and blackguard and slander me and my assistants under the full privilege of testifying before a congressional committee.

I told him that you had called one of my junior assistants before you and had attempted to make it publicly appear that his refusal to answer your questions as to what occurred in the grand-jury room in the Buchanan case was due solely to my orders. I said that at the time you attempted to convey this public impression you knew that it was misleading, because I had been asked by you to produce the minutes of the grand jury and had been instructed by the Attorney General not to comply with your request, as you well knew. I showed him the telegram of the Attorney General to me and showed him a copy of my letter to you, dated February 29, 1916, in which I sent you a copy of the telegram of the Attorney General instructing me not to give you the grand-jury minutes.

I told him that you were traveling around in your alleged investigation of me with BUCHANAN'S counsel, Walsh and David Slade, in constant conference with you. I said that I believed that every word of the evidence, whether in so-called secret sessions or not, had been placed at the disposal of these worthies, and that I would be just as willing to give the grand-jury minutes to a defendant as to give them to your honorable subcommittee.

I told him that I did not share the views which seemed to prevail in your subcommittee on this subject. I said that I regarded a Member of Congress who would take money for an unlawful purpose from any foreign agent as a traitor, and that it was a great pity that such a person could only be indicted under the Sherman law, which carries only one year in jail as punishment.

I said that it was incomprehensible to me how your honorable subcommittee should rush to the assistance of an indicted defendant; how you had apparently resolved to prevent prosecution by causing the district attorney in charge to be publicly slandered.

I told him that I would not permit the prosecution of the persons whose cause you had apparently espoused to be impeded by you; I said that if you wanted the minutes of the grand jury in any case, you would not get them as long as I remained in office.

You will observe from the foregoing statement that what Mr. Holme published may have been based on what I said. If you have any quarrel, it is with me, and not with him.

It is amazing to me to think that you supposed that I did not understand what you have been attempting to do during your visit here. I realized that your effort was to ruin me and my office by publishing with your full approval the complaints of various persons who have run afoul of the criminal law under my administration. Your subcommittee has endeavored by insulting questions to my assistants and others, by giving publicity and countenance to the charges of rascals and by refusing to listen to the truth and refusing to examine public records to which your attention was directed, to publicly disgrace me and my office.

I propose to make this letter public.

Respectfully,

H. SNOWDEN MARSHALL,
United States Attorney.

Hon. C. C. CARLIN,
Chairman Subcommittee of the Judiciary
Committee of the House of Representatives,
323 Federal Building, New York, N. Y.

At the same time or before this letter was sent to the subcommittee, it was given to the newspapers and published by them.

On the 9th day of March, 1916, the subcommittee aforesaid, through its chairman, Hon. C. C. CARLIN, submitted to the Committee on the Judiciary the foregoing letter of H. Snowden Marshall.

On or about the 11th day of March, 1916, the following letter was received by the chairman of the Judiciary Committee and immediately laid before the full committee.

DEPARTMENT OF JUSTICE,
UNITED STATES ATTORNEY'S OFFICE,
New York, March 10, 1916.

DEAR SIR: Referring to my letter of March 4 addressed to the chairman of the subcommittee, which has recently taken testimony in New York concerning my administration of my office, I notice from the press that some persons appear to have construed my statements as directed toward your honorable committee as a whole—I beg to advise you that the criticisms in that letter were addressed to the methods pursued by the subcommittee. I do not retract nor modify any of those criticisms. But I did not intend, nor do I think my letter should be so construed, to reflect in any way upon the Judiciary Committee, nor did I question the power of the House of Representatives to order such an investigation.

If you and the other members of your committee for whom I have high respect have gained the impression that my letter carried any personal reflection upon your honorable committee, it gives me pleasure to assure you that I had no such purpose.

Respectfully,

H. SNOWDEN MARSHALL.

Hon. EDWIN Y. WEBB,
Chairman of the Judiciary Committee,
House of Representatives, Washington, D. C.

The Judiciary Committee has carefully considered said letters in the light of congressional and judicial precedents as touching the prerogatives of the House of Representatives and its Members, and the committee has come to the determination that said letters, their publication, and attendant circumstances are of such nature that they should be called to the attention of the House. For obvious reasons, the committee deems it advisable to take this step rather than to report directly upon the facts and the law in the case. I am, therefore, directed by the committee to report the whole matter to the House of Representatives, with the recommendation that a select committee of five be appointed by the Speaker to report upon the facts in this case; the violations, if any, of the privileges of the House or the Committee on the Judiciary, or the subcommittee thereof; the power of the House to punish for contempt; and the procedure in contempt proceedings, to the end that the privileges of the House shall be maintained and the rights of the Members protected in the performance of their official duties.

Mr. KITCHIN. Mr. Speaker, I move the adoption of the following resolution, which I send to the Clerk's desk.

The Clerk read as follows:

House resolution 193.

Resolved, That a select committee of five Members be appointed forthwith by the Speaker to consider the report in the nature of a statement from the Judiciary Committee, with reference to certain conduct of H. Snowden Marshall, and to report to the House of Representatives the facts in the case; the violations, if any, of the privileges of the House of Representatives, or of the Committee on the Judiciary, or of the subcommittee thereof; the power of the House to punish for contempt; and the procedure in contempt proceedings in case they find a contempt has been committed, to the end that the privileges of the House shall be maintained and the rights of Members protected in the performance of their official duties.

The select committee shall have the power to send for persons and papers, and shall submit its report to the House not later than April 14, 1916.

The SPEAKER. The question is on agreeing to the resolution.

The resolution was agreed to.

The SPEAKER appointed the following committee: Messrs. MOON, GARNER, CRISP, STERLING, and LENROOT.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. Waldorf, one of its clerks, announced that the Senate had agreed to the amendment of the House of Representatives to the bill (S. 3391) to amend an act entitled "An act for the relief of Indians occupying railroad lands in Arizona, New Mexico, or California, approved March 4, 1913."

The message also announced that the Senate had passed without amendment the bill (H. R. 13769) to authorize the Secretary of War to supply tents for temporary use of the sufferers from the recent conflagration in Paris, Tex., and for other purposes.

The message also announced that the Senate had passed without amendment the bill (H. R. 8466) to relieve J. Lawrence Latham, postmaster at Eupora, Webster County, Miss., of the payment of cash and funds stolen from the post office.

The message also announced that the Senate had passed the following resolution, in which the concurrence of the House of Representative was requested:

S. J. Res. 118. Joint resolution authorizing the Postmaster General to provide the postmaster of Newark, N. J., with a special canceling die for the Newark two hundred and fiftieth anniversary celebration.

The message also announced that the Senate had agreed to the amendments of the House of Representatives to bills of the following titles:

S. 3978. An act to authorize the Catawissa Railroad Co., its lessees, successors, and assigns, to construct a bridge across the west branch of the Susquehanna River from the borough of Milton, Northumberland County, Pa., to the borough of West Milton, Union County, Pa.; and

S. 3977. An act to authorize the Shamokin, Sunbury & Lewisburg Railroad Co., its lessees, successors, and assigns, to construct a bridge across the Susquehanna River from the borough of Sunbury, Northumberland County, Pa.. to Monroe Township, Snyder County, Pa.

EXTENSION OF REMARKS.

Mr. MURRAY. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD on the subject of peace, patriotism, and preparedness.

The SPEAKER. Is there objection?

There was no objection.

ADDITIONAL COTTON STATISTICS.

The SPEAKER. This is Calendar Wednesday, and the unfinished business is House joint resolution 103, authorizing and directing the Director of the Census to collect and publish additional statistics. The House will automatically resolve itself into the Committee of the Whole House on the state of the Union, and the gentleman from Indiana, Mr. CLINE, will take the chair in the absence of the gentleman from Michigan, Mr. DOREMUS.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of House joint resolution 103, with Mr. CLINE in the chair.

Mr. HELM. Mr. Chairman, this resolution was introduced by the gentleman from Alabama [Mr. HEFLIN], who is familiar with its objects and purposes, and I now yield such time to him as he may desire to explain the resolution to the House.

Mr. MANN. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. MANN. Has the resolution been read at all, or the reading of it dispensed with?

Mr. HELM. I think the resolution was read last Wednesday. That is my recollection.

Mr. HEFLIN. Mr. Chairman, the Government by an act of Congress now collects statistics of cotton consumed by spinners, and since the European war began vast quantities of cotton have been consumed in the making of smokeless powder and explosive shells. It is estimated that 3,000,000 bales or more are consumed in 12 months in that way. It is important that we gather these statistics, that the producer and the consuming public here may know just how much cotton is being consumed in that way. In 1912 we passed an act, and I was the author of some of its provisions. It required the gathering of statistics of baled cotton on hand at factories, cotton exported, and that consumed by cotton spinners. Prior to that time the Government authorized the Department of Agriculture to gather statistics of cotton acreage. It gave to the public here and abroad information of just how many acres the farmers of the South had planted in cotton. Then the Government authorized the Agricultural Department to report upon the condition of the growing crops all during the growing season. The farmer did not ask for these statistics, but the public wanted to know, and the Government gave the public the information desired. Then the Government went further, and it provided for gathering statistics of cotton ginned twice a month from August until March. The spinner wanted that information; the farmer did not ask for it. The spinner wanted to know how much cotton was coming in, how much the supply would be from time to time, and the Government gave him that information.

Now, then, if the spinner and the public are entitled to this information why not let the farmer know what becomes of his cotton, how much is on hand from time to time, how much is consumed in the United States annually. We have gathered the statistics of cotton stored by the spinners, and how much is consumed by the spinners, but we have no statistics of the amount of cotton consumed by powder mills and by explosives manufacturers, and I submit, in all fairness, that the producer is entitled to this information. [Applause.] Suppose, for instance, we produce a 14,000,000-bale crop, and the spindles here should consume 12,000,000 bales, and we should not export a bale. You would assume that we had 2,000,000 bales of old cotton left. Suppose, then, the buyer and the seller met, and the buyer said to the producer—the seller—"Why, we have 2,000,000 bales of old cotton," and the producer said, "No; you have not, there is no old cotton." The buyer would reply that the statistics showed that the spindles consumed only 12,000,000 bales and that 14,000,000 bales were produced, but the seller would reply, "You must remember that we are consuming cotton now, vast quantities of it, in the making of smokeless powder and explosive shells, and they have consumed for this purpose the other 2,000,000 bales." Are not the buyer and seller both entitled to know just what the truth is regarding the matter? The Government tells both of them the truth as to how much cotton is consumed by spinners. Then, why not tell the whole truth and show how much is consumed by powder mills?

I believe, gentlemen, that you will agree with me that the cotton producer is entitled to know how much cotton is used in this way. Now, then, if he gets that information the statistics will show that the spindles consume 12,000,000 bales and that the powder factories consume 2,000,000 bales. I use this to illustrate the point that I have in mind. Under the present law the Director of the Census has no authority to gather information as to the amount of cotton consumed at powder mills. Cotton manufactured into powder goes through a treatment before it is made into powder. They put nitric acid upon it and then put it through a washing process before it is ground and made into smokeless powder and explosive shells.

Now, the Director of the Census through his chief statistician states here in the report of the Committee on the Census that he has no authority to call for that character of information. I talked to a retired naval officer of the United States and he told me that he was satisfied that the European armies were consuming 3,000,000 bales a year in smokeless powder and explosive shells. I talked with the Director of the Census and he said he had no way of getting this information, but, from what he could gather, the powder mills in the United States have consumed between one million and a half and two million bales in making smokeless powder and explosive shells.

The time was, in Napoleon's day, when they used charcoal, saltpeter, and sulphur for making powder; but that material is not comparable in force and explosive power with powder made of cotton, and cotton, gentlemen, is a great product of the United States. [Applause.]

We in this country produce two-thirds of the world's supply of cotton, and this Government ought to lend every encouragement possible to those who produce that important product. Germany has the fullest agricultural statistics of any country on the globe.

The farmer there knows to the slightest detail all about the quantity produced and how it is consumed, and as a result of that Germany is the most efficient agricultural country in the world. She produces 85 per cent of her bread supply for home consumption and for the army. She produces 95 per cent of her meat supply. And, gentlemen, I attribute all this to the encouragement that she has given to the agricultural classes of that country. [Applause.]

Mr. KONOP. Will the gentleman yield?

Mr. HEFLIN. I will.

Mr. KONOP. I can not quite understand in what way these statistics will help the farmer of the South?

Mr. HEFLIN. Well, suppose the grain grower should want to know how much corn was being consumed in the United States, and the corn speculator should tell him so many hundred million bushels, and then the grower would say, "I understand we are consuming 100,000,000 bushels or more in a new industry," and the Director of the Census would say, "Yes; a great deal is being used in this new industry, but we have no authority to collect the statistics, but it is important that the producer know the truth." That is the situation. It gives him the facts, by the Government, and does not leave him to the mercy of the grain speculator.

The same applies to cotton. Now, I will illustrate further to my friend: For instance, we produced last year 11,000,000 bales of cotton. The cotton spindles of the United States at the present rate of consumption will consume nearly 8,000,000 bales of that crop. So you see there will only be 3,000,000 bales out of the whole crop to be exported and to supply the powder mills of the United States. The producer is entitled to know

what becomes of the 3,000,000 bales; how much is exported and how much is consumed by the powder mills.

Mr. WALSH. Will the gentleman yield?

Mr. HEFLIN. Yes; I yield to the gentleman.

Mr. WALSH. I would like to ask the gentleman whether or not there would be any need for this information if the war should cease within the next month or two?

Mr. HEFLIN. Yes. Cotton has been found to be the greatest explosive power in the world, and it will be used in vast quantities in all the future for the manufacturing of munitions of war.

Mr. WALSH. And is it the purpose to send agents abroad into foreign manufacturing plants?

Mr. HEFLIN. No. We have no authority to do that. We can only collect statistics in this country, and that is what is provided for in my resolution.

Mr. WALSH. And that is what this proposes to do?

Mr. HEFLIN. That is what it proposes to do.

Mr. COX. Will the gentleman yield?

Mr. HEFLIN. I will.

Mr. COX. What does the gentleman think as to whether or not, if this bill becomes a law, it will stop gambling in cotton? Will it have the tendency to stop it?

Mr. HEFLIN. Well, it will give more accurate information as to the supply of cotton on hand. It will give the purchaser information he very much needs and which the public needs. The spinner needs this information, because if the powder mills are eating rapidly into the supply of cotton, he would like to know how much they consume every three months, and if they are using a great deal, he will get in the market before it is too late and buy his supply, in order to see that our cotton mills are not confronted with a cotton famine, as I believe they will be by August of this year.

Now, I want to say further to the House, and then I am through for the present, that the Chief of the Bureau of Statistics in the Census Department appeared before the committee and stated that this whole work would not cost more than $10,000. Now, mark you, gentlemen, this $10,000 would gather all the statistics back through 1915 and up to and including this quarter. And then he said after the first year it would cost less than $5,000 annually. These statistics will be gathered quarterly and not monthly, as the bill that passed here the other day with regard to cottonseed product provided.

I have no more to say at present. But I will say before I conclude that the committee reported this bill unanimously, and that the Director of the Census has declared before that committee that requests for this information came from business men, spinners, producers, and the public generally.

Mr. CANNON. Will the gentleman permit a question? It is merely for information.

Mr. HEFLIN. I will.

Mr. CANNON. Does the Agricultural Department gather now the amount of cotton that is cultivated from year to year, the acreage, and so forth?

Mr. HEFLIN. Yes, sir.

Mr. CANNON. Does it gather also statistics of the production—the number of bales, and so forth? And the gentleman spoke of 8,000,000 bales being consumed by the spindles in this country. Is that information gathered?

Mr. HEFLIN. They gather that. A report is made by the Census Bureau as to how much is consumed by cotton spindles in the United States.

Mr. CANNON. Precisely. That would leave, if there were 11,000,000 bales produced in the past season and 8,000,000 consumed by the spindles, 3,000,000 bales yet unaccounted for. Now, are there statistics available as to the amount exported?

Mr. HEFLIN. Yes, sir.

Mr. CANNON. Well, if you have the statistics of the amount consumed by the spindles and statistics for that which is exported, then you would add the two together and take the total from the amount of production, and would we not then know how much cotton was yet in the country?

Mr. HEFLIN. Precisely. But here is the situation that arises: Suppose we export 2,000,000 bales and consume 8,000,000 bales; that is 10,000,000 bales, and that would leave 1,000,000 bales not accounted for. The buyer would say that that 1,000,000 bales are in existence. Now, the producer wants to know whether that cotton is in existence or not.

Mr. CANNON. That is a million bales not accounted for, and while the buyer on the one hand claims one thing and the producer claims another thing, the gentleman now wants to find out whether that million bales is stored in the cotton warehouses or not. They do store cotton and keep it on hand from year to year—I mean either the warehousemen or the producers in their sheds or barns? The cotton will carry from one season to another like corn, will it not?

Mr. HEFLIN. Oh, yes. You can preserve a bale of cotton for a hundred years.

Mr. CANNON. The amount of corn produced in the country is ascertained by statistics, is it not?

Mr. HEFLIN. Yes, sir.

Mr. CANNON. And the amount exported is ascertained, is it not?

Mr. HEFLIN. Yes, sir.

Mr. CANNON. If you had the amount exported and the amount raised, and deducted the amount exported from the amount raised, you would know that the balance of the corn in the United States was not used, was here yet, or had been consumed upon the farm, or had been mixed with wheat for flour, and so on. Is it not just as important that we should know as to the many hundreds of thousands of elevators throughout the country, especially in the corn belt—not so much, perhaps, in the South as in the North—how much is stored there, and how much is stored in the cribs before it has gone to the elevators awaiting consumption, awaiting a purchaser, because we are all speculators to a greater or less extent?

Mr. HEFLIN. I can say to the gentleman that he can doubtless find now the number of elevators in the West and the number of bushels stored in them during the last season by going to the Department of Agriculture, and if you have not these statistics as full and complete as the farmers of the West are entitled to have them, I promise you that I will vote for a measure of that sort, and I believe that this side of the House will. [Applause.]

Mr. CANNON. Then pretty full statistics are gathered as to corn and wheat? I am asking in good faith.

Mr. HEFLIN. Yes; but the situation is different. We consume millions of bushels of grain here at home in food for human beings and feed for stock upon the farms, but we do not consume cotton in that way. It is not consumed on the farm in that fashion. It goes to these manufacturing establishments. That is the difference between grain and cotton. It is absolutely necessary to get these statistics if we are going to have full and complete cotton statistics.

Mr. CANNON. That would involve the examination of the cotton warehouses and those who are holding it over in their own storehouses?

Mr. HEFLIN. The department says it can use the agents it now has, and it would probably not add more than two or three men—a small number—to the present organization to carry on this work; and the Chief of the Bureau of Statistics states that he needs this information; that there is a demand for it everywhere; that he has not the authority now to gather it; and I repeat that he recommends the passage of my resolution. [Applause.]

The CHAIRMAN. The time of the gentleman from Alabama has expired.

Mr. WALSH. Mr. Chairman, will the gentleman yield?

Mr. HEFLIN. Yes.

Mr. WALSH. Will the gentleman state what is the necessity for, or what would be the benefit of, procuring statistics for the year 1915? Why do not you go back for 10 years?

Mr. HEFLIN. Well, there is no necessity for going back 10 years or 3 years as to that.

Mr. WALSH. What is the necessity for going back one year?

Mr. HEFLIN. I will say to the gentleman that there is no old cotton left from the 1913 crop. The statistics here sought will give us the amount of cotton that has been manufactured into gunpowder and explosive shells since the war in Europe began, and then quarterly thereafter.

Mr. HELM. Mr. Chairman, how much time has the gentleman from Alabama used?

The CHAIRMAN. Twenty-one minutes.

Mr. EMERSON. What is going to be the additional expense of obtaining these statistics?

Mr. HEFLIN. Less than $5,000 a year after the first year. The Director of the Census does not think it will be as much as $10,000 for all the work for the first year.

Mr. HELM. Mr. Chairman, I desire to reserve the remainder of my time.

Mr. MANN. Mr. Chairman, under the existing law we authorized the Census Office to gather all the information that is possible to obtain concerning the quantity of raw cotton produced, manufactured, on hand, imported, or exported, and if this bill passes the information obtained would not be of the slightest benefit to the raiser of cotton.

The Census Office now has the authority to gather the statistics concerning the production of cotton and to follow that production to the processes of manufacture, and it may at all times obtain all the information that can be obtained in order to know the quantity of cotton which has been consumed and the quantity of cotton which is on hand.

The act of July 22, 1912, provides that "the Director of the Census be, and he is hereby, authorized and directed to collect and publish statistics concerning the amount of cotton ginned; the quantity of raw cotton consumed in manufacturing establishments of every character; the quantity of baled cotton on hand; the number of active consuming cotton spindles; and the quantity of cotton imported and exported, with the country of origin and destination." There are various other provisions, endeavoring to enlarge upon those, so that the contention that this bill is desirable in order that the producer of cotton may know where the cotton has gone that is not used by the spindles is an idle contention.

It is said that the cotton used for the manufacture of explosives is prepared cotton; hence the Director of the Census, under law, does not collect statistics concerning the use of the prepared cotton. That is true, but he does collect statistics concerning the use of cotton in making the prepared cotton. There is no cotton lost if he collects all the statistics authorized by the existing law.

If there are 11,000,000 bales of cotton produced, and 8,000,000 bales of cotton consumed by the spindles of this country and 2,000,000 bales of cotton exported, the contention that they do not know what has become of the other 1,000,000 bales of cotton is hardly correct, because if that cotton has been used for the manufacture of explosives it has gone through a manufacturing establishment, first as raw cotton, and the Director of the Census collects statistics as to that. There is not a pound of raw cotton raised concerning which the Director of the Census is not required to ascertain the facts, to collect and publish the statistics, under the existing law. I do not know what the special reason is for ascertaining the quantity of cotton used in the manufacture of explosives. It would be interesting information if we knew the quantity of cotton now made into explosives or the quantity of explosives produced and exported. I myself would like to know that. But this bill is not confined to obtaining information concerning the quantity of explosives manufactured last year or this year or during the European war. It becomes a perennial law. It requires the publication of statistics quarterly hereafter, and it seems to me highly objectionable for this Government to publish the quantity of high explosives that it may be manufacturing for its own use. Why should we publish to all of the world the amount of explosives we are manufacturing for our own governmental use? It has nothing to do with the question of raw cotton, because you have already traced that under the law to the point of preparation for use for explosives. It might become very pertinent in the future, if we should ever be engaged in war or if there was danger of war, for the foreign Governments to know how much cotton we were using or how much of high explosives we were manufacturing with the aid of cotton. I imagine that Great Britain would give a good deal to know how much explosives Germany is now manufacturing. I think that Germany would give a good deal to know how much in the way of high explosives the allies are now producing, because there is no subject more interesting to the warring nation than the knowledge of how much ammunition the other side has. I would have no objection to the collection of statistics in reference to the existing war for the sake of curiosity. I am very much opposed to having this Government publish quarterly the quantity of high explosives that may be manufactured, possibly for our own use in the future. We are endeavoring to lay up a supply of ammunition. I do not think we ought to go around advertising to the world just how much we have on hand or how much we are making all the time.

Mr. SIMS. Mr. Chairman, will the gentleman yield for a question?

Mr. MANN. Certainly.

Mr. SIMS. I do not think it makes any difference to the farmer or to the manufacturer to know into what line of manufacture the cotton has gone. The question to be ascertained, if it is of any benefit to anybody, is how much unmanufactured cotton remains on hand now, at the time of the making of these reports; so it seems to me that the same object could be attained, so far as this resolution is concerned, without reporting how much has gone into the manufacture of high explosives.

Mr. MANN. The present law provides that the Director of the Census shall collect information concerning all of the cotton which is used in manufacturing establishments of any kind; and this cotton which is originally raw cotton is manufactured before it is used as high explosives, or that is the contention, and I suppose it is true. I suppose they collect the statistics from the manufacturers of high explosives. If not, they collect the statistics in advance of the amount of raw cotton which has been so treated.

Mr. SIMS. I understand the law to be as the gentleman from Illinois has stated, but I understand that the Director of the Census has said that he has no authority to report the amount of cotton used in the manufacture of explosives.

Mr. MANN. No; the Director of the Census reports that he has no authority to collect statistics of the quantity of cotton used in the manufacture of high explosives. That is correct; but he has the authority to collect statistics concerning the quantity of raw cotton which is prepared for use in the manufacture of high explosives. So we cover the whole subject of raw cotton.

Mr. SIMS. I readily appreciate the weight of the objection of the gentleman from Illinois to publishing to the world a statement of how much powder we are making for ourselves. It does not seem to me that it is necessary to do that in order to find out the amount of cotton in existence at the time of the making of these reports. Now, after the farmer gets rid of his cotton he is no longer interested in it. His interest lies chiefly in the question of how much he may plant another year. The fact is that by this time of the year nearly all the cotton has been sold by the producer and is in the hands of manufacturers, speculators, or persons who are holding it for other purposes.

Mr. MANN. That is true. Undoubtedly it is also true that if you have the quantity of cotton on hand, say 1,000,000 bales—I suppose there are always more than a million bales stored—if you have several million bales of cotton stored, so that the manufacturers can draw on the stored cotton, that has a tendency to depress the price of the cotton in the hands of the original producer, or the primary market. But that is all provided for in the existing law. Now, doubtless, there are some people in the country who would like to know how much cotton is being manufactured into high explosives and sent to the allies. I have no doubt the German Government would like to know that. I would not object to knowing myself, as a mere matter of curiosity.

Mr. SIMS. But the gentleman does not think the farmers of the United States who produce the cotton have any special interest in that information?

Mr. MANN. All they want to know is the quantity of cotton consumed, the quantity of cotton produced, and the quantity of cotton left over, and that is all covered by the existing law. Every point of it is covered by the existing law. I do not know whether they get every pound of it or not, but they trace it from the ginners to the point where it is exported or manufactured, and under a bill that we passed the other day they continue to trace it into the hands of those who store it.

Now, I can imagine no reason myself for ascertaining how much is made into medicated cotton, so far as the producer of cotton is concerned, but that would be no great injury. I think it would be a distinct injury to this country to publish the quantity of high explosives that are made, and that is what this bill would require.

Mr. WHEELER. Will the gentleman yield?

Mr. MANN. I will.

Mr. WHEELER. I inferred from what the gentleman from Alabama said that it was a question between the farmers and the commission men whether any cotton was left on hand.

Mr. MANN. I think this bill has nothing to do with that because under existing law they gather all those statistics.

Mr. HELM. Will the gentleman yield?

Mr. MANN. Yes.

Mr. HELM. How many pounds of high explosives will a bale of cotton make?

Mr. MANN. I have not the slightest idea. Does the gentleman know?

Mr. HELM. I do not, and for that reason I think the gentleman's entire argument falls down.

Mr. MANN. I hope not because I do not happen to know a technical fact of that kind.

Mr. HELM. The gentleman's entire argument has been based on the fact that the country would know how many bales of cotton went into high explosives, and that the world would know how many pounds or tons of high explosive the United States had made.

Mr. MANN. I suppose the world will know, for I suppose somebody knows.

Mr. HELM. But the gentleman is putting his argument into such a form as if there was a well-known ratio between bales of cotton and pounds of powder.

Mr. MANN. Of course there is a well-known ratio. I do not know what it is. The gentleman from Kentucky, who for many years was chairman of the Committee on Expenditures in the War Department, ought to know. I never held the office and I do not think I am under any obligation to know. I reserve the balance of my time.

Mr. HELM. Mr. Chairman, I yield five minutes to the gentleman from Texas [Mr. DAVIS].

Mr. DAVIS of Texas. Mr. Chairman, the question of cotton is an interesting question to me and to the people of the South generally, because it is a well-known fact throughout our country that while God Almighty gave to a little fringe of the United States on the Atlantic seaboard and around the Gulf of Mexico a monopoly over one of the most important crops the world produces, the people who make it year after year are becoming more helpless; and while the world gets the greatest known clothing commodity on earth, the people who make it have to pay freight for every bale of cotton for 5,000 miles to find a factory, and a foreign market controls prices and have for 26 years.

One of the greatest commodities of our Southland is hawked and jayhawked on the markets of the world, and the country that produces it has not been able to keep in touch with it. We found when the war broke out that our cotton market was said to have been killed because there was a war involving the market centers of Europe. The war had not gone very far, however, until the magazines and the trades journals that leaked through the censorship brought to us the fact that there were something like 3,000 guns shooting at each other every week, that took nearly a bale of cotton to load them. Now, get the idea. In other words, there were 3,000 guns in action that took an average of about 200 pounds to load them, and some reached as high as 430 pounds. It is known, I think, as mercerized or prepared cotton. We do not know the process, but it goes through the hands of the speculator, and he has the South in his grip. Of the 1914 crop we find that England got about a million bales, more than she ever got in the history of the world. Austria got less. Germany got less. Italy and France got nearly half a million more than they ever got. Why? Because J. P. Morgan, the agent of the allies, killed the cotton market by turning the lock and key on the gold in New York. He killed the cotton market in the South and turned it over to England and France to load their war guns at a price far less than they ever bought before in the world. All business in the South impoverished, paralyzed. Now, we are asking you to give the department the privilege of investigating these matters.

Mr. CARAWAY. Will the gentleman yield?

Mr. DAVIS of Texas. Yes.

Mr. CARAWAY. The cotton used in the manufacture of explosives is the linters.

Mr. DAVIS of Texas. There is not enough of that, but they use it if they can get it.

Mr. CARAWAY. It was used until the present war.

Mr. DAVIS of Texas. They use it whenever they can get it. If they use the long staple, I understand they have to grind it, and linters has already been ground naturally very short.

Now, I feel that this measure ought to pass, and I do not know why any man should object to it. The question of exposing the production of high explosives is a very tender question. I would seriously object to the world's knowing what we are doing in that way. I feel sad when I think of the recent investigation of some of our powder and manufacturing institutions that when they made contracts with our country they sent copies to their partners in the different countries of the earth so that they could keep track of our manufacture of munitions. Men that would thus betray our secret munition contracts, I think, every one of them ought to be court-martialed and shot.

I would be ready to do anything to keep our own secrets; but we do not ask you to expose those secrets; we simply ask you to keep in touch with how much goes into that great industry, commercially and otherwise, that is all.

Mr. HELM. Does the gentleman from Illinois expect to consume any more time?

Mr. MANN. I do not just at the present time.

Mr. HELM. Then, Mr. Chairman, I ask that the Clerk read the resolution for amendment.

The CHAIRMAN. If there is no further general debate, the Clerk will read the resolution for amendment.

The Clerk read as follows:

Resolved, etc., That the Director of the Census be, and he is hereby, authorized and directed to collect and publish statistics of raw and prepared cotton and linters, cotton waste, and hull fiber consumed in the manufacture of guncotton and explosives of all kinds, and of absorbent and medicated cotton during the calendar year 1915, and quarterly thereafter, and the quantity held in such establishments at the end of each quarter. The statistics herein provided for are in addition to those now collected in compliance with the act of Congress approved July 22, 1912, the provisions of that act being made applicable to and governing the collection and publication of the data.

Mr. HEFLIN. Mr. Chairman, I move to strike out the last word for the purpose of replying to some of the statements made by the gentleman from Illinois [Mr. MANN]. The Chief of the Bureau of Statistics, as I stated in the outset, appeared before the committee when this resolution was up for consideration. He stated that this information was important, he stated that they had no authority now to collect this information. The gentleman from Illinois [Mr. MANN] is correct in the statement that we gather statistics of cotton bales at the factory, and so on, but of unpacked cotton, raw, prepared or partially prepared there is no authority in the law to collect statistics. The Bureau of the Census makes that statement, and it is unchallenged. The committee reported this bill unanimously. The gentleman suggests that it will give away our secrets as to how much cotton is being consumed in manufacturing ammunition. Why, every week, every day, every month, since the war commenced the daily papers have published that an order here and there was left with some concern in Pennsylvania, New York, or elsewhere for millions of pounds of munitions of war by some European power. It has been common knowledge as to munitions being purchased by the allied forces and sent abroad. In that case we know that it is powder and shell, and so on, but in this case the statistics do not show how many pounds of munitions are turned out by the factories. It shows how much cotton has been consumed by those factories as one of the ingredients entering into the manufacture of ammunition, but it does not disclose to the world how many tons of ammunition are turned out in the finished product—only the amount of cotton consumed by these munition plants. It does give to the producer the knowledge that he is entitled to, if we are going to have any statistics at all regarding cotton as to how much is being consumed by these establishments in our country.

It will disclose no secrets to people abroad. If in the time to come we should be embroiled in war with some foreign power, then will be the time to put the seal of secrecy upon this work; but until that time comes and we see the importance of it, I submit that that argument is far-fetched, and I trust that it will not make any impression on gentlemen in the House, because the farmer is entitled to this knowledge. It seems to me that, somehow or other, every time a movement is set on foot to benefit the man who toils, the farmer in this country, there is always some bugaboo discovered, something veiled in the closet, by which some gentleman here undertakes to defeat the measure.

Mr. BARNHART. Mr. Chairman, will the gentleman yield?

Mr. HEFLIN. Yes.

Mr. BARNHART. In what respect does the importance of statistics for cotton differ from that which is taken everywhere of live stock and grain and produce of the farms of various kinds? I know that each year we take that through the assessors. Is it not true of cotton that it is taken in the same way?

Mr. HEFLIN. As I stated in the outset, I fear the gentleman did not hear my statement.

Mr. BARNHART. I did; but I did not get the distinction.

Mr. HEFLIN. We now gather statistics with regard to everything pertaining to cotton that is of any consequence except those provided for here, and the chief of the bureau says that this information is important, that inquiries are made for it, and that they have not got it. It is a new industry, consuming large quantities of cotton, that makes this information necessary. They did not know until about 50 years ago in this country that you could make gunpowder and explosive out of cotton.

Mr. BARNHART. Just a word further; and I am asking for information. Why is it that the Census Bureau can get statistics on these other items of the products of the farm but can not get statistics of cotton in the same way?

Mr. HEFLIN. Mr. Chairman, the present law provides that they can collect the number of cotton bales that are ginned and consumed at the factories; but here is cotton that is partially prepared and fully prepared that goes into the making of powder, and they have no authority to get that, because it is prepared and partially prepared, and it amounts to probably 2,000,000 bales or more.

The CHAIRMAN. The time of the gentleman from Alabama has expired.

Mr. MONTAGUE. I move to strike out the paragraph. Mr. Chairman, with all respect to my friend from Alabama [Mr. HEFLIN], I think that this is a very unwise measure. I can not appreciate at all its necessity, and a brief consideration

of it must make us realize that it is full of troubles for us at home and abroad. With the distemper now raging throughout the world, what is the necessity, what is the wisdom of putting upon record the quantity of cotton that goes into the manufacture of explosives? The gentleman says that the information respecting the manufacture of guncotton is carried in the newspapers every day. There is a very wide difference as to the evidence found in the newspapers and the evidence found in the records of our Government as respects the effect upon the foreign Governments of the world. This measure will embarrass us at home and, in my judgment, it will embarrass us even more in our diplomatic negotiations abroad under existing circumstances.

I will not discuss the economic aspects, the business expediency, or merits of the measure, save to say that it seems to me the only possible results will be either to lessen the demand for cotton and therefore to decrease its price, or that it will benefit the cotton speculators. But this consideration is beside my present purpose, and that my supreme conviction is that the particular information sought to be obtained will embarrass our Government in dealing with its present delicate foreign complications. For this paramount reason I believe the measure dangerously inopportune, and therefore I can not give it my support.

Mr. HEFLIN. Mr. Chairman, I am utterly surprised at the remarks of the gentleman from Virginia [Mr. MONTAGUE]. I ask unanimous consent to proceed for three minutes.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. HEFLIN. Mr. Chairman, the gentleman from Virginia must not understand this resolution. I am aware of the fact that the gentleman has no cotton producers in his district, or if he has any they produce less cotton than they do in my precinct, but this is a matter that vitally affects 30,000,000 of American people who live in the South. This will give our people complete statistics with regard to cotton consumption, and I am surprised that the gentleman from Virginia would lift his voice against such a meritorious measure as this. It benefits the people who are more injuriously affected by the European war than the people of any other section of our country. They are to-day in the predicament of having millions of bales of their cotton consumed in making powder and explosive shells, and many of the plants are in the gentleman's own district, and the farmer is denied the opportunity of seeing how much cotton is consumed for that purpose.

Mr. MONTAGUE. Will the gentleman permit an interruption?

Mr. HEFLIN. I will.

Mr. MONTAGUE. Will the gentleman permit me to say that there is not a single plant in my district?

Mr. HEFLIN. I beg the gentleman's pardon. Possibly I confined it to too small a territory, but I will say these plants are in the State of Virginia. And I believe the gentleman, if he votes against my bill, will be the only Virginian who does so. I do not believe there will be a dozen votes on the other side against it. I do not believe that this House will hamstring the farmers of the South by denying them this information because of some weak and puny argument that it discloses information to the people abroad that they ought not to have.

No, Mr. Chairman, we owe it to the producing classes of this country, whether they live in the South, the East, the North, or the West, to give them full and complete information about the stuff that they produce and the consumption of it after they produce it. There is nothing hidden in this measure. It is open and aboveboard. It is in the interest of truth, in the interest of honesty and of justice to the cotton farmers, and 30,000,000 of American people living in the South ask that this legislation be had. [Applause.]

Mr. QUIN. Mr. Chairman, I was struck with surprise at the remarks of my distinguished friend from Virginia [Mr. MONTAGUE]. I do not believe that that patriotic and elegant gentleman really understands the purport of this resolution. I want to say to my friend from Virginia that we have no way of telling anything about what becomes of a bale of cotton after the ties are taken from it. The cotton is baled up, and has from four to six ties on each bale, and then other bales are pressed with it through a compress, and in this compressed form is shipped off to the spindles of the world.

This resolution is a direct aid to the farmer, the producer of the cotton.

Mr. PARKER of New York. Will the gentleman yield?

Mr. QUIN. I yield.

Mr. PARKER of New York. I would like the gentleman to explain what business it is of the producer after he sells it what becomes of it, any more than it is the business of the farmer that produces a bushel of wheat, after he has sold it.

Mr. QUIN. In reply I will say that is exactly what "is the matter with Hannah." Too many people in this country think just like you do, my friend, that the farmer, the man who produces the great farm products of this country, has no business to know anything about them. We propose that the farmers who produce this cotton shall know something about it, in order to know what the value of it is. You take the linters now, they are very valuable, while they used to be worth nothing. Here has sprung up a new use for linters and other cotton in the manufacture of high explosives for war purposes in Europe, and many people in this country think that preparedness is the only thing we ought to have—to manufacture everything made by the sweat and blood of this country into munitions of war. I do not think that way. Whatever the farmer produces that does go into that business should bring its value, and the farmer should not be chiseled out of it simply because he has no way of knowing what it is worth. Now, we propose by this resolution simply that the man who produces the cotton of this country shall know what becomes of these 2,500,000 bales.

Mr. ANDERSON. Will the gentleman yield?

Mr. QUIN. I will.

Mr. ANDERSON. I want to inquire of the gentleman what the farmer is going to do with this information after he gets it? What good is it going to do him?

Mr. QUIN. It will be worth this much, that he will know what becomes of that portion of his cotton called linters. He will know into what business it goes. He will know its value, and, in knowing the value of it, he will know how to plan, what it costs him to make his cotton, and what he ought to get for it. If you are putting into the manufacture of explosives a certain amount of this cotton, he knows he is not getting the value of these linters. He has been kept out of that all of these years by the men who own the oil mills. You understand not only that portion that comes off of the seed as put into this part called explosives, but another element of this cotton, and the man who produces that cotton certainly has a right to know what percentage of his crop is going into the agents that destroy human life. He certainly has a right to know what percentage of his cotton goes into that nefarious business in order that he may know the real value of his labor. [Applause.]

The CHAIRMAN. The time of the gentleman from Mississippi has expired.

Mr. CANNON. Mr. Chairman, I oppose the motion of the gentleman to strike out the last word.

The CHAIRMAN. The gentleman from Illinois is recognized.

Mr. CANNON. Mr. Chairman, the gentleman from Alabama, in answer to some questions which I asked him, stated, if I remember, that there were a million of bales of cotton of the crop of 1915 out of the 11,000,000 bales that were unaccounted for when you came to what the spinners used in this country, which is ascertained, and as to what was exported.

Mr. HEFLIN. I was using that merely as an illustration, because we export out of the crop of 14,000,000 bales about 9,000,000 bales, 2,000,000 bales less than this whole crop.

Mr. CANNON. Very well; still, by illustration, the gentleman said that information was already with us. Now, the million of bales that I will speak of for illustration, not accounted for, is evidently stored in the United States or held by the farmers. And the farmers are pretty good speculators, let me say, and hold their crops over sometimes half a year, sometimes one year, and some of them two years.

Now, then, my colleague [Mr. MANN] read the law already in existence and made what was to me a valid statement of fact that seems to me important touching the gathering of these statistics. The report states, and so does the bill—especially the bill—that the amount of cotton used in the manufacture of high explosives shall be ascertained by law. It ought not to be ascertained by law, in my judgment.

Now, I will state very frankly that with my high respect for the gentleman from Alabama [Mr. HEFLIN], if I were to vote according to his speech I would vote for this bill; but if I am to vote according to the bill and what is proposed to be gathered, why, from a patriotic standpoint, I do not see how I can vote for the bill. [Laughter.]

Now, it is easy to declaim about the farmer. We are all friends of the farmer. I recollect back in the Populist days—and some people may say the earlier and better days of the Republic—how the passions were torn to tatters about the farmer. I heard a man, whose name I will not mention, out in my own district, who got after me, say I was not a friend of the farmer. Nay, nay! And then he said, "Gentlemen, I was born between two corn rows," and an old farmer yelled out, "A pumpkin, by gee!" [Laughter.]

Now, I suppose the agricultural district that I represent is perhaps as good a one as there is in the United States. I do not know how much corn my farmers have stored. They have a very considerable amount. You have not gathered any statistics showing how many millions of bushels are held in those lumber-constructed cribs, awaiting, as the farmers hope, a higher price.

Mr. ANDERSON. Mr. Chairman, will the gentleman from Illinois yield?

Mr. CANNON. Certainly.

Mr. ANDERSON. I wanted to inquire of the gentleman if he knew what it was that they raised between two rows of cotton? [Laughter.]

Mr. CANNON. Well, I am not as familiar with the production of cotton as I am with the production of corn. I am quite sure we can get along without those statistics, and I am quite sure that my eloquent friend from Alabama [Mr. HEFLIN] will be renominated and reelected. I do not know, but I hope he has no opposition for his renomination; and if he is renominated, that is as sure as election down there. [Laughter and applause.]

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. MANN. Mr. Chairman, I do not like to repeat what I said before, but may be it would be proper to say that all the statistics concerning raw cotton which can be of any interest to any producer are now collected or directed to be collected under the existing law. I am going to read again what I read from the law before, and an additional provision of the law. I read:

Be it enacted, etc., That the Director of the Census be, and he is hereby, authorized and directed to collect and publish statistics concerning the amount of cotton ginned, the quanity of raw cotton consumed in manufacturing establishments of every character, the quantity of baled cotton on hand, the number of active consuming cotton spindles, and the quantity of cotton imported and exported, with the country of origin and destination.

SEC. 2. That the statistics of the quantity of cotton ginned shall show the quantity ginned from each crop prior to September 1, September 25, October 18, November 1, November 14, December 1, December 13, January 1, January 16, and March 1, and shall be published as soon as possible after these respective dates. The quantity of cotton consumed in manufacturing establishments, the quantity of baled cotton on hand, the number of active consuming cotton spindles, and the statistics of cotton imported and exported shall relate to each calendar month, and shall be published as soon as possible after the close of the month. Each report published by the Bureau of the Census of the quantity of cotton ginned shall carry with it the latest available statistics concerning the quantity of cotton consumed, stocks of baled cotton on hand, the number of cotton-consuming spindles, and the quantity of cotton imported and exported. All of these publications containing statistics of cotton shall be mailed by the Director of the Census to all cotton ginners, cotton manufacturers, and cotton warehousemen, and to all daily newspapers throughout the United States. The Director of the Census shall furnish to the Bureau of Statistics of the Department of Agriculture, immediately prior to the publication of each report of that bureau regarding the cotton crop, the latest available statistics hereinbefore mentioned, and the said Bureau of Statistics shall publish the same in connection with each of its reports concerning cotton.

This covers the handling of all cotton from the gin to its use as manufactured articles. That covers all the cotton.

Mr. MONTAGUE. Mr. Chairman, will the gentleman permit me to ask him a question?

Mr. MANN. Yes; I yield to the gentleman.

Mr. MONTAGUE. Does the gentleman from Illinois think this is an opportune time to gather statistics as to how much cotton goes into explosives in America and into explosives that go abroad? I did not hear the gentleman's speech, and perhaps I have asked a question that he has heretofore answered.

Mr. MANN. Well, I have heretofore answered, but I will answer again. The purpose of the bill theoretically—and I have no doubt that was the intention of the author of the bill—was to gather the statistics concerning the handling of cotton, so that they would know what cotton was consumed and what was not consumed. All of that is covered by the existing law that I read.

But what the bill does is to direct the collection of statistics to show the quantity of explosives which are manufactured in the United States. I regard it as very dangerous for this country to publish to the world the quantity of explosives which it has made for its own use, or which it does make for its own use, not only now, but hereafter.

I said before I would not care what information was obtained concerning the use of cotton last year in connection with the manufacture of explosives since the war, but I do not think we ought to publish to the world the quantity of explosives that we are preparing and laying up against a day of need, so that the world will know how much we have on hand.

Mr. CULLOP. Mr. Chairman, will the gentleman yield?

Mr. MANN. Yes.

Mr. CULLOP. I would like to ask the gentleman from Illinois if it is not the policy of both the War and the Navy Departments not to make public the supplies that the Government has on hand as to munitions of war?

Mr. MANN. I am not informed as to that; but I am quite sure that they do not desire to give any too wide publicity to it.

Mr. CULLOP. I will say to the gentleman that I understand that is the policy of both the War and Navy Departments.

Mr. MANN. I should think it would be.

Mr. HOWARD. Mr. Chairman, will the gentleman yield?

Mr. MANN. Yes.

Mr. HOWARD. Under the statute that the gentleman has just read, does he think the authority is already vested in the Census Bureau to take into account in the aggregate amount of cotton bales consumed that which is consumed in the making of explosives?

Mr. MANN. Certainly they have to take into account all that is manufactured into explosives, but they do it in the quantity of raw cotton, and not in the quantity of prepared cotton. But they say how much has been used for treatment.

Mr. HOWARD. Under the statute, it is obligatory for the Census Bureau to take into account all cotton now consumed by munition factories?

Mr. MANN. By anybody, for any purpose. That is, the raw cotton.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. BARNHART. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Indiana moves to strike out the last word.

Mr. BARNHART. I do so in order that I may ask the gentleman from Alabama [Mr. HEFLIN] a question, and I do that because I am seeking information. I have heard the question asked twice as to how this proposition could possibly benefit the grower of cotton, that he should know to what special class of manufacture his products are devoted.

Mr. HEFLIN. I will take pleasure in answering that. A gentleman on that side asked that question of the gentleman from Mississippi [Mr. QUIN].

Mr. BARNHART. Yes.

Mr. HEFLIN. It will benefit him in this way: To illustrate, suppose 10,000,000 bales of cotton are produced in 1916 and 8,000,000 bales are consumed at home and 1,000,000 bales are exported. There are 1,000,000 bales unaccounted for, because the Census Department now says in its evidence before the committee reporting my resolution that it does not collect statistics of cotton made into gunpowder and explosive shells.

The department now gathers statistics as to the amount consumed by the spindles, which we will say was 8,000,000 bales. It accounts for the 1,000,000 bales that went abroad. Now, the other million bales are unaccounted for. The speculator on the exchange bears the market. He scatters his circulars broadcast, saying that there are a million bales of old cotton left over from the crop of 1915. The farmer says, "I do not believe that." The speculator says, "Here are the statistics—8,000,000 bales consumed by the spindles, 1,000,000 bales went abroad. There are a million bales remaining." Now, what is being done with it? The producer claims that it has been consumed by the manufacturers of explosives.

Mr. BARNHART. Suppose it were being consumed by the manufacturers of explosives, what difference would it make to the producer?

Mr. HEFLIN. A great deal of difference. The producer says, "I do not believe you have got that much cotton on hand, and I am entitled to a better price for that reason," whereas the speculator says, "We have got that million bales of old cotton on top of the new crop," and the producer is entitled to know whether that is true or not.

The purpose of it is to give the producer information as to the entire amount of cotton consumed. For instance, he gets ready to plant a crop this year. He says, "How much old cotton is there on hand?" Suppose he were told that there were 2,000,000 bales of old cotton on hand. Then he would say, "I will reduce my cotton acreage, because I do not want to come up next fall with a big crop—with an overproduction. If I do, the price will go down to 5 or 6 cents, while it costs 10 cents to make it." So he will govern himself by that information. He knows how to plant, and he knows how to sell, and it is this information that he needs.

Now, I said to the grain growers of the West, "I do not understand grain like you do. You want a bill passed through this House to regulate your grain exchanges better. I will help you on that and will vote for it. I believe we know more about the cotton situation than you do, and we will ask you to help us, so that the cotton grower may have the information that he needs." We will vote to give you the information that

the grain grower needs. And I will say to my friend from Indiana this completes the statistical information about cotton. The chief of the bureau says—

This information is necessary, and we have not now the power under the present law to collect it.

He is the man who operates under it. The gentleman from Illinois [Mr. MANN] talks about what the law is. Here is what the department says. It says it has not the authority to get the statistics as to this prepared or partially prepared cotton. Why, when you unbale it the present law does not cover it. It says distinctly baled cotton. It does not mention cotton treated or partially prepared at all. It takes nitric acid and washing processes to make gunpowder and other ingredients. What we want to know is how much cotton the powder mills consume.

The CHAIRMAN. The time of the gentleman from Indiana has expired.

Mr. HEFLIN. I am sorry to have taken all my friend's time.

Mr. BARNHART. I would have liked to say a word.

Mr. HELM. Mr. Chairman, I do not care to consume any time. In fact, I think there is just a little disposition to consume time unnecessarily on this matter; but it does occur to me that there is a weakness and a fallacy in the argument of those gentlemen who are urging that this bill will disclose a State secret that ought not to be disclosed. Under the very law read by the gentleman from Illinois [Mr. MANN] the bureau is required, and they have their agents to ascertain the output of every factory in the United States. The entire quantity of all explosives manufactured in the United States is now known and published under that very law. I do not doubt that if you were to telephone to the Census Bureau and ask them for the quantity of explosives manufactured in the United States last year they could give you an answer in 10 minutes.

Mr. HEFLIN. That is undoubtedly true.

Mr. HELM. Now I will put it this way: Assuming that you are attempting to get at the quantity of explosives manufactured by the United States Government itself, unless there is somewere a disclosure of the amount of cotton bought by the Government for use in the manufacture of explosives, then you have disclosed nothing of a definite or accurate nature. Why? Are you going to assume that all the explosives made in the United States go for the use of the Government itself? Certainly not. There are unlimited quantities of these products that come from the manufacturers of explosives, with cotton as their basis, that go into commercial activities, and are used for countless other purposes. So if you say that there are a thousand bales of cotton consumed in the manufacture of explosives in the United States, it proves nothing. It does not disclose anything so far as the Government's quantity of explosives on hand is concerned. If, as maintained by the gentleman from Illinois [Mr. MANN] there is a fixed and established ratio—that is, that a bale of cotton will produce so many pounds of explosives—it simply means that that much has been manufactured, but it does not necessarily follow at all, by any kind of sequence, that it is in the possession, control, or owned by the Government of the United States. So far as that feature of the argument is concerned, it seems to me that it must fall.

Now, as I have repeatedly stated, I am not from a cotton-producing State. These gentlemen who come from the cotton-growing section seem to be very eager, very keen, for the passage of this bill. They know more about the value of this information than I do. The gentlemen from the tier of States bordering upon Canada—the wheat-growing and cereal-growing States—know far more about wheat, barley, oats, and products of that kind than the gentlemen from the Gulf or cotton-producing States. For myself, I know nothing about the business of the cotton grower, but I do see a fallacy in the argument here that the passage of this bill will disclose any state secrets.

Mr. HOPWOOD. Mr. Chairman, I have listened to this argument very carefully, and I have not found anybody yet who has answered the question propounded by my friend from Indiana [Mr. BARNHART] as to how this is going to help the cotton grower. In a small way I am a cotton grower. I went out into the new State of Oklahoma a few years ago and bought a few acres of land. I have two boys out there who are growing some cotton. If this was going to help them sell their cotton for a better price, I would support the bill, unless——

Mr. HEFLIN. Will the gentleman yield?

Mr. HOPWOOD. Yes.

Mr. HEFLIN. Did the gentleman hear me say it would benefit the producer to know how much old cotton there is on hand?

Mr. BARNHART. He has that information, anyhow.

Mr. HOPWOOD. Yes; I heard the gentleman say that. But the people who try to bear the market will always get out false reports. Do you think the farmers of this country are not smart enough to understand that? The farmer does not sell cotton, wheat, or anything else without knowing the market. He tries to sell it on the best market and holds it as long as he pleases and sells it when he pleases. The farmer is the most independent man in the country to-day, and is getting better prices for his products than almost anyone else, unless it is the people selling war munitions.

Mr. HEFLIN. That is not true of the people who produce cotton.

Mr. HOPWOOD. I know cotton products went down when you knocked the tariff off of it, but if we put a good tariff on it it will sell all right again and there will be a good cotton market. [Laughter on the Republican side.]

Mr. HEFLIN. Would you put a tariff on cotton when we are producing two-thirds of the world's crop?

Mr. HOPWOOD. Yes; I would like to produce it all; we can produce it all. Why in the world does the farmer want to know any more than anybody else where his product goes after he sells it? Now, we sell coal down in my country. I do not care whether you burn it in a stove or in a furnace or in a grate after you buy it, if you pay us the price for it. I do not care whether coal goes into munitions of war; I do not care if you put it into a furnace for the manufacture of munitions of war. That is all right. I am glad if you have found a way to make money out of our coal. If we sell the coal, it is up to you to do the best you can with it, and if you have any way that you can use it in which you can make money out of it, or have found some new way to use it, why, God bless you, use it that way. How is it going to help the man who mines and sells the coal to know where it goes or in what way it is used by the purchaser. There is just as much sense in knowing where the coal goes, whether it goes into munitions of war, as it is to know whether cotton goes into munitions of war. There is no way that I can see that this information will help the farmer, and therefore I am going to vote against this bill. [Applause.]

Mr. STEAGALL. Mr. Chairman, as I understand the argument of the gentlemen who are opposed to this measure, they make two points: One is that there is no necessity for this legislation, and the other is that it would be unwise to give out the information, because it involves the publication of facts regarding the status of the country's military establishment.

Upon the first proposition it occurs to me that if it is fair—and I understand such to be the provision of the existing law—to collect statistics showing all the cotton produced by the farmer, it is nothing but justice to him that he be permitted to know of any great newly created demand for cotton running up into millions of bales. [Applause.] If it is fair for the world to know what the farmer has produced, it is fair for the farmer to know of any demand for his product that may spring up anywhere in the world. [Applause.]

Now, Mr. Chairman, if we are not going to perfect this law, and the Director of the Census says that it is not perfect, that these statistics under the present law can not be forthcoming, we ought to perfect it by the passage of this bill. If not, the law as it now stands ought to be repealed. We ought not to have a system that is imperfect and incomplete in the publication of the demands for the farmer's product.

Now, upon the other proposition. I listened with a great deal of interest to the contention, which to me was new, made by the distinguished gentleman from Illinois, whose learning and service and ability, as a new Member of this body I have learned already to appreciate very deeply—even though he is on the other side of the House—I listened to his argument as to the effect of these statistics on the Nation's Military Establishment, and it seems to me, with all deference to the gentleman, that the very opposite of his suggestion is true, and for this reason: The United States will be the only power on this earth that can gather these statistics showing what amount of cotton goes into the manufacture of high explosives, and, as we have almost a monopoly of the world's supply of cotton, we will be enabled to know all the time how much is going into the manufacture of high explosives by other nations. Further, I dare say that if the President, as Commander in Chief of the Army has not the power, we will find some power, if it becomes necessary temporarily, by which the United States may suppress or withhold the information for the time being as to the amount of cotton that goes into high explosives manufactured by our Government. It seems to me that because our Government will have sole knowledge and control of these statistics before their publication the operation of this law would be in favor of the United States as against other nations in the matter of disclosing the amount of cotton going into preparations for war. [Applause.]

Mr. SIMS. Mr. Chairman, I never thought that we could have too much information about anything, and therefore I do

not think that any of this information about cotton could possibly hurt the grower. I think it would be a benefit to him, and therefore I am going to vote for the bill. [Applause.]

But there is one thing I want to call to the attention of my friends in the South about this matter, for I do not know what the effect will be. If I understood the gentleman from Alabama [Mr. HEFLIN] right, he said that some of these large guns took enough powder for one shot to require 200 pounds of cotton to produce it.

Mr. HEFLIN. Yes; some estimate that it would require as much as 400 pounds of cotton.

Mr. SIMS. That one shot takes powder enough to consume 400 pounds of cotton to manufacture it, and that probably one or two million bales are used in making high explosives each year.

Mr. HEFLIN. A retired naval officer of the United States told me that in his judgment the European armies had used in 12 months—and this was last October—fully 3,000,000 bales of cotton.

Mr. SIMS. Full 3,000,000 bales of cotton up to that time, which was not over a year. There has been a demand by many good people that we should place an embargo upon the exportation of munitions of war from this country to Europe. If we stop the demand for 2,000,000 bales of cotton for that purpose, we will reduce the demand on the cotton supply to that extent, which would have a very great effect in reducing the price of cotton. Personally I am in favor of selling the allies and also the central powers all the cotton they will buy and pay for. If they want to shoot their heads off and want American cotton to aid in that undertaking, let them have it. If they do not do it with American cotton, they will do it with cotton from somewhere else; but I have heard some of my good friends and I think some Members of this House advocate an embargo on all munitions of war. If we do that, then we may just as well put an embargo on the exportation of wheat and meat, because soldiers can not use ammunition unless the physical vigor of the soldier is also sustained by food supply. If we run this thing down to its last analysis, we will practically cut off the demand for everything our people produce—wheat, corn, cotton, pork, beef—for all the surplus farm products, and if we will have to sell it all in the United States, what would then happen with the home market? Protection would not amount to anything in the way of holding up the prices of the home market if everything we produce had to be sold at home. I am for the bill; I want the information; and the greater the amount of cotton sold for this purpose the more it is necessary that we should know it. There is one thing about it, however, and that is I am afraid that some of our cotton producers who are selling 3,000,000 bales to make powder out of will not be so anxious to end the European war as they claim they are now, although they ought to be. The bill is a good one, and I think its purpose is good. Like the gentleman from Kentucky [Mr. HELM], I believe we are not going to make enough smokeless powder in this country while there is such a big demand for it abroad that it will make any difference if the people of Europe know what amount we make or do not make. The larger the demand for ammunition and the more we make and sell the higher the price of cotton will be. But, of course, we do not want the war to continue just in order to sell cotton.

Mr. MANN. Mr. Chairman, I move to strike out the enacting clause.

The CHAIRMAN. The question, first, is on the motion of the gentleman from Virginia [Mr. MONTAGUE] to strike out the section.

Mr. MONTAGUE. Mr. Chairman, I ask unanimous consent to withdraw that motion. I simply made the motion to have an opportunity to present my views.

The CHAIRMAN. The gentleman from Virginia asks unanimous consent to withdraw his motion. Is there objection?

There was no objection.

Mr. HELM. I move that the committee do now rise.

Mr. MANN. Mr. Chairman, I move to strike out the enacting clause. That takes precedence of all other motions.

The CHAIRMAN. The question is on the motion of the gentleman from Illinois to strike out the enacting clause.

The question was taken; and on a division (demanded by Mr. MANN) there were—ayes 56, noes 57.

Mr. HEFLIN. Mr. Chairman, I demand tellers.

Tellers were ordered, and the gentleman from Illinois [Mr. MANN] and the gentleman from Kentucky [Mr. HELM] were appointed to act as tellers.

The committee again divided; and the tellers reported—ayes 71, noes 53.

So the motion was agreed to.

Mr. HELM. Mr. Chairman, I move that the committee do now rise and report the bill with the recommendation that the enacting clause be stricken out.

The motion was agreed to.

Accordingly the committe rose; and the Speaker having resumed the chair, Mr. CLINE, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration House joint resolution 103 and had directed him to report the same back to the House with the recommendation that the enacting clause be stricken out.

The SPEAKER. The question is on the recommendation of the committee to strike out the enacting clause.

The question was taken; and on a division (demanded by Mr. MANN) there were—ayes 68, noes 51.

Mr. HEFLIN. Mr. Speaker, I make the point of order that there is no quorum present.

The SPEAKER. The gentleman from Alabama makes the point of order that there is no quorum present. Evidently there is not. The Doorkeeper will lock the doors, the Sergeant at Arms will notify the absentees, and the Clerk will call the roll.

The question was taken; and there were—yeas 128, nays 167, answered "present" 11, not voting 127, as follows:

So the recommendation of the committee that the enacting clause be stricken out was rejected.

The Clerk announced the following pairs:

On this vote:

Mr. ABERCROMBIE (against motion) with Mr. CRAMTON (for).

Mr. GOODWIN of Arkansas (against motion) with Mr. STINESS (for).

For two weeks beginning March 30:

Mr. SABATH with Mr. NORTH.

For the session:

Mr. LIEBEL with Mr. ROWLAND.

Until further notice:

Mr. STEPHENS of Mississippi with Mr. SWIFT.

Mr. BYRNES of South Carolina with Mr. HASKELL.

Mr. SCULLY with Mr. MOONEY.

Mr. WM. ELZA WILLIAMS with Mr. GRIEST.

Mr. HOUSTON with Mr. GUERNSEY.

Mr. FLYNN with Mr. MCCULLOCH.

Mr. DECKER with Mr. KENNEDY of Rhode Island.

Mr. CASEY with Mr. CRAGO.

Mr. ASWELL with Mr. DEMPSEY.

Mr. DOOLING with Mr. TILSON.

Mr. FINLEY with Mr. WATSON of Pennsylvania.

Mr. HAMLIN with Mr. SLEMP.

Mr. MORRISON with Mr. HUMPHREY of Washington.

Mr. FOSTER with Mr. CHANDLER of New York.

Mr. GALLIVAN with Mr. RODENBERG.

Mr. YOUNG of Texas with Mr. PLATT.

Mr. LOFT with Mr. PETERS.

Mr. STEDMAN with Mr. MOTT.

Mr. STEPHENS of Texas with Mr. DRUKKER.

Mr. LEWIS with Mr. MEEKER.

Mr. SLAYDEN with Mr. MORIN.

Mr. DOREMUS with Mr. OAKEY.

Mr. FIELDS with Mr. LANGLEY.

Mr. DALE of New York with Mr. HUTCHINSON.

Mr. MCANDREWS with Mr. HILL.

Mr. PATTEN with Mr. FAIRCHILD.

Mr. GALLAGHER with Mr. SNYDER.

Mr. AIKEN with Mr. ANTHONY.

Mr. BRUCKNER with Mr. BARCHFELD.

Mr. BRUMBAUGH with Mr. BEALES.

Mr. CONNELLY with Mr. BENNET.

Mr. CROSSER with Mr. COOPER of Ohio.

Mr. DENT with Mr. EDMONDS.

Mr. DEWALT with Mr. FORDNEY.

Mr. EDWARDS with Mr. FREEMAN.

Mr. FITZGERALD with Mr. GLYNN.

Mr. GRIFFIN with Mr. GRAHAM.

Mr. HAMILL with Mr. HAMILTON of New York.

Mr. HAYDEN with Mr. KENNEDY of Iowa.

Mr. HILLIARD with Mr. KIESS of Pennsylvania.

Mr. HOWARD with Mr. LOUD.

Mr. JONES with Mr. MCARTHUR.

Mr. LOBECK with Mr. MOORE of Pennsylvania.

Mr. MAHER with Mr. MOORES of Indiana.

Mr. OLNEY with Mr. MOSS of West Virginia.

Mr. POU with Mr. PORTER.

Mr. RUCKER with Mr. ROBERTS of Massachusetts.

Mr. SHACKLEFORD with Mr. SCOTT of Pennsylvania.

Mr. SHERLEY with Mr. SELLS.

Mr. STEPHENS of Nebraska with Mr. CHARLES.

Mr. STOUT with Mr. SUTHERLAND.

Mr. TAGUE with Mr. TINKHAM.

Mr. VENABLE with Mr. TREADWAY.

Mr. WATKINS with Mr. WARD.

Mr. WHALEY with Mr. WINSLOW.

Mr. MCCLINTIC with Mr. WOOD of Indiana.

Mr. HENRY with Mr. HAYES.

Mr. WILSON of Florida with Mr. DAVIS of Minnesota.

Mr. HUMPHREY of Washington. Mr. Speaker, I am paired with the gentleman from Indiana [Mr. MORRISON], and I voted "yea." I want to change my vote.

The name of Mr. HUMPHREY of Washington was called, and he voted "Present."

Mr. CRAMTON. Mr. Speaker, I voted "yea." I have a pair with the gentleman from Alabama [Mr. ABERCROMBIE], who is in favor of this resolution. I desire to withdraw my vote and vote "present."

The name of Mr. CRAMTON was called, and he voted "Present."

The SPEAKER. On this vote the yeas are 127, nays 167, present 11—a quorum. The Doorkeeper will open the doors.

Under the rule the resolution is automatically recommitted to the Committee of the Whole House on the state of the Union.

Mr. HELM. Mr. Speaker——

The SPEAKER. For what purpose does the gentleman from Kentucky rise?

Mr. HELM. I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the House joint resolution 103.

Mr. MANN. Mr. Speaker, I demand the regular order, and I make the point of order that the motion is not in order. We never have a motion to go into the Committee of the Whole House on the state of the Union on Calendar Wednesday. Now, I make the point of order, however, that it is not in order to take up the resolution. The Speaker has frequently held that in order to call up a bill on call of committees the bill must actually be on the printed calendar. We have a daily printed calendar. The Speaker has ruled a number of times, this Speaker and former ones, that as a matter of protection to the House, in order to proceed with the calling up of a bill, it must be upon the actual calendar in the House.

I see that the parliamentary clerk is furnishing to the Speaker Hinds' Precedents. I presume he has reference to section 5345. If he has not, he should have. There is a case where a bill was reported adversely some way on Private Calendar day, and the Speaker held that it went back as unfinished business when that calendar was called on a subsequent day. But there is no decision in Hinds' Precedents or anywhere else, I think, which holds that you can call a bill up again on the same day. It automatically goes back to the calendar, it is true, but it can not be taken up in the House unless it is on the actual printed calendar. It is not there. It was there this morning, but it was taken off, and it is now off.

The SPEAKER. Now, is the gentleman certain about that?

Mr. MANN. Certainly, I am sure about it. We took it up in the House. That has been disposed of. That time being on the calendar has been disposed of. This is a new time, going back on the calendar.

Mr. GARRETT. Will the gentleman yield?

Mr. MANN. Certainly.

Mr. GARRETT. I have no particular interest in the bill, but this is a parliamentary question. How did the resolution get off the calendar?

Mr. MANN. We took it up in the committee.

Mr. GARRETT. That did not take it off the calendar.

Mr. MANN. It brought it into the House, and under the rule it is sent back to the calendar.

Mr. GARRETT. I beg the gentleman's pardon; I do not see how taking it up in Committee of the Whole took it off the calendar. It could not have been taken up had it not been on the calendar. I do not see how bringing it up and considering it takes it off the calendar.

Mr. LENROOT. Mr. Speaker, will the gentleman yield there?

Mr. GARRETT. I am speaking in the time of the gentleman from Illinois [Mr. MANN]. With his consent, I yield.

Mr. LENROOT. If it was not taken off the calendar, how could it be taken back to the calendar when the House refuses to strike out the enacting clause, under the rule?

Mr. GARRETT. That is the statement of the Chair; but I do not think it has ever left the calendar. It is certainly on the calendar until some final disposition is made of it. The statement of the Speaker that it was referred back to the calendar

was perhaps not a necessary statement. Its parliamentary status, it seems to me, is that it has never left the calendar. There has been no final disposition of it if it is under consideration. I do not see how it can be taken off the calendar until there has been a disposition of it some way or other. To go into Committee of the Whole for its consideration, Mr. Speaker, certainly does not take it from the calendar. If that should take it from the calendar, it would not have any status at all.

Mr. CRISP rose.

The SPEAKER. The gentleman from Georgia [Mr. CRISP] is recognized. But before the gentleman from Georgia begins, the Chair wants to suggest to the gentleman from Wisconsin [Mr. LENROOT] that there is not a word in the rule about its being on the calendar or being taken off the calendar.

Mr. LENROOT. Yes, Mr. Speaker. May I have a moment to explain what I refer to?

The SPEAKER. Certainly.

Mr. LENROOT. I had in mind paragraph 5345 of Hinds' Precedents, where the Speaker held, "This bill goes to the Committee of the Whole House and takes its position on the calendar as if it had never been sent back to the House. It becomes the first business on the calendar, as the unfinished business," and so forth. That is what I had in mind.

The SPEAKER. The gentleman from Georgia is recognized.

Mr. CRISP. Mr. Speaker, this is an unusual proceeding, and I am frank to say that it is the first time it has occurred since I have been a Member of this body, or since your honor has been the presiding officer of this House.

What are the facts? The Committee of the Whole House on the state of the Union considered this resolution. The Committee of the Whole House on the state of the Union is a creature of the House. That committee, in its deliberations and in its judgment, recommended to the House that the resolution be defeated by striking out the enacting clause. The Chairman of the Committee of the Whole reported to the House the action of the committee recommending that the enacting clause of the resolution be stricken out. The House, which is superior to the Committee of the Whole, declined to approve the action of the committee and refused to strike out the enacting clause.

Now, Mr. Speaker, to the ordinary man it would look as though, in this state of affairs, the resolution would not again be referred to the Committee of the Whole House on the state of the Union, because that committee had had its day in court, had reported to the House, and the House had refused to approve its action; and it would look as though this action would be tantamount to saying the House wanted to agree to the bill. And under the ordinary, common-sense view of the proposition it would look as though the House would proceed at once to vote on the passage of the bill. But clause 7 of Rule XXIII of the Rules of the House provides that where a motion is made in Committee of the Whole to strike out the enacting clause of a bill and the House refuses to approve of that action of the committee "the bill shall stand recommitted to the said committee"—the Committee of the Whole House on the state of the Union.

That occurred in this case. Therefore, under the rules of the House, this bill stands recommitted to the Committee of the Whole House on the state of the Union.

But surely, Mr. Speaker, the House of Representatives is not impotent. It is certainly competent to proceed with and finish the consideration of a measure that is up before it. This bill was under consideration, and the action of the House indicated that the House desired to pass this bill; but under the technical rule of the House the bill goes back to the Committee of the Whole. In my judgment, Mr. Speaker, the motion to go back into Committee of the Whole to further consider this bill is clearly in order on other days than Calendar Wednesday.

Now, I recognize the force of the proposition of the gentleman from Illinois [Mr. MANN] that on Calendar Wednesday a motion for the House to resolve itself into Committee of the Whole House on the state of the Union to consider a bill on the Union Calendar is not in order, because under the rules the House automatically goes into the committee to consider the bill; and, in my opinion, this bill being technically, under a technical rule, recommitted to the Committee of the Whole House on the state of the Union, that does not debar or preclude the House, which, by a majority vote says it desires to pass this bill, from the further consideration of it. But, in my judgment, under the rules of the House, the House should automatically resolve itself into Committee of the Whole House on the state of the Union for the further consideration of this bill, and when the committee assembles then it is in order to make the motion that the action of the House in refusing to strike out the enacting clause be put into effect by a motion being made in the Committee of the Whole House on the state of the Union to rise and report the bill with a favorable recommendation. [Applause.]

The SPEAKER. This is a peculiar situation, and the Chair is not certain that it has arisen since the present occupant of the Chair has been in the House, and that is a good while. If it did it never attracted the attention of the present occupant of the chair.

To begin with, the part of the rule that was quoted by the gentleman from Georgia [Mr. CRISP], subdivision 7 of Rule XXIII, is rather peculiar in itself. I read from that rule:

A motion to strike out the enacting words of a bill shall have precedence of a motion to amend, and, if carried, shall be considered equivalent to its rejection. Whenever a bill is reported from a Committee of the Whole with an adverse recommendation and such recommendation is disagreed to by the House, the bill shall stand recommitted to the said committee without further action by the House, but before the question of concurrence is submitted it is in order to entertain a motion to refer the bill to any committee with or without instructions.

Nobody made any such motion, as is provided for in the rule.

When the same is again reported to the House, it shall be referred to the Committee of the Whole without debate.

It turns out, as a matter of fact, that originally the practice conformed to the view taken by the gentleman from Georgia [Mr. CRISP], which seems to be a reasonable view, that the very minute the House refuses to concur in the recommendation of the Committee of the Whole House on the state of the Union to strike out the enacting clause, the sensible and proper thing to do would be to vote immediately on the bill. That is what used to be done. When the Kansas-Nebraska——

Mr. MANN. Mr. Speaker, I think if the Speaker will read the history of that rule he will not say that the proper and sensible thing would be to vote on the bill immediately, because there never was a rule more grossly abused than the old rule under which they took a bill away from the Committee of the Whole by a motion to strike out the enacting clause, in order to prevent consideration and amendment in committee, bringing it into the House, rejecting the motion to strike out the enacting clause, and passing the bill without a chance to consider it for amendment.

The SPEAKER. The Chair was just coming to that, and was going to make a little statement about the history of it, which is very interesting. When the House was considering the Kansas-Nebraska bill, which was a very celebrated bill, and wrecked more lives than did the siege of Troy, this very same question came up.

In 1854, during the contest on the bill (H. R. 236) to organize the Territories of Kansas and Nebraska, Mr. Alexander H. Stephens, of Georgia, a famous historic personage, moved to strike out the enacting clause, in order to avert a course of proposed amendments apparently interminable. Mr. Israel Washburn, jr., of Maine, urged that this motion, under the rule, applied in the House but not in the Committee of the Whole; but his contention was overruled, and after five minutes of debate for the motion and five against it, the question was taken. The votes of the friends of the measure carried the motion to strike out the enacting clause, and the bill, without amendment, was reported to the House, where the previous question could be used to cut off all obstructive amendments which threatened the bill in Committee of the Whole.

The House disagreed to the recommendation that the enacting clause be stricken out, and then the bill was put upon its passage.

Mr. HINDS, of Maine, who probably knows more about parliamentary law than anybody else living, or that ever did live, as far as that is concerned [applause], goes on to give reasons why this rule was changed, and states what the gentleman from Illinois [Mr. MANN] suggested. Mr. HINDS reasons it out at great length, and shows that this old rule to vote on the bill immediately, without consideration, was used for purposes that were not good, to make the statement short. Then the House after a while adopted this new rule. There have been three decisions rendered on this subject. The first one involves the history of the transaction, and it is not necessary to repeat it.

Section 5345 of Hinds' Precedents, volume 5, says:

When the House disagrees to the recommendation of the Committee of the Whole that the enacting words of a bill be stricken out, the bill goes back to the calendar of the Committee of the Whole as unfinished business.

And before I forget it, I wish to state that in the opinion of the Chair this bill has never been off the calendar. It was on the calendar on a previous Wednesday, and it was considered somewhat that day. That does not seem to have taken it off the calendar, because it came up to-day. Now, if the consideration of it on the first Wednesday that it came up did not take it off the calendar, it is clear that the transactions here to-day do not take it off.

The note to section 5345 of Hinds' Precedents says—

On Friday, March 14, 1890, the Speaker—

Mr. Reed—

announced as the regular order the bill (H. R. 3538) for the relief of Albert H. Emery, which had been reported from the Committee of the Whole House on the preceding Friday, with the recommendation that the enacting clause be stricken out.

This was a bill on the Private Calendar.

The Speaker then put the question, "Will the House concur in that recommendation?"

The question being taken, there were—yeas 66, nays 143; so the House refused to concur.

Mr. William M. Springer, of Illinois, then asked, as a parliamentary inquiry, as to the status of the bill on the Calendar of the Committee of the Whole House, to which it was recommitted under the rule.

The Speaker said:

This bill goes to the Committee of the Whole House and takes its position on the calendar as if it had never been sent back to the House. It becomes the first bill on the calendar, as the unfinished business, to be considered when the House again resumes consideration of the Private Calendar.

That was under the old rule.

Section 5346 of Hinds' Precedents states that—

On May 30, 1900, the House was about to vote on the bill (S. 1939) authorizing the President of the United States to appoint a commission to study and make full report upon the commercial and industrial conditions of China and Japan, etc., the bill having been reported from the Committee of the Whole House on the state of the Union with recommendation that the enacting clause be stricken out and the previous question having been ordered on a motion to concur in the recommendation of the Committee of the Whole.

Mr. William P. Hepburn, of Iowa, having made a parliamentary inquiry as to the situation of the bill, the Speaker—

Mr. Henderson—

said:

"The Chair is of the opinion that if the action of the Committee of the Whole is sustained, that ends it. If the action of the Committee of the Whole is reversed, the bill will fall back to its old place in the committee. * * * It will be on the Calendar of the Committee of the Whole House on the state of the Union. * * * In other words, it would leave this bill practically where it was when the motion was made in the morning hour. On this matter the previous question has been ordered. So the question is on concurring in the recommendation of the Committee of the Whole to strike out the enacting clause."

Those decisions of actions clearly indicate the course of procedure, except that since Speaker Henderson rendered his opinion the House has adopted this Calendar Wednesday rule, by which bills are referred automatically to the Committee of the Whole House on the state of the Union. The Chair holds that the House automatically resolves itself into the Committee of the Whole House on the state of the Union for the further consideration of this resolution. [Applause.] The gentleman from Mississippi [Mr. HARRISON] will take the chair.

The CHAIRMAN. The House is in Committee of the Whole House on the state of the Union for the consideration of House joint resolution 103, authorizing and directing the Director of the Census to collect and publish additional statistics.

Mr. HELM. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. HELM. Should this bill be read a second time?

The CHAIRMAN. The Chair does not think that the bill must be read in full.

Mr. HELM. Mr. Chairman, I move that the committee do now rise and report the resolution with a favorable recommendation.

Mr. MANN. A parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. MANN. Does this bill come back to be considered now by the Committee of the Whole, or does it come back without any rights at all?

The CHAIRMAN. The Chair will hear the gentleman on the proposition whether or not it should be considered anew in the Committee of the Whole.

Mr. MANN. The Chair is so candid with me that I will be candid with the Chair, as I always am. I think under the rules it comes back as unfinished business in Committee of the Whole, but it is subject to amendment. I move to strike out the last word.

Mr. HELM. Mr. Chairman, will the gentleman yield?

Mr. MANN. Yes; I am willing to yield the floor.

The CHAIRMAN. The Chair will first answer the gentleman's parliamentary inquiry. The Chair thinks that the bill is now before the Committee of the Whole as unfinished business and open to amendments.

Mr. HELM. Very well, Mr. Chairman, if that is the ruling.

The CHAIRMAN. The gentleman from Illinois is recognized, and moves to strike out the last word.

Mr. MANN. Mr. Chairman, a majority of the Committee of the Whole which heard the debate on this bill, including a number of gentlemen on the other side of the aisle, voted to strike out the enacting clause. That motion was disagreed to in the House by the votes of those who never heard of this bill, did not know anything about it, and were negligent in their duty in not being in the Hall, or, possibly, attending to business elsewhere that was official. This bill proposes to gather certain statistics in reference to cotton on the plea that they want to follow the raw cotton to know how much there is produced and in the market at any time.

I read the law to the committee before, clearly directing the Director of the Census to gather all that information now. That information is now being collected, and the only thing that this bill does in addition to what is now provided by law, in the way of collecting statistics, is to inquire into the cotton used in the production of explosives. I objected to the proposition, because I do not think it wise for this country to advertise to the world the quantity of explosives which it may be laying up for future use in case war comes. I think it highly inadvisable for this country to deliberately inform all the nations of the world of the reserve which we may have in the way of ammunition if we have occasion to use it. The bill itself suggests that they have no right to collect statistics relating to the quantity of prepared cotton used in the production of gun cotton and other high explosives, but under the existing law we have the right to collect all statistics in relation to the use of raw cotton which may be treated, manufactured for use in the manufacture of gun cotton or other high explosives, and the only effect of this bill is to expose to the world the quantity of cotton which may be used in the manufacture of explosives. I do not think we ought to give that information to the world. [Applause.]

Mr. HEFLIN. Mr. Chairman, some gentlemen here now did not hear the discussion in the Committee of the Whole. I stated in the Committee of the Whole House, and I repeat here, that the Director of the Census and the Chief of the Bureau of Statistics stated before the Committee on the Census that this information was valuable; that it was desired; that the public generally was demanding it, and that the producers wanted it, and the spinners had asked for it, and everybody who had anything to do with cotton wanted it; but that they did not, under the present law, have the authority to gather these statistics.

I have made that statement time and again here to-day, and we have made that as plain as we could, and I appeal to gentlemen on the other side of the aisle, and I appeal to those who come from the grain-growing West, not to be led against this bill under any pretense that it is not wise to give this information to the public. Gentlemen, if you will dig deep into this proposition in your effort to find who is back of this opposition, you will find that the Du Pont Powder Co. is the real nigger in the woodpile. [Applause.] They buy cotton, and they do not want the information to go to the producer that would enable him to stand up in the light of truth and demand a fair and reasonable price. They want to consume millions of bales of cotton and then tell the producer that that cotton is still in existence, and use that as a club to beat down the price. In all justice and fairness to the cotton-producing section, where 30,000,000 people are interested in this matter, I ask you from the grain-growing West to vote with us. I challenge any man to show where I have ever voted against a measure or lifted my voice against any provision that would help the farmers of the West. Some few gentlemen on that side voted with us before, and I believe you will vote with us again. We deem this information necessary. We need these statistics of cotton so that unscrupulous speculators can not tell the producer that there are 3,000,000 bales of cotton in existence when they know it has been consumed by powder mills. The Government gets the number of acres that the producer plants, as I said before, and the information as to growing condition of the cotton crop. Now, the producer and the public want the amount consumed by the powder mills, and they are entitled to it.

Mr. Chairman, I do not want to consume any more time, but I appeal to the spirit of fairness on that side of the House to vote for the bill and give us this information, which will make the cotton statistics full and complete. [Applause.]

Mr. MANN. Mr. Chairman, I move to strike out the enacting clause.

Mr. HELM. Mr. Chairman, I make the point of order that that motion has been made once before, and the House has refused to support it, and the motion is dilatory.

The CHAIRMAN. The Chair will hear the gentleman.

Mr. MANN. Mr. Chairman, this comes back to the committee with the power to make any amendment.

Mr. HELM. Mr. Chairman, this is the identical proposition that the House has voted on twice before. The House does not ordinarily vote twice on the same character and kind of an amendment.

Mr. MANN. Let me make an observation to the Chair. The motion to strike out the enacting clause takes precedence of a motion to amend in any other way. If there could only be one motion in Committee of the Whole, and that motion prevailed, and it went to the House, and the House disagreed to it, there might be a question whether that one motion could be repeated in Committee of the Whole. But the House might easily disagree to the recommendation to strike out the enacting clause for the very reason that the House wanted the committee to proceed and see whether it could perfect the bill in the Senate to satisfy the committee. This bill might be entirely changed by amendment. To say that you could not then move to strike out the enacting clause would be ridiculous. A motion to strike out the enacting clause is the only method by which the committee can report a bill unfavorably, practically, and this bill goes back to the committee not with any direction from the committee, but for consideration as though it were a new matter in the committee, and the committee has the same power now that it had in the first place.

The CHAIRMAN. Does the gentleman from Kentucky desire to be heard upon the point of order?

Mr. HELM. Mr. Chairman, the only observation I have to make is this: This is the identcal proposition that the committee and the House voted on on two previous occasions and disposed of this afternoon. It is like an amendment which had been previously offered and voted down. The House does not take unnecessary time in voting upon the same propositions twice. It will be like operating in a circle, and would be simply voting down an amendment, and then reoffering the same amendment and voting it down again. When would we end? All the rules of the House are framed with the idea of the expedition of business, and this seems to be a motion rather tending to the obstruction of business.

Mr. LENROOT. Mr. Chairman, if the Chair should sustain this point of order, then I desire to call the attention of the Chair to the fact that in so doing he must thereby incorporate an entirely new principle into the parliamentary situation. Unless the point of order be overruled, when the House refuses to agree to the recommendation of the committee that the enacting clause be stricken out, then, when the resolution is again considered in the Committee of the Whole, the Chair must hold that it goes back to the committee with instructions. Certainly it has never been held or intimated anywhere that when it goes back to the committee, the committee is in anywise bound or instructed, but on the contrary it is left entirely open for the committee to take such action as the general rules of parliamentary law and of the House permit to be taken in the first place.

Mr. HELM. Mr. Chairman, will the gentleman yield?

Mr. LENROOT. Certainly.

Mr. HELM. Is not this the situation: That the Chair has made a ruling and the ruling has been passed back to the House as to whether the opinion of the Chair shall stand as the opinion of the House? Here is the opinion of the House that this enacting clause shall not be stricken out, and it comes back to the committee as the decision of the House, as the decision of the Chair.

Mr. LENROOT. Not at all, because the only effect of refusing to strike out the enacting clause is to leave the resolution exactly where it was when the first motion was made. It leaves it open to a motion to strike out the enacting clause exactly as it did before.

Mr. LONGWORTH. Mr. Chairman, will the gentleman yield?

Mr. LENROOT. Yes.

Mr. LONGWORTH. If the gentleman's contention is not correct, what possible use could there be in going back into the Committee of the Whole? Unless the committee can do as it wishes, including the consideration of the motion to strike out the enacting clause, why go back into the committee?

The CHAIRMAN. The Chair is ready to rule. The Chair thinks that if the Committee of the Whole had reported this bill to the House with a favorable recommendation, and on that report of the committee the House failed to concur and had recommitted the bill to the Committee of the Whole, that a motion again made in the Committee of the Whole to report the bill favorably to the House would be in order. The Chair does not think that because the Committee of the Whole had once passed upon the question and the House had failed to concur, but on the contrary had recommitted the bill to the Committee of the Whole, that a similar motion to favorably report the bill to the House would then have been out of order.

This bill is now returned by the action of the House to this Committee of the Whole as unfinished business and subject to amendments; and what amendments were offered or what action the other Committee of the Whole took can not influence the action of this committee. This is a new Committee of the Whole, which, under the rules of the House, must consider this bill as unfinished business; and for that reason the Chair thinks that the point of order made by the gentleman from Kentucky [Mr. HELM] is not well taken, and therefore overrules the point of order.

The question, therefore, is on the motion of the gentleman from Illinois to strike out the enacting words.

The question was taken; and on a division (demanded by Mr. MANN) there were—ayes 96, noes 98.

Mr. MANN. Mr. Chairman, I demand tellers.

Tellers were ordered, and Mr. MANN and Mr. HELM were appointed tellers.

The committee again divided; and the tellers reported—ayes 101, noes 112.

So the motion was rejected.

Mr. HELM. Mr. Chairman, I move that the committee do now rise and report the bill to the House with a favorable recommendation.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. HARRISON, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration House joint resolution 103, and had directed him to report the same back to the House with the recommendation that it do pass.

Mr. HELM. Mr. Speaker, I move the previous question on the resolution to final passage.

The previous question was ordered.

The SPEAKER. The question is on the engrossment and third reading of the House joint resolution.

The joint resolution was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is, Shall the joint resolution pass?

The question was taken.

Mr. HEFLIN. Mr. Speaker, I demand the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 169, nays 128, answered "present" 7, not voting 129, as follows:

YEAS—169.

Adair	Dill	Key, Ohio	Rubey

So the joint resolution was passed.

The Clerk announced the following additional pairs:

On this vote:

Mr. GOODWIN of Arkansas (for bill) with Mr. STINESS (against).

Mr. ABERCROMBIE (for bill) with Mr. CRAMTON (against).

Until further notice:

Mr. BORLAND with Mr. BEALES.

Mr. BUCHANAN of Illinois with Mr. BENNET.

Mr. CARAWAY with Mr. CHARLES.

Mr. CASEY with Mr. CRAGO.

Mr. CLINE with Mr. DAVIS of Minnesota.

Mr. DOREMUS with Mr. GRAY of New Jersey.

Mr. PATTEN with Mr. MCCRACKEN.

Mr. HAY with Mr. ROBERTS of Massachusetts.

Mr. HULL of Tennessee with Mr. RUSSELL of Ohio.

Mr. HUMPHREYS of Mississippi with Mr. SMITH of Idaho.

Mr. LOBECK with Mr. STEENERSON.

Mr. MORGAN of Louisiana with Mr. VOLSTEAD.

Mr. SHOUSE with Mr. WOOD of Indiana.

The result of the vote was announced as above recorded.

On motion of Mr. HELM, a motion to reconsider the vote by which the joint resolution was passed was laid on the table.

DEED TO HOMESTEAD OF ABRAHAM LINCOLN.

The SPEAKER. Has the Committee on the Census any more business?

Mr. HELM. It has not.

The SPEAKER. The Clerk will call the committees.

Mr. CLARK of Florida (when the Committee on the Library was called). Mr. Speaker——

The SPEAKER. Is the gentleman making a report from the Committee on the Library?

Mr. CLARK of Florida. Yes, sir; I desire to call up the bill H. R. 8351.

The SPEAKER. The Clerk will report the bill by title.

The Clerk read as follows:

A bill (H. R. 8351) to accept a deed of gift or conveyance from the Lincoln Farm Association, a corporation, to the United States of America, of land near the town of Hodgenville, county of Larue, State of Kentucky, embracing the homestead of Abraham Lincoln and the log cabin in which he was born, together with the memorial hall inclosing the same; and further, to accept an assignment or transfer of an endowment fund of $50,000 in relation thereto.

The SPEAKER. The House will automatically resolve itself into the Committee of the Whole House on the state of the Union.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the consideration of the bill H. R. 8351, a bill to accept a deed of gift to homestead of Abraham Lincoln, with Mr. BARNHART in the chair.

Mr. CLARK of Florida. Mr. Chairman, I ask unanimous consent that the first reading of the bill be dispensed with.

Mr. CANNON. I think, Mr. Chairman, that the bill had better be read.

The CHAIRMAN. Does the gentleman object?

Mr. CANNON. I do. I think it should be read.

The CHAIRMAN. The Clerk will report the bill.

The Clerk read as follows:

Be it enacted, etc., That the United States of America hereby accepts title to the lands mentioned in the deed of gift or conveyance now in possession of the President of the United States of America, together with all the buildings and appurtenances thereon, especially the log cabin in which Abraham Lincoln was born and the memorial hall inclosing the same, which deed or conveyance was executed on the — day of ———, 1913, by the Lincoln Farm Association, a corporation, to the United States of America, describing certain lands situated near the town of Hodgenville, county of Larue, State of Kentucky, which lands are more particularly identified and described in said deed or conveyance. The title to such lands, buildings, and appurtenances is accepted upon the terms and conditions stated in said deed or conveyance, namely: That the land therein described, together with the buildings and appurtenances thereon, shall be forever dedicated to the purposes of a national park or reservation, the United States of America agreeing to protect and preserve the said lands, buildings, and appurtenances, and especially the log cabin in which Abraham Lincoln was born and the memorial hall inclosing the same, from spoliation, destruction, and further disintegration, to the end that they may be preserved for all time, so far as may be; and further agreeing that there shall never be any charge or fee made to or asked from the public for admission to the said park or reservation.

SEC. 2. That the United States of America hereby also accepts title to the endowment fund of $50,000 mentioned in the assignment and transfer, now in the possession of the President of the United States of America, which assignment and transfer were executed on the — day of ———, 1913, by the Lincoln Farm Association, a corporation, to the United States of America, transferring and turning over all its right, title, and interest in and to said endowment fund, heretofore invested in certain stocks, bonds, and securities held and owned by the Lincoln Farm Association, and more particularly identified and described in said assignment and transfer. The title to said endowment fund is accepted upon the terms and conditions stated in said assignment and transfer, namely, that the United States of America shall forever keep the said tract of land described in said deed, together with the buildings and appurtenances thereunto belonging, dedicated to the purpose of a national park or reservation, and that there shall never be any charge or fee made to or asked from the public for admission to the said park or reservation; and further, shall forever protect, preserve, and maintain said land, buildings, and appurtenances, and especially the log cabin in which Abraham Lincoln was born and the memorial hall inclosing the same, from spoliation, destruction, and further disintegration, to the end that they may be preserved for all time, as far as may be, as a national park or reservation.

SEC. 3. That the President of the United States of America and the Secretary of State are hereby authorized to execute, in the name of the United States of America, such instrument or instruments as may be or may become necessary to comply with or carry out the terms and conditions of such gift or gifts and to secure the full benefit therefrom.

Mr. CLARK of Florida. Mr. Chairman, I desire to yield to the gentleman from Illinois [Mr. MCKINLEY] such time as he may desire.

The CHAIRMAN. The gentleman from Illinois [Mr. MCKINLEY] is recognized.

Mr. MCKINLEY. Mr. Chairman, some 8 or 10 years ago a number of citizens of Kentucky and others scattered over the United States formed an association for the purchase of the farm and log cabin in which Abraham Lincoln was born, located 2¾ miles from Hodgenville, Ky.

Mr. Chairman, the report of the committee covers the matter very fully, and I will ask that the Clerk read the report.

The CHAIRMAN. The Clerk will read the report.

The Clerk read as follows:

[House of Representatives. Report No. 221. Sixty-fourth Congress, first session.]

TO ACCEPT DEED OF GIFT TO HOMESTEAD OF ABRAHAM LINCOLN.

Mr. MCKINLEY, from the Committee on the Library, submitted the following report, to accompany House bill 8351:

The Committee on the Library, to whom was referred House bill 8351, having considered the same, now reports it back to the House with the recommendation that it do pass.

The purpose of the bill is to authorize the United States to accept as a gift not only the cabin in which Abraham Lincoln was born, but, in addition thereto, the farm upon which he was born; and, also, an endowment fund made up as follows: $44,000 (par value) city of Louisville, Ky., 4½ per cent bonds, due in 1951; $2,000 (par value) city of Louisville, Ky., 3 per cent bonds.

The present market value of these bonds is nearly $50,000.

A magnificent marble memorial hall has been erected and incloses the cabin which stands near the spring, where it stood when Lincoln was born.

On the farm is a substantial residence and other buildings, occupied by the superintendent of the farm. The farm comprises about 137 acres.

Those who have saved the homestead of Lincoln from the ownership of those who might have exploited it for commercial purposes have also saved the log cabin in which he was born, and have inclosed it in the Memorial Hall, which will forever preserve it from decay. They have also cleared the farm of brush and undergrowth, have rebuilt boundary fences, have made a beautiful park immediately around Memorial Hall, and have endowed the farm with a fund sufficient to maintain it. Having done all this they feel that they have fulfilled their undertaking, and now suggest that the Nation take it over as a gift, and see to it that Lincoln's birthplace is preserved for all future generations.

Already thousands of people, from all over the country, visit the place every year. It is anticipated that future years will see this number become multiplied over and over.

The property has an income of more than $2,000 a year from the endowment fund alone and is self-sustaining.

The present holders of the fee simple title have executed a deed of conveyance, in fee, to the United States, which is held by the President pending the passage of this bill.

The committee most earnestly recommends the passage of this bill. In fact, it is hoped that it may be unanimously adopted.

Mr. CLARK of Florida. Mr. Chairman, I understand the gentleman from Ohio [Mr. FESS] wanted some time. About how much time does the gentleman desire?

Mr. FESS. Five minutes.

Mr. CLARK of Florida. I yield to the gentleman from Ohio, Mr. Chairman, 10 minutes.

The CHAIRMAN. The gentleman from Ohio [Mr. FESS] is recognized for 10 minutes.

Mr. FESS. Mr. Chairman, there is no sentiment that could stir the hearts of America more than a sentiment in honor of the memory of Abraham Lincoln, and I know of no occasion when that sentiment expressed would be more appropriate than upon the occasion of the offer of this property as a gift to the National Government, to care for it.

Some men place themselves in history by what they say, others by what they do, and still a few others by what they both say and do. I have thought that the author of "Sartor Resartus" never need to have done anything to have placed himself in history. The same might be said of the author of the "Pickwick Papers," or of the author of "Julius Cæsar," and the "Merchant of Venice." Then, on the other hand, a man who has accomplished what such men as Edison have done would never need to add to his accomplishments by anything that he might say, for he would be remembered, not by what he said, but by what he did.

But in the case of Abraham Lincoln, he fixes his place in history by what he has said and also by what he has done. The man who said, "A house divided against itself can not stand," probably said what would fix for him a permanent place in history; or "Broken by it I, too, may be, but bow to it I never will," that would also have given him a place in history; or when he said, "Fondly do we hope, fervently do we pray, that this mighty scourge of war may speedily pass away," or when he said, "With malice toward none, with charity for all, with firmness in the right as God gives us to see the right, let us go on with this work," he uttered statements that would permanently fix his place in history. These are but few of many that might be recalled, any one of which is significant in historical meaning. But when we add to those beautiful deliverances some things that he did, we have additional grounds for assigning him a great place in history.

Our Capital City of Washington will always be remembered as the place of his greatest utterances and his greatest deeds. The sixties will be the time to which the historian will hark back for Lincoln's achievements. History will deal most widely with him as the great President, the war President. Emancipation will be recorded as his greatest victory for human rights. The preservation of the Union must be written down as his crowning glory. But we to-day will turn back in our mind, away from the Capitol at Washington, away from the sixties in time, away from civilization as we knew it in the city and in the older countries, to the realm of the pioneer, to the State of Kentucky, that had only recently been settled. We turn away from the time and place of his notable utterances and famous achievements to the then unknown western country. We will think not so much to-day of the distinguished citizen as of the babe in the State of Kentucky; not so much of the head of the grandest Republic on earth as of the child of the wilderness; not so much of the famous emancipator as of the boy stricken with poverty; not so much of the preserver of the Union as of the one with universal inspiration to every boy and girl of America. We are looking from here, the seat of power and the arena of influence, back to those days of sorrow and impotence; and if to-day we could transplant ourselves back in Kentucky to the year of 1809 and had the vision to peer into the future so as to see the road that he traveled, what a vision of opportunity would open to us.

Mr. Chairman and fellow Members of the House, I think it is a beautiful occasion that while we are concerned about his achievements for humanity we here and now choose for a moment to dwell upon those early days, that we fix his beginning as well as emphasize his ending, and instead of thinking too frequently of the White House which he occupied, think more often of the log cabin in which he was born. It is the boyhood time rather than the manhood that appeals to us to-day.

Here is a proposition that gives us the opportunity to dwell upon the childhood, upon the poverty-stricken family; it has to do with his birthplace, where he lived the first seven years of his life, the farm over which his parents trod and on which they labored; and I know of no picture so touching as when the little family of four left this home and started for the Ohio River, which they crossed and went beyond 17 miles, there, together—the father, the mother, the little brother, and the sister, two years his elder—built the little cabin in the woods with their own hands, a cabin of but three sides, in which they dwelt that first year. This picture of privation loses its sting in the wonderful years of opportunity soon to open to the boy of that small group.

It is to those early days that our hearts naturally hark back at this time when there is here presented by our colleague, a distinguished son of Kentucky, the Representative of the district in which is located his birthplace, this opportunity to receive this gift. As a Member of this Congress, I desire to offer my vote of congratulation and gratitude to the State that gave the Nation its Lincoln and which now proposes to donate to it his birthplace as a perpetual memorial to his memory. This contribution, not so much from the State as the people in the State, is by this proposed resolution the most recent effort to make it possible that the Nation itself might preserve the beginnings of the life of America's greatest citizen.

I look upon him as the first, the last, the best, the greatest in comprehension, the broadest in statesmanship, the sweetest in disposition, and the deepest in humanity of all this western world. And while history will care for his memory, and while, in the words of Stanton, his great Secretary, "he now belongs to the ages," it is a beautiful thing for this Congress to do what will prevent our forgetting his beginnings. His ending in being a great statesman will always be commemorated. His career is secure. His achievements are common knowledge. Their brilliancy must not blind us to the unpromising beginnings. This proposition will connect his greatness as he left us with the simple beginning of his life and will help to refresh the future generations with the inspiration of American opportunity. For that reason I want to speak my favor of the reception of this gift by those whose hearts are filled with gratitude toward the memory of this great man. [Prolonged applause.]

Mr. CLARK of Florida. Mr. Chairman, it was with a great deal of pleasure that I voted in the Committee on the Library to report this bill favorably to the House, and I want to state that it was an absolutely unanimous report.

We are now constructing within the city of Washington a great memorial to the memory of Mr. Lincoln. Out in Illinois—at Springfield, the capital of the State—stands a great monument to his memory. It is proposed by this bill to preserve for future generations the place of his birth. The honor to be done this great man would not be complete, it seems to me, without some such action as this. I am glad that this bill is here, and trust that there will be an absolutely unanimous vote for it. I want to say that it augurs well for this great Republic that the man who introduced this bill, who has been furthering its progress before the committee and upon this floor [Mr. JOHNSON of Kentucky], is the son of the man who raised the first Confederate flag that fluttered in the breezes of Kentucky. [Applause.] This action bespeaks more emphatically and more strongly than any language could the fact that we are an absolutely united people, under one flag, with one country, and all of us loving to do honor to the memory of Abraham Lincoln. [Applause.]

Mr. Chairman, I now yield 10 minutes to the gentleman from Texas [Mr. EAGLE]. [Applause.]

Mr. EAGLE. Mr. Chairman, it will afford me sincere pleasure to vote for this measure, by which the United States will accept a deed of gift for the land upon which and the humble log cabin in Kentucky in which Abraham Lincoln was born.

All of my life I have lived in the far South. All of my life I have heard and shared those sentiments of tenderness, of devotion, and of reverence which all of my people feel for the heroes of the "Lost Cause." That sentiment which has more profoundly

touched my spirituality, in pathos and in tenderness, than any other sentiment has been the beautiful devotion of the thinning ranks of the Confederate armies and of their families and descendants. for the memory of the time when they risked life, fortune, and everything that life holds dear, excepting honor and their sense of duty, for a cause that went down honorably in gloom and defeat upon the field of war. And yet throughout my blessed Southland everywhere, among the noble men and glorious women who make up that chivalric and beautiful civilization, never in my life have I heard any sentiment except one of admiration and sympathy for the martyred Abraham Lincoln. [Applause.]

It is a happy occasion of rejoicing that no longer, as in the days of our fathers, is there any estrangement or any bitterness. I rejoice with men in this Chamber from every section of this glorious Union that now there is peace not only in fact but mutual sympathy and fellowship as well, and that in the future there will be no patriotism limited alone to North or South or East or West, and that everywhere we feel the same common devotion to the same flag and the same aspiration for the glory of a common country. [Applause.]

Many years after the Civil War, when Jefferson Davis had been denied citizenship because as President of the fallen Confederacy he had been but the spokesman and chosen leader for many millions of people, when he had never once opened his mouth to speak in public and had during the 20 years after the war never once written or said publicly or privately one word of bitterness concerning that tragic time, a meeting was held in his honor in Jackson, Miss., where a veteran of the lost cause, upon either side of the tottering, venerable, and beloved old man, helped him up the steps of the capitol in the midst of a throng of tens of thousands of men, women, and children who held his name in veneration. They said, "Mr. Davis, at least once before you pass away let your people hear your voice again." For once he broke his silence, and he said in substance simply this: "My friends, I am legally an alien in the land of my birth, but I thank God that I yet live in the affectionate hearts of my devoted countrymen."

It was a scene the like of which rarely has been witnessed upon this earth, where men and women and little children by the thousands wept as if their hearts would break. Throughout the years of his life after the war, Jefferson Davis was everywhere in the South treated with veneration. When, in death, his body was conveyed to its final resting place in Richmond, the people gathered along the route at the farms, villages, and cities, and, without flags or cannon for salute, still paid him reverence with silent forms, bared heads, and eyes dimmed with tears. And when you men of the North come to realize that a people as tremendous in their emotional nature, as intensely convinced in their judgment as the southern people in their mass were convinced that they were right, can yet with a loyalty undivided remain happy and contented and patriotic citizens of a reunited country, contributing the best there is in them to a common cause, and can without division pay affection and devotion and admiration and reverance to the martyred President Abraham Lincoln, who led the other side of that controversy, you and your people should always have respect and affection for our glorious southern people and civilization. [Applause.]

I believe that in all history the two lives which, written upon paper or recited as tradition, excite the most interest are Napoleon Bonaparte and Abraham Lincoln. Since I was a little boy, born and reared over in the backwoods of Kentucky, and since as a young man of 17 moved out to Texas, there has never been a time when the life and the story, and the tragedy, the pathos, and the humor of Abraham Lincoln have not fascinated me. [Applause.] As the years come and go and more and more clearly men are able properly to estimate his mind and character, the name and fame of Abraham Lincoln will be more and more secure in that sacred hall of world fame where only the towering figures of history dwell. [Applause.] And in the Nation he helped so largely to preserve, now the blessed heritage of ourselves and our children and our children's children, his great spirit will always live as an inspiration to guide its life toward that noble destiny of freedom and happiness which was the dream of our fathers when they sent it upon its noble career. [Long continued applause.]

The CHAIRMAN. The gentleman's time has expired.

Mr. CLARK of Florida. Mr. Chairman, I yield 10 minutes to the gentleman from Illinois [Mr. RAINEY].

Mr. RAINEY. Mr. Chairman, I am glad to have the opportunity to vote for this bill. It is appropriate that the birthplace of Abraham Lincoln in a Southern State shall be preserved by the National Government for all time to come. The long journey the boy Lincoln undertook when he left this Kentucky farm ended finally at the village of New Salem, Ill., in the congressional district I have the honor now to represent. To the boy Lincoln and to those who surrounded him and influenced his early career there came in the beginning of the last century the call which came to the South and to the East alike, the call of the West.

> To the West, to the West, to the land of the free,
> Where the great Mississippi rolls down to the sea,
> Where a man is a man if he is willing to toil,
> And the humblest may share in the fruits of the soil.

Following this call of the West, Lincoln finally, after years of travel, in the early part of the year 1830 reached the frontier village of New Salem, on the Sangamon River, and he spent there the formative years of his life. The village disappeared long ago, but some time I hope to see established on the beautiful bluff along the river, where New Salem stood, another national park; and I hope to see a real Lincoln highway following the route he took, connecting the place of his birth, in the State of Kentucky, with the spot where he spent the formative years of his life, in the State of Illinois, and where his great career commenced.

At the time the call of the West came to the boy Lincoln the call of the West reached another boy living under the shadow of the spire of the village church in the village of Brandon, Vt., and a little while later Douglas started for the Illinois country. He came down the rivers and canals in flat boats, through the long forest avenues in ox carts, pursuing the same method of travel that Lincoln pursued. And three years after the arrival of Lincoln at New Salem, Douglas reached the frontier village of Winchester, 20 miles away in Illinois, also in the congressional district that I have the honor to represent. And there, separated by 20 miles of woodland, these two young men spent the formative years of their lives. One of them, frail of stature, acted as auctioneer's clerk, taught school, and studied law in the village of Winchester; the other, robust of body, clerked in a country store, conducted the village post office, fought the Clarys Grove boys, and studied law at the same time in the village of New Salem.

The strangely parallel careers of these two young men commenced at that time. They were in the Legislature of Illinois at the same time. They were admitted to practice law at the same time. Lincoln's law partner was a candidate against Douglas for Congress. Lincoln would have been the candidate were it not for this fact. Both served in Congress at the same time, Lincoln following Douglas to this body. Douglas was promoted to the Senate and acquired an international reputation. Lincoln served only one term, and, discouraged, returned again to private life and to the practice of the law. He remained in the practice of the law until 1858, when the strangely parallel careers of these two great leaders of men commenced again.

They were both opposing candidates for the United States Senate in the State of Illinois, representing different parties, and together canvassed the entire State. Their debates will remain in the history of debates of this character, famous as long as the English language is spoken. But the result of that campaign was again discouraging to Lincoln. The great Douglas was triumphantly elected.

Two years later they were opposing candidates for the Presidency. The result of that campaign left the towering form of Lincoln standing alone on the horizon. One, a cavalier of the Southland, became the leader of the party which was opposed to the South. The other, a Puritan of Puritans, became the leader of the party which found its greatest strength in the South. They were both loyal to the Union until the very last. One of them died just as the guns rang out along the longest battle line the world had ever known. The other died just at the close of that long war between the States.

In the city of Springfield, Ill., a granite column, the granite coming from the State where Douglas was born, marks the spot where Lincoln lies. In the city of Chicago, where the waters of Lake Michigan ripple on the shore, a white marble column marks the spot where Douglas lies. Some day we can honor Douglas in this country without detracting anything from the position Lincoln occupies and must always occupy. They will rank throughout time as two of our greatest citizens and statesmen. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. CLARK of Florida. I yield to the gentleman from Georgia [Mr. CRISP].

Mr. CRISP. Mr. Chairman, as a southern man and the son of a southern soldier I simply desire to avail myself of this opportunity to express my pleasure in having an opportunity to vote for this bill. The district I have the honor to represent lies away down South in Dixie, and I know my people entertain

and cherish for President Lincoln the greatest admiration and kindest feeling. My father was himself a Confederate soldier, and he has said to me on many occasions that the worst thing that ever happened for the South was when President Lincoln was assassinated.

Before the war Gen. Cobb, of Georgia, was at one time Speaker of this House, and he was also Secretary of the Treasury. He was a general in the Confederate Army. He has a son, a probate judge, in my county, who was on his father's staff in the Confederate Army. I have in my office a short communication sent me by Judge Cobb eulogizing President Lincoln, the article also giving his father's views and opinion on the assassination of President Lincoln. I ask unanimous consent to extend my remarks in the RECORD by inserting the article.

The CHAIRMAN. The gentleman from Georgia asks unanimous consent to extend his remarks in the RECORD in the manner stated. Is there objection?

There was no objection.

The article is as follows:

EDITOR TIMES-RECORDER:

The coming of the governor, his staff, members of the Grand Army of the Republic, and other distinguished citizens of Illinois to unveil the monument to their soldier dead at Andersonville brings up memories of the past connected with a man from their State whom they loved and honored and are proud to claim as having come from Illinois; and it seems proper that these memories should be given some public expression at this time.

I refer to Abraham Lincoln. Although he wore no handsome uniform with epaulets and gold braid, was he not a soldier? He was Commander in Chief of the Army and Navy of the United States. Forty-seven years ago, in April, 1865, my father, Maj. Gen. Howell Cobb, commanded the Confederate forces of the department of Georgia. I was a member of his military staff, and was standing near him one day when he received an official telegram. When he read it his face turned as white as a sheet, and throwing up both hands he exclaimed, "My God! Lincoln has been assassinated; this is the greatest calamity that could have befallen our people." How true were his words and prediction time has too fully proven.

It is not surprising that the assassination of Lincoln inflamed the northern heart and created bitterness against the southern people at that critical period, and gave the opportunity to the extreme fanatical element of the North to shape the policy of the Government in dealing with the Southern States after the surrender of Lee's and Johnston's armies. And this brings us to consider what might have been.

Abraham Lincoln was a great, good, and wise man, with a big, loving heart. He always held that the Southern States were never out of the Union. He had the love, confidence, and respect of his people, and if he had lived his policies would have been carried out—a request from him to the Southern States to elect their Senators and Representatives, send them to Washington, and again become a part of a reunited Union of sovereign and independent States. We would not have gone through the farce of reconstructing what he claimed had never been divided.

We would not have had the manacling of Jefferson Davis, thereby wringing the heart of a great and brave people by putting this humiliation on their chieftain, whom they all loved, honored, and admired, when they were helpless to protect or defend him. The Southern people would not have had to go through the trying, expensive, and humiliating times of so-called "reconstruction." The Freedman's Bureau and its antitwin, the Ku Klux Clan, would never have been heard of, and the dove of peace with the olive branch of brotherly love nearly 50 years after would not still be hovering in midair, wanting to proclaim—what all good and true men in this entire Nation earnestly wish and pray for—a united and loyal people, knowing no North, no South, no East, no West.

JOHN ADDISON COBB.

Mr. CLARK of Florida. Mr. Speaker, there are a number of gentlemen who desire to be heard upon this bill, and whom the House and the country desire to hear. As the hour is getting late and we can not hope to finish the matter to-day, I therefore move that the committee do now rise.

Mr. GARRETT. Mr. Chairman, before the gentleman does that will he yield to me?

Mr. CLARK of Florida. Certainly.

Mr. GARRETT. I desire to know the situation in respect to the time when we meet again?

The CHAIRMAN. The gentleman from Florida has 18 minutes remaining.

Mr. MANN. I shall ask to be recognized next Wednesday with the idea of yielding time.

Mr. GARRETT. Under the new rule we have only two hours.

Mr. MANN. That is true. I think the gentleman from Tennessee will be able to secure ample time.

The CHAIRMAN. The gentleman from Illinois [Mr. MCKINLEY] has used only three minutes of his hour.

Mr. CLARK of Florida. Mr. Chairman, I yielded those three minutes to the gentleman from Illinois [Mr. MCKINLEY]. The gentleman from Illinois [Mr. MANN] has not used any time, and he will demand recognition for an hour.

Mr. MANN. There will be ample time to yield to the gentleman from Tennessee.

Mr. CLARK of Florida. Mr. Chairman, I renew my motion that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. BARNHART, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 8351 and had come to no resolution thereon.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted to Mr. MOONEY, indefinitely, on account of the death of his father.

Mr. HULBERT. Mr. Speaker, I ask unanimous consent for leave of absence until Saturday, because of illness in my family.

The SPEAKER. Is there objection?

There was no objection.

ENROLLED BILLS SIGNED.

The Speaker announced his signature to enrolled bills of the following titles:

S. 1809. An act to create an additional judge in the district of New Jersey;

S. 3391. An act to amend an act entitled "An act for the relief of Indians occupying railroad lands in Arizona, New Mexico, or California," approved March 4, 1913;

S. 3977. An act to authorize the Shamokin, Sunbury & Lewisburg Railroad Co., its lessees, successors, and assigns, to construct a bridge across the Susquehanna River from the borough of Sunbury, Northumberland County, Pa., to Monroe Township, Snyder County, Pa.;

S. 4671. An act to exempt from cancellation certain desert-land entries in Riverside County, Cal.;

S. 4190. An act authorizing the Yankton County Bridge Co., a corporation, to construct and maintain a bridge or bridges and approaches thereto across the Missouri River at a point between Yankton County, S. Dak., and Cedar County, Nebr.; and

S. 3978. An act to authorize the Catawissa Railroad Co., its lessees, successors, and assigns, to construct a bridge across the west branch of the Susquehanna River from the borough of Milton, Northumberland County, Pa., to the borough of West Milton, Union County, Pa.

Mr. LAZARO, from the Committee on Enrolled Bills, reported that they had examined and found truly enrolled bills of the following titles, when the Speaker signed the same.

H. R. 13769. An act to authorize the Secretary of War to supply tents for the temporary use of the sufferers from the recent conflagration in Paris, Tex., and for other purposes.

H. R. 8466. An act to relieve J. Lawrence Latham, postmaster at Eupora, Webster County, Miss., of the payment of cash and funds stolen from the post office.

SENATE JOINT RESOLUTION REFERRED.

Under clause 2, Rule XXIV, Senate joint resolution of the following title was taken from the Speaker's table and referred to its appropriate committee, as indicated below:

S. J. Res. 118. Joint resolution authorizing the Postmaster General to provide the postmaster of Newark, N. J., with a special canceling die for the Newark Two hundred and fiftieth Anniversary Celebration; to the Committee on the Post Office and Post Roads.

EXTENSIONS OF REMARKS.

Mr. BAILEY. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD upon the subject of the high price of gasoline.

The SPEAKER. Is there objection?

There was no objection.

Mr. HICKS. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD upon the subject of the south side waterway improvement.

The SPEAKER. Is there objection?

There was no objection.

HOUR OF MEETING TO-MORROW.

Mr. KITCHIN. Mr. Speaker, I ask unanimous consent that when the House adjourns to-day it adjourn to meet at 11 o'clock to-morrow.

The SPEAKER. Is there objection?

Mr. MANN. Mr. Speaker, reserving the right to object, when we meet at 11 o'clock, is it the expectation that we will quit about half past 5?

Mr. KITCHIN. Yes.

The SPEAKER. Is there objection?

There was no objection.

ADJOURNMENT.

Mr. KITCHIN. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 4 o'clock and 56 minutes p. m.) the House adjourned until to-morrow, Thursday, April 6, 1916, at 11 o'clock a. m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1. A letter from the Secretary of War, transmitting, with a letter from the Chief of Engineers, report on reexamination of Lorain Harbor, Ohio (H. Doc. No. 985); to the Committee on Rivers and Harbors and ordered to be printed with illustration.

2. A letter from the Secretary of War, transmitting, with a letter from the Chief of Engineers, report on preliminary examination of Flint River, Ga., from its mouth to Albany (H. Doc. No. 986); to the Committee on River and Harbors and ordered to be printed with illustration.

3. A letter from the Acting Secretary of the Treasury, transmitting copy of a communication from the Secretary of War, submitting urgent estimates of deficiencies in appropriations required for the services of the Engineer's Department, for the current fiscal year (H. Doc. No. 987); to the Committee on Appropriations and ordered to be printed.

4. A letter from the Acting Secretary of the Treasury, transmitting copy of a communication from the Secretary of War, submitting an urgent estimate of deficiency in the appropriation for public printing and binding, War Department, required to complete the service of the fiscal year ending June 30, 1916 (H. Doc. No. 988); to the Committee on Appropriations and ordered to be printed.

5. A letter from the Secretary of the Treasury, transmitting copy of communication from the Secretary of State, submitting an estimate of appropriation to pay the expense of printing, in compliance with the requirements of the act of February 3, 1887, the certified copies of the final ascertainment of the electors for President and Vice President of the United States, as transmitted by the executive of each State to the Secretary of State (H. Doc. No. 989); to the Committee on Appropriations and ordered to be printed.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, bills were severally reported from committees, delivered to the Clerk, and referred to the several calendars therein named, as follows:

Mr. HOUSTON, from the Committee on the Territories, to which was referred the bill (H. R. 3085) to ratify, approve, and confirm an act duly enacted by the Legislature of the Territory of Hawaii amending the franchise held by the Honolulu Gas Co. (Ltd.) by extending it to include all of the island of Oahu, Territory of Hawaii, reported the same with amendment, accompanied by a report (No. 493), which said bill and report were referred to the House Calendar.

Mr. SAUNDERS, from the Committee on the Merchant Marine and Fisheries, to which was referred the bill (H. R. 13223) to provide for appeals from decisions of boards of local inspectors of vessels, and for other purposes, reported the same without amendment, accompanied by a report (No. 495), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. TAYLOR of Colorado, from the Committee on the Public Lands, to which was referred the bill (H. R. 11162) to amend an act entitled "An act to authorize entry of the public lands by incorporated cities and towns for cemetery and park purposes," approved September 30, 1890, and for other purposes, reported the same with amendment, accompanied by a report (No. 496), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

CHANGE OF REFERENCE.

Under clause 2 of Rule XXII, the Committee on Invalid Pensions was discharged from the consideration of the bill (H. R. 8548) granting a pension to Robert Leigh Morris, and the same was referred to the Committee on Pensions.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. HAMILTON of Michigan: A bill (H. R. 14224) providing for the erection of a public building at the city of South Haven, Mich.; to the Committee on Public Buildings and Grounds.

By Mr. BUTLER: A bill (H. R. 14225) authorizing abutting owners upon Crum River, a navigable stream, where the same empties into the Delaware River, to straighten, widen, and deepen the same, and substituting such straightened course and channel for the present channel thereof, and abandoning and vacating a portion of the present chanel; to the Committee on Rivers and Harbors.

By Mr. STEPHENS of California (by request): A bill (H. R. 14226) to amend section 1, subdivision (b), of the act entitled, "An act to amend and consolidate the acts respecting copyright," approved March 4, 1909; to the Committee on Patents.

By Mr. McFADDEN: A bill (H. R. 14227) to amend the act approved December 23, 1913, known as the Federal reserve act; to the Committee on Banking and Currency.

By Mr. HELGESEN: A bill (H. R. 14228) authorizing the city of Grand Forks, N. Dak., to construct and maintain a dam across the Red River of the North, at or near the city of Grand Forks; to the Committee on Interstate and Foreign Commerce.

By Mr. STONE: Joint resolution (H. J. Res. 196) to receive evidence in support of the claims of Dr. Frederick A. Cook to attainment of the North Pole; to the Committee on Education.

By Mr. LAFEAN: Joint resolution (H. J. Res. 197) authorizing the sale of revenue stamps in post offices and subpost-office stations throughout the United States; to the Committee on Ways and Means.

By Mr. LOBECK: Concurrent resolution (H. Con. Res. 25) authorizing the printing of a revised edition of the bankruptcy laws as prepared by the Committee on Revision of the Laws of the House of Representatives; to the Committee on Printing.

By Mr. FLYNN: Memorial from the Legislature of the State of New York, favoring building naval armament by the United States; to the Committee on Naval Affairs.

By Mr. HULBERT: Memorial of the Legislature of the State of New York, favoring increases in United States military and naval forces for purposes of more adequate defense; to the Committee on Military Affairs.

By Mr. DANFORTH: Memorial of the Legislature of the State of New York, favoring increases in United States military and naval forces for purposes of more adequate defense; to the Committee on Military Affairs.

By Mr. GOULD: Memorial of the Legislature of the State of New York, favoring increases in United States military and naval forces for purposes of more adequate defense; to the Committee on Military Affairs.

By Mr. SIEGEL: Memorial of Legislature of the State of New York, favoring increases in United States military and naval forces for purposes of more adequate defense; to the Committee on Military Affairs.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BRUMBAUGH: A bill (H. R. 14229) granting an increase of pension to Frank W. Tuttle; to the Committee on Pensions.

Also, a bill (H. R. 14230) granting an increase of pension to Timothy Kelly; to the Committee on Pensions.

By Mr. COLLIER: A bill (H. R. 14231) for the relief of Dr. G. Y. Hicks, of Vicksburg, Miss.; to the Committee on Claims.

By Mr. DAVIS of Minnesota: A bill (H. R. 14232) granting an increase of pension to George W. Kinsey; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14233) granting an increase of pension to James Auge; to the Committee on Invalid Pensions.

By Mr. DEWALT: A bill (H. R. 14234) granting a pension to George W. Rathman; to the Committee on Pensions.

By Mr. HASKELL: A bill (H. R. 14235) granting an increase of pension to Annie Morrison; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14236) granting an increase of pension to Adolph H. Schumann; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14237) granting an increase of pension to Valentine Hinton; to the Committee on Invalid Pensions.

By Mr. HAUGEN: A bill (H. R. 14238) granting an increase of pension to John I. Bovee; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14239) granting an increase of pension to James M. Jobe; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14240) granting an increase of pension to George Kint; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14241) granting a pension to Frank Schmidt; to the Committee on Pensions.

Also, a bill (H. R. 14242) granting a pension to Lois Ann Nicholas; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14243) granting a pension to Christina Whitcome; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14244) for the relief of James Curran; to the Committee on Military Affairs.

Also, a bill (H. R. 14245) for the relief of Edward Looby; to the Committee on Military Affairs.

By Mr. HAWLEY: A bill (H. R. 14246) granting an increase of pension to Emily A. De Forest; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14247) for the relief of William A. Frater; to the Committee on Claims.

Also, a bill (H. R. 14248) for the relief of Willis Alden; to the Committee on Claims.

By Mr. HELGESEN (by request): A bill (H. R. 14249) granting an increase of pension to Alexander Adams; to the Committee on Invalid Pensions.

Also (by request), a bill (H. R. 14250) granting an increase of pension to Samuel I. McPherron; to the Committee on Invalid Pensions.

Also (by request), a bill (H. R. 14251) granting an increase of pension to Annie E. Rhoades; to the Committee on Invalid Pensions.

Also (by request), a bill (H. R. 14252) granting an increase of pension to Zachary Miller; to the Committee on Invalid Pensions.

By Mr. HENSLEY: A bill (H. R. 14253) granting an increase of pension to Lewis J. Cundiff; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14254) granting an increase of pension to James M. Bridwell; to the Committee on Invalid Pensions.

By Mr. LAFEAN: A bill (H. R. 14255) granting an increase of pension to Jennie E. King, widow of Augustus D. King; to the Committee on Invalid Pensions.

By Mr. LINTHICUM: A bill (H. R. 14256) granting a pension to Jessie E. Stover; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14257) granting a pension to Fannie T. Smith; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14258) granting an increase of pension to Otis H. Taylor; to the Committee on Invalid Pensions.

By Mr. McFADDEN: A bill (H. R. 14259) granting an increase of pension to William Skelton; to the Committee on Invalid Pensions.

By Mr. MEEKER: A bill (H. R. 14260) granting a pension to Andrew Woodlock; to the Committee on Invalid Pensions.

By Mr. MONTAGUE: A bill (H. R. 14261) for the relief of the estate of R. O. Haskins; to the Committee on Claims.

By Mr. MORGAN of Louisiana: A bill (H. R. 14262) for the relief of the estate of John O. Denham; to the Committee on Claims.

Also, a bill (H. R. 14263) for the relief of the estate of Joseph C. Seale; to the Committee on Claims.

Also, a bill (H. R. 14264) for the relief of the heirs of Reuben H. Carruth; to the Committee on Claims.

Also, a bill (H. R. 14265) for the relief of the heirs of Don Louis Bondro, alias Boudreaux; to the Committee on Claims.

By Mr. MORGAN of Oklahoma: A bill (H. R. 14266) granting a pension to Florence V. Evans; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14267) granting a pension to James Tucker; to the Committee on Pensions.

Also, a bill (H. R. 14268) granting a pension to Lettie B. May; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14269) granting an increase of pension to John W. Gee; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14270) granting an increase of pension to Caroline Kersey; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14271) granting an increase of pension to John Herrick; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14272) granting an increase of pension to George G. Sherlock; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14273) granting an increase of pension to Sherman Jacobs; to the Committee on Pensions.

Also, a bill (H. R. 14274) to correct the military record of Frank Rector and grant him an honorable discharge; to the Committee on Military Affairs.

By Mr. MOSS of Indiana: A bill (H. R. 14275) granting an increase of pension to Ambrose S. Uselman; to the Committee on Invalid Pensions.

By Mr. NOLAN: A bill (H. R. 14276) for the relief of the Western Grain & Sugar Products Co. of California; to the Committee on Claims.

By Mr. RAINEY: A bill (H. R. 14277) granting a pension to Zachariah McClain; to the Committee on Invalid Pensions.

By Mr. RANDALL: A bill (H. R. 14278) granting a pension to Mrs. Sarah M. Roberts; to the Committee on Invalid Pensions.

By Mr. RUSSELL of Missouri: A bill (H. R. 14279) granting an increase of pension to Sarah B. Wilson; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14280) granting an increase of pension to James A. Wise; to the Committee on Invalid Pensions.

By Mr. SANFORD: A bill (H. R. 14281) granting a pension to Louis E. Lavariere; to the Committee on Pensions.

By Mr. SEARS: A bill (H. R. 14282) granting an increase of pension to Philip H. Sipe; to the Committee on Invalid Pensions.

By Mr. SHERWOOD: A bill (H. R. 14283) granting an increase of pension to Robert W. Griffin; to the Committee on Pensions.

Also, a bill (H. R. 14284) granting a pension to Joseph P. Riley; to the Committee on Pensions.

Also, a bill (H. R. 14285) granting a pension to William J. Riley; to the Committee on Pensions.

By Mr. SIMS: A bill (H. R. 14286) granting an increase of pension to Joseph I. Mahar; to the Committee on Invalid Pensions.

By Mr. STINESS: A bill (H. R. 14287) granting an increase of pension to Fanny Reid; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14288) granting an increase of pension to Patience B. Nicholas; to the Committee on Invalid Pensions.

By Mr. SWITZER: A bill (H. R. 14289) granting an increase of pension to John W. Hank; to the Committee on Invalid Pensions.

By Mr. TILLMAN: A bill (H. R. 14290) granting a pension to William Burke; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14291) granting a pension to Charles W. Reeves; to the Committee on Pensions.

Also, a bill (H. R. 14292) to appropriate the sum of $2,000 to be paid to Mrs. A. C. Hall, of Scotland, Ark., for personal property taken and used by the Army of the United States; to the Committee on War Claims.

Also, a bill (H. R. 14293) to appropriate the sum of $1,000 to be paid to James G. Walker; to the Committee on War Claims.

Also, a bill (H. R. 14294) to pay to G. B. Parker the sum of $40; to the Committee on Claims.

By Mr. WALKER: A bill (H. R. 14295) granting a pension to Mary Johnson; to the Committee on Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By Mr. BAILEY: Protest of Ambrose Berkebile, B. F. Critchfield, James Leyshon, N. L. Berkebile, Lester Constable, Ira Clark, M. M. Young, A. Hockensmith, M. S. Critchfield, Austin Berkebile, James Adair, Jerome Crissey, J. E. Lambert, Frank Crissey, William N. Constable, Dallas B. Covert, George J. Hammer, Miles Edmiston, R. I. Richardson, R. W. Lambert, H. C. Evans, John J. Kenney, Lowman Ling, S. R. Morris, A. A. Slagle, James Cruikshank, Sherman Cone, Harry Lambert, Sherman D. Miller, A. Kring, I. J. Lambert, W. G. Hershberger, Charles Shaffer, H. D. Allison, John H. Miller, R. S. Mowry, Ralph Kinzey, Lloyd N. Hershberger, S. I. Hershberger, S. S. Hummel, J. J. Wible, Sherman Allison, I. E. Paul, William H. Paul, M. V. Kelly, Walter Gaston, Alvin Wertz, Louis G. Schrock, Grant U. Hammer, Charles Leventry, C. A. Trent, J. M. Griffith, J. L. Miller, E. H. Cook, C. E. Thomas, William B. Martin, George Ganoe, H. D. Miller, George J. Rose, Curt C. Stanton, Morrell Swank, William Martin, jr., Charles P. James, E. F. Glock, R. R. Thiele, Joseph Leventry, William Gindelsperger, George W. Smith, J. F. Lohr, William H. Ott, Vernon J. Deitz, G. W. Ellenberger. O. W. Boyer, George S. Phenicie, Lemuel Kaufman, N. B. Woy, C. W. Woy, A. F. Shank, Albert Ott. W. F. Brant, H. E. Buechley, C. H. Brant, B. A. Beabes, Benoni Kaufman, H. B. Brant, H. H. McClain, G. B. Roudabush, Jacob Shaffer, Charles I. Kline, Warren T. Mock, Albert W. Miller, J. D. Stull, J. J. Stull, Frank S. Smith, G. A. Shank, Phillip Jones, John A. Graft, Herman M. Sprengel, George W. Smith, Guy B. Wissinger, Sam C. Stewart, E. P. Horton, G. A. Boring, Ivan F. Potts, G. W. Page, S. L. Varner, W. B. Souser, O. W. Manges, C. W. Thomas, Richard Mitchell, S. S. Blight, J. Milton Ashton, Gilbert Brown, M. L. Reiman, D. D. Blauch, L. T. Gardner, Thomas Rudge, and J. Q. A. Curry, all of Johnstown, Pa., against the passage of House bill 491, denying the use of the mails to certain publications; to the Committee on the Post Office and Post Roads.

By Mr. MORGAN of Oklahoma: Memorial of Stella Quarterly Meeting of Friends Church, Cherokee, Okla., favoring national prohibition; to the Committee on the Judiciary.

By Mr. MORIN: Petition of Chancellor S. B. McCormick, of University of Pittsburgh, Pittsburgh, Pa., in favor of Senate joint resolution 92; to the Committee on Public Buildings and Grounds.

Also, petitions of C. E. Augustine, Elmer K. Hiles, W. H. Connell, jr., C. D. McArthur, A. R. Hunt, J. W. Bennel, George E. Reno, Thomas Woods, C. F. O'Hagan, W. W. Oursler, W. A. Rowe, W. C. Rott, J. W. H. Swan, F. Crabtree, John M. Rayburn, Richard R. Hiel, O. E. Gressly, N. O. Renkin, Aug. J. Schmitt, Charles Fitzgerald, W. P. Chandler, jr., Lloyd A. Cross, Frank I. Ellis, S. A. Meyer, J. S. McBride, John Jackson, E. J. Mason, A. H. McGill, S. B. Heppenstall, H. L. Dixon, G. A. Davis, Edward U. Smith, Byron K. Ellion, B. T. Schuchman, C. N. Kimmel, Dale T. Wadsworth, John T. Brown, jr., G. C. Mquhart, George O. Loeffler, and K. F. Treschow, favoring extension of military training in civil educational institutions; to the Committee on Military Affairs.

Also, petition of S. K. Kamaiopili, of Honolulu, Hawaii, opposing liquor traffic in Hawaii; to the Committee on the Judiciary.

By Mr. NEELY: Memorial of members of the Baraca Bible Class of the Baptist denomination, of Grafton, W. Va., against passage of bills to amend the postal laws; to the Committee on the Post Office and Post Roads.

By Mr. PAIGE of Massachusetts: Memorial of Woman's Christian Temperance Union of Fitchburg, Mass., favoring prohibition in the District of Columbia; to the Committee on the District of Columbia.

Also, petition of Marshall B. Waterman and 73 others of Athol, Mass., against bills to amend the postal laws; to the Committee on the Post Office and Post Roads.

Also, petition of Marshall B. Waterman and 62 others of Athol, Mass., against Sunday observance bill in the District of Columbia; to the Committee on the District of Columbia.

Also, memorial of Woman's Christian Temperance Union of Fitchburg, Mass., favoring national prohibition; to the Committee on the Judiciary.

By Mr. PRICE: Petition of sundry citizens of Blythedale, Md., against Sunday observance bill in the District of Columbia; to the Committee on the District of Columbia.

Also, petition of sundry citizens of Baltimore, Md., favoring Nolan minimum-wage bill, relative to Government salaries; to the Committee on Reform in the Civil Service.

Also, petition of Maryland League for National Defense, favoring preparedness; to the Committee on Military Affairs.

Also, memorial of Coopers' International Local Union, No. 32, of Baltimore city, favoring inspection of dairy products; to the Committee on Agriculture.

Also, petition of employees of the post office at Chestertown, Md., favoring the passage of the Griffin bill, House bill 6916; to the Committee on the Post Office and Post Roads.

By Mr. ROWE: Petition of Jonathan Randel, of Brooklyn, N. Y., favoring passage of House bill 11876; to the Committee on Labor.

Also, petition of Iron Steamboat Co., Fred. H. Bishop, president, protesting against passage of House bill 8036; to the Committee on the Merchant Marine and Fisheries.

Also, petition of G. F. Kaekler, for the Kalkhoff Co., New York City, favoring the passage of House bill 11621; to the Committee on the Post Office and Post Roads.

Also, petition of Beal Byron Co., of New York, protesting against any restrictions being placed on motor boats; to the Committee on Rivers and Harbors.

Also, petition of Nelson O. Tiffany, jr., of Buffalo, N. Y., favoring adequate preparedness; to the Committee on Military Affairs.

By Mr. SHOUSE: Petition of citizens of Ford County, Kans., against passage of bills for Sunday closing of barber shops in the District of Columbia; to the Committee on the District of Columbia.

Also, petition of citizens of Larned, Kans., against passage of House bill 8348; to the Committee on the District of Columbia.

Also, petition of citizens of Morton County, Kans., favoring amending the pending joint committee bill on rural credits; to the Committee on Banking and Currency.

Also, petition of citizens of Fort Dodge, Kans., against passage of bills to amend postal laws; to the Committee on the Post Office and Post Roads.

By Mr. STEPHENS of California: Petition of Samuel M. Newmark and 54 other citizens of Los Angeles, Cal., protesting against Burnett immigration bill; to the Committee on Immigration and Naturalization.

Also, petition of Woman's Civic Club of Fortuna, Cal., favoring appropriation of $300,000 for Yosemite National Park; to the Committee on Appropriations.

Also, petitions of S. M. Hughes and three other citizens of Los Angeles; J. Vaughan, San Pedro; and Charles C. Townsend, Lancaster, all in the State of California, favoring the Warren bill; to the Committee on Military Affairs.

Also, petitions of Home Investment Building & Loan Association and Metropolitan Loan Association, of Los Angeles, Cal., favoring relief from Federal emergency excise-tax act; to the committee on Ways and Means.

Also, petitions of Schiller Lodge, No. 34, Sons of Herman, and Louis Karl and 23 other citizens of Los Angeles, Cal., favoring embargo on munitions of war, and protesting against loans to belligerent countries; to the Committee on Ways and Means.

Also, petition of Woman's Christian Temperance Union of Beaumont, Cal., favoring prohibition in the District of Columbia; to the Committee on the District of Columbia.

Also, letters from Chamber of Commerce of Los Angeles, Cal., protesting against the formation of a new land district to include Imperial County and the eastern portion of Riverside County; to the Committee on the Public Lands.

Also, petition of Pedic Society of San Francisco, Cal., favoring bill to regulate the practice of pediatry or chiropody in the District of Columbia; to the Committee on the District of Columbia.

Also, petition of Bakers' Union No. 25, of Pasadena, Cal., favoring House bill 137, investigation into sanitary conditions surrounding the marketing of dairy products; to the Committee on Agriculture.

By Mr. THOMAS: Petition of Prof. William C. Farrar, Bethel College, Kentucky, against erecting power plant near Washington Monument; to the Committee on the District of Columbia.

By Mr. TIMBERLAKE: Petition of citizens of Fort Morgan, Colo., favoring national prohibition; to the Committee on the Judiciary.

Also, memorial of Northeastern Weld County (Colo.) Educational Association, Esther L. Shanebo, Coleman, Colo., president, against national defense; to the Committee on Military Affairs.

By Mr. TINKHAM: Petition of Union League Club of Chicago, Ill., favoring preparedness; to the Committee on Military Affairs.

SENATE.

THURSDAY, *April 6, 1916.*

(Legislative day of Thursday, March 30, 1916.)

The Senate reassembled at 12 o'clock meridian, on the expiration of the recess.

NATIONAL DEFENSE.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States.

Mr. CHAMBERLAIN. Mr. President, I am not going to ask to have read the mass of telegrams I have received and which I have before me begging the Senate to retain section 56 in the bill. I am simply going to call attention to the fact that they come from sources not interested in these encampments, but men who are anxious to see a proper measure enacted that will assist in raising a volunteer force.

I have before me 356 telegrams coming from New York, Philadelphia, Boston, Baltimore, Portland, Oreg., New Jersey, Pennsylvania, Massachusetts, and other points than the cities I have named in New Jersey, Pennsylvania, New York, Connecticut, New Hampshire, Ohio, Montana, Virginia, Delaware, and Vermont. Some of the telegrams are from officers of the National Guard of these States. I have one particularly from a gentleman in Oregon who has been adjutant general of the State for a great many years, who served with the Second Oregon Volunteers in the Philippines as a major and was afterwards judge advocate general in the Philippines, and he favors section 56 very strongly.

Mr. McCUMBER. Mr. President——

Mr. CHAMBERLAIN. I will yield in just a moment.

Mr. McCUMBER. I merely wish to ask the Senator a question.

Mr. DU PONT. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst	Gallinger	McCumber	Sherman
Bankhead	Harding	Martin, Va.	Simmons
Beckham	Hitchcock	Martine, N. J.	Smith, Ga.
Brady	Hollis	Myers	Smith, Md.
Brandegee	Hughes	Nelson	Smoot
Broussard	Husting	Norris	Sterling
Burleigh	Johnson, Me.	O'Gorman	Stone
Catron	Johnson, S. Dak.	Oliver	Swanson
Chamberlain	Jones	Overman	Taggart
Chilton	Kenyon	Page	Thomas
Clapp	Kern	Pittman	Townsend
Clarke, Ark.	Lane	Pomerene	Underwood
Culberson	Lee, Md.	Robinson	Warren
Cummins	Lewis	Saulsbury	Weeks
Dillingham	Lippitt	Shafroth	Williams
du Pont	Lodge	Sheppard	Works

Mr. CHILTON. My colleague [Mr. GOFF] is absent on account of illness. I will let this announcement stand for the day.

I wish also to announce the necessary absence of the Senator from Florida [Mr. FLETCHER].

Mr. LEWIS. I beg to announce the absence of the Senator from South Carolina [Mr. TILLMAN]. He has been called to his State on pressing business.

Mr. KERN. I wish to announce the unavoidable absence of the Senator from Arizona [Mr. SMITH] on account of illness. This announcement may stand for the day.

The VICE PRESIDENT. Sixty-four Senators have answered to the roll call. There is a quorum present.

Mr. CHAMBERLAIN. Mr. President, I started to make a brief statement awhile ago and was interrupted by the suggestion of the absence of a quorum, and I will make it now.

Since the Senate adjourned yesterday afternoon I have received about 360 telegrams, including some that have just come to me since I started my former statement. The telegrams are from citizens of New York, Philadelphia, Boston, Baltimore, Portland, Oreg., and also from different cities in New Jersey, Pennsylvania, Massachusetts, New York, Connecticut, New Hampshire, Ohio, Montana, Virginia, Delaware, and Vermont, protesting against the elimination of section 56 from the bill. I desire to say that these telegrams come from persons who attended the Plattsburg and similar training camps, and many officers of the State militia—of the National Guard, I should probably say—veterans of the Spanish-American War, and others.

One of the strongest protests against the elimination of this section is from Judge Gantenbein, of Portland, Oreg., which reached me this morning, calling attention to the fact that he had seen the statement in the early morning papers, the midnight edition of the papers, about what was done here. Judge Gantenbein is one of the circuit judges of my city. For a number of years he was adjutant general of the State. He was an officer in the Second Oregon Volunteer Regiment in the Philippines, and served during the occupation as judge advocate, and has had very broad experience. He protests most strenuously against the elimination of section 56.

I have also a characteristic telegram, which I will read, from a guardsman, dated at Baltimore, this morning. He says:

As a member of the first training regiment, Plattsburg, 1915, and also as first lieutenant, Maryland National Guard, emphatically urge the passage of section 56 of Senate military bill.

J. CRAIG MCLANAHAN.

Another is from New Jersey, which says:

As a militiaman of 25 years' enlisted and commissioned service I emphatically protest against attempt to defeat Federal reserve plan embodied section 56 Senate bill and urge passage of this section; also against amendment attaching militia officers to General Staff to control militia affairs, this being opposed to sound development and future effectiveness of militia.

ARTHUR H. MACKIE,
Major, First New Jersey Infantry.

I call attention to these telegrams. I will not ask to have them read into the RECORD, but I desire to have a record made of the fact that I have received these telegrams, all protesting against the elimination of section 56.

The VICE PRESIDENT. The telegrams will be received and lie on the table.

Mr. O'GORMAN. Mr. President, I ask to have printed in the RECORD a letter and a number of telegrams received from citizens of the State of New York and elsewhere protesting against the elimination of section 56 in the pending bill.

The VICE PRESIDENT. Is there objection? The Chair hears none.

The letter and telegrams referred to are as follows:

NEW YORK CITY, *April 5, 1916.*

Hon. JAMES A. O'GORMAN,
Capitol, Washington, D. C.:

DEAR SIR: The present Congress is engaged upon consideration of two questions which vitally affect the future of this country.

1. The increase in the Standing Army, including reorganization of the State militia.

2. The increase in our naval program, including increase in the personnel of the Navy.

History unquestionably teaches us that the country which is not prepared to meet other countries upon at least an equal war footing is doomed to recede from the position which it otherwise would hold in the community of nations, and by reason of its consequent inability to enforce respect for its rights and the privileges of its citizens by so much forfeits the respect of the other nations of the world.

Our present Standing Army, from the standpoint of personnel and equipment, is so ridiculously inadequate as to make us a laughing stock among the other nations of the world. By this I do not mean to imply that man for man our Army, the personnel of our Regular Army, will not equal in efficiency that of any other nation of the world. But that will not win battles against superior forces. As my Senator I write to emphasize upon you that as one of your constituents I am most emphatically in favor of an increase in our Standing Army to at least 250,000 men, providing at the same time for an adequate reserve.

I am also in favor of more thorough training of the State militia and a coordination of the various units thereof, so as to subject it to centralized control. In this connection I consider the Hay bill worse than no provision whatever for the necessities of our present case, and I trust that you will do everything in your power to defeat that bill and to bring about the passage of a bill establishing our military policy upon the broadest lines.

As to the Navy, our Navy is not only our first weapon of offense, but, as the situation now stands, our first and only effective weapon of defense. The coast line which the United States would have to protect in the event of hostilities is many times greater than that of any other country with which we might come into conflict and our Navy considerably smaller than that of any such country. We have a considerably more effective machine in our Navy to-day than we have in our Army, but owing to the unfortunate policy of the present administration this effectiveness is potential rather than actual.

I am emphatically in favor of bringing our Navy to 100 per cent effectiveness and for increasing the size of the Navy proportionately to the extent of our coast line and its requirements in the event of hostilities. This means an energetic prosecution of a naval program substantially as recommended by the General Board of the Navy.

Many good citizens are fearful lest the present Congress will attempt to foist upon the Nation a bill with regard to the Navy similar in its effect to the Hay bill.

I trust that you will do everything in your power to oppose such destructive legislation and to effect adequate constructive legislation in this respect.

Very truly, yours, ALFRED ELY.

—

NEW YORK, *April 6, 1916.*

Senator JAMES A. O'GORMAN,
Washington, D. C.:

Earnestly urge you to make every effort to prevent defeat of section 56, Senate military bill; we need training camps.

GUSTAV SCWAW.

—

NEW YORK, *April 5, 1916.*

Senator JAMES A. O'GORMAN,
Washington, D. C.:

The Volunteer Army movement must not be jeopardized by politics. I went to Plattsburg, finished the march in the ambulance, and have gotten many men to go this year. They most decidedly would not join the Guard.

CONRAD G. GODDARD,
Roslyn, Long Island, N. Y.

—

NEW YORK, *April 5, 1916.*

Senator JAMES A. O'GORMAN,
The Capitol, Washington, D. C.:

I respectfully urge upon you the necessity of approving section 56 in the Senate bill on military organization now under consideration. I feel very strongly about this.

J. A. RIPLEY.

—

NEW YORK, *April 5, 1916.*

Hon. JAMES O'GORMAN,
Washington, D. C.:

We, the undersigned citizens of the United States, protest against attempt to defeat Federal reserve plan in section 56 of Senate bill, and emphatically urge passage of this section.

F. B. Marshall, Halsey French, William Meadowcroft, Alexander S. Farmer, Alfred W. Arenader, Alfred A. Schener, Geo. A. Griffin, Wm. Lamson, Wm. J. Coakley, Geo. J. Bourke, Thomas C. Norton, Arthur S. Tuttle, Vornon S. Moon, Arthur H. Pratt, Aswald W. Hill, Kenneth Allen, John E. Hill, Wm. I. Foster, F. X. A. Purcell, A. G. Thomas, H. M. Foster.

NEW YORK, *April 5, 1916.*

Senator O'GORMAN,
Washington, D. C.:

Vote against Lee amendment; section 56 must be retained.

ALEXANDER GORDON,
61 Broadway, New York.

—

NEW YORK, *April 5, 1916.*

Hon. JAMES A. O'GORMAN,
United States Senate, Washington, D. C.:

Request you vote against Lee amendment striking out section 56.

THEODORE T. LANE.

—

NEW YORK, *April 5, 1916.*

Senator JAMES A. O'GORMAN,
Washington, D. C.:

As a member of the first Plattsburg training regiment, I emphatically protest against the attempt to defeat the Federal reserve plan embodied in section 56 of the Senate bill, and urge upon you the passage of this section which practically contemplates a national system of Plattsburg camps.

JOSEPH J. FRANK,
New York City.

—

NEW YORK, *April 5, 1916.*

Senator O'GORMAN,
The Capitol, Washington, D. C.:

Emphatically indorse section 56 of Senate military bill. The opportunity to serve Nation in a Federal force would make available not less than hundred thousand men annually who can not or will not join any State militia.

DELANCEY K. JAY.

—

NEW YORK, *April 5, 1916.*

Senator JAMES A. O'GORMAN,
Washington, D. C.:

I urge emphatically adoption section 56, Senate Army bill, and protest utmost indignation attempt defeat it.

HERBERT K. STOCKTON,
27 William Street.

—

NEW YORK, N. Y., *April 5, 1916.*

Hon. JAMES A. O'GORMAN,
Washington, D. C.:

The Plattsburg Chamber of Commerce protests against the dropping from the Army bill of section 56, providing for a Federal reserve. We regard this section as based upon the fundamental duty of citizenship, the duty of national defense, and as a step toward a broader recognition of this duty.

W. J. JAQUES,
President Plattsburg Chamber of Commerce.

—

NEW YORK, N. Y., *April 5, 1916.*

Senator O'GORMAN,
Washington, D. C.:

Emphatically urge passage section 56, Federal reserve bill.

FRANK DAWSON.

—

NEW YORK, *April 5, 1916.*

Hon. JAMES A. O'GORMAN,
Washington, D. C.:

I earnestly believe that section 56 of Senate bill 4840 should be retained, because I think that a Federal reserve is the most effective means of defense and that voluntary training camps, such as were held at Plattsburg last summer, should be permanently established by law.

W. R. BEGG,
24 Broad Street, New York City.

—

NEW YORK, *April 5, 1916.*

Hon. JAMES O'GORMAN,
Washington, D. C.:

I have followed closely the newspaper accounts of the course of the proposed military legislation in Congress. I understand that there is opposition to section 56 of Senate bill No. 4840. I earnestly hope that you will use your efforts to overcome this opposition.

A. L. HUMES,
Plaza Hotel, New York City.

—

NEW YORK, N. Y., *April 5, 1916.*

Hon. JAMES A. O'GORMAN,
Washington, D. C.:

Referring to the national defense bill now pending before the Senate, we heartily indorse the Regular Army increase and the Federal reserve plans as now embodied in the bill. In view of the inadequacy for national defense of any Regular Army which the American people will support, in view of the collapse of the State militia as a national defensive system in every crisis of our history, and in view of the uselessness of untrained volunteers in modern war, we most emphatically protest against any weakening of the Federal reserve provisions unless there is provided the only adequate substitute, universal military training under exclusive Federal control.

F. G. Sheridan, Albert Buttendorf, Fred F. Moore, Wm. W. Kerr, Geo. Fuchs, Chas. R. Cockey, Chester W. Allen, W. J. Buhrendorf, J. L. Murphy, David Kurtzweg, L. P. Wood, F. H. Robbins, Frederick F. Dibelins, Jos. S. Stull, jr., Allen E. Shannon, Clifford Zaver, Adam H. Brenzinger, Geo. R. Farwill, John W. Langguth, Torris Elde, H. O. Tafel, J. Howard Williams, Alexander H. Fox, W. J. Cormack.

—

NEW YORK, *April 5, 1916.*

Hon. JAMES A. O'GORMAN,
Senate Chamber, Washington, D. C.:

I hope you will use your influence to secure approval of section 56 in Senate bill regarding training camps. I am satisfied from my personal experience at Plattsburg that these camps are a necessary aid in national defense.

FRANCIS W. AYMAR.

NEW YORK, *April 5, 1916.*

Hon. JAMES A. O'GORMAN,
United States Senate, Washington, D. C.:

I protest against the attempt to defeat the Federal reserve plan embodied in section 56 of Senate bill 4840, because my experience at Plattsburg last summer convinces me that the plan is of the greatest value as a measure of defense. The plan in no way conflicts with the interests of the National Guard, of which I am a member, and it gives an opportunity for military training to men who can not belong to the National Guard. It also offers to members of the National Guard a chance for a supplementary training under conditions approximating those of actual service. I have seen something of both methods of training, and I wish to say very earnestly that if there were any necessity of choosing between the two the Federal reserve would be more efficient and reliable.

HOWARD H. BROWN,
116 West Sixty-ninth Street, New York City.

—

NEW YORK, *April 4, 1916.*

Hon. JAMES A. O'GORMAN,
United States Senate, Washington, D. C.:

On behalf of Military Training Camps Association of the United State of 4,200 men from all sections who have attended Federal training camps, and representing also not less than 30,000 citizens who will attend this year's camps, at a cost of $2,000,000 to themselves, we earnestly protest against attempt to defeat section 56, Senate military bill. This section, without impairing National Guard, will make available for service of Nation tens of thousands who under no circumstances can be made available under a National Guard system.

MILITARY TRAINING CAMPS ASSOCIATION
EXECUTIVE COMMITTEE.

—

NEW YORK, *April 5, 1916.*

Senator O'GORMAN,
The Capitol, Washington, D. C.:

As a member of first training regiment, I wish to protest against the attempt to defeat the Federal reserve plan embodied in section 56 of the Senate bill, and emphatically urge the passage of this section.

WILLIAM S. SEAMAN, Jr.

—

NEW YORK, *April 5, 1916.*

JAMES A. O'GORMAN, Esq.,
Capitol, Washington, D. C.:

I protest against attempt to kill training-camps movement. Pass section 56 of Senate bill and give us a chance to defend our lives and honor in case of war.

EDMOND PATTEN GLOVER.

—

NEW YORK, *April 5, 1916.*

Senator JAMES A. O'GORMAN,
United States Senate, Washington, D. C.:

As a thorough believer in Federal training-camps movement, I sincerely hope that the Federal reserve plan embodied in section 56 of Senate bill will become law, and I desire to enter a vigorous protest against alleged attempt to defeat this provision. Any modification of Chamberlain bill in direction of weak, deceptive, and wasteful Hay bill would be national misfortune. If Congress appreciated the widespread national determination for adequate military and naval preparedness and favoring complete federalization of all military forces and acceptance of the recommendations of General Staff, the Chamberlain bill would be passed by overwhelming majority.

ARCHIBALD G. THACHER,
59 Wall Street.

—

NEW YORK, *April 5, 1916.*

Hon. JAMES A. O'GORMAN,
Washington, D. C.:

I attended the Plattsburg business men's camp last summer and am a member of the New York National Guard. In my opinion, the plan embodied in section 56 of Senate bill 4840 offers every opportunity to create a reserve of far greater efficiency and reliability than a federalized militia National Guard. Opposition to this section is utterly unjustifiable, even on the assumption that a federalized militia will be as reliable and as efficient as a reserve created under section 56. To constitute a federalized National Guard the only reserve is to discriminate against men who are willing and anxious to serve in a reserve, but who for business or other reasons are unable or unwilling to join the National Guard. Furthermore, section 56 should be retained because it put the military training camps upon a permanent basis, and thereby offers an opportunity for military training to men who are unable or unwilling to join a reserve in time of peace, but who would be the first to volunteer in case of war.

HARRISON TWEED,
103 East Eighty-sixth Street, New York City.

—

NEW YORK, *April 5, 1916.*

JAMES A. O'GORMAN, *Washington:*

I wish to urge that section 56 of Senate bill 4840 should be retained, for the reason that a Federal reserve is the most effective and desirable means of national defense, and for the further reason that voluntary training camps such as were held at Plattsburg should be established upon a permanent basis.

B. H. INNESS BROWN.

—

NEW YORK, *April 5, 1916.*

Senator JAMES A. O'GORMAN,
Washington, D. C.:

I desire to protest most strongly against effort to defeat Federal reserve plan, section 56, military preparedness bill.

H. S. DUELL.

—

NEW YORK, *April 5, 1916.*

Hon. JAMES A. O'GORMAN, *Washington:*

Please use your influence to secure adoption section 56 of Senate military bill. This provision can not hurt National Guard and will create an adequate reserve at a minimum cost. Camps this year throughout United States will be paid for by citizens attending.

JOHN R. VAN HOME.

—

NEW YORK, *April 5, 1916.*

Hon. JAMES O'GORMAN,
United States Senate, Washington, D. C.:

Having had opportunity of observing at first hand as present member National Guard, State of New York, hopelessness of attempting to obtain really efficient and dependable soldiery through drills held in armories one night a week during winter, supplemented only by short encampments in the field in summer, and believing that attempt to federalize militia will result in large expenditures public money without adequate return, and will, in fact, result only in creating false feeling of security, I urge upon you vital necessity of retaining in Senate bill 4840 provisions of section 56, which leave way open for creation of reserve of Federal volunteers and retention of Federal training camps.

WINTHROP W. ALDRICH,
45 East Sixty-second Street, New York, N. Y.

—

NEW YORK, *April 5, 1916.*

Hon. JAMES A. O'GORMAN,
The Capitol, Washington, D. C.:

As citizens who have had little, if any, military training, who believe that the national safety demands that all citizens receive thorough military training who are planning to attend the Plattsburg camps this summer at considerable inconvenience and expense, we emphatically protest against any weakening of the Federal reserve provisions of the pending defense bill unless there is provided the only adequate substitute—universal military training under exclusive Federal control.

Clarence F. Bell, Elda L. Kimmey, P. W. O'Grady, Allen E. Shannon, Edgar F. Smith, Joseph S. Stull, jr., Arthur R. Holbrook, Thomas H. Wiggin, Frederick F. Griswold, Clinton L. Bogert, Jacob M. Gray, Charles R. Cockey, Edward W. Thode, C. Raymond Hulsart.

—

NEW YORK, N. Y., *April 5, 1916.*

Hon. JAMES O'GORMAN,
Senate Chamber, Washington, D. C.:

I beg you to fight for retention section 56, Senate Army bill.

HENRY H. CURRAN,
Republican Leader, Board of Aldermen.

—

NEW YORK, N. Y., *April 5, 1916.*

Hon. JAMES A. O'GORMAN,
Washington, D. C.:

I learn that the Senate contemplates elimination from Army bill provision for Federal reserve. This is the most important provision of the bill, being in some measure a recognition of the obligation of universal military service and the beginning of a real policy of preparedness. I emphatically urge the retention of this section.

ARTHUR WM. BARBER.

—

NEW YORK, N. Y., *April 5, 1916.*

Hon. JAMES A. O'GORMAN,
United States Senate, Washington, D. C.:

We understand efforts being made to defeat policy looking toward Federal training camps as outlined in section 56 in Senate bill now under consideration. We earnestly protest against the attempt to defeat the Federal reserve plan embodied in this section and strongly urge the passage of same.

HORACE BOWKER.
C. M. SHULTZ.

—

SCHENECTADY, N. Y., *April 5, 1916.*

Senator JAMES A. O'GORMAN,
The Capitol, Washington, D. C.:

Save section 56, Army bill, and authorize Federal reserve plan.

L. E. WIMAN.

—

NEW YORK, *April 5, 1916.*

Hon. JAMES A. O'GORMAN,
Washington:

In my opinion section 56 of Senate bill 4840 should be retained, because a Federal reserve is the best means of national defense and because voluntary camps such as were held at Plattsburg should be officially recognized and permanently established.

CARL TAYLOR,
24 Broad Street, New York City.

—

NEW YORK, N. Y., *April 5, 1916.*

Senator JAMES O'GORMAN,
Washington, D. C.:

I earnestly protest against attempt to defeat Federal reserve plan in section 56 of Senate bill and emphatically urge passage of this section.

PIRIE MACDONALD.

—

NEW YORK, *April 5, 1916.*

Senator O'GORMAN,
Washington, D. C.:

I earnestly urge you to give your fullest support to Federal reserve plan as embodied in section 56, Senate bill now under consideration, and to work for its passage.

Respectfully,

W. R. MAY,
121 East Thirty-eighth Street, New York.

—

NEW YORK, *April 5, 1916.*

Hon. JAMES A. O'GORMAN,
United States Senate, Washington, D. C.:

Trust you will use every effort to retain section 56, providing for Federal training camps. Regard this as essential to sound national system of defense.

JAMES D. WILLIAMS.

NEW YORK, N. Y., *April 5, 1916.*

Senator JAS. A. O'GORMAN,
U. S. Senate, Washington, D. C.:

We the undersigned citizens of the United States protest against the attempt to defeat the Federal reserve plan in section 56 of the Senate bill, and emphatically urge the passage of this section.

J. P. Hogan, J. S. Langthorn, F. H. Pond, M. J. Ungrich, C. W. Coffin, Wm. B. Hunter, Roger W. Armstrong, Jas. F. Sanbern, Chas. Goodman, Robt. J. Vanepps, James G. Grimes, Harry R. Bouton.

—

SCHENECTADY, N. Y., *April 5, 1916.*

Senator JAMES A. O'GORMAN,
Washington, D. C.:

Hope you will give your support to bills pending providing for continuance of Plattsburg and similar training camps; sentiment of this community strongly favors such legislation. Only five attended Plattsburg from here last year, as a result of their experiences more than 100 will go this year.

E. P. EDWARDS,
President, Schenectady Rifle Club.

—

ITHACA, N. Y., *April 5, 1916.*

Senator O'GORMAN,
Washington, D. C.:

Request your support of measures for providing a Federal volunteer force.

R. C. CANDEE.
G. R. PHIPPS.

—

BROOKLYN, N. Y., *April 5, 1916.*

Senator JAMES O'GORMAN,
The Senate, Washington, D. C.:

Respectfully and most earnestly ask your support for Federal reserve measure in section 56 of the Senate bill.

JNO. AUER.

—

NEW YORK, *April 5, 1916.*

Senator JAS. A. O'GORMAN,
The Capitol, Washington, D. C.:

Urge most emphatically the passage of section 56 of the Senate military bill providing for Federal reserve; protest earnestly against defeat of this section.

L. QUIGLEY,
108 West Sixty-ninth Street, New York City.

—

NEW YORK, *April 5, 1916.*

Senator JAMES O'GORMAN,
The Capitol, Washington, D. C.:

I understand that section 56, regarding training camps, of the Senate Army bill is in danger of being defeated, the removal of this section would devitalize the bill and the State will not sanction feeble attempts at preparedness.

H. L. MEIERHOF.

—

ROCHESTER, N. Y., *April 5, 1916.*

Senator JAS. A. O'GORMAN,
The Capitol, Washington, D. C.:

The Rochester national-defense contingent, more than 700 strong and growing, vigorously protests attempt to kill section 56 of the Senate bill, permitting Secretary of War to conduct the Federal training camps. We urge your best efforts in support of the passage of this section.

N. R. POTTER,
Member of the Executive Committee.

—

NEW YORK, *April 5, 1916.*

Hon. JAMES A. O'GORMAN,
Washington, D. C.:

As one who went to Plattsburg last summer and who expects to go again this year, and as a member of the Veteran Corps of Artillery, I urge you to do your utmost to secure the passage of Federal reserve plan embodied in section 56 of the Senate bill.

H. F. STONE.

—

NEW YORK, *April 5, 1916.*

Hon. JAMES A. O'GORMAN,
Washington, D. C.:

Plattsburg behind Chamberlain bill. Please oppose Hay bill.

J. H. MALLORRY.

—

NEW YORK, *April 5, 1916.*

Senator JAMES A. O'GORMAN,
Washington, D. C.:

Favor strongly bill authorizing the President or Secretary of War organizing Federal volunteers in peace times and conducting training camps under Federal control. Understand article 56 of Federal reserve plan bill now before Senate contemplates this. Emphatically urge passage of this section and protest strongly any attempt to defeat same.

H. S. LEVERICH.
ROBERT PETTIGREW.
M. M. MURPHY.
L. E. HUTTON.

—

STAPLETON, N. Y., *April 5.*

Senator JAMES A. O'GORMAN,
Senate Chamber, the Capitol, Washington, D. C.:

As a member of the business men's training camp, held at Plattsburg last summer I wish to emphatically urge the passage of section 56 of the Senate bill now under consideration, regarding the Federal reserve plan, which I consider a most important measure in the plan for national defense.

R. C. WIGAND.

Mr. O'GORMAN. Mr. President, something was said yesterday by certain of the Senators regarding an extremely offensive propaganda organized by certain citizens who are especially interested in the National Guard. I hold a letter in my hand addressed to me and signed by H. S. Sternberger, colonel, on the letterhead of the Headquarters Division, National Guard, New York Municipal Building, New York City. I shall ask to have this letter read.

It will be noted that it lacks the phraseology of the ordinary communication from a citizen to a Senator or to any other public official. It is more in the nature of a command to eliminate the volunteer army provision from the pending bill. It is based upon a positively selfish proposition, namely, that in the opinion of the writer the adoption of that provision will be prejudicial to the National Guard. He loses sight entirely of the larger and the more patriotic aspect of the question as to what is the best thing for the country in this grave crisis.

I ask that the letter may be read by the Secretary, including the heading.

The VICE PRESIDENT. Is there objection? The Chair hears none.

The Secretary read as follows:

HEADQUARTERS DIVISION, NATIONAL GUARD, NEW YORK,
New York City, April 4, 1916.

From: Chief of the Quartermaster Corps.
To: Senator JAMES A. O'GORMAN, Washington, D. C.
Subject: National Guard legislation.

1. I desire to inform you that the Hay bill as passed is satisfactory to the National Guard, and I urge particularly that sections 76 and 77 of the House bill as passed be incorporated in the Senate bill. I am opposed to section 58 of the old Chamberlain bill, which authorizes the President to organize volunteers in time of peace; this, to my mind, is detrimental to all the National Guard.

2. I wish to call to your attention the fact that I shall use my influence, not only with National Guardsmen but with all citizens whom I come in contact, toward pointing out to them that the so-called continental army scheme is impracticable and would have a bad result if passed. I urge upon you as Senator from New York State, having about 18,000 National Guardsmen in active service at present, and about three times that number who have served in the National Guard, to oppose any contemplated measure that is detrimental to the interests of the National Guard at large.

H. S. STERNBERGER, *Colonel.*

Mr. O'GORMAN. I have not the honor of any personal acquaintance with the writer of that letter, and I suspect he does not know me. If he did, he might know that the tone of his communication was not calculated to be persuasive with me. I am not accustomed to accept dictation from any source, and in a matter of this grave character I resent any attempt at coercion from any person.

Now, Mr. President, with regard to one objection the writer of that letter makes against the provision for the volunteer army, let me make this observation. The head of the National Guard in the State of New York is Maj. Gen. O'Ryan, a man of fine character and unusual military ability. He is probably the only officer connected with the National Guard in any State in this country who has been invited to take the course in the War College in this city, and he has completed it. In the opinion of Regular Army officers he is a born soldier. I am sure that the subordinate officer who wrote the offensive note to me was not voicing the sentiment of the patriotic citizens of the State of New York who are identified with the National Guard in that State, and that this volunteer army provision will not impair the efficiency of the National Guard is shown by a letter written by Gen. O'Ryan, which I shall read. Under date of January 17, 1916, Gen. O'Ryan stated:

The question is sometimes asked whether there is any conflict of interest or of effort between the organizations of the National Guard and the training camps for college and business men. This question may not only be answered emphatically in the negative, but it may be affirmatively stated with equal emphasis that the training regiments have been of benefit to the National Guard of this State at least. A very considerable number of men of the Plattsburg training regiment have joined organizations of the New York division, some as commissioned officers and some as enlisted men.

Wholly aside from the foregoing, there is another aspect of the training camps which should not be lost sight of. There are in some localities men who desire military training, but who are so circumstanced that they can not make available for the purpose the amount of time demanded by service in the National Guard. Some of the men in this class find it possible to devote 30 days for training during the summer months. The training camps furnish the needed opportunity for men in this class. These camps are, therefore, performing a service to the Nation in respect to such men which it is not possible for the National Guard to perform.

I have no hesitation in urging upon officers of the National Guard throughout the State their fullest cooperation in support of the excellent movement represented by the training camps. In New York State facilities have been provided in some of the armories for detachments of men of the training camps who desire to continue the work begun at Plattsburg.

Mr. President, the proposed volunteer army is a development of the training system referred to in this letter of Gen. O'Ryan, and I prefer to accept the opinion of this gentleman on this question rather than the criticisms here and elsewhere of men not so well qualified to speak on the subject.

Mr. OLIVER. Mr. President, I would regard it as being extremely unfortunate if, as a result of this debate, a prejudice

should be aroused throughout the country against the officers of the National Guard in the different States. For the men who have given their time and their services substantially without compensation to the National Guard in my own State I could not say anything but a good word. Many of those gentlemen have expressed to me their opinion that section 56 would not only be to the detriment of the National Guard, but, in their opinion, would work ill instead of good to the country. In expressing that opinion I believe that they are acting, as they always have acted in military affairs, from motives of extreme patriotism. After a careful study of the subject, however, I am constrained to disagree with them; but, notwithstanding that, Mr. President, I know that they are honest in what they say and that they believe every word that they tell me, I can not now refrain from expressing my dissent from some of the expressions that have been given out in the course of this debate reflecting upon their motives in working for the elimination of this particular section.

I do not think they are right. I think, on the whole, that section 56 errs in not being strong enough; and if any amendment should be offered tending to strengthen it, I would vote for it.

I have received many telegrams favoring this section, and some in opposition to it. I hope the section will be retained, and I hope, but hardly expect, that it will be amended so as to make it stronger than it is as reported by the committee.

Mr. TOWNSEND. Mr. President, if by occupying even a brief time I would materially delay action upon the pending bill and its amendments I would refrain from speaking, for I realize that, so far as influencing the vote of Senators is concerned, much of the discussion here is of no avail. My only excuse for saying anything at this time is to give an opportunity to the many people who have written me on the subject of preparedness, both for and against, to understand the reasons which will compel me to vote for reasonably adequate military protection to the United States. I am not a military expert and have felt it the part of patriotic duty to defer largely in matters of detail and efficiency to those practical military men whose high character, unquestioned ability, and expert study and experience have made them authorities on this subject. Unfortunately, these experts are not entirely agreed upon all matters affecting the question, and in such cases of disagreement I have tried consistently to weigh the arguments pro and con in order to reach the best conclusion possible.

It can not be reasonably denied by even the most optimistic pacifist that the most unusual and disturbing conditions obtain in the world and in the United States that have ever been known in our history. From the alluring dreams of commercialism, in which the specter of war never entered, the world awoke to the horrid reality of "grim-visaged war" astride the world. The change to our people was startling. The days passed and 10,000,000 men were equipped with appliances of war, the most appallingly destructive that the genius and invention of man could devise—engines the most deadly ever known to the world; poisonous gases which make fatal the very breath of life, flying machines dropping death from the clouds, submarine dragoons which fill the seas with terror. As these shocking facts became known the world gasped and civilization stood still. But gradually the news of millions slain and millions maimed for life became so common that local news and markets again held the attention, at least of the American people. Europe, drunk with human blood, became the reeling, ready market for war supplies made in the United States. During all this time, revolutions, one succeeding another without intermission, were devastating Mexico, in which were rightfully thousands of Americans and other foreigners, whose lives and properties were sacrificed under direction of bandit leaders. The relations of the United States with the European belligerents and with Mexico have been strained almost to the breaking point, and at no time has the situation been more critical than it is at present.

Great Britain has rewritten the international laws governing the rights of neutrals whenever her desire prompted, and American commerce of practically all kinds has been treated as contraband and American rights have been ignored. She has made the United States one of her most effective allies, and is offended at the even mild protests of our Government. Germany has violated the laws of warfare by sinking defenseless ships carrying American citizens, who, under the law of nations, had a legal, if not a moral, right to be upon them. She is offended at us because we have but weakly protested against Great Britain's policy of making us a party to the latter's wicked efforts to starve the women, children, and noncombatants of Germany. Russia has no existing treaty with the United States and still cherishes resentment at our attempt a few years ago to meddle with her domestic affairs. Japan's memory still rankles with our Nation's attitude in the immigration matter and listens with ill-concealed displeasure to insults from Americans. She has not forgotten the school and land episodes in California nor her frustrated attempts to acquire Magdalena Bay, and it is possible that she feels the United States lessened the fruits of her victory in the late war with Russia. European nations hold us responsible for losses sustained by their nationals in Mexico and Mexico hates the United States with an undying hatred.

The Congress has not been permitted to know the exact situation of our foreign relations. The President and his Secretary of State probably do know. Some of the President's special envoys may know what Congress does not. But I shall not at this time nor on this bill enter into any extended criticism of the administration in its conduct of our foreign affairs. The present duty is nonpartisan, and, while I hold radical views as to the cause for much of our unpleasant national predicament, I recognize that it is a condition and not a theory that confronts us.

That our foreign affairs are critical, no thoughtful man can doubt. The things which I have mentioned and others are known. The President has issued a call for help. He has said that imminent danger threatened and that our country was insufficiently prepared to meet even the Mexican situation. He has warned the people that sparks were flying all around and that our country was in danger of a destructive conflagration. He is the head of the Army and Navy, and as such he has called upon Congress to give him an adequate Army to meet the present and prospective emergencies. It will respond now, as it always has responded, to every emergency call of the Commander in Chief. Congress and the country desire that our Republic shall be preserved against any reasonable possibility of dishonor or destruction. It has a mission for humanity which will require centuries to complete and a Congress which, through mistaken notions of economy or fear of personal political death, would fail to provide in an adequate degree insurance against national loss or destruction, would betray its trust, and become an enemy of democracy.

I feel that it is a higher duty to protect the country against the possibilities of foreign invasion than is the duty of a banker to protect his deposits against burglars or his home against fire. The banker is reasonably certain his bank will never be entered by thieves, yet he makes assurance double sure by installing a safe as nearly burglar proof as possible. Not one house in a thousand burns up, and yet he insures his home against fire. With the air full of sparks, as stated by the President, and our Nation's premises very inflammable, shall we not take out insurance?

Personally I have not worked myself into the hysteria of a great war fright, and yet I believe that the possibilities of international trouble were never so great as at present. Our government's conduct of foreign affairs has contributed to this condition. Our wealth and resources invite it. The world never saw so large a number of war-trained and seasoned soldiers at one time as are now under arms. War is now to them a profession. Its terrors have steeled their nerves and deadened their sensibilities. The greatest nations of Europe are war mad.

Russia and Japan were supposed to have been bankrupted by the recent war between them, and yet to-day, before the old wounds are healed, we find them stronger and more militant than ever. England had hardly recovered from the Boer War before she entered the present conflict. Our Revolutionary War prepared the United States to enter the struggle of 1812. Does anyone doubt that at the close of the Civil War those four-year veterans would have enlisted in a war against a foreign foe even more eagerly than they went to the front in sixty-one, and that the North and South would have united?

But I believe that preparation is especially necessary now that the President and the naval and military experts have admitted and advertised to the world our unpreparedness to cope with even weak and disrupted Mexico. We must defend the priceless heritage of democracy against reasonably possible invasion. But for the sake of peace we should show the world that we are prepared to protect our own. Such preparation will be a good investment. If we are reasonably prepared for a defensive war, we will never have one. If we are not so prepared, we may have one. It is because I love peace and hate war that I want to render my country immune to the latter by preparation. Does anyone doubt that the United States would not have been subjected to many of the insults and wrongs from Mexico and the European belligerents if we had not said "We are too proud to fight"; "We have not a sufficient Army and Navy"; "We will debate questions which

throughout our history were by our Government thought undebatable"?

The peace-loving, insult-resenting, just, and trained athletic giant is never insulted, is never attacked.

Furthermore, Mr. President, I want the United States to be in a position to lead in the world effort to make impossible another such war as that now waging. If through preparation we are practically immune to war we will have more influence at the council table of the nations than we will have if it is thought that fear and self-interest prompts our action. Better to spend a billion dollars in a program of defense, even if when it is completed our guns and armor are scrapped and our war craft are left to rot and rust at their moorings, than to lead our untrained youth to slaughter in an invited war and at a cost of many billions of dollars.

And so, Mr. President, being satisfied that it is the duty of this Congress to reorganize our Army and Navy with a view to greatly increasing their efficiency, the question with me is how and when to do it. As to how it shall be done, I have already stated that I am inclined to be governed largely in my vote by men whose training and experience fit them to advise. The time to begin is now. Indeed, we are already late in beginning. The very first business of this Congress should have been this work. Just as soon as the President saw the sparks flying, just as soon as he discovered that he was wrong when he condemned those men who said our country was without adequate defense, he should have used his great demonstrated power over Congress and urged its undivided attention to preparation. He should have speeded up the Government navy yards and private contractors who were working on ships authorized two and three years ago. This work has not been hastened, and to-day we have sixty-odd war craft that have been authorized and under construction for from one to three years. If an emergency need for a larger and more efficient Army and Navy exists, every energy of the Government and its agents should be employed to its limit of greatest efficiency. The administration has been so deliberate about this matter that I have sometimes wondered if the President really did see the dangers he so graphically described on his trip through the Middle West; and yet I feel that he is right now in urging speedy and adequate preparation. Dangers do confront us, and time may be of the very essence of our safety.

As to this particular bill, I think the able chairman of the Committee on Military Affairs and his capable and experienced assistants on the committee have given it much study in preparation, and it seems about the least that can in good reason be done. I think that a greater increase in the Standing Army should be provided for the first two years. At the end of that period we may find that we do not need so large a further increase as we now anticipate, and the faster we fill up the reserve force with men who have had service with the colors the more efficient will be our defense. It does not seem to me that the addition of 16,000 men to our already concededly inadequate Army provided in this measure is a sufficient increase for the first year. It is probable, however, that the recruiting officers will have trouble in securing 16,000 enlistments in a year. Young men are not going to break madly away from jobs paying from $15 to $30 a week to join the Army at $24 per month. It also seems to me it would have been wise to have provided for a little larger pay and more attractive inducements.

I favor the committee provision for regular reserves. I have some doubts about its being of much immediate avail, for the reason that young men may not enlist, but it is worth trying. There are thousands of patriotic men in this country who are willing to enlist in such a cause as this and under these provisions, and I think it would be better to have men who are closely connected with the colors ready at hand than to rely entirely upon the National Guard.

I am especially pleased with the provisions relating to the National Guard. That is a force already in existence. It is composed of the best young men in the States. This bill will give them an inspiration and a status which will increase their usefulness. The constitutional objections which have been urged against federalizing the State militia do not have as much weight with me as perhaps they ought to have. I realize, of course, that it is possible to conceive of a State that would not follow the discipline and training prescribed and followed by the Regular Army organization, but it is highly improbable that it would do so. Under existing statutes Regular Army officers are now drilling the State militia. If this bill becomes a law, the National Guard will have greater responsibilities, and it will, in my judgment, patriotically meet them. I have no doubt about the patriotism of the American people should our country be actually threatened with invasion by a foreign nation, but they must be convinced of the real danger. You can not expect young men to give up their ambitions, their profitable and attractive avocations of peace, and enlist in a Regular Army when they are told on high authority that the talk of a foreign war is jingoism, that we are sufficiently prepared for any probable emergency, and that no reasonable possible danger threatens, even though a little later that same authority becomes panic-stricken and without specifications states that war is possible, that our country is unprepared, and danger is imminent. Personally I hold the opinion that we should have an effective standing army of 200,000 men with short term of service, but longer term of enlistment. We should have an efficient reserve of as many more men thoroughly trained and ready at all times to be called to the colors. My own notion is that if enlistments were made for four years with regular service in time of peace of not more than two years on full pay and then two years of service in the reserves with payment for period occupied in drill, both Regular Army and reserves could be recruited so as to remain at approximately full strength. This, with the provisions of the bill for the National Guard, would, in my judgment, prepare the country adequately for any reasonably possible emergency, and would not offend the popular objections to a large standing army and would not unduly increase the burden of taxes upon the people.

I am in hearty accord with the idea of military training in our schools and colleges. Such training should be compulsory upon every physically and mentally fit boy over 15 years of age, whether he be the son of a millionaire or of a laboring man. I favor this, not alone or largely for the possible needs of war, but for the good of the boys, and therefore for the welfare of the country. Military discipline and subjection to authority are necessary to the highest good of the citizens of a republic. Such discipline is conducive to straighter, stronger, healthier men, and subjection to properly constituted authority is one of the first lessons which the citizen should learn. Neither wealth nor station should exempt any fit man from service to his country if occasion requires it. With such training our present standing army would be abundantly sufficient. If we were so prepared, Mr. President, every nation—aye, all the nations combined—would hesitate long before engaging in a war of conquest against the United States. It would answer the charge of militarism, the complaint of political influence by the Army, and relieve the people of the great burden of cost. The people do not yet understand this plan, however, and popular sentiment seems to be against it, but in time it will be adopted. In the meanwhile it becomes my duty to vote for the best thing that is possible at this time, which is the pending amended bill.

I wish I knew how much the greed of gain has had to do with our present need of preparation. I wish I knew the real status of our foreign relations. But I do not, nor can I know. Our trouble with poverty-stricken, revolution-torn Mexico has disclosed our military weakness, and 20,000 volunteers have been asked to enlist for the purpose of entering, if need be, the sunstruck, famine-infested deserts and barrens of the alleged Republic to the south of us. The President as Commander in Chief of our Army and Navy is crying danger and appealing for help. I must under these circumstances, from what real knowledge I have of the situation, believe that he has not so completely reversed himself on the question of our Nation's defenses without sufficient cause, and I prefer to vote the people's money to prevent future possible trouble, even though a knowledge of the real facts might make it unnecessary, than by inaction to make possible a greater loss from disastrous invasion and the possible destruction of thousands of my countrymen.

Mr. CLAPP. Mr. President, there is some good in section 56; and the good that is in section 56 is the basis found in the plan or system of training camps, originating, I believe, at Plattsburg, N. Y., last year.

I do not think anyone fails to appreciate the value of these training camps, and if we could have had a plain provision in this bill—and I believe I can point out a way in which we could have one—for the development and encouragement of these camps, placing the participants in the encampments under an oath of enlistment for a term of years so that they would be subject at any time to call, it would have been a very meritorious measure.

I was much interested in the letter read by the Senator from New York [Mr. O'GORMAN] this morning, which I think illuminates the background from whence the telegrams come that have come here this morning. That letter, signed by Gen. John F. O'Ryan, relates not to a nebulous proposition, which some members of the committee themselves admit they do not yet understand, embodied in section 56, but it relates to the encouragement of training camps; and I believe the sentiment that is reflected here this morning in the telegrams comes from those who believe in the training camps and can not come from

a full understanding of the complexities of section 56, when the members of the committee, when asked as to the purpose to be effected by that section, are unable to state what that section means.

Mr. President, I do not believe there can be any conflict between the training camps, carried to the extent of enlistment for a term of years of the men who participate in those training camps, and the National Guard. It is a little singular that the other day we were treated here to the suggestion that the National Guard was seeking to influence legislation, when this morning we are treated to the spectacle of a deluge of telegrams designed to affect legislation in the counteraspect and along the counterlines.

If it were possible to take section 56 and convert it into a plain section, plainly stating what was meant, so that there could be no difference of opinion among the members of the committee themselves as to what it meant, it would be a wise step to take. Section 56 refers to and brings into it and makes a part of it another law. You go to that law, and you find that that law incorporates another law; and we have here the spectacle of a provision proposed to be enacted which will require the consultation of three separate, independent statutes to understand what the provision means.

Under this view of the case I am impelled, I think, to vote against the provision. If the provision prevails, we will have it for what it is worth. If it is defeated, I am satisfied that there will be a measure offered in its place that will plainly point out just what is intended, and effectuate, develop, and enlarge the training-camp plan.

Mr. O'GORMAN. Mr. President, may I ask the Senator a question?

The PRESIDING OFFICER (Mr. PITTMAN in the chair). Does the Senator from Minnesota yield to the Senator from New York?

Mr. CLAPP. With pleasure.

Mr. O'GORMAN. The Senator seems to be favorable to the idea that section 56 should be eliminated from the bill. I desire to ask the Senator what provision would be made for a reserve force if the National Guard provision should be held to offend the Constitution of the United States? In that contingency there will be, of course, no provision for a reserve.

Mr. CLAPP. Mr. President, the National Guard provision can not be held to offend the Constitution practically in this, that when there is a call to arms the National Guard, consisting, as it will, of units, will, in the main, as in the Spanish War, be ready to enlist; and once enlisted into the Federal force, it becomes subject to the Federal law.

Mr. O'GORMAN. The Senator admits, then, that, notwithstanding this proposed legislation, so far as it affects the National Guard, in the event of war it will be entirely optional with the members of the National Guard as to whether they will leave their own States?

Mr. CLAPP. The Senator from Minnesota does not admit that, by any means.

Mr. SMITH of Georgia. Mr. President, is there any doubt that the National Guard can be called into service by the President for the purpose of suppressing insurrection or repelling invasion in any part of the United States?

Mr. CLAPP. None whatever. More than that, the Supreme Court has held that repelling invasion may consist of counterinvasion, the President being the one to determine as to the expediency of that; but, as putting it beyond any pale of controversy, these men can be enlisted. The Senator from New York does not understand me. I would have the camps. I would have these men take an oath that for a given number of years, whatever term might be fixed upon, they should be subject to call to arms.

As illustrating the ambiguity, the uncertainty of section 56, if war should come with section 56 in operation, we would have an indefinite number, from our present standpoint, of men who had received the training of these camps, and who would be dispersed throughout the country. On the other hand, we would have our concrete National Guard units, companies, regiments, brigades, and, I think in two States, divisions. Now, the question is, Which would be first called upon?

The Senator from South Dakota [Mr. STERLING] offered an amendment plainly stating that under those circumstances the National Guard should be first called. That that is the theory of the chairman of the committee is evident from the fact that the chairman of the committee insists that with section 56 enacted as it now reads, and in connection with these other three laws that you would have to read to find out what section 56 means, the National Guard would be first called upon. Whatever doubt there may be as to the correctness of that interpretation, it is an admission that the National Guard should first be called upon, because there is no suggestion from the chairman that the law which he claims makes that provision should be repealed.

With that admission, why should there be any doubt about it? Why not accept an amendment that will put it beyond any question? And yet, when another member of the committee was asked that question yesterday morning, he was unable to answer the question. I think he might well make that admission, for I do not believe that the provision found in the Dick bill, enacted at a time when this provision of section 56 was unthought of, would cover the men enlisted under section 56.

I have always contended, since I have been in the Senate, that a law should be plain. It is sometimes excusable that we err in judgment; it is sometimes excusable that we are unable to state plainly matters difficult of statement; but there is no excuse for not stating plainly a matter which is susceptible of plain statement, and I do not believe legislation should be enacted in this form.

I can justify voting against this section, because I am satisfied that if section 56 is stricken out there will be substituted for it a plain, practical provision for carrying on and developing training camps, and providing that those who participate in those training camps shall be sworn into the service.

Mr. WARREN. Mr. President, will the Senator permit an interruption?

Mr. CLAPP. With pleasure.

Mr. WARREN. I have listened with interest to what the Senator says. He seems to doubt whether this section meets the views of those who have been in, or wish to go into, camps for training. If the Senator will permit me, here is a telegram from the executive committee of the Association of Training Camps that I should like to have read; but of course the Senator——

Mr. CLAPP. I have no objection to its being read. I should then want to ask the Senator a question.

Mr. SMITH of Georgia. I suppose every Senator has received it, perhaps.

Mr. CLAPP. Yes.

Mr. WARREN. If so, they can say so; but it refers directly to the question that the Senator now has under discussion.

The PRESIDING OFFICER. Without objection, the Secretary will read as requested.

Mr. WARREN. I will say that it is not a late telegram. The date will be given by the Secretary. It is not one of those that came to-day.

The Secretary read as follows:

NEW YORK, N. Y., *April 4, 1916.*

Hon. FRANCIS E. WARREN,
United States Senate, Washington, D. C.:

On behalf of Military Training Camps Association of the United States, consisting of 4,200 men from all sections who have attended Federal training camps and representing also not less than 30,000 citizens who will attend this year's camps at a cost of $2,000,000 to themselves, we earnestly protest against attempt to defeat section 56, Senate military bill. This section, without impairing National Guard, will make available for service of Nation tens of thousands who, under no circumstances can be made available under a National Guard system.

MILITARY TRAINING CAMPS ASSOCIATION
EXECUTIVE COMMITTEE.

Mr. CLAPP. Now, I should like to ask the Senator from Wyoming whether he regards that telegram as decisive of an inquiry which was made here the other day and remains unanswered, and that is as to whether there will be headquarters established with all the paraphernalia necessary for the prompt mobilization of troops corresponding to the units which might be made up of the men who participate in these training encampments.

Mr. WARREN. I will answer the Senator. The fifty-sixth is a short section and does not go into detail, but it refers specifically to the law now on the statute books passed within the last two years providing for volunteer forces. Under that act, of course, the units are the same, or relatively the same, as in the Regular Army. The Senator will keep it in mind in reading section 56 that it leaves it with the President as to calling them out. It leaves it also with the President as to how those units shall be formed, as to some particulars, just exactly as the Hay bill has done and more or less the Chamberlain bill, so that there may be additional transportation trains and other matters that are only useful when the troops are expected to go immediately into active service. In the meantime, it would only be carried as far as to train the men in these camps up to the point where, when trains for transportation, and so forth, were made up, they would have passed over all the elementary parts and be ready to take hold of the larger matters, and would be that much ahead of the volunteers who were not enlisted until war was actually upon us and our men utterly without military knowledge.

Mr. CLAPP. In other words, the Senator has not thrown any light on the question which I asked him, if he thought the sender of that telegram had in mind——

Mr. WARREN. The sender of that telegram——

Mr. REED. Mr. President——

The PRESIDING OFFICER. Does the Senator from Minnesota yield, and to whom?

Mr. CLAPP. I am yielding now to the Senator from Wyoming, as he is replying to my question.

Mr. WARREN. The telegram follows the——

Mr. CLAPP. I suggest that the Senator confine his interruption to an inquiry.

Mr. WARREN. I wish to say that the executive committee were here in person and discussed that matter with the committee, and they stated that section 56 would meet the views of that association, and that under it they would enlist.

Mr. REED. I wish to ask the Senator from Wyoming a question about the telegram.

Mr. CLAPP. I shall have to decline, under the rules of the Senate.

Mr. REED. I am not going to make a speech. I want to ask a question. I should like to ask the Senator from Minnesota to ask the Senator from Wyoming if he does not have some reason to believe that the telegram which he read is one of a lot of canned telegrams emanating from a common source and in substantially the same phraseology?

Mr. CLAPP. Mr. President, I would dislike to ask that question, because I have taken the stand that we ought not to deal with any of these telegrams from that attitude. I believe in the right, and more than that, I believe it is the duty of our citizens to freely communicate their views to the Members of this body.

Mr. REED. So do I, Mr. President, and if the Senator will pardon me——

Mr. CLAPP. I can not yield except for a question.

Mr. DU PONT. I wish to answer the Senator as to where the headquarters of the corps are to be established. I understand that it will be in the War Department.

Mr. CLAPP. Now, I have an answer. The headquarters of this force will be in the War Department. It has been insisted on this floor that there would be units organized and each one would have its officers and they would have somewhere a central place that they might call headquarters. On the other hand, I have gone through the various laws that this proposed law refers to, and I can find no authority for that suggestion, and the question remains practically unanswered yet as to what will be the locus of these various organizations which may be trained into units, composed of the men who attend these camps.

Mr. LODGE. Mr. President——

The PRESIDING OFFICER. Does the Senator from Minnesota yield to the Senator from Massachusetts?

Mr. CLAPP. For an inquiry.

Mr. LODGE. All those details are embodied in the act of the Sixty-third Congress which provides for a volunteer force. This revives it. The whole thing is there, and we do not want to repeat it.

Mr. CLAPP. Then, if that is true, this requires a little illumination.

Mr. LODGE. I do not know who can illuminate it better than the Senator from Minnesota.

Mr. CLAPP. That act provides for details of men who are called to arms and kept under arms in units all the time until their term of service expires. I submit there is not a Senator on this floor who would admit or suggest that this bill contemplates the calling of these men to a locality as men called to arms and keeping them at that locality in the interim between these terms of camp-training experience and activity.

Again, the other question remains unanswered, and now, as throwing light on the telegram offered by the Senator from Wyoming, the training-camp organization committee that has this matter in charge contemplates that there can be 100,000 men secured at an expense of something like $3,000,000. They never dreamed of the expense contemplated by this provision. The estimates of the Senate committee contemplate twenty-four millions the first year. The training-camp committee, on the other hand, had in mind the training-camp proposition, which is a valuable thing, giving to the citizens of this country the opportunity of military training and supplementing that with an enlistment that requires them to respond to a call to arms if made within the time of the enlistment.

Mr. President, it does seem to me that on an important matter like this, instead of being told, as we were told yesterday, to first vote the provision in and then ascertain what it means, we ought first ascertain what is proposed by the section, and if we can agree as to the purpose thus disclosed then adopt the section, and if we can not agree then reject it. Feeling certain as I do that the Senate, in case section 56 is rejected, will make a prompt and complete provision for training camps contemplated by the letter read by the Senator from New York [Mr. O'GORMAN] and contemplated by the telegrams that we have received here this morning, I believe it is my duty to insist, as far as I can through the activities of my vote, in requiring that section 56 be made plain and explicit. I believe under the existing condition in the Senate the only way that can be accomplished is to strike out section 56 and then put in a substitute over which there can be no discussion as to what it means.

Mr. MARTINE of New Jersey. Mr. President, I regret that the Senator from Oregon [Mr. CHAMBERLAIN], the chairman of the committee, is not here at this moment. I feel that he was most unfortunate in a portion of his remarks yesterday where he said—I read from the RECORD:

> Mr. President, if the National Guard intends to come here as a political force, as it has done—there is not any question about that.

I insist that that is a most ungenerous and unfair statement. I do not believe the National Guard have come down here as a political force or have made an effort to dominate the Senate through any political means. I do know that some members of the National Guard have been here, but I believe the National Guardsmen are prompted by a spirit and a purpose as lofty and as patriotic as that of any Senator in this body. I know many of those men and I feel that the accusation is unjust and ungenerous. Those men came here because they believed the enactment of this particular bill, and particularly with section 56 in it, would tend to disintegrate and destroy their National Guard.

I will say, as I said the other day, the National Guard is an arm of great service in this country. They are not tin soldiers nor toy soldiers. It will not do to charge that on them. They are a patriotic body of men, as brave and as patriotic as any band of men who ever carried a gun. I recall very well in my own State, and I can look back far enough and recall in the State of New York and in the State of Pennsylvania when the National Guard gave infinite service to our country, infinite service to the State, and now it illy becomes Senators to talk about National Guardsmen coming down here and pressing themselves as a body, a political force, to carry out a particular measure.

I am impressed with the fact that this bill will disintegrate and destroy the National Guard. I am as much for the welfare of the country and so are these men as can be the authors of this measure. Those men have no mean or ulterior purpose to serve. They are as patriotic as we. We all realize the necessity, and you can not find a Senator in this body who is not in favor of a bill that shall better prepare our country in the hour of need. I am with the Senator from New York [Mr. O'GORMAN]. I do not believe there is a reasonable probability of our country being attacked notwithstanding the suggestions that have been advanced by the chairman of the committee. I believe we are reasonably safe, but to make assurance doubly sure I am in favor of an Army bill which shall put us beyond question in the right line as to defenses.

I urge my friends to cease this nonsense, and to my mind this injustice and unfairness, of the intimation that because one may disagree on this bill he is conspiring at the overthrow of the country for the disintegration of our armed forces. I want all to recognize that men have the right to disagree, and that those who oppose are just as patriotic, just as honest as those who advocate the measure.

Mr. SUTHERLAND. Mr. President——

Mr. MARTINE of New Jersey. I shall vote against this section. Should the section fail to be stricken out, I am frank to say that I shall vote for the bill then in its entirety, though I think it would be infinitely better if the section were out.

The PRESIDING OFFICER. Does the Senator from New Jersey yield to the Senator from Utah?

Mr. MARTINE of New Jersey. I yield for a question.

Mr. SUTHERLAND. The Senator from New Jersey has flowed on past the point where I desired to make an inquiry. He said a moment ago that section 56, if enacted into law, as I understood him, would destroy the National Guard.

Mr. MARTINE of New Jersey. I said it was the belief of the National Guard. I claim no expert knowledge in military lines.

Mr. SUTHERLAND. Is it the Senator's belief that it will destroy the National Guard?

Mr. MARTINE of New Jersey. It is my fear that it would tend to disintegrate and to destroy the National Guard.

Mr. SUTHERLAND. May I ask the Senator a question? I am just as anxious to preserve the National Guard as is the

Senator from New Jersey, and I would do nothing consciously that would destroy it. Will the Senator from New Jersey tell us in what way the organization of this volunteer force would destroy the National Guard?

Mr. MARTINE of New Jersey. Well, prefacing it with what I said, that I am not an expert military man and claim to have little knowledge of matters military, it is the belief of the gentlemen who have talked with me that it would tend to disintegrate and destroy the National Guard. I think that opinion has been quite generally acquiesced in and pretty generally understood.

I have received telegrams on one side insisting that it would destroy them, and I have received some others saying that even though it did the section had better be left in. I have received them on both sides of the question.

Mr. BRANDEGEE. Mr. President, I have heard some statements to the effect that the law adviser of the Army, the Judge Advocate General, had given a written opinion, and possibly several written opinions, in relation to the proposition in both the Hay and Chamberlain bills to federalize the National Guard, to state it briefly. I received this morning a letter from a very distinguished lawyer and an ex-member of the Cabinet stating that the Judge Advocate General wrote an opinion some months ago which covered the ground in relation to that subject, and that he has recently prepared another opinion regarding the provision at present under discussion. I should like to ask the chairman of the committee if he is in possession of those opinions or if he has seen them?

Mr. CHAMBERLAIN. I will say to the Senator that during President Taft's administration the Adjutant General rendered an opinion holding, in substance, that the National Guard could not be so federalized as to warrant the Government in undertaking to call their services into requisition to go out of the United States. That opinion was later submitted to Attorney General Wickersham, and he concurred in that opinion. I think the Senator will find that both the opinion of Judge Advocate Gen. Crowder and Mr. Wickersham were printed either in the House hearings or in one of the documents that has been referred to during this discussion.

Mr. BRANDEGEE. Is there not a later opinion than that, about the plan proposed in the Senator's own bill?

Mr. CHAMBERLAIN. I do not recall one now.

Mr. BRANDEGEE. I think it would be exceedingly interesting for us to know what the legal adviser of the Army may say about it, and as the Senator seems to be uncertain as to whether he has the opinion or not I will ask unanimous consent that the resolution I send to the desk may be agreed to, in case we have not the opinion.

Mr. CHAMBERLAIN. I think I can find it.

Mr. BRANDEGEE. I would like to have all the opinions that have been given.

The PRESIDING OFFICER. Without objection, the resolution will be read.

The Secretary read the resolution (S. Res. 158), as follows:

Resolved, That the Secretary of War is hereby directed to furnish to the Senate any written opinions which the Judge Advocate General of the Army may have given concerning the project contained in the so-called Hay and Chamberlain bills, to federalize the National Guard.

The PRESIDING OFFICER. Is there objection to the present consideration of the resolution?

Mr. LEE of Maryland. I object to the resolution.

The PRESIDING OFFICER. There is objection, and it will go over one day.

Mr. REED obtained the floor.

Mr. LEE of Maryland. I will state my objection if necessary. Will the Chair let me explain the objection?

The PRESIDING OFFICER. Does the Senator from Missouri yield?

Mr. LEE of Maryland. The opinions are already in the RECORD of both committees.

Mr. CLAPP. Mr. President, just a moment, if the Senator from Missouri will allow me. While I was on my feet I referred to the fact that the Training Camps' Association estimated the cost for 100,000 men at $5,000,000. I had intended, as showing how closely the committee and the association understood one another, to insert at that point that the estimate of the committee for the first year would be something like $24,000,000. I shall take the liberty of inserting that at the appropriate place in my remarks.

Mr. BORAH. Mr. President, may I ask the Senator from Minnesota a question before he sits down?

The PRESIDING OFFICER. Does the Senator from Minnesota yield to the Senator from Idaho?

Mr. CLAPP. I do.

Mr. BORAH. The Senator has stated that it is estimated that the training camp, as I understand, would cost $2,000,000 a year for 100,000 men?

Mr. CLAPP. That was their estimate.

Mr. CHAMBERLAIN. May I interrupt the Senator there?

Mr. CLAPP. Certainly.

Mr. CHAMBERLAIN. Is not the Senator from Minnesota mistaken about that estimate having been made? If that was stated, it was because it cost them of their own money about $2,000,000 to attend the training camp. That was the way I understood it.

Mr. CLAPP. Surely; they say that 100,000 men were there—I think there were not 100,000 men there, but a hundred thousand men might be there—my recollection is that the estimate was $3,000,000 for a hundred thousand men.

Mr. BORAH. The estimate of this committee under section 56 is about $24,000,000.

Mr. CLAPP. The estimate of the committee for the first year is $24,000,000; for the second year, $31,000,000; for the third year, $39,000,000; for the fourth year, $47,000,000; and annually thereafter, $27,000,000.

Mr. BORAH. How was this difference of cost made up? What constitutes the difference? What is it that costs $32,000,000 instead of $2,000,000?

Mr. CLAPP. If the Senator from Idaho will examine section 56, he will find that that section refers again to another act, the act of April 25, 1914, which, in turn, refers to still another act, and between the three acts there is the general experience which we have in legislation—too much sail for the amount of ballast—in other words, a great top-heavy organization.

Mr. CHAMBERLAIN. I desire, in answer to the Senator from Idaho [Mr. BORAH], to speak of what enters into that cost of $24,000,000. That is not the actual cost of the men. We are accumulating all the time clothing, ordnance, and other matériel. The estimate for these things was printed in the RECORD yesterday, showing for the Quartermaster and Ordnance Departments just exactly what went into that estimate of $24,000,000 per annum. The Government is laying aside and storing ordnance and other things that are necessary for the organization.

Mr. CLAPP. Yes; and for that reason I have not stated it; but it was called out by some inquiry referring to the larger figures embracing those items. I simply referred to the figures estimated for the first year. There is not any great amount of accumulation carried on the first year, but that does account for the increased cost year after year, undoubtedly, but the first year it is $24,000,000.

Mr. CHAMBERLAIN. Mr. President, let me make myself understood about that. The first year included in that estimate of $24,000,000 they have $3,651,000 for ordnance stores and supplies; $1,318,000, manufacture of arms; $744,000, automatic machine rifles; armament of fortifications B, $9,226,000; small-arms target practice, $120,000; making $15,059,000 of the estimate that the Senator refers to. Practically all of that goes into the reserve.

Mr. SUTHERLAND. I desire to ask the chairman of the committee a question. I am somewhat confused about this matter of cost, in view of the various statements that have been made. What, in the opinion of the chairman of the committee, will it cost the Government of the United States to organize and train, under section 56, a volunteer force of, say, 100,000 men per annum?

Mr. CHAMBERLAIN. I do not know that I could give the cost for a hundred thousand men; but if the Senator will take the estimates of cost that have been referred to, it is proposed by this voluntary system to eventually raise about 261,000 men.

Mr. SUTHERLAND. What will it cost?

Mr. CHAMBERLAIN. And those men are raised in increments of one-fourth for four years, so that the final annual cost, as contained in these estimates, is the cost of the full force at the end of the fourth year.

Mr. SUTHERLAND. And what is that?

Mr. CHAMBERLAIN. It is $27,609,067.

Mr. SUTHERLAND. Per annum?

Mr. CHAMBERLAIN. Yes; assuming that the enlistments would number 261,000 and were trained for 30 days.

Mr. SUTHERLAND. At any rate that sum would take care of a volunteer reserve force of 261,000 men?

Mr. CHAMBERLAIN. Yes, sir; decreasing from the fourth year, because during the first, second, and third years much of this money is expended—and that is the reason the cost is large—in the accumulation of equipment.

Mr. SUTHERLAND. Let me now ask the Senator what would be the amount of contribution upon the part of the

Government toward the training and equipping of a corresponding number of the National Guard?

Mr. CHAMBERLAIN. Under table 11, of cost—and I will say that that has been criticized by the Senator from Maryland [Mr. LEE]—under the estimates we have here it is $40,873,200 annually after the fourth year.

Mr. SUTHERLAND. For the same number of men?

Mr. CHAMBERLAIN. For practically the same number.

Mr. SUTHERLAND. Then, it would cost the Federal Government, in addition to what may be spent by the States, if I understand the matter, in the neighborhood of $12,000,000 more per annum for the same number of troops of the National Guard than it would for this contemplated volunteer reserve force. Is that correct?

Mr. CHAMBERLAIN. The difference in the annual cost amounts to a little over $13,000,000 after the fourth year.

Mr. CUMMINS. I desire to ask a question of the Senator from Oregon. What is done for the National Guard that makes it cost the Government more to maintain 260,000 of the National Guard than to maintain 260,000 of the volunteers?

Mr. CHAMBERLAIN. Their training covers a longer period; of course that is one element of cost; but it is perfectly fair to say here, Mr. President, that, in making the estimate of the cost of the National Guard, we have estimated in that, as a part of the expense, the accumulation of the same material and supplies. The difference in pay alone is about thirteen or fourteen million dollars.

Mr. CUMMINS. I understood the Senator from Oregon to say yesterday, possibly, that the training of the volunteers was substantially the same in point of time as would be the training given the National Guard.

Mr. CHAMBERLAIN. But it is condensed into a 30-day period, whilst the members of the National Guard are trained in the armories each week and spend 24 days in camp.

Mr. CUMMINS. But the volunteers must be trained 30 days every year?

Mr. CHAMBERLAIN. Yes.

Mr. CUMMINS. To me it is utterly inconceivable—and I know there must be a very serious mistake somewhere; not made, of course, by the Senator from Oregon—that it should be asserted that you can maintain 260,000 volunteers, with their officers, at a cost of $24,000,000, while it costs $45,000,000 or $40,000,000 to aid the National Guard to maintain the same number of troops. I repeat there must be a mistake somewhere in that estimate.

Mr. CHAMBERLAIN. Mr. President, I can not, of course, undertake to correct the figures that have been furnished us from the different branches of the War Department. I only take the figures which they gave us; that is all the committee could do. The Senator will find them very carefully compiled throughout.

Mr. SMITH of Georgia. Mr. President, if the Senator will allow me, if he will turn to the figures giving the cost of the National Guard and the cost of the volunteers, he will find that the expense of the Quartermaster Corps of the National Guard is placed at $17,000,000, $20,000,000, $21,000,000, $23,000,000, and $24,000,000. There does not seem to be any charge on a similar scale in connection with the volunteer service, unless new equipment and the 30 days' training is considered under it. I find that items for new equipment and training are also embraced in the estimates for the National Guard. That quartermaster's charge, which seems to be very large, amounting to half of the total estimate as to the National Guard, does not seem to be found to an equal extent in the estimate given as to the cost of the volunteers.

Mr. CHAMBERLAIN. I can furnish the Senator the estimates from the quartermaster's department showing the exact figures. The difference principally lies in the estimate for the pay of the two forces.

Mr. VARDAMAN. Mr. President, I should like to ask the chairman of the committee a question. The expense of maintaining the volunteer force is paid in the same way, for the same amount of service, as in the case of the Regulars, is it not? In other words, when a man joins the volunteer force his traveling expenses are paid going to and returning from the camp to his home. Is not that correct?

Mr. CHAMBERLAIN. Yes; it covers both.

Mr. VARDAMAN. And he is equipped, clothed, shod, given a hat, and all that, as the Regulars are, is he not?

Mr. CHAMBERLAIN. Yes.

Mr. REED. Mr. President, I shall take only a moment. I want very briefly to discuss this avalanche of telegrams. They were presented this morning in such bulk as to appear not only to be formidable but ominous. They were presented by the chairman of the committee in one bundle and by the Senator from New York [Mr. O'GORMAN] in another. I presume they were handed to us as evidence of a spontaneous uprising on behalf of the people in favor of section 56. At the same time we have heard criticized on the floor of the Senate the National Guard because members of that organization have seen fit to write letters and send telegrams urging legislation which would preserve the National Guard from destruction.

Before I discuss these telegrams I want to say a word lest I should be misunderstood. I hold that all citizens of the United States not only have the right, but it may in some instances become their duty, to send their views to their Representatives or Senators in Congress. When one receives the views of a great number of men scattered throughout his State or the country, each really expressive of the opinion of the sender, the fact at once appeals to every man who is a fit representative of the people; but in these latter days it has become the custom for some central organization to get up a propaganda and to send out to the members of an organization or association a request to deluge Congress with letters or telegrams. Generally the sender is told what he is to say, and ordinarily I think the suggestion is accompanied with the caution, "Please do not copy this exact language." So we generally find an attempt is made to vary the language.

Mr. President, I have gone through this great bundle of telegrams which were filed here by the chairman of the committee and I undertake to say that I can impanel a jury, and let him pick the 12 men, and I can prove that 90 per cent of these telegrams emanated from one common source. I can prove it by the language of the telegrams themselves. So that, instead of representing a general opinion that is entertained throughout the country, the telegrams in fact represent the opinion of some propagandist who has a special interest in section 56, either patriotic or otherwise.

Let me give you a few illustrations. Here is a telegram from Baltimore:

As a member of the first training regiment, United States military camp—

Now, note the language which follows—

I protest against attempt to defeat Federal reserve plan embodied in section 56, Senate bill, and urge immediate passage of this section.

Here is one from Boston:

As a member of Plattsburg training regiment, I protest against attempt to defeat Federal reserve plan in section 56 of Senate bill and emphatically urge passage of this section.

Of course, Boston being an intellectual center, this may have been a case of thought transmission. But here is another telegram from Boston in exactly the same language as the one I just read, and here is another one from Baltimore in exactly the same language as the first telegram I read, and here is another one from Boston in exactly the same language, and still another from Boston in the same language, and still another. Then here is a telegram from Boston that changes the language by inserting the word "vigorously," so that this gentleman "vigorously protests." And here is one from Brooklyn. Now, nobody would expect Brooklyn to be so keenly attuned to mysterious intellectual processes that it would catch this vibration that is going through the air, but the gentleman from Brooklyn caught it nearly right. He substituted the word "emphatically" for "vigorously," but otherwise he caught the Boston-Baltimore language. So I can go through the lot. This is one class and one kind of language. Then there is another class, which is typified by this telegram from Pittsfield, Mass.:

Please work to put through the Federal reserve plan embodied in section 56 of the Senate bill.

And there are seven telegrams from that same town in exactly the same phraseology.

Mr. President, here are about 30 telegrams which display a somewhat bungling attempt to vary the language. They come from Philadelphia, from Cambridge, Mass., from New York City, from Auburn, N. Y., and four or five other places. They are what we might call the "strongly urge" telegrams. One of them reads:

Strongly urge passage of section 56 in Senate bill relating to Army. Do not permit its defeat.

That comes from Philadelphia; but here comes one from Cambridge:

I strongly urge passage.

Just the pronoun "I" put in, which is quite a natural thing to expect in a message from Cambridge.

But here is a gentleman from New York who uses all of the language, except he puts in the word "I *emphatically* urge."

And so, running through some 30 telegrams, they are as plainly from one source as though they had been written in one handwriting or upon one typewriter and one kind of paper.

Here are about 50 telegrams. They come from Boston, and they come from Princeton, and they come from Brooklyn, but principally from Boston. There are, however, some from other towns. While they vary slightly in their language, all of them have substantially this sentence:

Strongly protest against defeat of section 56 of the Senate bill, embodying Federal reserve plan.

That sentence, substantially, appears in every one of them.

And so I might go through with all the telegrams comprising the great pile filed this morning. I should by so doing weary the Senate; I content myself by remarking that it is perfectly manifest, from an examination of these telegrams, that over 90 per cent of them, if not 99 per cent of them, emanated from one common source.

I simply say what I have so that nobody will think there is any great uprising indicated by these numerous messages. The charge has been made that the National Guard, because a few letters have been written in, is engaged in a lobby. Here is the positive, absolute, physical evidence in the Senate that the organization which went into camp at Plattsburg is engaged in a most vigorous and concerted attempt to influence legislation. I do not complain of it, but I do not want to hear the cry of "wolf" any more from gentlemen who represent that particular idea.

Mr. VARDAMAN. Mr. President, I think the telegrams and letters that are sent to Members of Congress are either from motives of patriotism or pelf. I have no objection whatever to a member of the National Guard of my State or any other States giving me his honest opinion as to the value of the National Guard to the general plan of our Army. I do not object to anybody giving me an idea or a fact, but I do not care to hear from any one who has a pecuniary interest in the matter of legislation. I have received a telegram such as the Senator from Missouri [Mr. REED] has just read.

Now, if this great Army is to be organized I have no objection to a volunteer force at all. I have no objection to these camps in the summer time for the purpose of training men in the use of arms, and teaching them the lessons of war. I think, however, the toilers of the country can ill-afford to bear the burden of taxation incident thereto at this time. Personally, I had hoped that all of this great plan, the organization of the Army and the building of a Navy, might be postponed until after the war in Europe is over, so as to permit the American people to survey the situation and organize an Army and build a Navy to meet all the exigencies and the necessities of the future. And I think that probably would have been done but for the energetic efforts on the part of those who are largely interested in the profits derived from the manufacture of munitions of war. Manifestly this Congress is not going to take the course which I would dictate or prescribe had I the power, but on the contrary, I am afraid it is going to undertake to lay the foundation of a great system—to build a house, as it were, when the flames are leaping heavenward and the storm is raging furiously about us.

That such a structure, whose foundation is laid under such circumstances, will meet the demands of the future, if we shall do our duty as a Christian Nation and the civilized peoples of the earth shall show themselves capable of self-government, I have my serious doubts.

My especial objection to section 56 is rather local in its nature. I am opposed to the whole scheme at this time, but the peculiar bearing it has upon the affairs of Mississippi means the local question of paramount importance. I pointed out certain provisions in the section a day or two ago which vitally affect the people of the State from which I come. My purpose in calling attention to the objectionable provisions of section 56 was purely patriotic. My only desire in the matter was to serve the people of Mississippi and America. But, notwithstanding my motive, I notice in the RECORD that my warnings and suggestions have been made the subject of ridicule by a distinguished Member of this body.

I want to say, Mr. President, that there is no argument in epithets, no reason in ridicule; and satire in the discussion of a serious question is the refuge of the intellectual bandit.

In the consideration of this great question the calmest, most serious consideration should be given to every provision of this bill. When I said that under the terms of section 56 there might be organized in the State of Mississippi a camp to which the negroes of that State would be invited, I did not say that that would be done. God forbid that there should ever come to the White House a man so utterly regardless of the interests of the people of America as to do such a thing. But this is an age of change. Marvelous changes have taken place in recent years. Things are happening to-day that we did not dream two years ago could possibly happen. I do not know what is going to happen in the coming years. But I do know that the race question is in the South, and that it is of overshadowing, paramount importance there.

When it is suggested that such a thing is impossible, that the laboring negroes of Mississippi could not leave their farms to go to one of these camps, I want to say in reply that in the little city of Jackson, where I live, if such a camp were organized, either in Mississippi, Alabama, Tennessee, or anywhere else in the South, more than a regiment would, in my judgment, go from that one little city of Jackson alone, robust, vigorous negro men, who do nothing, who toil not, neither do they spin, but rather live by the hand-outs from their women employed in the homes of the white families—and if such a proposition were made to them they would flock to it like carrion crows around a carcass. There could be a camp organized in the State of Mississippi, by advertising it for 60 days, of 25,000; and the Senators from the other sections of this Republic do not know what that means to the people of Mississippi. Oh, I am not saying this in order to generate race prejudice or to advertise our own unfortunate conditions; not at all. I would to God that conditions were different, that the peril might be removed from our midst.

It was stated upon the floor of the Senate yesterday:

Suppose a lot of darkies went into Hinds County, to a so-called Plattsburg drill, as a voluntary force of some sort, and, with arms in their hands, began to be disciplined, so that in the opinion of the white people of the State they became a source of menace to white civilization, what would happen to those volunteer darkies? Echo answers, "What?"

Of course, I know what would happen, and what I know would happen, is the very thing that I do not want to happen. No man knows the difficulties in handling the affairs of a Southern State when the two races conflict, who has not served in the capacity in which I served for four years as governor. You Senators from States where you have not that problem at all read in your newspapers nearly every morning accounts of some unfortunate crime that has been committed in South Carolina, Georgia, Mississippi, Alabama, Texas; and what is the result? Mobbing. What is the effect of mobbing upon those who mob? I care not what the provocation may be; I do not care what crime may lead to the mobbing; the white man who participates in it, though he does it to protect his home, to preserve the peace and purity of his wife and daughters—that man who violates the law when he takes it in his own hands suffers a moral deterioration from which he will never recover; and if that thing is persisted in very long, it will destroy the very civilization which we of the South are trying to conserve. There is no doubt about that.

Now, if, for political reasons or any other reasons, with an utter disregard of the real interests not only of the southern people but all the American people—because whatever injures the South, hurts the entire Republic—any President should order a mobilization of negro troops in Mississippi or any other Southern State, keep them there for 30 days, clothe and equip them, and then send them back with all the airs they have acquired in 30 days of drill, only one who understands the nature of the Negro and his peculiarities generally would know what would follow.

But the distinguished Senator intimated that the negroes have no money to attend the camp. Under the terms of this bill, the United States Government furnishes the money to pay for transportation and general equipment. Every negro would take it as a very delightful summer outing, and if an effort should be made to bring them to the service of the United States as a part of the Army, I apprehend it would not be the least trouble to organize as large an army as the Government would be willing to pay for.

Mr. President, I would much rather take my chances without any preparation whatever to meet a foreign foe, relying upon the individual white citizen and the patriotic spirit of the men of America to defend the flag and repel any foreign invasion, than to submit to the enactment of a law of this character, which exposes the people of the South to a peril as far-reaching as the adoption of section 56. I shall therefore vote to strike that section from the bill.

Mr. GALLINGER. Mr. President, I have taken no part in this discussion, beyond asking a question occasionally, having been much more anxious to vote than to talk, feeling, as I do, that there is great urgency for the speedy passage of this bill; and I am only going to take a few minutes to-day to present my views on one or two phases of the controversy that has been raging in the Senate Chamber for a week.

I am in favor of retaining section 56 in the bill as it stands, and shall so vote. I have not heard from a single member of the National Guard of my State—and we have a very efficient National Guard in New Hampshire—either for or against the

section that is under discussion, so that I am not at all influenced by anything that comes from the National Guard in reference to this matter, an organization that I am very friendly to.

I want to say, Mr. President—and I say it in all kindness, because I am not in favor of legislation that will do harm to any section of the country—that I deprecate very much the raising of the race issue in the consideration of this bill. The junior Senator from Mississippi [Mr. VARDAMAN] a few days ago raised that issue in very plain terms, declaring that, so far as the colored man was concerned, if he had his way he would not allow him to be a soldier of the United States but would keep him in a menial position, and the Senator from Mississippi has just repeated substantially the same thing. Of course, the Senator is entitled to that view, and every other Senator is entitled to a different view if he himself holds it. Speaking for myself, I want to express in a very few words my dissent from the position that the junior Senator from Mississippi has taken. And in this connection, so that the RECORD may be right, I want to say that the Senator whom the junior Senator from Mississippi criticized a few moments ago is not a member of the Republican Party and does not sit on this side of the Chamber.

Mr. President, I believe I speak for the entire Republican membership of this body when I say that we have no disposition to raise the race issue. We recognize it as a very serious problem with which another section of the country has to deal, and we are content to have it worked out as best it can be; notwithstanding we dissent from some of the methods that have been used in some of the Southern States. I say, Mr. President, I deprecate the raising of the race issue in this debate, and I have called attention to the circumstances under which it has been raised.

If I have read history aright, Mr. President, the colored man made a good soldier in the Civil War. He fought for the Union, for the Constitution, and for the flag, and he fought valiantly. If I read history aright, the colored man was a good soldier in the Spanish-American War, and he never has been given the credit that belongs to him for the work he did during that struggle. I also notice, Mr. President, that only a few days ago it was colored troopers who attacked and defeated a portion of the army of the bandit Villa; and they fought then as they have frequently fought before, bravely and valiantly. Whenever put to the test the colored soldier has acquitted himself honorably.

The truth is, Mr. President, that the time may come when the loyal colored men may be needed to protect our country from invasion and defend the liberties of our people, and I should hesitate to put myself on record as saying that those men should in an emergency of that kind be denied the privilege of fighting for their country.

The political rights of the colored man have been seriously abridged and he tamely submits to what he feels is a great injustice; but notwithstanding that, he is willing to fight for his country, and to me it is inconceivable that any man should attempt to deny him that right if he wishes to exercise it.

Mr. President, I beg of Senators not to allow their minds to be beclouded in any way by the race issue, which, in my judgment, has no proper place in this discussion. The provisions of section 56 should be considered and decided from a purely military point of view, and from no other point. Believing, as I do, that section 56 is one of the most important provisions of the bill, I shall vote against striking it out, and I trust that the motion of the Senator from Maryland may not be agreed to.

I desire simply to add a single word. It seems to me this section has been sufficiently discussed. It seems to me that we ought to be content with the time that has been spent in its discussion, and that we ought to come to a speedy vote. I appeal to Senators, whatever their views may be as to this section or as to any other provision of this important bill, that they may bring their minds to the conclusion which I have reached, and that we may not spend much more time in the discussion of a matter that is perfectly well understood by every Senator on both sides of the Chamber.

The VICE PRESIDENT. The question is on the substitute offered by the Senator from North Dakota [Mr. MCCUMBER] to section 56 as reported by the committee.

Mr. LEE of Maryland. Mr. President, the Senator from New Hampshire [Mr. GALLINGER] has just stated that this question should be approached from the standpoint of military reasons. The Senator from New York [Mr. O'GORMAN] has said that we should consider this question from the standpoint of the interests of the country as a whole. With both these general statements I agree.

Mr. President, preparedness must be practical, preparedness must be sane; it should be efficient, and should be economical. This particular section, section 56, in my judgment should be eliminated from the bill by the Senate and more than the equivalent provided for in other ways. I do not believe preparedness is going to gain any time by leaving section 56 in the bill. It has already been voted on in the House. It was proposed by Mr. GARDNER, of Massachusetts, as an amendment to the House bill, and received so little support that he did not even ask for a division. The Senate, however—this vote may turn out by one or two majority when it is actually taken—is quite equally divided on the question. The House of Representatives, therefore, being against it overwhelmingly and the Senate of the United States being divided, under ordinary conditions is there any prospect that section 56 can be agreed to in conference?

Mr. GALLINGER. Mr. President, I rise to a question of order. I think the Senator has not a right under our rules to attempt to influence the judgment of the Senate by alluding to what has happened in the House of Representatives.

The VICE PRESIDENT. The Chair is of opinion that the Senate must settle this question from its own view and not from the view of the House of Representatives, and that it is not a legitimate argument to attempt to influence the Senate by the action of the House of Representatives.

Mr. LEE of Maryland. I have said on that subject all I wished to say, at any rate, and I spoke of it simply as a practical man dealing with a practical question. I look at it from the standpoint of the military considerations which the Senator from New Hampshire just now referred to. I want preparedness, effective preparedness, and at the earliest possible time, and I do not wish to see any unnecessary delays thrown in the path of the preparation of a genuine citizen soldiery for the defense of the country.

Mr. President, is there no presumption in favor of the Constitution of the United States? If a man stands on this floor and argues in favor of the citizen soldiery mentioned in the Constitution, of the citizen soldiery approved of by Gen. Washington time and again, is he not entitled to the benefit of being in accord with the fundamental law and the greatest military leader of our country? Gen. Washington described the citizen soldiery as "the palladium of our security, the first effectual resort in case of hostility." Speaking of the militia, those were his words. No man had more trouble with unorganized and undisciplined militia than he had.

We all here are or have been members of the militia when between the age of 18 and the age of 45, as are all citizens; and yet relatively few of the citizens of this country know they are in the militia as a matter of law. Such as these unorganized, undisciplined militia are what Gen. Washington alluded to whenever he did speak in terms of condemnation of militia. Such a force is of necessity unreliable from a military standpoint, and should not be intrusted with the defense of our country and our institutions.

But an organized army, a disciplined militia, provided for under section 8, Article I, of the Constitution, is an altogether different story. I can not help thinking as we read over and talk over that section that it is one of the most remarkable expressions of wisdom in that great instrument, showing the practical ability, the theoretical knowledge of the men who made our Constitution, balancing the locality against the central government; and the balance of the Constitution is one of its greatest characteristics. It lies in the fundamental division of a government, legislative, judicial, and executive, all of those great features being features of balance for the preservation of liberty without in the least degree affecting the efficiency of the Government operating under the system. I want to discuss in a few moments the provisions of section 8, Article I, of the Constitution, but pass on now to a preliminary fact that for 100 years or more of the history of this country there has been a persistent and successful organized effort to defeat the full and effective exercise of the powers of Congress over the citizen soldiery prescribed in the Constitution. Congress has largely failed to exercise its right to organize, arm, and discipline the militia during all this period. The opponents of the action recommended by President after President, from Washington almost to the present day, used the present constitutional doubts and the present military insinuations against citizen soldiers.

Practically there was a lack of money, and also, as it is alleged, the ambitions of the Regular Army personnel interferred very largely with the possibility of developing a disciplined and permanently officered citizen soldiery.

That is one of the things that I want to bring to the attention of the Senate. Take this volunteer system. It necessarily is a confused condition whenever inaugurated to protect the country in an emergency. Volunteers hastily gather. Where would the officers come from? Certainly all the leading officers would come from the established personnel of the Regular Army. When appropriations were small and when opportunities of advancing the legitimate ambitions of military men were rare, there was perhaps more excuse in such an opposition, but now when the Congress is on the verge of increasing the Regular Army to 200,000 or to 250,000, when a large part of the captains will be majors and when many of the majors will be colonels by this very increase, the time has passed when anything like military jealousy on the part of the Regular personnel should be considered for a moment or respected for a moment in dealing with this great question of militia preparedness.

Congress has been largely under the influence for a long time of some kind of prejudice with reference to the militia of this country. I have been surprised sitting here in the last few days to hear the criticism coming from the old Members of this body of the alleged inefficiency and lack of discipline of the National Guard of the country.

Mr. President, if the finest young officers leaving West Point, furnished by the Government with their education, furnished with the pay that would support them, furnished with their clothing and their outfit, were told to go out and raise an army and discipline an army and at the same time Congress told those highly educated young officers, who would not have to take the time to make a living, that it would not pay any wages to that army, what sort of an army could those young men raise and maintain?

And yet, Mr. President, though Congress has for the last 10 years or more been paying something to the militia in the way of clothing and equipment, it has provided no wages to the National Guard soldiers except the wages of 50 cents a day, I believe, for some maneuvers. All this time what has been going on? A patriotic body of men, the officers and men of the National Guard of this country, have been giving of their time and of their substance to create and maintain and keep together a body of fairly disciplined soldiers that now amounts in numbers to 134,000 men, without pay for the rank and file, all losing their time, and the officers having to make up to the National Government for the clothing or other equipment individual soldiers might lose. The captain of an ordinary infantry company in the National Guard is responsible for between $4,000 and $5,000 worth of property to the United States, and necessarily some of that property is lost in various ways, but he, though commanding men who receive practically no pay from the country they protect, is compelled to make good out of his own pocket all the losses that occur.

The small amount that is provided for by this bill will revolutionize that situation. The $52.50 a year that the bill carries for the national guardsman will be a recognition, at least, and by preventing a total loss of the time devoted to the country will stimulate men to attend the periods of drill and will give a money sum against which the losses may be set-off. This pay, small as it is, will go a long way toward increasing the efficiency and discipline of the National Guard in this country.

Yet Senator after Senator who has sat in this body through years and years and who has never raised his hand to give the present proposed pay of $52.50 a year to the National Guardsman has risen in his place in the Senate and commented on what he alleged to be their lack of discipline.

Mr. President, it would seem to me that a man who had been in this body for any length of time and concurred in failure to exercise the powers of Congress to discipline the militia would be ashamed to rise in his place and point to the unpreparedness of this country in respect to the very matter that he himself has so long neglected.

Yet, Mr. President, almost every gentleman here who has criticized what he alleges to be the lack of discipline in the National Guard attempts at the same time to excuse himself on general constitutional grounds.

But how about the Constitution in respect to paying the guard? Is there any constitutional difficulty or objection to paying the National Guard? Is there any constitutional objection to this $52.50 a year? There is no such objection, and every man in this body knows that such a provision will operate as it is claimed it will operate. Here is an obvious improvement for possible discipline, free from constitutional doubt, and yet the critics of the National Guard have held it back throughout these years.

The Senator from New York suggested doubt as to what might happen if the courts found that any of these improving provisions were unconstitutional. It will be time enough when that decision is arrived at. But why has not the National Guard been paid before? How can any man who has been here and has had the opportunity of years and who has not made a record in the struggle for the payment of the National Guard even for the small wage of $52.50 a year, rise in his seat here and point the finger of criticism at what he alleges to be a lack of discipline? Congress has failed to organize and to arm and to discipline, and the words of the Constitution say that Congress shall provide for those things.

Mr. President, I do not know where we would look if we were looking for the men who failed to do this thing. I do not want to be invidious, but the Senator from Oregon [Mr. CHAMBERLAIN] yesterday, when we were discussing a question of military policy as for or against section 56, criticized us all who are opposed to section 56, as though we were opposed to the preparation of this country for a legitimate and proper defense against an invading foe.

He suggested that we were practically against preparedness. I resent that suggestion, because I believe that we who stand for the use of the National Guard, for organizing, arming, and disciplining the militia of this country, as recommended by Gen. Washington, as provided in the Constitution, are the fundamental and sane friends of preparedness.

There is a great advantage, certainly at the beginning, a great money advantage, in favor of the guardsman over the volunteer. The first year's financial advantage, referring to table 12 in the report of the committee, can be found by correcting table 12, first year's estimate, by deducting $19,000,000 from that first year's cost, a sum which has been already spent and represents accumulated material now in the hands of the National Guard of this country, and then dividing the remaining sum by 153,000 guardsmen, the number for whom the estimates are now annually made, the minimum enlisted number as provided by law. This gives us $176 per man as the annual cost of the United States of the individual guardsman, whereas the first year's cost as given by the committee for the 56,829 men and officers of the volunteers, in its first-year column, is $439 per man. The difference in favor of the guardsman, then, for the first year's cost is the difference between $439 and $176, that difference being in favor of the National Guardsman.

In addition to all that, the National Guardsman has a provision of between one and two hundred million dollars—I think I am safe in saying it is nearer two than one—of armories, military homes, where their clothing, equipment, and arms can be kept; where they can drill in bad weather, in addition to the outside drills which are provided for under this proposed law. The guardsman also has the advantage of the annual appropriations of the State; my State, for instance, appropriating $90,000 annually for the upkeep of the Guard in addition to having provided considerable investments in armories throughout the State. In this connection it is proper to add that out of the total of some 2,200 only 40 men were absent at the last inspection of the National Guard in Maryland.

But this volunteer army, so called, this so-called continental army, is a homeless body even if it can be brought to exist. Places for it to gather and keep its equipment, to issue forth from for the various purposes of military activity, are not yet provided or even estimated for by the committee.

It is remarkable, Mr. President, with these financial advantages in favor of the National Guardsman, that the committee should have gone out of its way to bring into this law a competing and, as I think, an unnecessary force. When I use the word "competing," I do not mean a force that by proper competition will improve the other, but I mean a force that gives an opportunity for all of the ancient enemies of the citizen soldiery of this country to discriminate in favor of the highly centralized force as against the citizen soldiery so carefully provided by the Constitution.

Mr. President, the committee can not be even moderately friendly to the National Guard, because if they wanted more men they could simply have increased the numbers and added that 50,000 to the National Guard, and added it as I have just shown with great economy to the Treasury of the United States, and greater promptness and certainty for the common defense.

In this connection I want to read you a little colloquy that took place in the Committee on Military Affairs between several Senators. I will just read the colloquy without the names. A Senator——

Mr. CHAMBERLAIN. Read the names. It is a public record.

Mr. LEE of Maryland (reading):

A SENATOR. It has always seemed to me, although I have never been able to figure it out, that limitations can be placed upon these

appropriations by the Federal Government that would compel the National Guard to yield to Federal control.

ANOTHER SENATOR. That could be done as a condition to the appropriation and the method of its use.

The FIRST SENATOR. That is what I am getting at.

The SECOND SENATOR. But would such a statute be in harmony with the provisions of the Constitution upon that subject?

The FIRST SENATOR. Suppose in making an appropriation for the National Guard, for instance, it is optional with Congress to make that or not. Suppose you make an appropriation conditioned upon the National Guard of all the States obeying the regulations adopted by the Secretary of War.

The SECOND SENATOR. The regulation would not be effective unless the States agreed to it.

A THIRD SENATOR. Would not that do away with the National Guard?

The SECOND SENATOR. It would have that effect, ultimately, and I am inclined to think that if it should have that effect it would be a good thing.

A good thing, Mr. President, to do away ultimately with the citizen soldiery of the Constitution of the United States! But the fact is that the National Guard will increase and improve, however recognized, by reason of the innate ability and patriotism of its members.

The Assistant Secretary of War, testifying before the Military Committee of the Senate, said, among other things, that 90 per cent of the men in the National Guard were there with reference to national defense, and, according to his estimate, a large per cent of the Guard might go into the Garrison volunteer system which was then being pushed.

Mr. President, I would not fear such disintegration very much did I not feel that there has been throughout the history of the long struggle for preparedness in this country a persistent prejudice in military circles against completely organizing the militia of this country; but I can not help thinking that Congress may lay the foundation for a possible failure to discipline the Organized Militia when it gives the two bodies places side by side and puts the management and possibly the destiny of the two in the hands of a personnel that may lean to the centralized force and may be adverse not only to the citizen soldiery specified in the Constitution but to all citizen soldiery.

Mr. President, I was a little surprised here this morning. The Senator from Oregon [Mr. CHAMBERLAIN] yesterday was full of indignation, and his voice showed unusual feeling for a man of such remarkable self-command, when he denounced the national guardsmen of this country for undertaking to communicate with their representatives in the Senate on this occasion. I think the Senator from Oregon went so far as to say that, if the communicating on the part of the National Guard with this body did not stop, he was for cutting it up root and branch, financially, I presume. To-day the Senator has been reading telegrams from a few National Guardsmen who favor his view, and I want to congratulate him on the increased liberality which he has to-day shown to that estimable military force. I hope that he will always maintain that attitude and will modify his attitude of yesterday, for I believe—and I think he will so believe when he thinks it over—that all of the citizens of this country can communicate properly to us here their opinions upon public questions pending in the Senate.

The long telegram which the Senator from Wyoming [Mr. WARREN] sent to the desk and had read is an appropriate telegram for us to consider. It shows that the Military Training Camps Association is operating in this matter and that mistaken opinions may have been disseminated about section 56 and the effect of striking it out, all of which could very easily have been started by misinformation sent by somebody to this camp association, which is in close touch, as it says in its telegram, with 30,000 citizens, and presumably has gotten as many of those citizens to telegraph the Senate as were willing to undergo the expense.

Those 30,000 citizens, according to this telegram, are going to pay $2,000,000 for a military educational course this summer. I want to say that I have great respect for their patriotism; I am glad that they are going to do it; but the very fact that they are able to contribute $66 each out of their private means for this purpose, as well as the length of time that is involved, shows very clearly that they belong to a class of the wealthier citizens of the country. But why not have these summer camps and military drill as members of the National Guard? This can easily be done without section 56 and a much greater military movement secured.

Mr. President, that is the very thing in this whole section 56 to which I am opposed. I do not believe we should create a separate military citizen-soldiery system. I think that these young men who are showing so much segregated patriotism ought to be encouraged to follow the flag alongside of their brethren in a really large movement. I think it would be better for them in the long run; it would be better for the country and better for their associates if they join the National Guard as guardsmen and follow the flag of their country as the soldiers of Switzerland do, let us say, each man on an equal footing with his neighbor. Let them live together in patriotism. They may have to die together.

This segregation into a special military force is undemocratic and undesirable, especially, Mr. President, in view of the fact that all this military training can be equally well and better done through the instrumentalities of National Guard maneuvers and encampments. There is not a particle of this training that can not be given in that way if these gentlemen want to get it, and they need not spend $66 apiece to segregate themselves from their fellow citizens. They can get it all, and they ought to get it all, at the hands of our Military Committee and be freely and sufficiently furnished with proper instruction under United States inspector instructors. It ought to be one great movement; it ought not to be a volunteer system and a militia system, conflicting one with the other; but it ought to be one great organized militia system, all mobilized at the same time and all mobilized under similar conditions.

Mobilization, Mr. President, implies uniformity. This division of military preparedness into small subdivisions is bad military policy, creating special types here and special bodies there with different relationships to national defense. Gen. Washington struggled for uniformity, and the words that I have quoted from him are connected with a plea for uniformity.

It is essential, therefore—

Said Gen. Washington on June 8, 1783, in addressing the governors of the Colonies—

that the same system should pervade the whole; that the formation and discipline of the militia of the continent should be absolutely uniform.

Here was the great Father of his Country pleading for uniformity, pleading for equality, pleading for similar efficiency, pleading against a segregation of the military and patriotic youth of the country into smaller subdivisions and under specially formed methods of discipline. He continues:

And that the same species of arms, accouterments, and military apparatus should be introduced in every part of the United States.

Why, Mr. President, we have got that. Thank Heaven, Congress has gone that far. It has clothed the soldier with a uniform in the National Guard; it has given him a musket, and given necessary other equipment to the National Guard—artillery, and so forth—similar apparatus to that used by the Regular Army.

As calling attention to the state of mind of some of the older Senators in this body, I would particularly refer to some of the remarks of the Senator from Massachusetts [Mr. LODGE]; and I regret that he is not now in the Chamber. Speaking of the present regulations, I presume, on April 4—page 5415 of the RECORD—he said that, in order for the National Guard to get the Federal pay under existing law, it was required that "there should be 24 drills of 1½ hours each and 5 days in camp." Was that any basis of criticism of the National Guard? Who is responsible for that small number of hours of drill? Who is any more responsible for there being only five days in camp than is the Senator from Massachusetts?

The Senator from Massachusetts may have made an effort to improve this condition—I hope he did; it would be to his credit if he had done so—but why should he ignore what this bill proposes to do much more? Why should he make a comparison under the old law with reference to the militia, for which he himself may be largely responsible, and not with what it is proposed to do under this bill or a better? If the provisions of the House bill are followed, 48 drills of an hour and a half each are provided for, which is 72 hours; 15 days in camp, at 10 hours a day, make 150 hours, or 222 hours as the minimum annual drill time for the National Guard, under the provisions of the House bill. The House gives only 15 days in maneuver camps; but the bill which the Senate committee reports would give a very much longer time for drilling in summer to the National Guard, as it provides 24 days in camp for the National Guard.

I do not believe that 24 days is practicable; I do not believe that at the rates of pay offered by this bill it will be possible for the citizen soldiery of this country, the men who have homes and families, to leave those homes and to abandon temporarily the support of their families, as in many cases they would have to do, on a soldier's pay of 50 cents a day. I believe that the provision of the House bill in that respect is more practicable than is the Senate bill, and that, if anything, the pay for the citizen soldier who is responsible in his community and responsible for the support of his family should be made somewhere nearly equal to his average earnings when at home.

Mr. President, the Senator from Wyoming presented that telegram from the Military Training Camps Association, and it was

entitled to consideration; but I want to say right here that the officers of the National Guard and the men of the National Guard, year after year, decade after decade, have been contributing their time and their money, without compensation and in amounts compared to which this small amount of money to be expended by these gentlemen going to the camps is utterly trivial. I do not think, therefore, that it lies in the mouth of any Member of this body to criticize any member of the National Guard of this country for coming here, for being interested in preparation, for presenting his views in connection with advancing the preparation for defense, about which he has not been a mere talker, but in favor of which he has acted so honestly and so earnestly and with so much expense to himself.

Mr. President, I really believe that our Regular Army needs a little shaking up somewhere; I believe it needs a little extension of military public opinion, of the military knowledge of this country, such as would be created from increasing the numbers and improving the discipline of the National Guard, for instance. Our Regular Army is extremely slow to act in some respects. I think the Military Committee of the Senate, which has been charged with the burden of preparedness through many years, and which is as much responsible for our present condition as any other body of men in the country, ought to have the advantage of more alacrity, broader recommendations, and more genuine suggestion of preparedness from the higher officers of the Army.

In this connection it is proper to give two instances which I think throw a little light on this situation—personal experiences of my own. In May, 1914, I introduced a resolution. I had been thinking over the military situation and the situation in Mexico. It occurred to me that if we went into Mexico—a possibility which did come about very recently—that water and transportation would be the things the troops would especially need. I introduced a resolution on that subject, and it was sent to the Committee on Military Affairs:

Resolved, That the Committee on Military Affairs be, and it is hereby, requested to prepare and bring in a bill for defining the duty and conferring the power and means upon some part of the Supply Corps of the United States Army to enlist the necessary men of proper mechanical skill and to acquire the necessary pipe, tools, pumping engines, well-boring machinery, auto trucks, and other transportation for promptly securing and distributing water supplies for drinking and washing purposes to United States troops in time of war or when war may be considered possible; and that the object of said bill should be to authorize all necessary details of officers from the Engineer Corps and Medical Corps and to use all available mechanical means in the hands of a disciplined and efficient service to create and keep a good water supply as near to the front as conditions render possible, and for which purpose the present contract system for Army water supply is obviously inadequate; and that the said general purpose of said bill may be connected, if feasible, with increased facilities for the distribution of ammunition and food and water to advanced forces.

What became of that resolution? I presume it slumbers to-day on the files of the Military Committee; but, it has been stated in the papers—and with apparent truth—that when this movement into Mexico took place the other day the Army was without water tanks to send along with the men, and that the Standard Oil Co., out of its abundant means, had permitted our little Army to have six automobile water tanks which the Standard Oil Co. was just then providing for its purposes. This special subject had been called to the attention of the Military Committee, and possibly by them to the supply corps of the United States Army, in May, 1914, and yet the United States Army, moving a few thousand men into Mexico, has to accept automobile water tanks from the Standard Oil Co.!

Mr. President, there is another little incident to which I desire to refer. I happened to be in the Military Committee one day when an officer was testifying. I never saw him before, but he would make an impression upon any observer as being a man of force and an officer of unusual attainments. After the members of the committee were through questioning him the chairman, with great courtesy, permitted me to ask him a couple of questions, and I asked him about the contest that is now going on along the whole European front between guns of fixed position and guns of concealed position. The great military struggle in Europe to-day is being determined in large part by this contest between the concealed great guns of position, for the fixed positions are abandoned. Col. Glenn, in answer to that question, filed a brochure dealing with the question of guns of concealed position, which is a part of the testimony taken by the Military Committee of the Senate. In that brochure he showed the very great utility of great movable and hidden guns; for the struggle now is between the eyesight of the flying forces and the skill of the men who handle the big guns. The big guns are concealed in every sort of position. They are placed under houses, placed behind hills, placed in little pieces of timber, placed wherever they can be concealed from the spying eye of the flying forces of the adversary. On either hand there is a tunnel leading from the gun to a dugout, and the artillerists handling a gun, whenever the enemy find where that gun is and commence to shell it, disappear like prairie dogs in these two side tunnels, and after the bombardment is over they come out and take what is left of their gun at night and put it in a new place.

That is the process going on in this war with reference to great guns. Col. Glenn testified that the great guns of fixed position in the fortress of Verdun had been removed by the French and hidden behind the fortress in concealed positions. I state this to prepare you for the letter I am about to read; and I hope the chairman of the Military Committee will not leave the Chamber, because I think this is a significant little circumstance that surely ought not to miss his attention. Here we are, 16 months after Liege and Namur, where great concrete and steel fortresses were destroyed by shell fire of the guns of concealed position, and here is a letter written by Gen. H. L. Scott, Chief of Staff, United States Army, in which he describes the position of our Army in that respect to-day:

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF STAFF,
Washington, D. C., February 1, 1916.

MY DEAR MR. DICK: I am very sorry not to have seen you when you were here. To-day is the first time I have been out since then. "I took up the subject of the mobile guns of large caliber a year ago and have been agitating it ever since, with the result that we have got the Secretary of War and the Assistant Secretary on our side, and we have estimates in for six, to begin with. After we once get the carriage design approved we can get more. I believe they are very necessary on both coasts and intend to do all I can to get mobile guns of large caliber with carriage on trucks and railway carriages."

Regretting I have not had the opportunity of seeing you, I am,

Ever sincerely, yours,

H. L. SCOTT.

MR. EVANS R. DICK,
30 Broad Street, New York, N. Y.

Mr. Dick had been discussing with me the question of movable guns of position, and this letter was so descriptive of the general condition of our defenselessness that he sent it to me in connection with our previous conversation.

Mr. President, I have a great deal of respect for Gen. Scott; he is a brave old soldier, and I am glad that he is making this fight for these six guns; but what a pitiful picture this letter presents! We have no coast defenses, Mr. President. We have some harbor defenses—and great movable guns are needed for the defense of our country generally. There ought to be 600 such guns; and yet we have not a carriage designed and in condition to be approved, and after we get a carriage approved the General thinks he can get some more. Why, Mr. President, with this nakedness of ours from a military standpoint clearly apparent, what is this strange hypnotic control that some influences are exercising over the preparedness of this country? They are the very same influences, I believe, that when we come here striving for uniformity in the citizen soldiery of the United States oppose provision for the National Guardsmen, who can be furnished so much more cheaply than the volunteers and in so much greater numbers for the protection of the country. The whole thing has elements of mystery. The average Regular soldier costs $1,150 a year; the average citizen soldier in the National Guard, as I have shown, costs $170 a year. With all the pay and equipment that this bill proposes to give them, with all the increased power of discipline it proposes to give over them, five or six national guardsmen can be provided for the same cost of one soldier in the Regular Army, and in the first year two guardsmen can be furnished for the cost of one volunteer.

Mr. President, it has been testified by all the military experts that the defense of this country is no small thing; that anything less than a possible force of one or two million men is comparative defenselessness. Where are you going to get one or two million men for genuine defense? The only possible way is by the more economical method of disciplining the citizen soldier, the man who supports himself at home, the man who is not segregated from the productive activities of the Nation.

I desire now to discuss for a little while the constitutional objections which have been submitted here, especially by the able Senator from Idaho [Mr. BORAH]. It is obvious that that Senator has strong feelings against the National Guard. I do not believe, however, that his feelings would affect his conclusions as a lawyer. They certainly do affect his figures when he speaks about the National Guard. I was struck the other day while he was talking that every time he mentioned the expenditure for the National Guard under this proposed legislation he added $10,000,000 or $15,000,000 to the round numbers, with a certain soaring of arithmetical enthusiasm that showed a feeling of condemnation on the inside.

Mr. BORAH. Mr. President——

The VICE PRESIDENT. Does the Senator from Maryland yield to the Senator from Idaho?

Mr. LEE of Maryland. With great pleasure.

Mr. BORAH. May I ask the Senator if it is not true, notwithstanding I soared occasionally on the question of figures, that I always kept below the estimates which are given by the House committee for the expense of the National Guard under its plan, and below the estimates given by the Senate committee for the expense of the National Guard under its plan?

Mr. LEE of Maryland. Mr. President, I was so far away from the distinguished Senator that I could only see that he was soaring. I really do not recall the exact figures he used. I could see that he had not made any deduction whatever for the corrections that I had worked out and applied to the estimates of the committee. I could see that he had not taken in that mere little bagatelle of an error which the committee brought in here of $19,000,000 for the first year's cost of the National Guard.

Mr. WARREN. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Maryland yield to the Senator from Wyoming?

Mr. LEE of Maryland. With great pleasure.

Mr. WARREN. Does the Senator believe the committee made an error of $19,000,000?

Mr. LEE of Maryland. That is my impression. I am not yielding the floor, Mr. President.

Mr. WARREN. I desire to answer that, but I do not care to occupy the floor against the Senator's wishes.

Mr. LEE of Maryland. I am perfectly willing to have the Senator deal with it while I am on my feet; but the Vice President has taken the position that I would lose the floor——

The PRESIDENT pro tempore. The Chair understood the Senator from Wyoming to ask if it were not true that a certain report showed certain figures different from what the Senator had been asserting.

Mr. WARREN. The Senator puts a different construction upon the figures, and I was going to correct it, if he would allow me to do so.

The PRESIDENT pro tempore. The Senator is at liberty to yield at his pleasure the first time. He does not forfeit the floor until he has yielded the second time. The Senator is at liberty to yield to the Senator from Wyoming or anybody else the first time, for any sort of discussion he sees proper to engage in.

Mr. LEE of Maryland. I should be glad to have the Senator suggest the correction while I am on my feet.

Mr. WARREN. The $19,000,000 that the Senator speaks of to be deducted, was the cost of the equipment that is with the National Guard. Under section 56, providing for the enlistment of volunteers, there is an amount charged up there for the same kind of equipment, or a similar equipment, that amounts to nearly the whole sum.

Mr. LEE of Maryland. That has got to be spent for the first year.

Mr. WARREN. Yes; of course it is money spent; but to go further, and say that the average per man is more, is not correct.

Mr. LEE of Maryland. I simply take the position, Mr. President, that when the committee comes in with an estimate for the National Guard of the first-year cost, and includes in it the expenditures that have been made through 10 years past, it is not a proper first-year estimate.

Mr. BORAH. Mr. President, may I ask the Senator a question, in order that I may be right?—because I do not desire to misrepresent.

Mr. LEE of Maryland. Certainly.

Mr. BORAH. What does the Senator estimate to be the cost of the National Guard per annum after the third year?

Mr. LEE of Maryland. I have made no examination after the first year. I simply dealt with the first year, and I was kept pretty busy keeping up with the apparent errors of the committee for the first year. I have not had time to go into the estimates of the committee for the second and third and fourth years; but when, by correspondence with and visits to the department, I found a variation of $19,000,000, it became necessary to attend to some other business, and I really did not have the time to inquire how much of this old material has been charged over and over again in these columns, if any. I presume, however, that the cost was carried along; because if you can put into a first-year estimate for the year 1917 expenditures made for material for 5 or 10 years back, then there is no reason why you should not put in with equal equity for the year 1918 the expenditures for 1917 and sundry years behind that.

The Senator from Idaho [Mr. BORAH] attacked the militia on the theory that they had usurped the powers of courts. I could not help thinking, as he spoke, how much easier it would be for local courts and local sentiment in a State to correct any military usurpation by local soldiery than it would be to correct a national soldiery guilty of the same form of usurpation; and undoubtedly military power always will be guilty of usurpation in dealing with the affairs of citizens under martial or semi-martial conditions.

On one day the Senator from Idaho argued that the power of appointment by the States of local officers would give large local influence over the militia; and he quoted from Mr Hamilton, the Federalist, No. 29, to the effect that the power of appointing officers would always secure a local influence in connection with the militia forces of the State.

Mr. President, I think that is a most excellent effect. I think that in a republic there should be some local sympathy, some local knowledge, some local connection in the mind and the political conscience of the officer. I think that is perhaps the fundamental reason why Gen. Washington and the framers of the Constitution provided, in this remarkable part of section 8, for that excellent balance in dealing with the militia between the States and the Nation as represented by Congress.

There are in that section only two powers reserved to the States—the appointment of the officers and the authority of training. Those two powers are reserved to the States, but that reservation is subject to an absolute control, because the appointment of the officers and the authority of training the militia has to be "according to the discipline prescribed by Congress."

Mr. HARDWICK. Not the appointment of the officers.

Mr. LEE of Maryland. Certainly, both; and why separate them? How could the constitutional mind of Washington, the practical mind of Washington, consider the training of troops separately from the selection of the officers? They go together.

Mr. HARDWICK. Mr. President, I should like to ask the Senator if he will put in the RECORD, in connection with his remarks, the language of the Constitution on which he bases that remarkable contention.

Mr. LEE of Maryland. I will with great pleasure. I have just quoted it—

> Reserving to the States, respectively, the appointment of the officers and the authority of training the militia according to the discipline prescribed by Congress.

There is not an intimation that the discipline does not apply to the selection of the officer, as well as to the training that the officer is to give. Remarkable? Why, it is the inevitable meaning of plain language.

Let us turn to the dictionary.

Mr. HARDWICK. If the Senator will pardon me just a moment, there is a comma after the words "appointment of the officers," is there not? Is it not a complete sentence?

Mr. LEE of Maryland. No; there is no comma after the word "officers" in the copy I have.

Mr. HARDWICK. There is in the Constitution.

Mr. LEE of Maryland. I do not think, Mr. President, that the comma would deprive Congress of its jurisdiction, even if it should be found to be there. I am inclined to think that this serious question of providing a discipline for the militia, and for the qualifications of the officers who apply that discipline, is something that the Constitution intended Congress to have the power to control.

The word "prescribe," Mr. President, is no mild word. It means "to set or lay down authoritatively for direction or control; to give as a law or direction; to lay down laws or rules; to give directions"; and one of the synonyms is "dictate."

The word "discipline" is a strong word, Mr. President. It means "systematic training or subjection to authority; especially, the training of the mental, moral, and physical powers by instruction and exercise, and by authoritiative control and direction; a course of exercise and practice in order to bring and keep under control, and to qualify for harmonious and effective action; the state of being subject to rule, or under control or command; systematic obedience; subjection; as, 'his men are under perfect discipline'; a system of rules or method of practice."

With these extensive powers reserved to the Congress of the United States, it is a singular thing that throughout more than 100 years of our history these powers have practically lain dormant; and only in the last 10 or 12 years, stung, perhaps, by the pitiable and miserable losses of the Spanish War, the horrible sicknesses that came from a lack of preparation, has there been some slight effort by Congress to exercise its extensive powers over the citizen soldiery of this country.

This is, indeed, a remarkable provision. It carries with it a perfect balance between the State and the Nation. It parallels the balance in all the rest of the Constitution; and it is

by reason of this provision, which, I believe, expresses the best thought of the best period of our Nation's life that I would prefer to see a harmonious militia, well disciplined, well armed, well organized, provided for and carried on by the Federal power granted to Congress under this section, and why I would prefer that that remnant of local sympathy which section 8 of article 1 would leave in the local soldiery should be left there for the protection of this great country from internal revolution.

Mr. President, in arming a great Nation we must arm it to repel attacks from within as well as attacks from without. We are arming to-day because we are convinced, as the chairman of the committee has wisely said, that man is a predatory animal, and that characteristic applies to men within national boundaries just as well as it does to men outside of national boundaries; and it especially applies to us, who are composed of all the nations that make up the peoples of the world.

In conclusion, Mr. President, I want to call the attention of the Senate and the attention of the gentlemen who stick in the bark on the power of Congress to organize, arm, and discipline the militia, to how natural and consistent it is to organizing and disciplining the militia that the words "according to the discipline prescribed by Congress," the last words in this particular clause of section 8, article 1, apply back to both the appointment of officers and the authority of training, because the appointment of the officer and the training that the officer gives are essentially the same function. The selection of the agent and the action of the agent are naturally contemplated in one mental process. To say that Congress can control, by prescribing a discipline, the action of the agents—the training—but is cut off, by a comma, from applying a discipline to appointing the agents—the officers—is to argue for an unreasonable incongruity. I mean, of course, the providing, as to officers, for certain general characteristics which a discipline, a rule of conduct, a law laid down, could provide—that these officers, from whom the authority of the State could make the appointment, must have qualified in some general way showing their ability to be officers.

Now, Mr. President, very briefly, I want to call the attention of the Senate to the corresponding language of the Swiss constitution in Article 21. It will be found in full on page 9 of Senate Document 360:

> The composition of these bodies of troops, the maintenance of their effective strength, the appointment and promotion of their officers, shall belong to the Cantons, subject to general regulations which shall be issued to them by the Confederation.

In Switzerland, under the general military law of 1907, which I have included in Senate Document No. 360, that works out in this way: The great body of the troops of Switzerland are Cantonal troops. There are 22 Cantons in Switzerland. The country is divided as to races also. Two-thirds of the Swiss are German and the remaining third are French and Italian. All of their public documents are printed in the three languages. They have had to combine the 22 separate States or Cantons and three separate races into one effective Confederation for military purposes, and they have accomplished that combination and have presented to the world the spectacle of a perfect army composed of a citizen soldiery.

Why, Mr. President, for some years I used to be troubled by this continual slurring of the militia of this country, and I had gotten into my nature a little of the distrust of the ultimate possibilities that could be brought about by a citizen soldiery as a line of defense for our country. I had heard so much of this that I have made a study of Switzerland's military law and of her constitution as bearing on this question, and of the result of that law as expressed by the army that defends that country to-day. I have had considerable difficulty in getting some of this testimony. From about page 45 to page 70 of that document, the testimony bearing upon the efficiency of the Swiss Army is entirely new. It embraces the report of our present military attaché for Switzerland, Capt. Exton, of the United States Army.

The authorities of the War College refused to let me have that report, basing the refusal upon the order of the Secretary of War, Mr. Garrison. I did not argue the question with the general who refused to permit the copying of this document because I have respect for him. I believed him to be a good officer and that he properly construed his orders from Secretary of War Garrison as he understood them. But in view of the fact that Switzerland was a neutral country, in view of the fact that all the spies of all the world are there or could be there, it seemed to me perfectly obvious that there was no impropriety in publishing Capt. Exton's report.

But, as I say, I did not argue the question with our military authorities, but applied, through the State Department, to the Swiss military authorities for their permission to publish this report, and in that connection received from them a brief statement showing the number of men mobilized in Switzerland and the time of that mobilization, and afterward secured an order from the present Secretary of War, Mr. Baker, for this evidence.

I wish to read into the RECORD what Capt. Exton, of the Artillery—now stationed in Switzerland, at Berne—says about the Swiss soldier:

> The soldier: The appearance and work of the soldier during the few days of mobilization showed him to have so benefited by his previous training in service as to make the Swiss Army probably the best-trained army, for its size, in the world to-day.
>
> Every man seemed thoroughly familiar with his duty, which he performed more or less as a matter of business.
>
> The discipline appeared excellent and of the character that is cheerfully accepted rather than maintained by force. The relation between officers and men was quite intimate at times, yet there was at the same time such an observance of details as might be found only in the German Army.
>
> As a matter of fact, everything about the Swiss Army, especially their thoroughness as to details, seems modeled after the German Army.
>
> The officers: An officer of the line should never be judged, except after some considerable service either in campaign or at maneuvers—yet from the work observed during mobilization and from conversations with Swiss officers during the past three months it is believed that the Swiss officers will, especially since their service during the past year, compare favorably with the officers of any army in the world.
>
> It must be remembered that the Swiss officers are selected from the educated men of Switzerland, and among them are found the leading men of every profession and business; and when one considers that in order to have reached the grade of second lieutenant he must have spent at least 336 days at intensive military training, 144 days of which is principally school work, one realizes the seriousness with which the service is accepted and the standard of thoroughness which may be attained in such a militia system.

Mr. PRESIDENT, I want to emphasize the fact that this is a militia system—this best-disciplined army of its size to-day in Europe.

If any Member of the Senate has any doubt as to what could be accomplished by the National Guard of the United States by Congress prescribing a discipline and by organizing an army and disciplining the militia, let him read this pamphlet and see what the Swiss have done for their army.

It is said, in extenuation of the failure of Congress to act, that Switzerland is a small country and that the mobilization which has been so effective, and which is made there every summer is relatively easy. Why, Mr. President, we can mobilize 200,000 men in sections every summer and mobilize our entire Guard and Federal Army every summer in as small a section as Switzerland covers if necessary. Compared with the resources of Switzerland, our resources are unlimited.

In this connection, and in conclusion, I want to read into the RECORD the language of Mr. Chief Justice Marshall, from McCulloch against Maryland, page 420, in which that great Chief Justice lays down the limitations of the implied powers of Congress. Why, Mr. President, if there were nothing in this section 8 except the words "organizing, arming, and disciplining," the implied powers would give Congress the necessary control of the details of that organization, arming, and disciplining; and the exceptions to the States from that large authority given Congress over the militia—the appointment of the officers and the authority to train—expressly limited and, as just now shown, are subject to the discipline prescribed by Congress. I maintain that under the powers of Congress this body has the right to see to it that the officer has the character and capacity, and that the officer with the capacity is the one appointed by the local authorities, and that the officer when appointed shall train the militia according to the discipline. The whole express power would be useless without the implied power to cause a discharge of an officer and to see to it by inspection that the officer acts according to the discipline.

With that suggestion I include the following language from McCulloch *v.* Maryland (4 Wheat. U. S. Sup. Ct., 420):

> We admit, as all must admit, that the powers of the Government are limited, and that its limits are not to be transcended. But we think the sound construction of the Constitution must allow to the National Legislature that discretion, with respect to the means by which the powers it confers are to be carried into execution, which will enable that body to perform the high duties assigned to it in the manner most beneficial to the people. Let the end be legitimate, let it be within the scope of the Constitution, and all means which are appropriate, which are plainly adapted to that end, which are not prohibited but consistent with the letter and spirit of the Constitution, are constitutional.

Mr. HARDWICK. Mr. President, I suggest the absence of a quorum.

The PRESIDENT pro tempore. The Senator from Georgia suggests the absence of a quorum. Let the Secretary call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst	Catron	Clapp	Culberson
Brandegee	Chamberlain	Clark, Wyo.	Cummins
Burleigh	Chilton	Clarke, Ark.	Curtis

du Pont	Lane	Overman	Smith, S. C.
Gallinger	Lee, Md.	Page	Smoot
Harding	Lewis	Phelan	Swanson
Hardwick	Lippitt	Pittman	Thomas
Hitchcock	Lodge	Poindexter	Vardaman
Hughes	McCumber	Pomerene	Warren
Husting	Martin, Va.	Robinson	Weeks
Johnson, Me.	Nelson	Saulsbury	Williams
Johnson, S. D.	Norris	Shafroth	
Jones	O'Gorman	Sheppard	
Kenyon	Oliver	Smith, Md.	

The PRESIDENT pro tempore. Fifty-three Senators having answered to their names, a quorum of the Senate is present. The question is on the adoption of the substitute offered by the Senator from North Dakota [Mr. McCUMBER] for section 56.

Mr. McCUMBER. Mr. President, just a word in explanation of the difference between section 56 and the substitute offered.

Section 56 is weak in that it does not start with any organized unit and there is no incentive to induce men to go somewhere to meet some one else from somewhere whom they have never met for the sole purpose of being drilled for four weeks.

The substitute lays hold of an organization of a military character already created, and everywhere throughout the country, whose very existence springs from the military instinct—an organization which would earnestly welcome this opportunity for greater perfection of drill and greater knowledge of military tactics.

Section 56 depends for its success upon the individual impulse of the citizen without support and without that animation which organized numbers alone can evoke.

The substitute utilizes the enthusiasm of youth which has already found expression in organization and directs it into the realm of accomplishment and national usefulness.

Section 56, in my judgment, will not bear the fruitage expected by its authors. A 30-day enlistment and drill each year at your own expense, which binds you to give your services at a time you may believe they are not needed, or they can with less hardship be performed by others whose situation is more favorable, is not a very great inducement to enroll under this section. The difficulty in securing an enlistment of 20,000 men, recently authorized, might well open our eyes to the reality of this condition.

The substitute, because it is giving just the opportunity which these students wish, will, in my judgment, result in more offers than the Government could accept.

Section 56, if it could be made a success at all, would give an army of about 260,000 at the utmost.

The substitute would give an army of at least 750,000 to begin with, and as each student would be subject to call in case of war up to the age of 45 years, would in a very few years give us an auxiliary army of millions.

Section 56 provides for a training of 30 days annually, certainly a very meager training for a soldier.

The substitute would require training one day each week for 9 or 10 months, as is the present rule, and this in addition to the camp life and camp training of at least two months on the larger scale.

Section 56 contemplates the training of those who are outside or beyond the student age. It would draw men from their business and occupations.

The substitute operates during the student life in association with it, supplementing the mental with physical exercises, assisting in developing both the mental and physical, and without any loss or waste of time.

Section 56, as already suggested in this debate, would give us at least a quasi aristocratic organization of gentlemen—a sort of exclusive military club.

This substitute draws the youth from every rank of life, develops and intensifies the sentiment of brotherhood and equality, and sends them back into the avenues of civil life, thereby preventing the military spirit from becoming the dominant or controlling sentiment of those who are thus prepared for war.

Mr. President, I noticed in introducing the amendment I inadvertently omitted three words, and I will ask to correct the amendment before it is voted on. On page 2, line 7, after the words "high school," I wish to insert "academy and college."

Mr. HARDWICK. Mr. President, I raise a question of order as to whether the motion of the Senator from North Dakota, which is a motion to strike out and insert, takes precedence over the motion of the Senator from Maryland, which is a motion simply to strike out.

The PRESIDENT pro tempore. The rule provides that one shall not prejudice the other. It is not a motion in the third degree. The Chair looks at the motion of the Senator from North Dakota to insert the matter proposed by him in lieu of section 56 as the pending question.

Mr. HARDWICK. Does that take precedence of simply a motion to strike out?

The PRESIDENT pro tempore. It is in the nature of a perfecting motion. The question is on the amendment of the Senator from North Dakota to the amendment.

The amendment to the amendment was rejected.

The PRESIDENT pro tempore. The question recurs on the motion of the Senator from Maryland to strike out section 56.

Mr. CUMMINS. Mr. President, I desire to record my protest against the tone of much of the argument that has been made in favor of section 56. There is running through substantially all that has been said in behalf of this section the thought, if not the expression, that those of us who believe that it ought to be expunged from the bill are not patriotic; that we are opposed to adequate military preparedness. I do not suggest that those who are for the section are less patriotic than I am; I do not suggest that they are less sincere or earnest in their desire to prepare this country against any danger that may beset her than I am; and I appeal, as a matter of fairness, against the intolerance which betrays itself in the suggestion that those of us who believe that the National Guard as an organized reserve in the country is better than the combination of the volunteer reserve and the guard reserve are wanting in our duty at the present moment.

I am just as sincerely in favor of preparedness—adequate, reasonable, efficient preparedness—as is the Senator from Oregon or any other Senator in this body. I am opposed to the section and to the force it proposes because I feel—it seems to me that I know—that in the operation of the section or the organization of the volunteer reserve army and the National Guard both will become inefficient; that the one will not be created and the other will be disintegrated.

As I said once before in discussing this section, it is impossible to believe that when peace comes—and I assume we do not intend to be constantly in war—the Congress of the United States will not appropriate $100,000,000 each year for the purpose of maintaining an organized reserve. The whole history of the country leads to no other conclusion than the one I have just stated, and we are face to face with these alternatives, in my opinion. We must either take the Guard, strengthen it as we can or as we see fit, or we must take the volunteer army and create it, with such equipment and such organization as it ought to have. It is unwise and impolitic to do both, for in the struggle that will constantly be maintained between them we will treat both meagerly, inadequately, and neither will ever constitute the reserve toward which we are looking.

I have no prejudice against the volunteer army. If Congress desires to depend upon it rather than upon the National Guard, I will not protest, and I will be willing to give it all the aid that it needs in order to become a strong, dependable force. I believe that the guard is the better force. It is already organized. It already has the confidence of the young men upon whom we must depend in the various States. We can maintain it, we can perpetuate it, with vastly less expenditure of money than will be required if we endeavor to raise a volunteer army to a similar strength and a similar state of efficiency. We are here about to authorize a regular army of 180,000 men, with the authority on the part of the President in time of war to raise it to 250,000 men. I do not assert——

Mr. LEE of Maryland. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Iowa yield to the Senator from Maryland?

Mr. CUMMINS. In just a moment. I do not assert that the army proposed is too large. I do not believe it is too large, although I will have a comment to make in a moment with regard to the system we are employing with respect to the Regular Army. I yield now to the Senator from Maryland for a question.

Mr. LEE of Maryland. I would like to ask the Senator just one question. Is there any reason why discipline and maneuvering, such as that furnished at Plattsburg, could not be furnished to the National Guard somewhere?

Mr. CUMMINS. Mr. President, it is furnished in the National Guard. There was no facility for training presented at Plattsburg that is not presented in every field meeting of a well-organized guard, and I know——

Mr. HARDWICK. Mr. President——

Mr. WILLIAMS. Mr. President——

Mr. CUMMINS. I know, because I have seen the guard in operation, and I know something of its fidelity to the instructions that are imposed upon it by officers of the Regular Army.

The PRESIDENT pro tempore. Does the Senator from Iowa yield to the Senator from Mississippi?

Mr. CUMMINS. I yield first to the Senator from Georgia.

Mr. HARDWICK. I merely want to suggest to the Senator that the question of summer camps is not directly nor necessarily associated with this volunteer army at all, and section 82 of the House bill provides adequately for summer camps, although the volunteer or continental army was discarded by the House of Representatives.

Mr. CUMMINS. I quite agree with the Senator from Georgia. I will now yield to the Senator from Mississippi for a question.

Mr. WILLIAMS. I simply wanted to ask the Senator why he thought there would be any deadly competition between this volunteer force and the National Guard. It seems to me that it would be emulation rather than competition, and that providing for the one furnishes no reason in the world for not providing for the other. If the National Guard needs anything at all it needs a healthy emulation. The Senator has just said that the National Guard might have maneuvers, but they meet only five days in the year, and the Senator must assuredly be apprised of the fact that they can hardly master skirmish drill during those five days, even if they served three years, which would make 15 days. Assuredly the Senator must know that there is nothing that could take place in connection with the force provided for under section 56 which would either cripple or kill or vigorously compete against the National Guard. He must know that the men who will attend the so-called Plattsburg drills under section 56 are men who, under no circumstances, would enlist in the National Guard. Now, why not leave us both instead of merely one?

Mr. CUMMINS. Simply because I——

The PRESIDENT pro tempore. The Chair will state to the Senator from Iowa that the interruption of the Senator from Mississippi was not a question; it was a speech. If the Senator yields again he loses his right to the floor under the rule.

Mr. WILLIAMS. I beg pardon. I did not hear what the Chair said.

The PRESIDENT pro tempore. The Chair said the interruption of the Senator from Mississippi was not a question; it was debate in the most positive terms.

Mr. WILLIAMS. With all due deference to the Chair, it was a question.

The PRESIDENT pro tempore. The Chair differs with the Senator from Mississippi.

Mr. WILLIAMS. There was nothing in it except a question.

Mr. CUMMINS. I will be guided by the judgment of the Chair in that respect, and I will endeavor to conclude what I have to say without incurring the hazard of losing the floor.

My reply to the Senator from Mississippi, because, however elaborate the statement, it was really a question, is this. Congress will not maintain both. I do not mean to say that Congress would not authorize such a camp as we had at Plattsburg or at Fort Sheridan. The mere provision for such a camp is not the scope of this section. It is true that these exhibitions of military enthusiasm furnish illustrations to those speaking for section 56 of its need or necessity, but section 56 has no relation at all to temporary camps of the character to which the Senator from Mississippi has referred. In section 56 we are giving the President the power, without any real restriction, to raise an Army of 261,000 men, to arm them, to equip them, to command them. They are brought into the service for the purpose of training. They are required to enlist in the Army of the United States, and if that enlistment be in the same terms as now required of enlisted men in the Regular Army they will be required to obligate themselves to serve for seven years in the Army for such length of time as the President may think best in training only, but with the power on the part of the President to order them at any moment, when war or threatened war seems before us, into the actual service for the purpose of fighting the battles of the United States.

Mr. WILLIAMS. Mr. President——

Mr. CUMMINS. I yield now, Mr. President, for a question, and a question only.

The PRESIDENT pro tempore. For a question only.

Mr. CUMMINS. And I rely upon the Chair to protect me in that regard.

Mr. WILLIAMS. Mr. President——

The PRESIDENT pro tempore. The Senator must be the judge of his own rights.

Mr. CUMMINS. I yield for a question.

The PRESIDENT pro tempore. A question that will elicit information and not convey argument or antagonize or support the argument.

Mr. CUMMINS. The Senator from Mississippi will see that I must yield only for a question.

Mr. WILLIAMS. I am very sorry that question should have been raised. I asked the Senator to yield to me for a question. I did not ask anything more.

Mr. CUMMINS. I yield for a question.

The PRESIDENT pro tempore. It does not make any difference for what purpose the Senator yields; if he is going to permit the Senator from Mississippi to make a speech, his time is exhausted. The Senator from Mississippi can make a speech if he wants.

Mr. WILLIAMS. Considering the fact that the Chair and the Senator from Iowa both seem to be suspicious of my motive, I will not even ask the question.

The PRESIDENT pro tempore. The Senator from Iowa will proceed.

Mr. CUMMINS. Mr. President, I beg to assure the Senator from Mississippi that I am not suspicious of his motive. I was compelled under the circumstances in order to retain the floor to say that I yielded for a question, and I shall regret it very much if——

Mr. WILLIAMS. Then, I will ask the question.

Mr. CUMMINS. Mr. President, I will yield for a question.

Mr. WILLIAMS. The question is this. Will the Senator tell me why there should be a question of competition rather than merely a question of emulation between the National Guard and this volunteer force?

Mr. CUMMINS. I will endeavor to make——

The PRESIDENT pro tempore. The Chair is of opinion that that is nothing but an argument, and the Senator must take the chance of the Senator who interrogates him as to whether or not he will confine himself to the rule. In the judgment of the Chair the Senator from Iowa has forfeited the floor.

Mr. LEWIS. I ask unanimous consent——

Mr. CUMMINS. I ask unanimous consent that I may be allowed to continue.

The PRESIDENT pro tempore. For what length of time does the Senator desire to proceed?

Mr. WILLIAMS. Mr. President, against the ruling of the Chair just pronounced I respectfully take an appeal.

The PRESIDENT pro tempore. The Chair is very glad to have the Senator do that.

Mr. WILLIAMS. Because even under the ruling of the Chair I have done nothing except to ask a question.

The PRESIDENT pro tempore. The question is on the appeal.

Mr. GALLINGER. Mr. President, before the vote is taken on the appeal I ask that the Reporter read precisely what the Senator from Mississippi said.

The PRESIDENT pro tempore. The Chair thinks that is proper, and the Reporter will read.

Mr. WILLIAMS. I ask that my language be read to the Senate.

The PRESIDENT pro tempore. That will be done.

Mr. WILLIAMS. I ask that it be done in order to prove that it was nothing but a question.

The PRESIDENT pro tempore. That will be done. The ruling is that the question must be such as to elicit information about a question of fact, not in the nature of an argument, it makes no difference whether it is long or short.

The Reporter read as follows:

Mr. WILLIAMS. Then I will ask the question.
Mr. CUMMINS. Mr. President, I will yield for a question.
Mr. WILIAMS. The question is this: Will the Senator tell me why there should be a question of competition rather than merely a question of emulation between the National Guard and this volunteer force?

Mr. WILLIAMS. Upon the ruling of the Chair I take an appeal to the Senate upon the ground that even upon the Chair's ruling a Senator has a right to ask another Senator a question.

The PRESIDENT pro tempore. If it is a question to elicit information, the Chair agrees with the Senator.

Mr. GALLINGER. I ask for the yeas and nays.

The PRESIDENT pro tempore. The yeas and nays are called for.

The yeas and nays were ordered.

The PRESIDENT pro tempore. If the rule is to be of any value at all, it must be uniformly enforced and uniformly respected. The Chair has not any power to enlarge it.

Mr. HITCHCOCK. Before the question is taken I should like to know, for information, what we are to vote on.

The PRESIDENT pro tempore. The question is whether or not a question which conveys or calls for argument is a question for information.

Mr. GALLINGER. I submit it is not that; that it is whether the question submitted by the Senator from Mississippi is a question which is allowable under the rule that has been established by somebody, I do not know by whom.

The PRESIDENT pro tempore. The Secretary will call the roll.

The Secretary proceeded to call the roll, and called the name of Mr. ASHURST, who voted in the affirmative, and the names of Mr. BANKHEAD and Mr. BECKHAM.

Mr. POINDEXTER. I rise to a parliamentary inquiry, Mr. President. I should like to have the form of the proposition we are to vote upon stated by the Secretary.

The PRESIDENT pro tempore. The question is, Shall the ruling of the Chair stand as the judgment of the Senate?

Mr. BANKHEAD. Mr. President——

The PRESIDENT pro tempore. The Senator from Alabama.

Mr. BANKHEAD. I should like to know exactly what the question is. There is so much confusion in the Chamber that I have been unable to understand it.

The PRESIDENT pro tempore. The Chair made a ruling that the Senator from Mississippi [Mr. WILLIAMS] had asked a question which conveyed an argument. The Senator from Mississippi appeals from the ruling of the Chair; and the question is, Shall the opinion of the Chair stand as the judgment of the Senate?

Mr. WILLIAMS. Mr. President——

The PRESIDENT pro tempore. The roll call has started.

Mr. WILLIAMS. I desire to make a parliamentary inquiry.

The PRESIDENT pro tempore. A parliamentary inquiry is not in order while the roll is being called. The roll call will proceed.

The Secretary resumed the calling of the roll.

Mr. CLARK of Wyoming (when his name was called). I have a general pair with the senior Senator from Missouri [Mr. STONE]. In the absence of that Senator I withhold my vote.

Mr. HOLLIS (when his name was called). I announce my pair with the junior Senator from New York [Mr. WADSWORTH] and withhold my vote.

Mr. JOHNSON of Maine (when his name was called). I have a general pair with the junior Senator from North Dakota [Mr. GRONNA]. In his absence I withhold my vote.

Mr. MYERS (when his name was called). I have a general pair with the Senator from Connecticut [Mr. MCLEAN]. He being absent, and I not knowing how he would vote on this question if he were present, I withhold my vote.

Mr. SAULSBURY (when his name was called). I have a general pair with the junior Senator from Rhode Island [Mr. COLT], and therefore withhold my vote.

Mr. ASHURST (when the name of Mr. SMITH of Arizona was called). My colleague [Mr. SMITH of Arizona] is unavoidably absent from the Chamber.

Mr. TOWNSEND (when his name was called). I have a general pair with the junior Senator from Florida [Mr. BRYAN]. My colleague [Mr. SMITH of Michigan] has a general pair with the junior Senator from Missouri [Mr. REED]. As I understand it, the Senator from Missouri and I are going to exchange those pairs, so that I may transfer my pair to my colleague and the Senator from Missouri may transfer his pair to the Senator from Florida. I therefore vote. I vote "nay."

Mr. WEEKS (when his name was called). I have a general pair with the senior Senator from Kentucky [Mr. JAMES], who is unavoidably absent, and I withhold my vote.

The roll call was concluded.

Mr. DILLINGHAM (after having voted in the negative). I should like to inquire if the senior Senator from Maryland [Mr. SMITH] has voted?

The PRESIDENT pro tempore. He has not voted.

Mr. DILLINGHAM. I have a pair with that Senator, but I transfer that pair to the Senator from Pennsylvania [Mr. PENROSE] and will let my vote stand.

Mr. CHILTON (after having voted in the negative). I have voted notwithstanding my pair, but I am very much in doubt whether or not I should do so. I therefore withdraw my vote.

Mr. DU PONT (after having voted in the negative). I inquire whether the Senator from Kentucky [Mr. BECKHAM] has voted?

The PRESIDENT pro tempore. He has not.

Mr. DU PONT. I have a general pair with that Senator, and not knowing how he would vote if present I withdraw my vote.

Mr. CURTIS. Mr. President, I desire to announce the following pairs:

The Senator from West Virginia [Mr. GOFF] with the Senator from South Carolina [Mr. TILLMAN]; and

The Senator from Idaho [Mr. BRADY] with the Senator from Florida [Mr. FLETCHER].

Mr. BURLEIGH. I have a pair with the junior Senator from Tennessee [Mr. SHIELDS]. In his absence I withhold my vote, and will let this announcement stand for the day.

The result was announced—yeas 24, nays 33, as follows:

YEAS—24.

Ashurst	Hardwick	Shafroth	Taggart
Bankhead	Lewis	Sheppard	Thomas
Chamberlain	Martin, Va.	Sherman	Thompson
Clarke, Ark.	Phelan	Smith, Ga.	Underwood
Culberson	Ransdell	Smith, S. C.	Vardaman
Gore	Robinson	Swanson	Walsh

NAYS—33.

Brandegee	Husting	Norris	Sterling
Broussard	Jones	Oliver	Sutherland
Catron	Kenyon	Overman	Townsend
Clapp	Lane	Page	Warren
Cummins	Lee, Md.	Pittman	Williams
Curtis	Lippitt	Poindexter	Works
Dillingham	Lodge	Pomerene	
Gallinger	McCumber	Reed	
Harding	Nelson	Smoot	

NOT VOTING—39.

Beckham	Fletcher	La Follette	Shields
Borah	Goff	Lea, Tenn.	Simmons
Brady	Gronna	McLean	Smith, Ariz.
Bryan	Hitchcock	Martine, N. J.	Smith, Md.
Burleigh	Hollis	Myers	Smith, Mich.
Chilton	Hughes	Newlands	Stone
Clark, Wyo.	James	O'Gorman	Tillman
Colt	Johnson, Me.	Owen	Wadsworth
du Pont	Johnson, S. Dak.	Penrose	Weeks
Fall	Kern	Saulsbury	

The PRESIDENT pro tempore. On the appeal of the Senator from Mississippi, the yeas are 24 and the nays are 33. So the decision of the Chair does not stand as the judgment of the Senate. The Chair construes the action of the Senate without any possible personal feeling in the matter. The only desire of the Chair was to enforce what he understood to be the rule. Now that the Senate has deliberately established another rule, the Chair will just as loyally enforce that one, if he can. So we go back to the old practice of allowing the Senator on the floor to be the judge as to whether or not he shall be interrupted, by whom, and for what purpose.

Mr. WILLIAMS. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Iowa yield to the Senator from Mississippi?

Mr. CUMMINS. I yield for a question only.

The PRESIDENT pro tempore. That is not any longer necessary.

Mr. CUMMINS. I have, however, the privilege of limiting the purpose for which I shall yield, Mr. President.

Mr. WILLIAMS. I recognize that the Senator from Iowa can not yield for anything except a question under the rules. I do not ask him to yield at all; but, after the Senator is through, I intend to make a few comments upon the ruling of the Chair.

The PRESIDENT pro tempore. The Senator may do as he is advised.

Mr. CUMMINS. Mr. President, I make no comment upon the ruling of the Chair, for there has been so much uncertainty with reference to this particular matter that it is not strange that there is difference of opinion about it; but I will proceed at once to answer the question propounded to me by the Senator from Mississippi [Mr. WILLIAMS].

The Senator from Mississippi asks why it is that there need be any conflict between the National Guard and the Volunteer Army to be organized under section 56? There is no conflict in the sense in which the Senator from Mississippi uses the word; there is no feeling between them, or I hope there would be no feeling between the men who would volunteer under section 56 and the men who volunteer in the National Guard. It is not because I think there would be any rancor or any contest between these two bodies of men that I oppose section 56. I oppose it because, as I have said many times, it simply strikes down our entire efficient organized force; and I marvel that anybody who favors preparedness in any degree can see his way clear to the creation of the volunteer force.

Why, Mr. President, we have authorized here a Regular Army of 180,000 men. The Regular Army is our principal defense; and now we propose not to have reserves, as they are ordinarily understood, but to create organized reserves in companies, regiments, brigades, divisions, corps, to the extent of more than 500,000 men, assuming that the National Guard is enlisted to its full strength and that the Volunteer Army is enlisted to its full strength.

Mr. President, do you believe that the people of the United States in times of peace will sustain, at an annual expense of $100,000,000 or more, two organized bodies of reserves, with their companies, regiments, and divisions, all ready to move into the field actively, together with a Regular Army of 180,000 men? No. The disproportion is absurd; it is sustained by no experience in the world.

Mark you, I am not now speaking of the vast number of unorganized trained young men who will be called upon to volunteer in the event of war; I am speaking of three great armies: One constantly in the service, called the Regular Army; one intermittently in the service, called the Volunteer Army; and the third, intermittently in the service, called the National Guard. We ought not to delude ourselves with any such pretense as necessarily grows out of the situation I have just described.

Mr. HITCHCOCK. Mr. President, will the Senator yield to me for a question?

Mr. CUMMINS. I yield for a question, not under the rule, but because I do not want to be interrupted for anything but a question.

The PRESIDENT pro tempore. The Chair does not understand that there is any rule on the subject; but the Senator may limit his concession to his colleague to suit himself.

Mr. HITCHCOCK. Is it not a fact that every nation in the world which has a reserve has a reserve which is three or four times as large as its standing army?

Mr. CUMMINS. Mr. President, that brings me to a very interesting point in this discussion. I had intended to deal with it at a later time, but, in answer to the inquiry of the Senator from Nebraska, I might just as well express my opinion upon it now.

The whole plan of preparation represented in the bill now before us is utterly inadequate. No nation in all time was ever prepared for war under the volunteer system. I want that to sink into the consciousness of the Senator from Nebraska. A nation can not prepare itself for war under a volunteer system. Volunteers will fight a war—and our main reliance, if we are ever so unfortunate as to be engaged in war with a great nation, will be upon volunteers—but we can not prepare so that we are instantly ready to carry on a conflict of that kind through the volunteer system.

The Senator from Nebraska and the Senator from Oregon have challenged those of us who favor the elimination of section 56 to a "show-down." I am here to accept that challenge; I am here to say that if we ever are prepared for war, if we change the policy which has been maintained throughout the whole life of the Republic and reach the conclusion that we ought to be really prepared at an instant's notice for a great conflict, then we must abandon this theory, this traditional volunteer regular army.

Why should the Senator from Nebraska or why should the Senator from Iowa expect one of his fellow men to fight for him at $15 a month and board? It is absurd. If we ask the citizens of the United States to organize themselves in sufficient numbers to constitute a regular army which will be adequate against any attack that may be precipitated against us, then we must have compulsory service. Why should the Regular Army not be made up of all our citizens? I do not mean at the same time, and I am not now speaking of the number which should constitute the Regular Army; but assuming, as this bill has assumed, that we need a Regular Army of 250,000 men, and in time of peace of 180,000, why do you ask men to enroll themselves in it at $15 a month and board? Why should not the Senator from Nebraska and the Senator from Iowa, if we are not both over age, take our chances and bear the burdens of citizenship in a country like this? Why should we not constitute a part of the Regular Army, if in the chances of conscription the lot should fall upon us?

I venture to say that the Regular Army provided for in this bill—and I was really glad to hear the Senator from Oregon yesterday grant its inadequacies in this respect—I venture to say that the Regular Army provided for in the bill will never be enlisted to the extent of 180,000 men, unless we engage in war. When war comes, when the peril is upon us, then there is a patriotism that springs to the country's need, and supplies the lack of attractiveness that we now see in the enlisted ranks. Who will work for $15 a month under command of officers who feel, and necessarily feel, all the authority vested in them?

The Senator from Nebraska [Mr. HITCHCOCK] himself read only a day or two ago—and he was supplemented by the Senator from Oregon [Mr. CHAMBERLAIN] a little later—that, notwithstanding all the efforts that the Government was able to put forth to enlist men under the authority recently granted to the President, we had not yet, according to the Senator from Oregon, enlisted 2,500 men, and that, too, notwithstanding the fact that we are in some peril on account of the situation in Mexico, a peril that might well stimulate and energize the patriotism of all the people of this country.

Mr. HITCHCOCK. Mr. President, will not the Senator now answer my question?

Mr. CUMMINS. I have in substance answered the Senator's question.

Mr. HITCHCOCK. I asked the Senator from Iowa to name a single country in the world that maintains a regular army that does not maintain a reserve several times as large as the army, and the Senator has not answered the question.

Mr. CUMMINS. There is no other country in the world that has any such system as is here proposed unless some parallel could be drawn between this plan and that followed by Great Britain.

Mr. HITCHCOCK. Let me ask the Senator another question.

Mr. CUMMINS. I will not enter into an argument with the Senator from Nebraska, for I am answering his question. The suggestion I have just made answers the question of the Senator from Nebraska. Every country that declares as its policy complete preparedness for war has every citizen of military age in its reserve. It is not a question of willingness or unwillingness to serve as a supplementary body; it is a part of the policy of the military nations to lay these burdens upon all their boys and all their men until they pass the military age, and they are all parts of one great army which we in this country would call the Regular Army. I want, therefore, the Senators who are so enthusiastic for preparedness to come, if they desire, and meet that real issue. If it is to be insisted that this Nation shall always be ready to engage any other nation in the world upon a moment's notice in war, then the volunteer system proposed by this bill is a shadow hardly a beginning in the process of reforming or changing or transforming the policy which has for more than 100 years been observed among the American people.

I want to put an end now, for all time, if I can, to this constant reproach in all the big newspapers of the land that anyone who has the temerity to question the wisdom of anything that is proposed in this bill is an enemy of his country and opposed to proper preparedness. I resent that charge. I understand perfectly that no Senator who has discussed the bill has directly questioned the motives of any Senator who intends to vote for the elimination of section 56; but I repeat that in every utterance there is against those who favor its elimination an offensive tone. We who believe that the National Guard should constitute the organized reserve of the country, and believe that any attempt to divide the contribution or the support given by the General Government to the organized reserves will but weaken them both and render both incapable of performing the services expected of them, are just as devoted to the Union, just as attached to its honor, and just as determined to defend its integrity as those who believe—honestly believe, I have no doubt—that we ought to create these two bodies of organized reserves.

I do not represent the National Guard any more than I represent the Regular Army or the volunteer army that might be organized under this bill. I have just as much devotion to the one as to the other. No man can exceed me in his admiration for the courage and the efficiency of the officers of the Regular Army of the United States, and no man surpass me in his appreciation of the devotion and the steadiness of the enlisted men.

Mr. HITCHCOCK. Mr. President, may I interrupt the Senator again?

Mr. CUMMINS. I yield for a question.

Mr. HITCHCOCK. Does the Senator contend that there is no country which maintains a reserve several times larger than its standing army, except in the case of involuntary service?

Mr. CUMMINS. I do not know of any.

Mr. HITCHCOCK. Well, I will tell the Senator.

Mr. CUMMINS. I hope the Senator will speak in his own time.

Mr. HITCHCOCK. I ask the Senator about Great Britain, then?

Mr. CUMMINS. I made an exception of Great Britain. The Senator heard me make the exception.

Mr. HITCHCOCK. I ask the Senator about Spain and Sweden, then?

Mr. CUMMINS. I have not examined the military laws of Spain and Sweden, but I can not allow the Senator to inject the legislation of those countries in my remarks. I would not care if Sweden and Spain do maintain such a reserve; it would not affect my judgment of American human nature or my opinion with respect to the best course that the Congress of the United States ought to pursue. When I come to examine those laws, I have no doubt that I will find that they agree in substance with the statement I have made.

Mr. President, it is not for me to defend the National Guard against some of the insinuations and aspersions which have been cast upon the members of that military body—I mean the aspersions growing out of their interest in the legislation and out of the telegrams which they have sent to certain Members of this body. I would be the last man to excuse the tone of the letter read this morning at the suggestion of the Senator from New York [Mr. O'GORMAN]. I agree that it was offensive;

but are we to condemn 120,000 of the best boys in the country—not better, of course, than their brothers in the same community, but boys with whom I, at least, am proud to associate; boys who understand their duty to their country, and are proud to perform it—are we to impeach them and overthrow their reputation because an ill-considered letter was written by one officer of the Guard to a Member of this body?

The injustice of holding, or trying to hold, or suggesting that we hold, all the members of the Guard responsible for an intemperate, injudicious act committed by one of them must be so apparent that I need not further enlarge upon it.

I know that the members of the National Guard—while I do not speak for them; I have no authority to speak for them—are simply attempting to do what they believe best for their country. They have no other motive save the motive which actuates all of us to do the thing which will promote the strength and the dignity and the safety of the United States. If they are mistaken with regard to the effect which this section will have upon their organization, it is a mistake in which, without any influence whatsoever from them, I share, because I believe that these two bodies of organized reserves will not be maintained by the United States. It is uneconomical; it is unmilitary; it is indefensible from my point of view, and we ought not to enter upon that experiment. I repeat that if the Senate honestly believes that the Volunteer Army will constitute a better source, a more reliable and dependable source of strength if we fall into the misfortune of war, then we ought to bend all our energies to the creation of a body of reserves in that way. My contention is that we are defeating the very object we are trying to attain when we endeavor to create and maintain these two distinct bodies in our military force.

Mr. President, if I believed that the National Guard had any sinister design upon the liberties of our country; if I could see, in the efforts that have been made to promote their organization, any desire to infringe upon the rights of citizens; if I could see, in all that they do, anything but a deep, profound desire to render service to their country, and service of the exact kind this bill contemplates, I would not feel so earnestly about it. But being sure of their patriotism, and being sure of their persistent energy, and being sure, if we give to them whatever aid we can and federalize them so far as we can, that when the moment comes when we need military strength we can get in that way more of it and of a better quality than we could possibly get in the way proposed by the committee. I am doing what I can to maintain them as a permanent body, simply because I believe that if they are made to understand that their future depends upon the maintenance of these two independent bodies all spirit will be driven out of them, and we will have delivered a fatal blow to their growth and their efficiency.

Allow me to say to the Senator from Mississippi that if this section provided only for such experiments as were conducted over the country last year in the way of camps to which men who had no opportunity to ally themselves with the Guard could resort, I would have no objection whatever to it; but these camps are not the things provided for in this section. If we want to give the men who spend their vacations in this way an opportunity to do it under more favorable circumstances, I will join in any legislation which has that for its object. But that is not the object of the section. The purpose of the section is to enlist an army of 260,000 reserves—organized reserves. The object of the militia portions of the bill, or the Guard portions of the bill, is to enlist a body of reserves of the same number; and I am impelled to the conclusion that the effort to maintain them both will prove a disastrous failure.

Mr. HARDWICK and Mr. WILLIAMS addressed the Chair.

The PRESIDENT pro tempore. The Senator from Mississippi indicated that he desired to address the Chair. If the Senator from Georgia will excuse the Chair, he will recognize the Senator from Mississippi.

Mr. HARDWICK. Certainly, Mr. President.

Mr. WILLIAMS. Mr. President, I rise merely for the purpose of explaining the recent appeal from the decision of the Chair, the grounds upon which it was based, and the result which alone can legitimately follow from it; and in that connection it becomes absolutely necessary to say something about the obiter dictum involved in the decision of the Chair.

After the Senate had ruled on my appeal the Chair announced that the Chair would go back to the old practice. Now, that was not the object of the appeal; that was not the result of the appeal; and that ought not to be the effect of the appeal. I am talking now in order to straighten out future rulings of the Chair.

I am just as much opposed as anybody is to a Senator upon the floor farming out the floor to other Senators under the guise of asking questions in order that other Senators may make speeches; nor was that principle to the slightest degree involved in the appeal, except by the obiter dictum of the Chair, and it was purely obiter dictum at that. I am opposed to that because it is dilatory, because it is objectionable in every possible way, and because the past rulings of the Presidents and Presidents pro tempore of the Senate have pronounced it objectionable and dilatory.

Mr. President, the question between you and the Senate, or between you and me which was decided by the Senate, was this: Was my interjection into the remarks of the Senator from Iowa [Mr. CUMMINS] a question or was it an argument? That is all. All that the Chair was called upon to decide was whether it was a question or an argument. The Chair decided that it was an argument. Now it becomes necessary to state just what occurred.

I rose and asked the Senator from Iowa if he would yield to a question. He yielded to a question. Even if after that I had put something to him that was not a question, the Senator from Iowa would not have been responsible for it and could not in justice have been held responsible for it. He could have interrupted me the moment I transcended the limits, and could have said to me, "That is not a question; it is an argument." Or the Chair could have interrupted me and could have said, "The Senator from Iowa has yielded for a question, and the Senator from Mississippi is making a speech or an argument," and then the Chair would have been exactly right. But I asked the Senator from Iowa to yield to me for a question, and the Senator from Iowa yielded to me for a question, and yielded for no other purpose; and in taking the appeal from the decision of the Chair I was not taking it to protect myself, I was taking it to protect the Senator from Iowa.

When the Senator yielded for a question, I propounded this question: "Why does the Senator from Iowa contend that these two clauses relating to the volunteer force and the National Guard constitute a competition rather than an emulation?"

Now, I may be stupid; I may be almost idiotic, and at times I think most of us are; but if I could frame a question at all, that would be an interrogation. I framed it in that way because, just a moment before that, the Chair had given me an intimation, upon a previous so-called question, that I must not argue; and if the Chair had made the ruling upon the previous question the Chair would have been right. But the Chair did not make it there. The Chair made it upon the last question, which was nothing in the world but a question.

Now, the Chair knows me and I know the Chair, and we both know that there could not be any question of personal antagonism that anybody in the world could raise between us two. I do think, however, that when the Chair went out of his way, after the Senate had decided the question against the Chair and in favor of my appeal, to say that hereafter we will go back to the old practice—and the old practice admitted of infinite farming out of the floor by one Senator to another—the Chair was pronouncing purely an obiter dictum which the Chair had no right to pronounce. The Chair had no right to say that the effect of the vote of the Senate upon that appeal was to say that hereafter any Senator may farm out the floor for any sort of an interruption, because what the Senate really did decide was this, and this only—that my interruption was an interrogative interruption, and not an argumentative interruption.

The Senate decided that I was right in that contention and that the Chair was wrong in that contention, and that is all that the Senate decided; and I decline to let the Chair make out of that appeal, and out of its successful maintenance by the Senate, the contention that hereafter any occupant of the Chair—he or anybody else—will be justified in ruling that one Senator has a right to interrupt another for the purpose of making a speech or an argument, rather than merely for the purpose of asking a question.

Mr. President, it may be said that a man may ask a question for information or he may ask a question in order to puncture an argument; but provided it be a question and a mere interrogation, the ultimate motive of the question does not apply. I may ask some Senator, who is talking about the negro question, where he lives. That may involve an argument, because if he lives where there are no negroes he may give me one answer, and if he lives where there is a majority of them he may give me another. It might be said that the question involved an argument, but not in the question. It would involve, perhaps, an argument in the answer, but not in the question itself.

I rose, Mr. President, merely to say that the decision of the Senate meant only what the Senate decided, not what the Chair, by obiter dictum, put into it by remarks which were totally uncalled for.

The PRESIDENT pro tempore. The last remark of the Senator from Mississippi would justify more being said than I intend to say.

Under the rule there is no more right to ask a question than to interrupt a Senator in any other form; but it has been worked into the rule as an implied exception growing out of the necessity for it. It occasionally happens that it is necessary to know more definitely a certain state of facts in order to apply intelligently the argument that is being made. Custom, therefore, has introduced a limitation on the rule that permits a Senator to yield for a question, and all the rulings that have been heretofore made on that subject have recognized that implied exception.

The Chair believed, in view of the growing business of the country and the length of the sessions of Congress, that the Senate was prepared to enforce, with more strict respect to its spirit and meaning, the rule which allowed a Senator to address the Senate but twice on the same day on the same question; and that these continued interruptions, notwithstanding they are not only had by the consent of the Senator having the floor but are frequently actually invited by the Senator speaking—it gives him a new topic to discuss, which is not at all times offensive—were to be discouraged in every proper way. If there were none to be considered except the Senator addressing the Senate and the Senator who desired to interrupt, there would be little complaint about the old practice; but it is evident to some of us now that it has the effect of extending the sessions, diverting the discussions, and almost invariably depleting the Senate Chamber. It therefore occurred to me that the rule might be enforced according to its real spirit and intent in really limiting each Senator to the right to address the Senate twice only on the same question and on the same day.

Under this condition, unless the Chair is somewhat largely the judge of the character of the question that implies an argument, or invites an argument, or punctures an argument, the rule has no value at all. Of course, he could arbitrarily apply it if disposed to do it; but I do not think I have made that reputation here. At least I have not done so wittingly. No self-respecting officer will make a ruling that is subject on every occasion to be censored according to the color and bias of the personal and political surroundings at the time.

I had no objection to the Senator from Mississippi appealing from the decision of the Chair. On the contrary, I invited it, because I wanted the judgment of the Senate to settle the limits of the rule, once and for all. This is the Senate. It makes its own rules. It supervises those who enforce them; and the way in which it wants them enforced is the way in which they should be enforced.

The matter has been disposed of. I shall not hereafter undertake to guess what is a question and what is not a question within the sense of the rule. I have tried to define it as an inquiry that would elicit information about a matter of fact. If it involves an answer to an argument, or if it suggests an argument, or if it punctures an argument, as the Senator from Mississippi says, I thought it was argumentative in character, and I therefore took that view of it. The Senate has decided in the particular case that the rule as the Chair understood was not to be enforced; and as there is no standard by which the Chair can determine in the future what a question is, he therefore shall decline to guess about it. The Senate must, on objection from the floor, hereafter be the judge of that matter itself.

The Chair invited the appeal. The Chair is entirely satisfied to have it settled. The Chair is not mad with anybody about the action taken. The Chair did not say anything that he supposed was uncalled for, otherwise he would not have said it; and he is sure the Senator from Mississippi will not care to adhere to that observation when he thinks about the matter a little further.

Mr. HARDWICK. Mr. President, there have been so many arguments made with reference to this question that are not justified by the facts, and there are so many misapprehensions both here and in the country about the real meaning of this section, that I feel that before we vote, those of us who favor the elimination of this section ought to call attention to certain inconsistencies in the arguments and positions of the proponents of this proposition.

In the first place, you would think from the telegrams individual Senators are receiving about this matter that the real thing involved in section 56 was these summer training camps like the one at Plattsburg, and people throughout this Republic are appealing to Senators not to do away with the summer training camps. Why, Mr. President, the proposition involved in section 56 is neither directly nor necessarily associated with these training camps in the remotest degree whatever.

In the Hay bill, for instance, where the continental-army plan was rejected—a proposition, by the way, which the House of Representatives defeated by an overwhelming majority—provision was made in section 82 for these summer training camps, and there is no reason on earth why we can not have camps like those at Plattsburg and Fort Oglethorpe throughout the country without necessarily having to have either a volunteer or a continental army. So much for that phase of the question.

One argument made was that the Senate ought to provide for this volunteer force, because business men who did not have time to attend the militia drills could go into this system, and would do so, and yet the argument was made by these same gentlemen, the proponents of this bill, that the militia were so inefficient, drilled so little, and were so poorly trained that we ought to have this more efficient volunteer force instead of the militia. They blow hot one minute and cold the other, and we can not confine them to either side of anything connected with this question. They insist on having both sides of the whole business.

If the volunteer force proposed by section 56 is going to provide a well-disciplined, thoroughly trained, efficient military reserve force for the United States, it is going to take time, and lots of time, from these business men; and the very business men to whom the proponents of this measure said this system appeals, who have not time to go into an "inefficient" militia, will never have time to embrace any of its benefits. On the other hand, Mr. President, if the fact is that this system is to establish a nice, gilded, summer-resort proposition for weary business men of affairs who like to hie themselves away to the mountains or to the seacoast when the heated periods come—if it is going to do that, and if it is going to give to those men, I say, a nice summer vacation, and they are going to divert themselves by a little patriotic training in these summer camps, and it is to be no more than that—then I ask these distinguished gentlemen how much more efficient will this volunteer force be than our militia?

It seems to me that they impale themselves on one or the other horn of this dilemma.

Mr. President, in the course of his very eloquent and very forceful remarks on yesterday, the Senator from Oregon [Mr. CHAMBERLAIN], invoking as he did the patriotic spirit of this country to come to the assistance of his beleaguered bill and to save his threatened section, said one thing that was true absolutely beyond all question, and that is, I think, the keynote of this entire situation. He spoke not only with eloquence but with historical accuracy when he said, "The boys of this country have fought every war that it has ever had." That is the truth; and yet when I propose to establish these reserves, not in a summer man's frolicking camp, not even in the militia, as far as the real backbone of the reserves goes, but in the schools and colleges of this country, where 2,000,000 boys are who can and will gladly furnish all the reserve forces that this country need, I can get no support from this honorable committee. I say they are wedded to ideas, that they want to do something that pride of opinion has committed them to, or they would not neglect this school question.

Just one other observation, and I shall have concluded what I want to say on this section, because I do think we ought to come to as speedy a vote as is possible.

The distinguished Senator from Nebraska [Mr. HITCHCOCK] yesterday appealed—almost on his knees, metaphorically—to Members of this body, and especially to Members on this side, to stand by the committee and follow the committee. Senators, I have had somewhat of a long service, for a man of my years, here in Congress, in one House or the other; and I fully agree with the Senator from Nebraska that ordinarily you ought to follow the recommendations of your committees, especially in the other House of Congress, where, I am willing to say, measuring my words, that committee work is much more efficient and painstaking than it is in this House of Congress. But it seems to me that that rule is subject to several qualifications that no fair-minded or experienced legislator can well dispute.

If it is a question of information—something that the committee has had the opportunity to study out, something that the committee has had the time and the opportunity and the means to know about better than other Members of the body who are not on the committee—then, of course, we ought to follow the committee, because they have superior information on the question at issue, and have had the opportunity and the time, and have taken both, to familiarize themselves with the question. But, on the other hand, Senators, if the question at issue is one of principle, if it is merely whether we are going to apply to a proposition one governmental principle or another,

then I think any Senator in this body is just as capable of forming his own opinion, expressing and voicing and voting his own conviction, as any member of any committee that this body ever appointed or constituted.

So much, Mr. President, for the issues involved in the motion to strike out section 56. We will never get a real reserve for this country unless we do one of two things. The Senator from New York [Mr. O'GORMAN] mentioned one of them yesterday—compulsory military service—and I want to say to him and to a Senator on the other side of the Chamber who voiced the same sentiment to-day it is utterly repugnant to my democratic instincts, aye, to my American instincts, to hear such a sentiment expressed here and such a course suggested. I do not believe in compulsory military training. It is un-American, and I hope and pray the time may never come when we shall have to resort to it in this country.

The happy geographical isolation of the American Republic has long saved our people so far from the burdens of this character that European nations have had to bear. I do not believe the situation has so changed or that the time has yet come when we must depart from one of the best of American principles and say to our people they must bear the burden of general and compulsory military service. Even in England, Mr. President, the other great Anglo-Saxon country of this world, although that country is engaged in a colossal struggle in which her very life is at stake, the idea of general compulsory service among all her people is not generally popular. The instincts of our people are peaceable. They are democrats—and I use the word broadly, not in a partisan sense—in their tastes, peaceful in their instincts, and we do not want to set up any military establishment in this country like that which the taxpayers of Europe have groaned under for years. It is not necessary. There is nothing in the situation here or elsewhere that suggests any such necessity. If we are not going to do that, and I hope the time will never come when stern national necessity will require it, and I do not believe it is at hand now, or anywhere in sight—if we are not going to do that, the only way we can get an adequate reserve for the Army is in connection with the schools, where the boys will be glad to have training and where they can have it at the smallest possible expense under any plan, without the slightest disturbance to business or industry in any form. That is what we ought to do, and if we want to have a real reserve it is what we will do before we get through with the debate and pass this bill.

Therefore I am utterly unwilling to take any such hollow plan as section 56, which is urged on the one hand because the business men want to go off on a frolic and can not spare time enough to drill in the National Guard, and is urged on the other hand because it will provide a more efficient force than the militia. The utter inconsistency of the two positions shows how hard put are the proponents of this section for argument to support it with, and strengthens my conviction that it will accomplish nothing of practical importance, and had best be eliminated from the bill.

Mr. CHAMBERLAIN. Mr. President, I am not going to attempt to speak. I rose merely to suggest that I hope the Senate will vote on this question now, and to say that because of the slow progress which has been made on the bill, after to-day I am going to request the Senate to hold evening sessions so that the bill may be disposed of.

Mr. SMOOT. Mr. President, respecting the request made by the Senator from Oregon [Mr. CHAMBERLAIN] just now, I shall occupy but a few moments. I have not yet said a word upon this bill, although I am deeply interested in it. I believe in national preparedness, and I have so believed for many years. I believe that we are totally unprepared to-day to defend ourselves against any invasion of any first-class power. I have been receiving telegrams both for and against section 56. I received one this morning which I desire to read from a man whom I honor and respect. I have confidence in his judgment and wisdom as a citizen and as a soldier. He served his country in the Philippines during the Spanish-American War. He gave a splendid account of himself and won laurels for the State from which he enlisted. This telegram is dated April 5, Salt Lake City, Utah, and reads as follows:

[Telegram.]

SALT LAKE CITY, UTAH, *April 5, 1916.*

Hon. REED SMOOT,
United States Senate, Washington, D. C.:

It is my opinion that section 56, Senate bill, if enacted into law will force complete disorganization National Guard. If this force is destroyed don't believe a force of its present efficiency and numbers can be created by any scheme of citizen soldiery within 10 years.

E. A. WEDGWOOD,
Adjutant General.

Mr. President, if I believed what that telegram states, and I want to be frank in saying that I know the man who sent it believes it with all his heart, I would vote to strike out section 56. But I feel that he is too apprehensive of the result of such action. I believe, Mr. President, that if section 56 is retained in the bill it will in no way affect the future usefulness and effectiveness of our National Guard.

I know that our National Guard is composed of a splendid set of men. I know if this country was in trouble they would be among the foremost and best defenders of it. I know they are loyal and true Americans. I want the National Guard recognized to as great an extent as this bill provides for, and if I had my way it would be greater. I also believe that there should be a volunteer army, and while the one provided for in section 56 is not as I would wish, I shall vote for it. The expense of such an army has been referred to by many Senators, and it should be considered; but I believe with a first-class volunteer army peace will be easier maintained, and to secure this we should not hesitate at expending the amount that is provided for in the bill, and even a greater amount if necessary.

I believe that unpreparedness is the road to war. I am also fearful, Mr. President, that the National Guard can not be federalized, but will not discuss that question, as it has been so well covered by others. I have such faith in our National Guard I believe, that even if such was the case, all would respond and do their full duty if trouble came.

I shall content myself by saying that I shall vote to retain section 56.

Mr. HUGHES. Mr. President, I find myself in a position that I frequently occupy in this body. The debate has continued to such an extent that I fear to trespass upon the time of the Senate. It has continued for days and weeks, and we have heard arguments made over and over again. I have been ready to vote on this question at any time in the past week or 10 days. But so much turmoil has been created in various States, and in my State, that when I am called on to vote at this stage of the proceedings I think it is due to myself to state the reasons for the position which I propose to take.

I do not find anything in the pending proposition particularly pleasing to me. An attempt is being made to do something for the National Guard. A little sop, which will cost the people of the United States something like $24,000,000, has been thrown to them, with no possible chance, in my belief, of enhancing in the slightest degree the efficiency of the National Guard. Something like $24,000,000 is being thrown to the Volunteer Reserve Corps. It may do them a considerable amount of good, but in my humble judgment it is not going to result in the slightest degree to the advantage of the American people, unless there is something in the argument that a people like ourselves can be satisfied by a great expenditure of money, and that, being in a hysterical condition, the spectacle of Congress spending one hundred and odd million dollars will serve as a sort of sedative to their nerves and they will go through this period of public excitement with more comfort than they would otherwise have.

There may be something in what we are doing from that point of view, but it does seem to me it is a great pity in an emergency of this kind, when the people of the United States are actually aroused, that we can not keep ourselves free of the red tape, the cobwebs, the manacles, the ankle irons that traditions have forced upon us in the past when we were simply playing at having an army.

Now, the people are convinced that the recent events which have occurred in the world are of such a character that nations are likely to go to war against each other on slight pretense and for any or no reason. A great many people believe we have lived for years in a fool's paradise, when we believed that nations could not be gotten to go to war. No man would have been rash enough to predict that the situation which now exists in Europe could possibly take place, but here it is. It has a reflex effect upon the people of the United States, and they are crying out in their blind way for an army with which to defend them, and here we are talking about a volunteer reserve force, we are talking about a National Guard which we have ourselves made inefficient, and no one talks about the only thing that can be of any possible service to us in a time of emergency, to wit, the Regular Establishment of this country. It is admitted in these debates that we can not even enlist the Regular force up to the present authorized strength, and no one wants to do anything about that. There has been no suggestion made along those lines.

I want to state what I think this situation calls for. I realize the impossibility of coming in here on the floor of the Senate and attempting to recast a great military bill, but how pathetic it is to see it being dealt with in the old way—a little more

money, a few more men, this expenditure here, and that expenditure there, and after all it seems to me nothing absolutely is accomplished to bring about the result the American people want and for which the American people will be compelled to pay.

If I had my way the least I would do would be to raise the standing Army to 250,000 men. We can not get 100,000 now. Then, if we want 250,000 men what will common sense dictate that we should do? That we should make the regular service more attractive than it is. In a day when laboring men in the State of New Jersey are being paid as much as $3 a day working in factories—not skilled mechanics but unskilled mechanics—we are asking men to go into the regular service, to put off their civilian caste and standing, to accept a subordinate position for the first time in their lives inferior in rank to some other man, for $15 a month.

It was only in 1914 that the Executive order which provided what should be the rations of enlisted men carried food of a character that the ordinary mechanic's son in the United States was getting every day before he went into the Army. I congratulate the chairman of the Committee on Military Affairs that so far as he has been able to do it he has reformed one of the most crying abuses in the military service. I approve absolutely and wholly of the ration list as now constituted. As it was constituted when I was connected with the United States service it was a disgrace to this or any other country, and particularly to a country like this, whose people are generous and willing to pay and feed the men who constitute their fighting force.

With an army of 250,000 or 300,000 regulars serving two years with the colors and serving four years in the reserves, you would have each year going into civil life 125,000 men. If, as suggested by the Senator from Georgia [Mr. SMITH], those 250,000 men were given vocational and educational training during those two years, that time would not be lost either to the men or to the Nation; they would return into the civil walks of life trained soldiers and better citizens than they were when they entered the Army.

The 125,000 men leaving the Army each year and going back to the civil walks of life to earn their own livelihood would be better citizens than they were before, and without the expenditure of the money that we now propose to expend, and for which, in my judgment, we will get nothing, we could have such a system brought about.

Every one of the nations now engaged in this great war relied first upon their regular establishment. We shall have to rely first upon our Regular Establishment, if we have a Regular Establishment worthy of the name. In 10 years, under the operation of a law such as I suggest, we would have 1,250,000 trained soldiers in civil life, every one of whom would or could be in the reserves, connected with the Federal Government, and control over him retained by the Federal Government; and behind that body of reserves and behind that body of regular trained soldiers we could sit back more or less at peace and then see what we could do with the National Guard, and then see what we could do with the volunteer reserve force and the other fads and fancies that arise to the minds of the people in the various sections of the country.

Now, I want to say a word with reference to the National Guard. A good deal of the criticism that has been leveled against the National Guard can be justified. I speak from experience. But I do not believe that the state the National Guard finds itself in to-day is chargeable to the Guard. The National Guard is essentially a State organization, and we are attempting to make a Federal organization out of it. It is good enough for the purposes for which it is intended, but there are constitutional and legal difficulties in the way of making it a good enough force for what we intend it to be.

I believe a man can secure good military training by service in the National Guard. I know the men who went into the volunteer service who had had the benefit of the training of the National Guard were better soldiers than the men who went into the volunteer service without the preliminary training of the National Guard. So I believe it is an easy matter to train men to the point of the efficiency required of the enlisted men; but I do not believe that it is possible for the man who is engaged in the activities of civil life, as a lawyer or as a doctor or as a banker, to devote enough time to the service to become sufficiently proficient in military affairs to be capable of commanding troops.

The enlisted man of the National Guard loves his officers; he has confidence in his officers; and he wants to serve under those officers. It seems to me it would be easy enough to evolve a system whereby, if called into active service by the Government, he could be permitted to have over him a certain percentage of his National Guard officers. There could be a framework, a skeleton, of an organization throughout the National Guard; I would say, for instance, each company might be permitted to select its own captain. A certain standard of efficiency might be demanded of him before he accepted his commission; but after he has passed his examinations for captain and is the officer the company desires, and is properly commissioned by the governor and then by the President, that man could be paid sufficient money so that he could devote all his time and attention to the affairs of the National Guard. We could do that, and we could increase the pay of the Regular Army soldiers. Everything which I have suggested could be done. We should then have an efficient force and a powerful and numerous reserve body in this country; and yet we would not begin to expend the amount of money that we are proposing to expend on the experiments on which we are about to enter under this bill.

In other words, if we want an army, if we want to defend this Nation, if we want to feel safe and be at peace, let us get an army of professional soldiers; and behind that front rank of trained, professional fighting men let us organize, equip, and train a volunteer army.

I am sorry that the committee has not gone into this matter in a broader and more fundamental way than they have done. I have about come to the conclusion, after listening to the debates, that it is my duty to vote against section 56. I think I shall devote my energies as much as I can in the direction of providing adequately for the arming, equipping, and paying of the men of the Regular organization, for I believe firmly in my heart that they are the chief reliance of this Nation.

Mr. REED. Mr. President——

Mr. CHAMBERLAIN. I do not intend to interfere with the Senator, but I do hope that we may be able to get a vote this afternoon on the motion to strike out this section.

Mr. REED. The time that I take will not interfere with that.

The PRESIDENT pro tempore. The Senator from Missouri.

Mr. REED. Mr. President, there has been a good deal said about the National Guard not being available in time of war. One example is worth all the theorizing in the world. I want to read merely a few sentences from a letter written by Gen. Clark, who is the commander of the Missouri National Guard, a lawyer of distinction and ability, and as good a citizen as there is in my State. He writes:

> It was stated before the House committee the other day by Mr. Breckinridge, the Assistant Secretary of War, I believe, that at the outbreak of the Spanish-American War only 30 per cent of the National Guard volunteered. I have heard this statement made before, and I wish to say that so far as it applies to the National Guard of this State, it is absolutely without the semblance of truth. The records will show that in 1898, 100 per cent of the National Guard of this State volunteered for service in that war. I am reliably advised that this same condition existed in all of the States. My information is that only one organization in the United States declined to volunteer, and this grew out of some difficulty with the governor over the appointment of its officers. Statements of this kind are not believed by those who make them, and are made with a view solely to discrediting the National Guard.

Mr. President, this question presents itself to me in this form: It is proposed to have a Regular Army of 180,000 men. It is admitted that there will be difficulty in securing that many men for the Regular Army unless the pay is raised or other advantages additional to those now existing are afforded. It is proposed, then, to create a reserve force or a supplementary force to fall back upon in the event of war.

The National Guard exists; it is now reasonably well equipped. It has headquarters, armories, and officers. It is a body of men that certainly is 100 per cent in advance of the condition in which it was at the time the Spanish-American War broke out. It is constantly improving, but during all these years it has clamored for certain assistance, for certain opportunities which have been steadily denied it. This organization can be made a first-class organization.

The fear I have is that our committee—and I do not say it to unjustly charge anything against the committee—have in some way been led to a discrimination against the National Guard.

In illustration of what I am going to say I call attention to the fact that, if I understand this bill, and if others who have written me understand it, correctly, it is proposed that, in case of war and in case of the utilization of the National Guard, the officers above the rank of captain are to be then practically mustered out of the service, because there is no provision for pay for them. I should like to ask the chairman of the committee if that is not the exact condition of the bill?

Mr. CHAMBERLAIN. No, Mr. President; they are not mustered out of the service. The bill as it was originally pro-

posed by the National Guard Association paid the higher officers, those above the rank of captain, salaries—quite large salaries—and the committee felt, from the evidence that they had before them, that the practical officer, the training man, the man who had most to do with the Guard, was the captain, because in many States they did not have regimental units, and we provided only for pay up to the grade of captain, except when the Guard were called into service, and then they were to get the pay of their rank.

Mr. REED. I do not think that makes it entirely clear. I have a letter from the colonel of the First Infantry, National Guard of Missouri, who makes this comment:

> The House bill now before the Senate provides that no officers but the captains and lieutenants of companies shall be paid. This eliminates the colonel, lieutenant colonel, the three majors, and several staff captains and lieutenants.
>
> These men are absolutely necessary to the success of any organization, and, in fact, they are the ones that are compelled to bear a great part of the expense, and it is absolutely unjust that they should not be included in any provision for compensation. Their work, as a matter of fact, is work that there is the least reward to, as they have very little part in the show end of the Guard, and they are continually called on for funds of various kinds to cover expenses. I trust that you will insist on these officers being included as they were under the provisions of the Hay bill.
>
> Section 112 of this same bill provides that officers and men who have signed the agreement and received compensation for their service may be called into the service in time of war. You can readily see that this is a joker by which all field and staff officers would be eliminated in case of trouble, and no one go into the field except the companies. In other words, the entire regiment as an organization would be destroyed.

Mr. President, here is this organization existing. As has been demonstrated in these debates, it has repeatedly proven its efficiency. As was stated the other day in the debate, in about five or six hours' time they were able in the State of Ohio to mobilize at one point 2,000 of these men. Instead of cutting down this organization, which exists, we ought to build it up.

Now what is proposed? To create a grand army of enthusiasm that is going to meet once a year for about 30 days, which I frankly admit can be gotten together to some extent during a time of war excitement, but which I utterly deny we have a single line of experience in this or any other country to warrant us in believing will come together on ordinary occasions. We are told that these gentlemen can come out for 30 days once a year, but that they can not join the National Guard. I want to know why? I want to know why a man who can give 30 days' time every year in the middle of the summer can not also give one night a week to attend drill at an armory? I say that you will encounter the greatest disappointment you have ever met with if you undertake to make an army by calling together an unorganized body of men—for that is what it will be—for 30 days each year, then allowing them to disintegrate and go to their homes. An army without headquarters, without equipment, and without cohesion. If these men come voluntarily and in great numbers at first, you will find that they will speedily disappear and disintegrate, like gentlemen do who go to a camp meeting and get enthusiastic, and then, after the camp meeting is over, nearly all forget there ever was a camp meeting. You will not get an army in that way; and if you spend $25,000,000 in that way, you will have burned up that much money without result.

There is a way you can employ that money and get a result. Twenty-five million dollars would pay $100 a year to 250,000 students in the schools and colleges in this country; it would pay the tuition of many of them; it would enable many a boy to go to school who can not now attend; you would reach the boy at a period of life when he has the time to devote and the energy to give to a military training. Why not use that money in advancing military science amongst those boys or young men who are already mobilized in your schools; who are already, figuratively speaking, in the camps; who are there where they can be reached? Why can you get them? First, because they are already mobilized; second, because young and ambitious men will enlist in companies and be willing to serve because they are associated with men like themselves—with their fellow students. There is no humiliation in such service; on the contrary, there is an inspiration in it. There would be a thronging into the ranks of schoolboys who would be willing to serve for a small compensation, and, as has been suggested here, the physical exercise and all that goes with military training would well repay our country for the money so expended.

I do not want to see an attempt made here to create three different kinds of armies. I do not want an army made up of shreds and patches. A Regular Army is absolutely all right, and I am willing to vote for a Regular Army of generous size; but back of that there ought to be one army, one organization, one system; and to its creation we should devote our energies. Then if, in addition, you go into your public schools and give a general training to the youth of this country, you will in the end so disseminate military knowledge and discipline as to give abundant strength to the country.

Mr. CHAMBERLAIN. Mr. President, I suggest the absence of a quorum.

The PRESIDENT pro tempore. The Senator from Oregon suggests the absence of a quorum. Let the Secretary call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst	Gore	Myers	Smith, Ga.
Bankhead	Harding	Nelson	Smith, Md.
Beckham	Hardwick	Newlands	Smith, S. C.
Borah	Hitchcock	Norris	Smoot
Brandegee	Hollis	O'Gorman	Sterling
Broussard	Hughes	Oliver	Stone
Catron	Husting	Overman	Sutherland
Chamberlain	Johnson, Me.	Page	Swanson
Chilton	Johnson, S. Dak.	Pittman	Taggart
Clapp	Jones	Pomerene	Thomas
Clark, Wyo.	Kenyon	Ransdell	Townsend
Clarke, Ark.	Kern	Reed	Vardaman
Culberson	Lane	Robinson	Walsh
Cummins	Lewis	Saulsbury	Warren
Curtis	Lippitt	Shafroth	Weeks
Dillingham	Lodge	Sheppard	Williams
du Pont	McCumber	Sherman	Works
Gallinger	Martin, Va.	Simmons	

The PRESIDENT pro tempore. Seventy-one Senators having answered to their names, a quorum is present.

Mr. CHAMBERLAIN. I ask for a vote.

The PRESIDENT pro tempore. The question is on the adoption of the motion of the Senator from Maryland [Mr. LEE] to strike out section 56. On that the yeas and nays have been demanded.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. CHILTON (when his name was called). I announce my pair with the senior Senator from New Mexico [Mr. FALL]. Unless I can obtain a transfer, I shall not be able to vote.

Mr. KERN (when Mr. FLETCHER's name was called). I desire to announce the unavoidable absence of the senior Senator from Florida [Mr. FLETCHER] on official business. He is paired with the junior Senator from Idaho [Mr. BRADY].

Mr. HARDING (when his name was called). I have a general pair with the junior Senator from Alabama [Mr. UNDERWOOD]. In his absence I withhold by vote.

Mr. HOLLIS (when his name was called). I have a general pair with the junior Senator from New York [Mr. WADSWORTH]. I transfer that pair to the junior Senator from California [Mr. PHELAN] and will vote. I vote "nay."

Mr. JOHNSON of Maine (when his name was called). I have a general pair with the junior Senator from North Dakota [Mr. GRONNA], which I transfer to the senior Senator from Tennessee [Mr. LEA], and will vote. I vote "nay."

Mr. OLIVER (when Mr. PENROSE's name was called). My colleague [Mr. PENROSE] is necessarily absent. He is paired with the senior Senator from Mississippi [Mr. WILLIAMS]. If my colleague were present and at liberty to vote, he would vote "yea."

Mr. REED (when his name was called). I transfer my pair with the senior Senator from Michigan [Mr. SMITH] to the senior Senator from New Jersey [Mr. MARTINE] and will vote. I vote "yea."

Mr. SAULSBURY (when his name was called). I have a general pair with the junior Senator from Rhode Island [Mr. COLT]. I am informed, however, that if present he would vote as I shall vote. I therefore vote "nay."

Mr. ASHURST (when the name of Mr. SMITH of Arizona was called). I desire to announce the unavoidable absence of my colleague [Mr. SMITH of Arizona].

Mr. LEWIS (when Mr. TILLMAN's name was called). I simply wish to announce the absence of the senior Senator from South Carolina [Mr. TILLMAN] and to say, by his permission, that if he were present and were permitted by his pair to vote he would vote "yea."

Mr. WEEKS (when his name was called). I have a general pair with the senior Senator from Kentucky [Mr. JAMES]. I transfer that pair to the junior Senator from Rhode Island [Mr. COLT] and will vote. I vote "nay."

Mr. WILLIAMS (when his name was called). I have a standing pair with the senior Senator from Pennsylvania [Mr. PENROSE]. I transfer that pair to the senior Senator from Arizona [Mr. SMITH] and will vote. I vote "nay."

The roll call was concluded.

Mr. GALLINGER. I beg to announce a pair between the Senator from Maine [Mr. BURLEIGH], who is unavoidably detained, and the Senator from Tennessee [Mr. SHIELDS].

Mr. MYERS. I have a pair with the junior Senator from Connecticut [Mr. McLEAN]. In his absence I withhold my vote. If the Senator from Connecticut were present, he would vote "nay," and if I were at liberty to vote I would vote "yea."

Mr. HUGHES. I desire to announce the unavoidable absence of the senior Senator from Kentucky [Mr. JAMES], who is detained from the Senate on important business.

Mr. TOWNSEND (after having voted in the negative). I have a general pair with the junior Senator from Florida [Mr. BRYAN]. Not being able to obtain a transfer of that pair, I withdraw my vote.

Mr. CURTIS. I have been requested to announce that the junior Senator from West Virginia [Mr. GOFF] is paired with the senior Senator from South Carolina [Mr. TILLMAN].

The result was announced—yeas 34, nays 36, as follows:

YEAS—34.

Ashurst	Hughes	Overman	Smith, S. C.
Bankhead	Jones	Page	Stone
Clapp	Kenyon	Ransdell	Swanson
Clarke, Ark.	Kern	Reed	Taggart
Culberson	Lee, Md.	Robinson	Thompson
Cummins	Lewis	Shafroth	Vardaman
Curtis	McCumber	Sherman	Works
Gore	Martin, Va.	Simmons	
Hardwick	Norris	Smith, Ga.	

NAYS—36.

Beckham	Gallinger	Nelson	Smith, Md.
Borah	Hitchcock	Newlands	Smoot
Brandegee	Hollis	O'Gorman	Sterling
Broussard	Husting	Oliver	Sutherland
Catron	Johnson, Me.	Pittman	Thomas
Chamberlain	Johnson, S. Dak.	Poindexter	Walsh
Clark, Wyo.	Lane	Pomerene	Warren
Dillingham	Lippitt	Saulsbury	Weeks
du Pont	Lodge	Sheppard	Williams

NOT VOTING—26.

Brady	Goff	Martine, N. J.	Smith, Mich.
Bryan	Gronna	Myers	Tillman
Burleigh	Harding	Owen	Townsend
Chilton	James	Penrose	Underwood
Colt	La Follette	Phelan	Wadsworth
Fall	Lea, Tenn.	Shields	
Fletcher	McLean	Smith, Ariz.	

So the motion of Mr. LEE of Maryland was rejected.

APPLICATIONS FOR PAROLE (S. DOC. NO. 389).

The VICE PRESIDENT laid before the Senate a communication from the Attorney General, transmitting, in response to a resolution of the 28th ultimo, certain information relative to the operation of the act of June 25, 1910, as amended by the act of June 23, 1913, relative to the number of applications for parole under the law, etc.; which was ordered to lie on the table and to be printed, and to be printed in the RECORD, as follows:

DEPARTMENT OF JUSTICE,
Washington, D. C., April 3, 1916.

Hon. JAMES M. BAKER,
Secretary United States Senate.

SIR: In accordance with the Senate resolution of the 28th ultimo asking for information relative to the operation of the act of June 25, 1910, and as amended by the act of June 23, 1913 (parole act), I have to inform you that there have been made 5,735 applications for parole under this law up to this date. Of this number, 1,756 have been recommended for parole by the board of which the warden is a member, 1,446 paroles have been granted, and there are 91 cases still pending.

In a very few cases the warden, acting as a member of the parole board, may have voted for parole and been overruled by the other two members of the board. It would be a very difficult matter to ascertain the number of such cases, and I am assuming that the words "recommended by the warden" appearing in the resolution were intended to read "recommended by the parole board."

Respectfully,

T. W. GREGORY, *Attorney General.*

DISTRICT GASLIGHT COMPANIES (S. DOC. NO. 390).

The VICE PRESIDENT laid before the Senate a communication from the Commissioners of the District of Columbia, transmitting, in response to a resolution of the 14th ultimo, certain information as to the action taken by the Commissioners of the District of Columbia to enforce section 11 of the act of Congress of March 4, 1913, relative to the Washington Gas Light Co. and the Georgetown Gas Light Co., both of the District of Columbia, which was referred to the Committee on the District of Columbia and ordered to be printed, and to be printed in the RECORD, as follows:

EXECUTIVE OFFICE,
COMMISSIONERS OF DISTRICT OF COLUMBIA,
Washington, April 4, 1916.

Hon. THOMAS R. MARSHALL,
President of the Senate, Washington, D. C.

SIR: The Commissioners of the District of Columbia have the honor to submit the following on the resolution passed by the Senate March 14, 1916, which provides—

"That the Commissioners of the District of Columbia be, and they are hereby, directed to report to the Senate as soon as practicable what steps, if any, have been taken by them since September 10, 1913, to enforce section 11 of the act of Congress entitled 'An act making appropriations to provide for the expenses of the Government of the District of Columbia for the fiscal year ending June 30, 1914, and for other purposes,' approved March 4, 1913, so far as the same may affect the Washington Gas Light Co. and the Georgetown Gas Light Co., both of the District of Columbia."

Pursuant to the instructions of the commissioners, the corporation counsel, on September 15, 1913, filed in the Supreme Court of the District of Columbia a bill in equity against the Washington Gas Light Co., asking for the dissolution of the company because it was holding certain stock of the Georgetown Gas Light Co. in violation of the anti-merger act of March 4, 1913. The bill prayed not only for a dissolution of the company but also for a sale of the stock so owned and held by the company. The Georgetown Gas Light Co. was made a party to this cause.

The gas companies answered the bill, issue was joined, and the case went to a hearing on the 5th of February, 1914.

Prior to the filing of this bill Thomas L. Hume had filed a bill, as one of the stockholders of the Washington Gas Light Co., against this company to have the stock of the Georgetown Gas Light Co. held by it sold and the proceeds distributed among the stockholders of the Washington Gas Light Co.

The Georgetown Gas Light Co. has also filed a bill against the Washington Gas Light Co. to have the same stock canceled and declared null and void because purchased and held in violation of law.

These three cases were consolidated and came on to be heard before Justices Gould and Stafford, of the Supreme Court of the District of Columbia; evidence was taken therein and they were argued and submitted to the court for its decision on the 5th day of February, 1914. No decision has as yet been handed down by the court.

Very respectfully,

BOARD OF COMMISSIONERS OF THE
DISTRICT OF COLUMBIA,
By O. P. NEWMAN, *President.*

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by J. C. South, its Chief Clerk, announced that the House had passed the bill (S. 5016) to authorize the reconstruction of an existing bridge across the Wabash River at Silverwood, in the State of Indiana.

The message also announced that the House had passed a joint resolution (H. J. Res. 103) authorizing and directing the Director of the Census to collect and publish additional statistics, in which it requested the concurrence of the Senate.

ENROLLED BILLS SIGNED.

The message further announced that the Speaker of the House had signed the following enrolled bills, and they were thereupon signed by the Vice President:

S. 1809. An act to create an additional judge in the district of New Jersey;

S. 3391. An act to amend an act entitled "An act for the relief of Indians occupying railroad lands in Arizona, New Mexico, or California," approved March 4, 1913;

S. 3977. An act to authorize the Shamokin, Sunbury & Lewisburg Railroad Co., its lessees, successors, and assigns, to construct a bridge across the Susquehanna River from the borough of Sunbury, Northumberland County, Pa., to Monroe township, Snyder County, Pa.;

S. 3978. An act to authorize the Catawissa Railroad Co., its lessees, successors, and assigns, to construct a bridge across the west branch of the Susquehanna River from the borough of Milton, Northumberland County, Pa., to the borough of West Milton, Union County, Pa.;

S. 4190. An act authorizing the Yankton County Bridge Co., a corporation, to construct and maintain a bridge or bridges and approaches thereto across the Missouri River at a point between Yankton County, S. Dak., and Cedar County, Nebr.;

H. R. 8466. An act to relieve J. Lawrence Latham, postmaster at Eupora, Webster County, Miss., of the payment of cash and funds stolen from the post office; and

H. R. 13769. An act to authorize the Secretary of War to supply tents for temporary use of the sufferers from the recent conflagration in Paris, Tex., and for other purposes.

PETITIONS AND MEMORIALS.

The VICE PRESIDENT presented a petition of the Baltimore Conference of the Methodist Episcopal Church, praying for prohibition of liquor traffic in the Territory of Hawaii, which was referred to the Committee on Pacific Island and Porto Rico and ordered to be printed in the RECORD, as follows:

The Baltimore Conference of the Methodist Episcopal Church, representing approximately a membership of 300 ministers and an equal number of lay representatives, in its annual session in Foundry Church, Washington, D. C., Bishop Earl Cranston, D. D., LL. D., presiding, having learned from reliable sources of the sad havoc made by the liquor traffic among the natives of the Hawaiian Islands, whose death rate has been greatly accelerated by the use of alcoholic drink, for which they have a peculiar weakness, and having also learned that the saloons of Honolulu are a constant and alarming menace to the physical and moral welfare of the many thousands of our American soldiers garrisoned on the island of Oahu, far from home, surrounded by many temptations, with few restraints: Be it therefore

Resolved, That we most respectfully and earnestly petition both Houses of Congress now in session in favor of the passage of the bill pending in the Senate and House for the prohibition of the liquor traffic in the Territory of Hawaii.

Our interest in this matter is all the more vital and paramount because of the missionary and educational work now being prosecuted

on the islands by our representative mission boards for the uplift of the many weaker races domiciled there beneath the flag.

In conformity with the foregoing and by order of the conference, we the undersigned, affix hereto our official signatures.

EARL CRANSTON, *President.*
FRANK G. PORTER, *Secretary.*

WASHINGTON, D. C., *April 4, 1916.*

Mr. HUGHES presented petitions of sundry citizens of New Jersey, praying for national prohibition, which was referred to the Committee on the Judiciary.

He also presented memorials of sundry citizens of New Jersey, remonstrating against the enactment of legislation to limit the freedom of the press, which were referred to the Committee on Post Offices and Post Roads.

Mr. PHELAN presented a petition of the Labor Council of San Francisco, Cal., praying for an investigation into conditions surrounding the marketing of dairy products, which was referred to the Committee on Agriculture and Forestry.

He also presented memorials of sundry citizens of California, remonstrating against the enactment of legislation for compulsory Sunday observance in the District of Columbia, which were ordered to lie on the table.

Mr. WARREN presented a petition of sundry citizens of Lingle, Wyo., praying for national prohibition, which was referred to the Committee on the Judiciary.

Mr. BURLEIGH presented a petition of the Chamber of Commerce of Bangor, Me., praying for military and naval defense of Penobscot Bay, Me., which was referred to the Committee on Military Affairs.

He also presented petitions of sundry citizens of Maine, praying for national prohibition, which were referred to the Committee on the Judiciary.

Mr. CLARK of Wyoming presented a petition of sundry citizens of Carpenter, Wyo., praying for national prohibition, which was referred to the Committee on the Judiciary.

Mr. POINDEXTER presented petitions of sundry citizens of the State of Washington, praying for national prohibition, which were referred to the Committee on the Judiciary.

He also presented the memorials of J. D. Bishop and sundry other citizens of Garfield, Wash., remonstrating against the enactment of legislation to limit the freedom of the press, which were referred to the Committee on Post Offices and Post Roads.

He also presented petitions of Local Grange No. 201, Patrons of Husbandry, of Bellingham, and of William Valley Grange, No. 452, Patrons of Husbandry, of Deer Park, in the State of Washington, praying for Government ownership of telephone and telegraph systems, which were referred to the Committee on Post Offices and Post Roads.

He also presented memorials of Local Grange No. 201, Patrons of Husbandry, of Bellingham, and of Stranger Creek Grange, No. 374, Patrons of Husbandry, of Daisy, in the State of Washington, remonstrating against an increase in armaments, which were ordered to lie on the table.

He also presented the memorials of E. C. Kellogg and sundry other citizens, of College Place, and of C. D. Threlkeld and sundry other citizens, of Auburn, all in the State of Washington, remonstrating against the enactment of legisaltion for compulsory Sunday observance in the District of Columbia, which were ordered to lie on the table.

He also presented a memorial of Burnt Valley Grange, No. 509, Patrons of Husbandry, of Chewelah, Wash., remonstrating against the passage of the bill (S. 2986) to provide capital for agricultural development, to create a standard form of investment based upon farm mortgage, to equalize rates of interest upon farm loans, to furnish a market for United State bonds, to create Government depositaries and financial agents for the United States, and for other purposes, which was ordered to lie on the table.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. SMITH of Maryland:

A bill (S. 5401) to aid the State of Maryland to construct a military and post road, to be known as the National Defense Highway, connecting the United States Naval Academy grounds at Annapolis, the capital of Maryland, and the seat of the Federal Government, the District of Columbia; to the Committee on Post Offices and Post Roads.

A bill (S. 5402) granting a pension to Charles Railey; to the Committee on Pensions.

By Mr. LODGE:

A bill (S. 5403) authorizing the President to appoint John Gibbon a major and quartermaster in the Quartermaster's Department of the Army; to the Committee on Military Affairs.

By Mr. OWEN:

A bill (S. 5404) granting a pension to Victor Tucker (with accompanying papers); to the Committee on Pensions.

By Mr. GALLINGER:

A bill (S. 5405) granting an increase of pension to Francis Roy (with accompanying papers); to the Committee on Pensions.

By Mr. O'GORMAN:

A bill (S. 5406) for the enlargement, etc., of the assay office in the city of New York (with accompanying papers); to the Committee on Public Buildings and Grounds.

HOUSE JOINT RESOLUTION REFERRED.

H. J. Res. 103. Joint resolution authorizing and directing the Director of the Census to collect and publish additional statistics was read twice by its title and referred to the Committee on the Census.

RECESS.

Mr. CHAMBERLAIN. Mr. President, I desire to state again, while Senators are all here, that beginning to-morrow, in order to speed this measure as much as possible, I shall ask that the Senate remain in session in the evening.

I move that the Senate take a recess until to-morrow at 12 o'clock.

The motion was agreed to; and (at 5 o'clock and 50 minutes p. m., Thursday, April 6, 1916), the Senate took a recess until to-morrow, Friday, April 7, 1916, at 12 o'clock meridian.

HOUSE OF REPRESENTATIVES.

THURSDAY, *April 6, 1916.*

The House met at 11 o'clock a. m.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

Teach us, O Lord, Thy ways and incline our hearts to walk therein in spite of the temptations, trials, and barriers in the way. It is not ease, inertia, that makes the manly man, but the earnest, sincere efforts to do things worth while. "In the world ye shall have tribulations, but be of good cheer—I have overcome the world." The earnest for every truth-loving, noble-minded, self-sacrificing man, who lives to a purpose. So may we live and aspire, to be and to do, that the peace which passeth understanding may be ours, now and evermore. Amen.

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. Waldorf, one of its clerks, announced that the Senate had passed the following resolution:

Resolved, That the Secretary be directed to return to the House of Representatives, in compliance with its request, the bill (H. R. 13006) to authorize the reconstruction of an existing bridge across the Wabash River at Silverwood, in the State of Indiana, and the maintenance and operation of the bridge so reconstructed.

BRIDGE ACROSS THE WABASH RIVER.

Mr. ADAMSON. Mr. Speaker——

The SPEAKER. For what purpose does the gentleman from Georgia rise?

Mr. ADAMSON. I wish to correct a mistake made on Monday in an emergency bill for a bridge. Overlooking the fact that an identical Senate bill was on the Speaker's table, a House bill was passed and sent to the Senate, but it was recalled. It is H. R. 13006. I ask unanimous consent that it be reconsidered and all proceedings vacated.

The SPEAKER. The gentleman from Georgia asks unanimous consent that all proceedings by which the bill H. R. 13006 was passed be vacated. Is there objection? [After a pause.] The Chair hears none.

Mr. ADAMSON. Now, Mr. Speaker, I ask unanimous consent that the Senate bill be considered. It is on the Speaker's table.

The SPEAKER. The Clerk will report it.

The Clerk read as follows:

An act (S. 5016) to authorize the reconstruction of an existing bridge across the Wabash River at Silverwood, in the State of Indiana.

Be it enacted, etc., That the Toledo, St. Louis & Western Railroad Co., and Walter L. Ross, its receiver, their successors or assigns, be, and they are hereby, authorized to reconstruct the bridge of said company and operate the same across the Wabash River at or near Silverwood, Ind., at a point suitable to the interests of navigation, on the line of the existing bridge of said company, in accordance with the provisions of the act entitled "An act to regulate the construction of bridges over navigable waters," approved March 23, 1906.

SEC. 2. That the right to alter, amend, or repeal this act is hereby expressly reserved.

The SPEAKER. The question is on the third reading of the Senate bill.

The bill was ordered to be read a third time, was read the third time, and passed.

On motion of Mr. ADAMSON, a motion to reconsider the vote by which the bill was passed was laid on the table; and the bill H. R. 13006 was laid on the table.

RIVERS AND HARBORS.

Mr. SPARKMAN. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House of the state of the Union for the further consideration of the bill H. R. 12193, the river and harbor bill.

Mr. MOORE of Pennsylvania. Mr. Speaker——

The SPEAKER. For what purpose does the gentleman rise?

Mr. MOORE of Pennsylvania. To suggest the absence of a quorum.

The SPEAKER. The gentleman from Pennsylvania [Mr. MOORE] makes the point of order that there is no quorum present, and evidently there is not.

Mr. KITCHIN. Mr. Speaker, I move a call of the House.

The motion was agreed to.

The SPEAKER. The Doorkeeper will close the doors, the Sergeant at Arms will notify the absentees, and the Clerk will call the roll.

The roll was called, and the following Members failed to answer to their names:

Abercrombie	Estopinal	Hulbert	Pou
Alexander	Fairchild	Jones	Price
Anthony	Farr	Keister	Ramseyer
Aswell	Finley	Kennedy, Iowa	Roberts, Mass.
Barchfeld	Flynn	Kennedy, R. I.	Rodenberg
Beales	Focht	Lazaro	Sabath
Bennet	Freeman	Lehlbach	Sanford
Black	Gallagher	Lewis	Scott, Pa.
Bruckner	Gardner	Liebel	Scully
Brumbaugh	Garland	Linthicum	Selis
Buchanan, Ill.	Garrett	Lobeck	Sherley
Byrnes, S. C.	Glass	Loft	Slayden
Callaway	Goodwin	Loud	Snyder
Cantrill	Gould	McAndrews	Stephens, Miss.
Charles	Graham	McCulloch	Stephens, Tex.
Cooper, Ohio	Gray, Ala.	McKenzie	Stiness
Copley	Gray, Ind.	McKinley	Sutherland
Crago	Griest	Maher	Tilson
Decker	Guernsey	Meeker	Tinkham
	Hamill	Mooney	Vare
Dension	Hamilton, N. Y.	Moores, Ind.	Venable
Dent	Hart	Morin	Ward
Dewalt	Haskell	Morrison	Watkins
Doremus	Haugen	Mott	Watson, Pa.
Drukker	Hay	Nichols, Mich.	Williams, W. E.
Dyer	Hayes	North	Winslow
Eagan	Henry	Oglesby	Wood, Ind.
Eagle	Hill	Patten	Young, N. Dak.
Edmons	Hilliard	Peters	Young, Tex.
Edwards	Houston	Porter	

The SPEAKER. On this roll call 312 Members—a quorum—have responded to their names.

Mr. KITCHIN. Mr. Speaker, I move that further proceedings under the call be dispensed with.

The motion was agreed to.

The SPEAKER. The Doorkeeper will open the doors.

LEAVE OF ABSENCE.

Mr. BUCHANAN of Illinois, by unanimous consent, was granted leave of absence for a week, on account of important business.

RIVERS AND HARBORS.

The SPEAKER. The gentleman from Florida [Mr. SPARKMAN] moves that the House resolve itself into Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 12193, the river and harbor appropriation bill.

The motion was agreed to.

The SPEAKER. The gentleman from Missouri [Mr. RUBEY] will take the chair in the absence of the gentleman from Kentucky [Mr. SHERLEY], who is detained in committee.

Accordingly the House resolved itself into Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 12193, the river and harbor bill, with Mr. RUBEY in the chair.

The CHAIRMAN. The Clerk will report the title of the bill.

The Clerk read as follows:

A bill (H. R. 12193) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes.

The CHAIRMAN. An amendment is pending, which the Clerk will report.

The Clerk read as follows:

Amendment by Mr. GOOD: On page 9, line 12, after the word "improvement," strike out "$1,000,000" and insert "$200,000."

Mr. SPARKMAN. Mr. Chairman, how much time does the gentleman from Wisconsin [Mr. FREAR] desire?

Mr. FREAR. Five minutes.

Mr. SPARKMAN. I ask unanimous consent that all debate on this paragraph close in 10 minutes—5 to be used by the gentleman from Wisconsin [Mr. FREAR] and 5 by myself.

The CHAIRMAN. The gentleman from Florida asks unanimous consent that all debate on the pending amendment be closed in 10 minutes.

Mr. MANN. I think the request was on the paragraph and all amendments thereto.

Mr. SPARKMAN. Yes; that all debate on this paragraph and amendments thereto be closed in 10 minutes—5 to be controlled by the gentleman from Wisconsin and 5 by myself.

Mr. MANN. The gentleman from Iowa [Mr. GOOD] would like 5 minutes on his amendment, and he has another amendment on which he would like 5 minutes.

Mr. GOOD. I have another amendment to offer in the event this amendment is not adopted.

Mr. SPARKMAN. I will confine myself at present to this one amendment, and ask that debate on it close in 15 minutes.

Mr. MANN. That is satisfactory.

The CHAIRMAN. The gentleman from Florida asks unanimous consent that the debate on this amendment close in 15 minutes, 5 minutes to be controlled by the gentleman from Wisconsin [Mr. FREAR], 5 by the gentleman from Iowa [Mr. GOOD], and 5 by the gentleman from Florida. Is there objection?

There was no objection.

Mr. FREAR. Mr. Chairman, when the committee rose on Tuesday the amendment before the House was upon lines 11 and 12 of the bill, appropriating $1,000,000 for the Norfolk and Beaufort waterway, so called. The amendment of the gentleman from Iowa [Mr. GOOD] reduces the million-dollar appropriation contained in the bill to $200,000, which is intended, as he stated, to cover the amount that would be required to keep the Government dredges employed, and is intended also to strike out the $800,000, which would be let to private contract at a rate 80 per cent in excess of what it would be if the work were performed by the Government.

I wish to speak more particularly in response to what was suggested by the gentleman from North Carolina [Mr. SMALL] at that time. He had quite an extended discussion of the subject of the commerce conveyed by this canal and also about the amount of money that had been appropriated and will be appropriated for this waterway. He stated that 603,000 tons would be carried by the Dismal Swamp Canal and this canal if they were thrown together. But, Mr. Chairman, that is an impossibility under existing conditions. There are two canals reaching down from Norfolk to the South. One goes to Elizabeth City, 30 miles inland—and I know this because I have been over it. It is about 60 miles from Norfolk to Elizabeth City. By this other canal route it would be 120 miles between these points. Col. Taylor conceded that some of the commerce, or much of the commerce, which goes over the Dismal Swamp Canal originates along that canal. There are two towns on that canal—Norfolk, a large city, and another city of considerable importance, Elizabeth City, on the Dismal Swamp Canal. The purpose of this Beaufort Canal is to drive that Dismal Swamp Canal out of business; as the engineers say, into bankruptcy. But you can not take away the little traffic they have over there, because the conditions are different. This canal will never carry it. This canal carries only about 65,000 tons outside of the wood and ties and logs that could be carried on a 9-foot waterway, the existing depth.

Mr. MOORE of Pennsylvania. Mr. Chairman, will the gentleman yield there?

Mr. FREAR. For just a moment.

Mr. MOORE of Pennsylvania. The gentleman indicated that the commerce here was largely local.

Mr. FREAR. No; I did not intend to indicate that. Some of it comes from the South by a barge line. The total amount is 209,000 tons this year and 258,000 tons the year before and includes both local and other freight.

Mr. MOORE of Pennsylvania. The gentleman is mistaken in that. One company has carried at least 600,000 tons in the last year.

Mr. FREAR. Well, if that be true, Mr. Chairman, the company referred to did not carry it through the canal.

Mr. MOORE of Pennsylvania. I will inform the gentleman that 100 new barges are operating in that canal.

Mr. FREAR. I can not yield further, Mr. Chairman. I am sustaining my statement by the official records. The Engineer's reports have not been questioned heretofore. We have appropriated a little over a million dollars on the canal thus far. It is through an unsettled country. There are not a hundred thou-

sand people living in that neighborhood. I think not 50,000; I think, in fact, Senator Burton showed there were not 25,000 people living there. It is a $5,400,000 item, and there is no telling what the end of this will be, and there is practically no important commerce on it. On the Erie Canal the commerce has practically been driven off, and as the distinguished gentleman from Illinois [Mr. CANNON] said the other day, there is no waterway traffic in the United States that amounts to anything outside of the deep waterway canals. This is only a shallow canal. It was bought over from a private company by the United States at a cost of $500,000 and is a poor investment.

The CHAIRMAN. The time of the gentleman from Wisconsin has expired.

Mr. GOOD. Mr. Chairman, I desire to use but two minutes on this amendment, and I reserve the other three minutes for the other amendment.

Mr. FREAR. The gentleman can not do that.

Mr. GOOD. Mr. Chairman, this amendment provides that $200,000 shall be appropriated for this work for this year. The testimony before the committee was to the effect that not more than $200,000 could be used in the operation of the Government plant. The Army engineers state that it cost the Government 4.3 cents per cubic yard, place measurement, to do the work with its own plant, while the contractors are paid more than 7.5 cents per cubic yard for the work done by them. My amendment will give the Army engineers all the money they can expend next year by keeping the Government plant in operation. If done in that way, the work will be done at a cost of approximately 4.3 cents. If this amendment prevails, it will take longer to do the work; but it will not cost much more than half the amount of money to do it that it will cost if this work is done by private contract.

The CHAIRMAN. The time of the gentleman has expired.

Mr. SPARKMAN. Mr. Chairman, of course, I sympathize with any effort that gentlemen may make here to reduce the cost of this class of work to a minimum; but the amendment of the gentleman, in my opinion, would not have that effect. My judgment is that it would make the work cost a great deal more than it will cost if we proceed in the way we have proceeded heretofore. No one can tell at this time what kind of a bid may be submitted by a would-be contractor. Whatever bid is submitted, the House may rest assured that the Government engineers and the War Department are not going to allow any more than is absolutely necessary to get the work done, as they always reserve the right to reject any or all bids. I want to say, further, that the Government dredging plants, of which the Government has a large number, costing about $15,000,000, with a present value of about $12,000,000, have had the effect of reducing very materially the amount charged by contractors. I remember when I first entered this body, 21 years ago, that in my section of the country it was costing five or six or seven times as much to do a given amount of dredging as the contractors charge now for the same kind of work, and that reduction is very largely because of the fact that we have quite a number of plants in that section of the country. Now if it is necessary to apply any remedy, the true remedy is to build more dredges. But I doubt very materially if it is necessary, because we are getting this work done almost as cheaply, perhaps quite as cheaply, as it can possibly be done. There may be now and then an isolated case where a contractor may make more than he ought to make; but in the main they do not, and I wish to say, further, that neither the gentleman from Iowa nor anyone else can tell what the bids for this particular work are going to be.

Mr. GOOD. Will the gentleman yield for a question?

Mr. SPARKMAN. Yes.

Mr. GOOD. The report of the Army engineers was that for the last year the Government had constructed by private contract over 14 miles, at 7½ cents plus per cubic yard, and had constructed a little over 2 miles by Government plant, at a cost of 4.3 cents.

Mr. SPARKMAN. That probably is caused by the fact that in some places the Government work can be done a little more cheaply than in other places. At some places where they have a plant already constructed and not much wear and tear, the cost to the Government is very small, whereas in other places it is much larger. It is the average cost which ought to be considered.

Mr. GOOD. Where the cost to the Government is larger the report of the Army engineers shows that there is usually a greater difference between the cost by Government plant and the cost by private contract.

Mr. SPARKMAN. You can not fix the price in advance if you are going to have any work at all done by private contract.

Mr. TAVENNER. Mr. Chairman, I should like to ask the gentleman from Florida [Mr. SPARKMAN] how he can say that the Government engineers and the War Department will not pay private contractors more than it will cost the Government to do this work, when they have already paid more in previous years? Have these officers reformed?

Mr. SPARKMAN. I did not say that. The gentleman misunderstood me. It may and does in some instances cost more, but I remember at least one case where it cost the Government more to do the work than it would have cost to have it done by private contract.

Mr. TAVENNER. I should like to ask the gentleman from Florida, since the Government is going to continue to improve rivers year after year, and it is a permanent business, whether he does not think that as a general rule the Government itself ought to do it when it can save millions of dollars by so doing?

Mr. SPARKMAN. If the gentleman from Illinois wants to turn all that class of work over to the Government, of course it may be done, but I do not think it ought to be done.

Mr. TAVENNER. Is the gentleman opposed to the Government doing it?

Mr. SPARKMAN. I am willing for it to do whatever is necessary, but if it undertakes to do it all the gentleman will find that instead of a plant costing $15,000,000 it is going to take twice or three times that to equip the Government to do this kind of work. If you want to embark on that plan, all right, but you want to first count the cost.

Mr. MOORE of Pennsylvania. Mr. Chairman, is there any time remaining?

The CHAIRMAN. The gentleman from Iowa [Mr. GOOD] has three minutes remaining, which he reserved for use on another amendment.

Mr. SPARKMAN. Have I any time remaining?

The CHAIRMAN. All time on this amendment has expired. The question is on the amendment offered by the gentleman from Wisconsin [Mr. FREAR].

Mr. MOORE of Pennsylvania. I ask unanimous consent that I may proceed for two minutes.

The CHAIRMAN. The gentleman from Pennsylvania asks unanimous consent that he may proceed for two minutes. Is there objection?

Mr. SPARKMAN. I think there will be another amendment, and the gentleman can get his opportunity on that.

Mr. MOORE of Pennsylvania. Very well, I will wait.

The CHAIRMAN. The question is on the amendment of the gentleman from Wisconsin [Mr. FREAR].

The question was taken; and on a division (demanded by Mr. FREAR) there were—ayes 57, noes 74.

Accordingly the amendment was rejected.

Mr. GOOD. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Iowa offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment by Mr. GOOD: On page 9, at the end of line 12, change the period to a colon and insert:

"*Provided*, That no part thereof shall be used to pay for any work done by private contract if the contract price is more than 25 per cent in excess of the estimated cost of doing the work by a Government plant."

The CHAIRMAN. The gentleman from Iowa is recognized for three minutes.

Mr. GOOD. Mr. Chairman, I am sure the House never wants to do a foolish thing. It never wants to do a thing that it is obliged to apologize for or go back upon. The fortification bill reported this morning contains this provision practically as I have offered it, as applied to this bill; that is, that private contractors shall not have more than 25 per cent on their contracts in excess of the estimated cost of doing the work by Government contract. You are going to be called upon to a man on that side of the aisle to support that proposition when the fortification bill is up for consideration, and when you do I commend your vote, for you will support it then, because I believe it is sound, I believe it is right, I believe that when you write that into the law on a bill covering $20,000,000 you are doing a courageous and patriotic thing, and I think you will be doing just as courageous a thing, just as patriotic a thing if you write it into a law appropriating $40,000,000 for river and harbor improvements.

And yet you voted down this proposition limiting contractors to reasonable profits the other day, and I take it that you are going to vote it down to-day, but how are you going to explain your action to the constituents that you represent, on a bill appropriating $40,000,000, on this item appropriating a million dollars, more than $300,000 of which is purely pork, according to the statement of the Army engineers.

As to the quarrel between the gentleman from Florida, the chairman of the committee, and the gentleman from South Carolina [Mr. SMALL], as to the amount of tonnage on this canal, I

have but little to say. I have confined my statement to the report made by the chairman of the committee that the total tonnage of the canal last year was 229,047 tons. The gentleman from Pennsylvania and the gentleman from North Carolina say that it is over 600,000 tons, but nowhere in the Army Engineer's report, nowhere in the report of the chairman of the committee, can you find more than 229,047 tons.

Now, Mr. Chairman, in this item, as I stated before, the Army engineers report that we are paying private contractors more than 7½ cents for doing the work, while the Government is doing the work for 4.3 cents, and my amendment simply limits the private contractor to a profit of 25 per cent.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Iowa [Mr. GOOD].

The question was taken; and on a division (demanded by Mr. SPARKMAN) there were 83 ayes and 50 noes.

Mr. SPARKMAN. Mr. Chairman, I ask for tellers.

Tellers were ordered, and the Chair appointed as tellers the gentleman from Florida [Mr. SPARKMAN] and the gentleman from Iowa [Mr. GOOD].

Mr. TRIBBLE. Mr. Chairman, can we have the amendment again read.

The CHAIRMAN. Without objection, the amendment will be again reported.

The Clerk again reported the amendment.

The committee again divided; and the tellers reported that there were 80 ayes and 59 noes.

So the amendment was agreed to.

The Clerk read as follows:

Beaufort Inlet, N. C.: For maintenance, $10,000.

Mr. MOORE of Pennsylvania. Mr. Chairman, I move to strike out the last word. Mr. Chairman, an amendment which is in line with Government ownership has just been passed by the committee, and it invites attention, since it applies directly to one of the great projects along the Atlantic seaboard. I have no quarrel with those Representatives who in good faith oppose waterway improvement, but those who live along the coast line sometimes wonder at the lack of interest in the matter of commerce and preparedness of those who come from the interior. No longer ago than day before yesterday one of the most distinguished men of his time, a man whom I have followed in fair weather and in foul, the great ex-Speaker of the House of Representatives [Mr. CANNON], stood upon this floor and made a speech which, respect him as I do, I am obliged to observe would have been remarkable if made anywhere within 100 miles of the Atlantic seaboard. In that speech he undertook, in opposition to the construction of a connecting waterway along the coast, to say that if the people in his valley of the Wabash could move the Atlantic Ocean over they would be grateful, since they would like to have the sea to go upon.

I do not think the gentleman would stand for that as an argument even in his own country, because it is untenable, as was the suggestion made by our distinguished leader on this side of the House [Mr. MANN] in the discussion of the river and harbor bill two or three years ago, when, in opposition to some eastern project, he suggested, in happy vein, the construction through the Rocky Mountains of a canal to connect Chicago with the Pacific Ocean.

In considering the bill we have just passed along a strip of country which, if you gentlemen who voted for the amendment were familiar with it, would at once point out to you the error of that vote. Not so much as it pertains to Government ownership, which you seemingly have voted into this bill, but because the effect may be to stop a great work, if, perchance, private contractors, with all the odium that attaches to the name, in these times of increased prices of material and labor, can not compete to the extent of 25 per cent with the Government plants, which have the overhead charges paid at the outset. There can be but one meaning to that amendment, and that is to impede, if not to stop, the business that is being done on the inside waterways of the Atlantic seaboard. And yet the votes have come, in part, from Atlantic Coast States, in spite of the representations of your own people, in spite of the resolutions passed by chambers of commerce and boards of trade and by business men and others engaged in shipping. You have joined our great leader on this side to vote out of this bill an important and needed improvement, demanded by your own constituents.

What does this coastal project mean? My great and good friend from Illinois [Mr. CANNON] indicates that what is proposed to be done here is to build an inside waterway along the Atlantic coast "6 miles from the sea." Oh, with all respect to one whom I love and admire, the gentleman from Illinois would do well to take up the geography that he studied in his North Carolina days and he would then understand how unfair and how inaccurate that statement is.

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

Mr. MOORE of Pennsylvania. Mr. Chairman, I ask unanimous consent to proceed for five minutes.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. MOORE of Pennsylvania. Mr. Chairman, I want this time in order that I may have an opportunity to tell my Republican friends along the Atlantic seaboard what the people will think of them when they come to realize that their Representatives have fallen in here under the banner of a Government-ownership proposition to defeat the great work that the people want done along the Atlantic seaboard—a work for commerce and preparedness, not for the people of the Atlantic coast but for all the people of the United States. My friend from Illinois [Mr. CANNON], with a splendid sweep of that strong left arm of his, indicated that preparedness upon a 6-foot channel or with a 10-foot or a 12-foot channel was ridiculous, and yet every one of you who has been following the story of the European war knows that the 6-foot channel in Germany has been the salvation of the German people in this great trial through which they are passing. [Applause.]

Every one of you who recalls the floods in Paris will remember that it was the barge on a six or seven foot canal that saved the people of that city and brought them food and munitions. What are we doing along our own coast? I want the men from Maine, the men from Vermont, the men from New Hampshire, the men from Massachusetts and New York, as well as those from Florida, North Carolina, and Virginia, to understand what they have done. I want to rouse them up to a sense of their duty. Apparently they have voted to stop business unless the Government goes into the contract business to construct this waterway. It will delay the work——

Mr. GOOD. Mr. Chairman, will the gentleman yield?

Mr. MOORE of Pennsylvania. Not now—delay the work on this waterway between Norfolk and Beaufort. On Saturday last I pointed out the great advantages of the waterway along the upper coast. This Beaufort reach is a connecting link running south, and what does it do? It carries our commerce inside the coast line from the sea as far as 50 miles from Cape Hatteras, the most dreaded point along the Atlantic seaboard, and which every mariner fears.

Oh, if some of you from the mountain tops, from the valleys of the interior, if some of you from along "the banks of the Wabash" would only go down there and look at the graveyard of the ships that have been piling up during the last 200 years you would not vote as you did a little while ago against proceeding with the work upon this inside course.

We are entitled to protection from Cape Hatteras. The people expect it. They want a safe passage for human life, a safe passage for thousands of tons of commerce which should not be driven to death in the open sea. I cite to you the case of three barges in distress on the Atlantic ocean yesterday. They were compelled to go outside because they were drawing too much water for the inside course. Their signals of distress were answered by a revenue cutter, and we are told that they were brought back safely to port. But what of the ships and the barges that are lost? Let gentlemen from Chicago answer this question. What have you done to help us?

During the 10 years from 1900 to 1909, according to statistics well confirmed, coming from the life-saving bureau of this Government, there were no less than 5,700 disasters to shipping along the Atlantic seaboard, many of them off Cape Hatteras, which you, my dear friend from Iowa [Mr. GOOD], would probably deny the advantage of an inside passage.

Mr. GOOD. Mr. Chairman, will the gentleman yield now?

Mr. MOORE of Pennsylvania. I will give the gentleman some figures that will convince him before I yield.

Mr. GOOD. Will the gentleman yield for a question?

Mr. MOORE of Pennsylvania. Yes.

Mr. GOOD. Does the gentleman mean to say that if we put a provision upon this bill which limits the profit of dredges to 25 per cent, will stop this improvement, when the farmers of Iowa, Illinois, and Indiana, according to Government reports, receive less than 3 per cent upon their investment?

Mr. MOORE of Pennsylvania. I hold no brief for the dredgers, but I will venture to tell the gentleman that the farmers of Iowa are more prosperous to-day and are making more money than are the dredgers along the Atlantic seaboard. I challenge the gentleman to deny that statement; your farmers are prosperous and they are prosperous because they are selling their

grain and their products to those of us along the Atlantic seaboard who are trying to safeguard your business.

Mr. GOOD. I simply quote from two Government reports, one from the Agricultural Department, and the other the report of the engineers.

Mr. MOORE of Pennsylvania. And the gentleman has done it in the name of the farmers who are most prosperous at the present time.

Mr. GOOD. I have done it in the name of an empty Treasury.

The CHAIRMAN. The time of the gentleman from Pennsylvania has again expired.

Mr. MOORE of Pennsylvania. Mr. Chairman, I ask unanimous consent to proceed for two minutes more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. MOORE of Pennsylvania. There were 5,700 disasters on the Atlantic seaboard during the 10 years following 1900. How many lives were lost in those disasters? It may not make any difference to you out West, possibly, but the total number of lives lost was 2,200. There is a fine old story which runs that it does not make any difference how many boys are killed in battle or how many go down in the ships, provided they are not your boys. Some of these 2,200 perhaps were western boys. They were our sons, our brothers, our fathers, heads of families, and they went down in those 10 years because, forsooth, we did not give them a safe inside passage. The material side of it may not be so important, but with those 2,200 lives went down $40,000,000 worth of property. It was the property of people all over the United States.

Why, men of Congress, if you had given us those $40,000,000 we would have built this inside waterway that by brother FREAR, of Wisconsin, and my brother CALLAWAY, of Texas, are worrying about, all the way from New York down south below the terrors of Cape Hatteras. I want you to think over the vote that you cast to-day, and I trust that you will not cast any more of the same kind. [Applause.]

Mr. SPARKMAN. Mr. Chairman, I move that all debate upon this paragraph close in five minutes.

The CHAIRMAN. The question is on the motion of the gentleman from Florida to close debate upon this paragraph in five minutes.

Mr. COOPER of Wisconsin. Mr. Chairman, a parliamentary inquiry. What amendment is before the House?

The CHAIRMAN. A pro forma amendment.

Mr. COOPER of Wisconsin. The gentleman from Wisconsin [Mr. FREAR] can make his speech on another pro forma amendment.

Mr. FREAR. But I want to talk on this particular waterway.

Mr. MANN. Mr. Chairman, I move to amend the motion of the gentleman from Florida by making it 20 minutes.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Illinois.

The question was taken; and on a division (demanded by Mr. MANN) there were—ayes 55, noes 66.

So the amendment was rejected.

Mr. MANN. Mr. Chairman, I move to amend by striking out "5" and making it "15."

The CHAIRMAN. The question is on the amendment of the gentleman from Illinois.

The question was taken, and the Chair announced that the ayes seemed to have it.

Mr. MANN. Mr. Chairman, I ask for a division.

The committee divided; and there were—ayes 53, noes 63.

So the amendment was rejected.

Mr. MANN. Mr. Chairman, I move to amend by striking out "5" and inserting "10."

The CHAIRMAN. The question is on the amendment of the gentleman from Illinois.

The question was taken, and the Chair announced that the ayes seemed to have it.

Mr. SPARKMAN. Division, Mr. Chairman.

The committee divided; and there were—ayes 54, noes 67.

Mr. MANN. Mr. Chairman, I ask for tellers.

Tellers were ordered.

Mr. MANN and Mr. SPARKMAN took their places as tellers.

The committee again divided; and the tellers reported—ayes 57, noes 82.

So the amendment was rejected.

The CHAIRMAN. The question is on the motion——

Mr. GREEN of Iowa. Mr. Chairman, I rise in opposition.

The CHAIRMAN. There is a motion before the House to close debate. The question is on the motion of the gentleman from Florida [Mr. SPARKMAN] to close debate in five minutes.

The question was taken, and the Chair announced that the ayes seemed to have it.

Mr. MANN. Mr. Chairman, I ask for a division.

The committee divided; and there were—ayes 83, noes 54.

Mr. MANN. Mr. Chairman, I ask for tellers.

Tellers were ordered.

Mr. MANN and Mr. SPARKMAN took their places as tellers.

The committee again divided; and the tellers reported—ayes 81, noes 48.

So the motion was agreed to.

Mr. GREEN of Iowa. Mr. Chairman, I rise in opposition to the pro forma amendment of the gentleman from Pennsylvania [Mr. MOORE] and also, incidentally, in opposition to the remarks which he just made. I was surprised a short time ago when the chairman of the Committee on Rivers and Harbors declined to accept the amendment which was last offered by the gentleman from Iowa, my colleague [Mr. GOOD]. I can not understand at this time how any Member could have voted against this amendment except on the theory that the committee ought to on all occasions and under all circumstances be sustained, regardless of the merits presented by the amendment which is offered.

Mr. Chairman, it has been repeated in the newspapers of the present day, iterated and reiterated, that the reason that this House is not voting more money for so-called preparedness is because a large majority of the Members of this House are too much interested in "pork-barrel" propositions. I do not care to consider that matter at this time, because I know, and every Member of this House knows, that, no matter what the vote on this bill for rivers and harbors may be, no matter what the amount that will be appropriated by it, it will not have the slightest effect on the amount that is awarded for preparation against invasion or for war.

Mr. RAGSDALE. Will the gentleman permit an interruption?

Mr. GREEN of Iowa. I can not at this time.

I do not know what defense could have been made to this amendment. There is nothing which would be more likely to bring this House into contempt and derision before the country than refusing to adopt the amendment which was offered by the gentleman from Iowa [Mr. GOOD]. The only objection that was made against it was the one which was made by the gentleman from Florida [Mr. SPARKMAN], that he thought instead of reducing the expense it would increase it, and that objection was made to the original amendment of my colleague. When it was introduced in such form that that objection could not be made, then comes my friend from Pennsylvania [Mr. MOORE] with a tearful plea for the sailors who are being wrecked along the coast.

Mr. Chairman, if I had a tenth part of the wealth that some of the gentleman's constituents possess and felt so sorry for the sailors that are obliged to go through the stormy regions of Cape Hatteras as he seems to feel, I would build a dredge myself and take the contract for less than 25 per cent above what it costs the Government to perform it. Why is it that these dredge owners will not enter into these contracts since this amendment was adopted? What do they want? Do they want 50 per cent or 100 per cent or 200 per cent higher than the Government price, or do they want more money to spend on banquets and to entertain people that they think can have some influence upon this House in the matter of these appropriations? That was all shown in statements made by my colleague by quotations from these very men who have been taking these contracts at an exorbitant price.

Mr. MOORE of Pennsylvania. The gentleman does not take the banquet proposition seriously, does he, as affecting Members of Congress?

Mr. GREEN of Iowa. I do not. I am happy to say that no one believes anything of that kind would affect Members of Congress; but these gentlemen who instituted these banquets seem to think that possibly they may have some effect, judging from the statements they have made.

Mr. MOORE of Pennsylvania. Will the gentleman yield?

Mr. GREEN of Iowa. I decline to yield further.

Regardless of the banquet proposition, there was one matter that was plainly brought out, and that was that these contractors were in a pool and a trust to hold up the Government and extract from the Government exorbitant and unreasonable prices for doing this work, and the amendment merely provided against their continuing so to do.

The CHAIRMAN. All debate is exhausted, and the pro forma amendment is withdrawn. The Clerk will read.

Mr. McLAUGHLIN. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. McLAUGHLIN. Was that motion to close debate on the section and all amendments thereto?

The CHAIRMAN. It was on the paragraph and all amendments thereto.

Mr. MANN. What became of the amendment, Mr. Chairman?

The CHAIRMAN. The pro forma amendment was withdrawn, or it will be considered as withdrawn, if there is no objection.

There was no objection.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Harbor at Morehead City, N. C.: For maintenance, $2,600.

Mr. McLAUGHLIN. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Michigan moves to strike out the last word.

Mr. McLAUGHLIN. The amendment offered by the gentleman from Iowa [Mr. GOOD] and adopted by the House was, I think, very proper, and it does not mean, in my judgment, that, as stated by the gentleman from Pennsylvania [Mr. MOORE], there is to be Government ownership and Government operation of all these works. I know something of the work done by the Government dredges and by private contract on the Great Lakes.

Mr. CALDWELL. A point of order, Mr. Chairman.

The CHAIRMAN. The gentleman will state it.

Mr. CALDWELL. Has the gentleman the right to discuss any other amendment than the one striking out the last word, following an amendment which has been passed? I object.

The CHAIRMAN. The gentleman from Michigan will observe the rules of the House.

Mr. McLAUGHLIN. If there is any question about being in order, I shall offer such an amendment as will make my remarks in order. I think the House should not be too particular, Mr. Chairman.

Mr. RAGSDALE. Mr. Chairman, a point of order.

The CHAIRMAN. The gentleman will state it.

Mr. RAGSDALE. I understood that the motion that was adopted was that all debate on this paragraph be closed.

The CHAIRMAN. The Chair knows.

Mr. MOORE of Pennsylvania. I ask unanimous consent that the gentleman be allowed to proceed for five minutes.

The CHAIRMAN. The gentleman is already recognized for five minutes.

Mr. MOORE of Pennsylvania. I thought a point of order was made against his proceeding.

Mr. CALDWELL. I object to his proceeding, Mr. Chairman.

The CHAIRMAN. The gentleman will proceed.

Mr. McLAUGHLIN. Mr. Chairman, I said I had some knowledge of the work done by the Government itself and by private contractors on the Great Lakes, and I know that the work done by the Government dredges has brought about a reduction of prices paid to the private contractors. It has not resulted in the Government doing all the work. It has not resulted in construction of Government plants sufficient to do a great part of the work. It has simply resulted in more reasonable contracts by private contractors.

Mr. SWITZER. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Michigan yield to the gentleman from Ohio?

Mr. McLAUGHLIN. Yes.

Mr. SWITZER. I will ask the gentleman if it is not a fact, as the gentleman from Iowa [Mr. GOOD] argued, that it has slightly increased the private contracts with respect to that canal?

Mr. McLAUGHLIN. My remarks are directed to this proposition, that it will not result in Government ownership and Government operation, as the gentleman from Pennsylvania [Mr. MOORE] so much fears.

Mr. FREAR. Mr. Chairman, will the gentleman yield at that point?

The CHAIRMAN. Does the gentleman yield?

Mr. McLAUGHLIN. I can not yield.

The CHAIRMAN. The gentleman declines to yield.

Mr. McLAUGHLIN. And the gentleman says also that in calculating the cost of work done by Government dredges, no account is taken of overhead expenses. I know that charge has been made concerning work on the Great Lakes, and it has been refuted. I wish to say that if the Government engineers operating under the direction contained in the amendment just adopted would make estimates of the cost of Government dredging without taking into account the overhead charges and all costs and charges that would have to be incurred by private contractors doing like work, they would not be worthy of the positions they occupy, and they ought to be court-martialed. I do not believe there will be any such style of figuring on the part of Government engineers.

Now, the gentleman from Pennsylvania [Mr. MOORE] is always forceful and sometimes interesting, but he is not always convincing or helpful to the House. The trouble with him is that he argues with the same force and vehemence respecting all propositions, good, bad, and indifferent, arguing with the same force this morning as yesterday when he defended those dinky little things which local enthusiasts call harbors on the coast of New Jersey. [Laughter.]

Mr. SMALL. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. McLAUGHLIN. Pardon me; I have not the time. One of those projects is Cold Spring Inlet, N. J., for which this bill carries an appropriation of $40,000 for maintenance. Concerning this project, or this harbor, as the local interests are pleased to call it, Capt. Lockwood, of the Corps of Engineers, in his report to Congress says:

> The project of improvement if carried to completion will be of material benefit to the city of Cape May as a pleasure resort by filling the adjacent swamp lands, obliterating mosquito-breeding beds, and furnishing opportunity for expansion of building sites.

We find also in the report made by Capt. Flagler, of the Corps of Engineers, the following statement concerning this project. The report says that it—

> would also permit a resumption of the yacht races that were at one time sailed at Cape May and formed the most attractive event of the season. The Cape May cup, an international trophy, I am informed, is now sailed for at New York. Together with the projects in real estate improvement at Cape May, the establishment of a secure harbor would, I am sure, largely increase the present patronage of summer visitors at this locality.

So river and harbor bills in the past have carried appropriations, and this bill carries an appropriation of money, under the guise of improving a harbor and providing for navigation, for the purpose of reclaiming swamp lands, exterminating mosquitoes, adding to the area of land for building sites, and for the purpose of assisting Cape May to compete with New York in the matter of regattas and yacht races. The only reason urged by the chairman of the committee for making this appropriation is that large sums of money have heretofore been expended, and, in order to maintain a semblance of a harbor, it is necessary for the Government to go on year after year spending money. The reports of engineers show that this project was approved in the first instance with the idea and with the hope that a large amount of commerce of great value would be worked up, it being estimated that the value of the commerce would be more than two million and a quarter dollars annually, but the commerce in 1914 was only 6,193 tons, with a valuation of $103,000.

In my judgment there is but one proper course to be pursued respecting this project. The business of the harbor has not developed in accordance with the expectations of the engineers and others who urged the improvement; the entire project is a failure and further expenditure by the Government is not a good proposition; in fact, it is absolute waste of money. If the improvement results only in draining swamps, killing mosquitoes, adding to the attractiveness of a summer resort, and providing for safety of racing yachts, it ought not to be maintained at the expense of the Government. If it is of real value for these purposes, the local interests, after having been generously supplied with money by the Federal Government, ought to be willing, as they are surely abundantly able, to maintain the harbor, if it may be so called, at their own expense.

Appropriations of money for such projects as this tend to justify charges made against river and harbor appropriations; they support the charge that this is pork-barrel legislation; and every legitimate project in the country and water commerce in general throughout the country suffer.

I speak as I do because I represent a district which has a number of harbors, every one of them doing business of an amount and character to justify Federal aid, and because I believe items like the one I have referred to in New Jersey weaken the bill and delay and interfere with appropriations for worthy projects.

It is not possible for one who is not a member of the committee to be familiar with many of the projects for which appropriations are recommended, nor am I able to say, or willing to believe, that the bill favors many projects like the Cold Spring Inlet project, but the presence of this project justifies some suspicion of the entire bill. I hope some way will be found to eliminate it and others like it.

The CHAIRMAN. The time of the gentleman from Michigan has expired.

Mr. MOORE of Pennsylvania. Mr. Chairman, I rise in opposition to the amendment offered by the gentleman from Michigan [Mr. MCLAUGHLIN].

Mr. SPARKMAN. Mr. Chairman, I ask unanimous consent that all debate on this paragraph and all amendments thereto close in five minutes.

The CHAIRMAN. The gentleman from Florida asks unanimous consent that all debate on this paragraph and all amendments thereto close in five minutes. Is there objection?

There was no objection.

The CHAIRMAN. The gentleman from Pennsylvania [Mr. MOORE] is recognized.

Mr. MOORE of Pennsylvania. Mr. Chairman, while "the gentleman from Pennsylvania" may not always be convincing, he appreciates the acknowledgment that he is sometimes forceful in this House, and if he has made an impression upon the gentleman from Michigan [Mr. MCLAUGHLIN] he is particularly pleased with that.

The gentleman from Michigan objects to "the gentleman from Pennsylvania" standing up for those things along the Atlantic seaboard that he thinks necessary to the preservation and promotion of life and property. The gentleman from Michigan never hesitates to ask for those things for the farm that he wants. When the Agricultural appropriation bill comes along the gentleman does not say anything about "pork barrel." When the Agricultural appropriation bill is under consideration we always find the gentleman from Michigan advocating the measures contained therein. But in keeping with the activity of the Chicago Tribune and other newspapers that do not know much about the subject, we hear him finding fault with the river and harbor bill. I would like the gentleman from Michigan and the gentleman from Illinois—the distinguished gentleman who has spoken frequently upon this floor upon this proposition—to know that up to 1907, according to the statistics of a White House conference, the amount of money taken out of the Treasury of the United States for the Mississippi Valley, to "clean out mosquitoes," and to build levees from the Great Lakes to the Gulf, was $208,000,000 out of a total of $552,000,000 from the beginning of time, and I would like the gentlemen from the Great Lakes territory and from the Mississippi Valley territory to know that while they were taking out this $208,000,000 of a total of $552,000,000, the Atlantic seaboard from the beginning of time, in the busy area of the original Thirteen States, received only $141,000,000. A pretty fair showing for the Middle West, considering its comparative youth!

The gentleman from Michigan talks here as if he knew something about the Atlantic coast; he says this great project, serving territory where we have the commerce, where we have the population, where we have the shipping, where we do more than 50 per cent of the manufacturing is for the purpose of wiping out the mosquitoes. Why, in his Agricultural bill the gentleman will not give a dollar to wipe out mosquitoes. He wants to take every dollar for the diseases of his cattle and horses, for seeds and soil, and for farm instruction. There is no "pork" in that. If there is, the gentleman can not see it. His farmer is the most prosperous man in the land to-day, but the gentleman comes along with his Agricultural bill, and the burden of the taxation is borne by the people along the Atlantic coast as well as his own. But the gentleman sees nothing in that to criticize. [Applause.]

Now, I am going to tell the gentleman something I think he should know. He harps, as a number of others from the Lakes country do, on the tremendous tonnage of the Soo Canal. I am glad it is large. I am as proud of it as he is, but when he says the facts as to the Atlantic coast, as I have stated them, are not convincing, he should be informed of his error. I have taken the trouble to look it up—the matter of tonnage—and I want the facts to be known. I will put them in the RECORD in full, because they are interesting. Out yonder upon the Soo Canal, which he claims is the center of the tonnage universe, they had for the year 1914 a total foreign tonnage of 26,000,000. On the Atlantic seaboard we had 51,000,000 tons.

Mr. MCLAUGHLIN. Will the gentleman yield?

Mr. MOORE of Pennsylvania. I am near the end of my time. I did not interrupt the gentleman.

Mr. MCLAUGHLIN. Does the gentleman mean to say that there were only 26,000,000 tons of freight passing through the Soo Canal in 1914?

Mr. MOORE of Pennsylvania. My figures are with reference to the foreign commerce on the Great Lakes.

Mr. MCLAUGHLIN. In 1913——

The CHAIRMAN. The gentleman's time has expired. All time has expired. The Clerk will read.

Mr. MOORE of Pennsylvania. I will put the figures in the RECORD. As to foreign tonnage the Atlantic ports are twice as strong as the Great Lakes, and as to values, sixteen times as much.

The Clerk read as follows:

Fishing Creek, N. C.: For maintenance, $1,000.

Mr. FREAR. Mr. Chairman, I move to strike out the last word.

Mr. SPARKMAN. I ask unanimous consent that all debate on this paragraph and amendments thereto close in five minutes.

The CHAIRMAN. The gentleman from Florida asks unanimous consent that all debate on this paragraph and amendments thereto close in five minutes. Is there objection?

There was no objection.

Mr. FREAR. Mr. Chairman, I had no idea of referring to this, although it is among my notes, but it comes right after the paragraph which the gentleman from Pennsylvania [Mr. MOORE] was so eloquently discussing, about the commerce upon the Atlantic coast. I am interested in this, and so is the committee, because the commerce at Fishing Creek amounts to 1,096 tons, of which 848 tons is timber hauled by the owners, leaving 248 tons the amount of commerce at this point. The gentleman from Michigan [Mr. MCLAUGHLIN] is right in his statement in regard to the Soo Canal, and the gentleman from Pennsylvania will find that the gentleman from Michigan is correct. The commerce passing through the Soo Canal in 1913, as shown by the Engineer's report, was something like 79,000,000 tons, according to my best recollection.

Of course, there is a large tonnage in Philadelphia. Philadelphia receives in this bill something like $2,700,000, with the authorization, due to the urgent pressure brought by the gentleman from Pennsylvania [Mr. MOORE], who looks after his constituents and does it well. Philadelphia is a large port; but when he objects, as he has objected upon this floor, to a limitation in the amount to be paid for dredging, he is attacking one of the fundamental objections to this bill, and you can not afford to go to the country with that. You do not want to needlessly waste money. No man on this floor should do that, and in all these dredging contracts we desire, as far as possible, to keep the cost down within limits, and that has been the purpose of the amendment offered by the gentleman from Iowa [Mr. GOOD]. Talk about Government ownership! There are a dozen great dredging contracts made for the Delaware River. There ought to be some limitation, if there be any question about what the profits are to be, and I believe that is a wise rule.

Now, the gentleman from Illinois [Mr. CANNON], who made the statement in regard to the waterway canal, said there was no canal in this country, outside of the deep-water canals, bringing any profit upon any investment. He referred, among others, to the Hennepin Canal. The gentleman is correct, so far as I can ascertain. Out of the 4,400 miles of canals that were in existence in the United States, 2,400 miles, or over 50 per cent of the canal mileage in this country, has been abandoned, and there is to-day no independent canal that is making 2 per cent profit upon the actual investment. Take the Delaware Canal, which the gentleman speaks about so frequently. The stock was worth nothing and the bonds were worth only 50 cents on a dollar before the proposition came for the Government to buy it. Take the canal, the Beaufort and Norfolk project; it was bought for $500,000. It was not a profit-making concern, but unprofitable. The Government took it, and we have been endeavoring to conduct some business on it, and we have spent over $1,000,000 already in that effort. The expenditure of $5,400,000 is proposed in this project, and we have developed a little over 200,000 tons of traffic. The gentleman says $40,000,000 will be paid for all this waterway. Why, as I understand it, it runs from $100,000,000 to $300,000,000.

Mr. MOORE of Pennsylvania. The gentleman is entirely in error. There is no justification for any such statement as that.

Mr. FREAR. If I am wrong, I will be glad to be corrected. It will be over $20,000,000 for this little 13-mile Delaware Canal the gentleman desires. That is the Agnus report. It will be far more than that for the canal across the State of New Jersey.

Mr. MOORE of Pennsylvania. The Agnus report recommends the construction of a 35-foot canal, and estimates the cost at $21,000,000.

Mr. FREAR. That is right. I said $20,000,000; $21,000,000 is the right amount.

Mr. MOORE of Pennsylvania. The cost along the line would be gauged according to the depth.

Mr. FREAR. Let me say to the gentleman that if it is to be used for preparedness, you have got to put that amount of money into it.

Mr. IGOE. Mr. Chairman, I ask unanimous consent that I may proceed for not more than five minutes, not on the bill but to answer a statement made by the gentleman from Illinois [Mr. MANN] on last Monday.

The CHAIRMAN. The gentleman from Missouri asks unanimous consent to proceed for five minutes, not upon the bill. Is there objection? [After a pause.] The Chair hears none.

Mr. IGOE. Mr. Chairman, on last Monday the Judiciary Committee reported a bill providing for the transfer of Chariton County, Mo., from the eastern district of Missouri to the western district of Missouri. The gentleman from Illinois [Mr. MANN] had some remarks to make about the form of the bill, and I stated as follows:

Mr. Chairman, when this bill was considered that question was raised, as to whether it might not be the better practice to set out the statute as it would read when amended, and some of us were informed that on another occasion when that had been done the Senate changed the practice and reported back the bill in some such form as this.

Mr. MANN. The gentleman's information was incorrect. There has been no such case. There has been no case where the House passed a bill amending an original section, where the Senate struck that out and inserted a mere change of the law.

Mr. Chairman, in the CONGRESSIONAL RECORD of February 15, 1915, on page 3820, it appears that the House considered a bill for the transfer of two counties in Arkansas, and that bill set out the section as it would appear when amended. The House passed the bill. The bill was called up in the Senate, and on page 5350 of the CONGRESSIONAL RECORD, on March 3, it appears that the bill was reported back to the Senate with the recommendation to strike out all after the enacting clause and insert a bill in the same form as that which we passed last Monday. That amendment was agreed to in the Senate and the bill was returned to the House, and the bill as amended by the Senate was agreed to by the House and passed, and it will be found on page 5490 of the RECORD. I make this statement because the gentleman from Illinois is usually correct and his statement might be taken as proof of the fact.

Mr. MANN. I will say, Mr. Chairman, that I am very much obliged to the gentleman from Missouri for the correction.

Mr. IGOE. I thought the gentleman would be, and I wanted to put it in the RECORD so that the Judiciary Committee might at least stand right before the House.

Mr. MANN. That was one case of bad practice which slipped by me.

The Clerk read as follows:

Cape Fear River above Wilmington, N. C.: Completing improvement and for maintenance, $83,000.

Mr. FREAR. Mr. Chairman, I offer the following amendment: Amend page 10 by striking out lines 16 and 17.

Mr. Chairman, I offer this amendment because the improvement and maintenance are both joined together, and it seems to me there is a great waste on that river, which has so far cost the Government over $7,000,000. I am referring to the upper part of the river, which gets $83,000. The project is an 8-foot project. The engineer says that he did not believe than an 8-foot navigation was necessary, but thought that 4 or 5 feet would be sufficient. The board and Mr. McKenzie, chief, approved of a modification of the channel from 8 feet to 4 feet and from $1,350,000 to $615,000. The river and harbor act of 1910 provided for 8-foot navigation, to cost $615,000, with $85,000 maintenance. The report of 1914 says that since the adoption of the present project closer investigation of conditions, and so forth, render it necessary to increase the estimate from $615,000 to $1,031,000; the project is about 60 per cent completed.

Now, I wish to call the attention of the House to the fact that Congress has been unfair in that it reduced the appropriation $600,000, but left the requirement for an 8-foot channel. The Army engineers say it is a mistake in estimates, because Congress insists on the original depth but cuts the appropriation one-half.

Mr. MANN. Will the gentleman yield?

Mr. FREAR. Yes.

Mr. MANN. This is to complete an improvement?

Mr. FREAR. Yes; but it is an 8-foot channel where Army engineers said that 4 feet would be enough. The House took away half of the original appropriation and left the project requiring an 8-foot channel.

Mr. MANN. If we started in to finish an 8-foot channel to cost $600,000 or $1,300,000, whatever it is, is it not wise to complete it if it will only cost $50,000 or $60,000?

Mr. FREAR. That would be true if the commerce afforded any reason for it, but commerce is practically, the most of it, 4 miles above Wilmington. Practically three-quarters of the commerce comes from just above the city. The fault lies originally with Congress, for they took away from the Army engineer's estimate about one-half of the appropriation and then insisted on an 8-foot channel. It shows the effect of legislating in a haphazard fashion and the waste it occasions.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Wisconsin.

The question was taken, and the amendment was rejected.

The Clerk read as follows:

Charleston Harbor, S. C.: Completing improvement of the 28-foot channel to the sea, $70,000; for maintenance of improvement of Ashley River, $10,000; in all, $80,000.

Mr. WHALEY. Mr. Chairman, I offer the following amendment.

The Clerk read as follows:

Amend, by inserting on page 11, between lines 4 and 5, the following: "Cooper River, S. C.: For improvement of channel from the harbor of Charleston to the naval reservation, so as to provide a channel 30 feet deep at all stages and 600 feet wide in straight stretches, increasing to a thousand feet at bends, in accordance with report published in House Document 947, Sixty-first Congress, second session, $175,000."

Mr. WHALEY. Mr. Chairman, as this is an important amendment, I ask unanimous consent that I be allowed to proceed for 15 minutes.

The CHAIRMAN. The gentleman from South Carolina asks unanimous consent to proceed for 15 minutes. Is there objection?

There was no objection.

Mr. WHALEY. Mr. Chairman, this amendment is offered for the purpose of providing an adequate channel from the harbor of Charleston to the navy yard, located 6 miles above the city of Charleston. There is an anomalous situation down there, which has been knocking at the doors of Congress ever since the Charleston yard was located. In 1900 when the Roger Board recommended the removal of the yard from Beaufort, S. C., to Charleston, it made the following statement in its report:

To reach the site selected on the Cooper River it would be desirable to remove the shoal at the head of Drum Island and also a lump in the bend of the river above, neither of which involves any difficulty or much expense.

Ever since the yard was located at Charleston, there has been a crying need to remove two lumps from the river so that it will allow the battleships to proceed to the yard. To-day any battleship in the Navy can enter the splendid harbor of Charleston. The whole United States fleet can be mobilized in that deep and commodious harbor, but when it comes to going from the harbor to the navy yard, which is distant 6 miles, there are two lumps in the river which carry only 26 feet of water and a width of 150 feet. To-day it is almost impossible for any naval officer to take a battleship from the harbor to the yard. He has 26 feet under his ship at mean low tide and 5 feet rise, but he has only 150 feet in width and at the bends of the river it is impossible to turn a battleship which may be four or five hundred feet long so as to avoid grounding her. The navy yard at Charleston has a dock which can accommodate any battleship in the Navy which has a length of not more than 545 feet. It is the largest navy yard south of Hatteras. There are six navy yards north of Hatteras and only three south of Hatteras.

The water on the sill over the dock at Charleston is 31 feet, as much as there is over any sill with the exception of the New York yard. The bar at Charleston will allow any ship to come into the harbor, and any ship drawing not more than 31 feet can be docked in that dock. Yet we have the situation to-day where a ship can not get to the navy yard because of two little shoals up this river. In 1909 there was a provision in the river and harbor bill calling for a survey of this river. A survey was made and a report made to Congress, in which it is stated:

Cooper River in its present condition will accommodate present or reasonably prospective commerce and needs no improvement, therefore, but considering the needs of the Navy Department some improvement is desirable. From correspondence herewith it appears that the needs of the Navy Department would be met by dredging a channel 30 feet deep at all stages, and 600 feet wide in straight reaches, increasing to 1,000 feet at bends up to the naval station, passing to the east of Drum Island, which is estimated by the district officer to cost $175,000.

This project has been before Congress since 1910, and has been turned down by the Committee on Rivers and Harbors year after year, because it was a naval proposition and the committee only considered the commercial needs of river improvement. In 1914 there was a resurvey of this river made for the purpose of ascertaining the commerce on the river, and a report was made to Congress in which it was stated that the commerce of the river had increased from $400,000 to $5,000,000, and this year a statement was made to the committee at a hearing held on the deepening of the harbor entrance to 30 feet that the commerce had increased since 1914 from $5,000,000

to nearly $12,000,000. We have a situation down there to-day where all of the ships of the Navy can gather in the harbor and mobilize there and any ship in the Navy can dock at that yard which is not more than 545 feet in length and does not draw more than 31 feet of water, but she can not go up the river to the yard because of two small shoals, where the river is not wide enough. We have ample water in front of the yard. At every other place in this river there is from 30 to 50 feet of water, and yet we have been unable to get any relief from the Committee on Rivers and Harbors, because it is a naval proposition, and we can not get any relief from the Naval Committee because it does not deal with harbor propositions. We are going into the question of national defense——

Mr. TREADWAY. Mr. Chairman, will the gentleman yield?

Mr. WHALEY. Yes.

Mr. TREADWAY. The gentleman states that it is a naval proposition. Is not the reason that he can not get relief from the River and Harbor Committee the fact that it is a new project?

Mr. WHALEY. Oh, that was after 1914.

Mr. TREADWAY. I am talking of the present time.

Mr. WHALEY. At the present time the objection to it is that it is a new project and it was not put in the bill on that account this year. Last year the same objection was made, namely, that it was a new project.

Mr. O'SHAUNESSY. Mr. Chairman, will the gentleman yield?

Mr. WHALEY. Yes.

Mr. O'SHAUNESSY. Can the gentleman inform us how much money was expended there for the navy yard?

Mr. WHALEY. The Navy Department has spent $5,000,000 at the navy yard.

Mr. O'SHAUNESSY. And they have built a yard there although they did not have accommodations to go to the yard?

Mr. WHALEY. At that time the battleships were drawing 26 and 27 feet of water, which would have given enough water to go up to the yard at high tide only.

Mr. O'SHAUNESSY. Did they go up?

Mr. WHALEY. They have had several up there. The *Olympia* is up there to-day, but she is a short ship.

Mr. O'SHAUNESSY. Has the $5,000,000 investment at the Charleston Navy Yard been justified in any manner?

Mr. WHALEY. More than justified. They have got fourteen hundred employees working there to-day, and have been working continuously for two years, and the Secretary of the Navy has written letters commending the yard for its efficient and splendid work.

Mr. O'SHAUNESSY. What I am driving at is to find out in what way it has been useful as a navy yard for the accommodation of battleships?

Mr. WHALEY. The only battleship there is the *Olympia*.

Mr. O'SHAUNESSY. That is the only one?

Mr. WHALEY. Yes.

Mr. O'SHAUNESSY. And you have sufficient depth of water at the yard, but you can not get to the yard on account of this channel?

Mr. WHALEY. Yes.

Mr. O'SHAUNESSY. And you want to deepen it to 30 feet and widen it to 600 feet, and at certain points in the river to 1,000 feet?

Mr. WHALEY. Yes.

Mr. O'SHAUNESSY. And the objection is made that you can not have it because it is a new project?

Mr. WHALEY. Yes.

Mr. MADDEN. How much will it cost?

Mr. WHALEY. It will cost $175,000; but there is nothing for maintenance. The report of the engineers is that there will be nothing at all for maintenance. It is a flat-footed proposition of $175,000 to widen and deepen the river to the yard.

Now, I want the House to understand that this is no attempt on my part to inject any pork-barrel business into this legislation, but it is a worthy, fair, and just project that has been demanded by the Navy Department for years for the purpose of allowing the use of the yard for battleships.

Mr. Chairman, when I found that the New York item was going into this bill, and that there was to be an exception made so far as new projects were concerned, and that the committee was going to take into consideration the needs of the Navy, carrying out the lines of national defense as urged by the Executive, I also got busy. I saw the Executive and I called his attention to this matter. He stated to me that he would send for the chairman of the committee. The other day when the chairman was making his splendid statement in reference to this bill I asked him if he had seen him, and he admitted that he had been seen by the Chief Executive and he had referred him to the naval officers.

I want to read to this House a letter addressed by Admiral Benson to the chairman of the Committee on Rivers and Harbors, dated February 25, 1916:

FEBRUARY 25, 1916.

MY DEAR MR. SPARKMAN: Since our conversation a few days ago in regard to the channel leading from the city of Charleston, S. C., to the navy yard, I find, on more careful investigation, that the dry dock at that yard will comfortably accommodate any of our vessels up to and including the *Utah* and *Florida* class.

As I told you at that time, I had taken the *Utah* into Charleston Harbor, and the least water found in the main channel was 33 feet. Following out the same line of argument that I used in regard to the channel in the East River leading from the southward to the New York Navy Yard, I feel that I should correct the error under which I was laboring the other day, and say that I believe the channel leading from the city of Charleston up to the navy yard should be so improved as to make it possible to accommodate any battleship in our Navy that could use that dry dock.

At the time the conversation took place the other day I was under the impression that this dock could not accommodate any except our very oldest battleships, and was really a little in doubt in regard to that. I am sorry that I should have been in ignorance of this point, but having discovered that I was ignorant, and consequently arguing on a wrong basis, I think it only proper that I should correct the mistake that I made at that time.

As you remember, when before the full Committee on Rivers and Harbors, the direct question was asked if I thought we should have a first-class navy yard south of Hatteras, and in answer to that question I stated "yes." I am still of that opinion, and as Charleston is the only one that fills that condition at present, I feel that this is also another argument why I should correct the wrong impression that I was laboring under during the conversation in question.

I feel particularly impelled to make this correction as in case of any international complication there should be any naval engagements south of Hatteras, it would be of vital importance to be able to use all the facilities that the Charleston yard offers, and to this extent I consider that this improvement should be considered in the nature of an urgent one.

Now, Mr. Chairman, I wish to read a letter from the Secretary of the Navy, addressed to the chairman of the Committee on Rivers and Harbors, dated March 3, 1916:

MARCH 3, 1916.

MY DEAR MR. SPARKMAN: While in Charleston, S. C., last December there were a number of our battleships in the harbor, and I was very much impressed with the necessity of deepening the channel leading from the harbor to the dry dock at the Charleston yard.

As you doubtless are aware, the dry dock at Charleston is sufficiently large to accommodate vessels of the *Utah-Florida* class and possibly the *Arkansas-Wyoming* class.

The cost, as I understand it, of deepening this channel is comparatively small, and as this dock is the only one of anywhere near its size south of Hatteras, it should be available for use in case of accident to any of our vessels off our southern coast. Due not only to the long distance but also to the stormy weather that might be encountered off Hatteras and to the northward, it might be of vital importance to take an injured vessel into a dock south of Hatteras.

In view of the efforts we are making along the line of preparedness, I consider the deepening of the channel leading from Charleston Harbor to the navy yard at that place of great importance and of an urgent character, and I recommend that action be taken toward its early accomplishment.

Sincerely, yours, JOSEPHUS DANIELS.

Hon. S. M. SPARKMAN, M. C.,
House of Representatives, Washington, D. C.

Mr. Chairman, there is not a single naval officer with whom I have ever talked or ever heard speak of the next naval fight, should this country get into war, who has not stated that it will take place in the Caribbean Sea. The Norfolk Navy Yard, which is north of Hatteras, is 1,500 miles from the Caribbean Sea. The Norfolk Navy Yard is 500 miles from the Charleston Navy Yard. If we have a fight in the Caribbean Sea, doubtless we will win that fight, but our battleships are not going unscathed. They are going to be injured, and will have to go 500 miles before they can get into a dry dock. If this project is adopted and these shoals are removed from this river, a ship can be taken into the Charleston Navy Yard and save 500 miles before it could get to the Norfolk yard, and avoid going around Cape Hatteras, which is considered "the graveyard of the Atlantic."

The CHAIRMAN (Mr. SHERLEY). The time of the gentleman has expired.

Mr. WHALEY. Mr. Chairman, I ask unanimous consent for five minutes more.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. HUMPHREY of Washington. Will the gentleman yield?

Mr. WHALEY. I will.

Mr. HUMPHREY of Washington. As I recall the depth of the water at the entrance of your harbor it is 28 feet.

Mr. WHALEY. It is 28½ feet, with a rise of 5½ feet at high tide, making the least depth at high water 33 feet.

Mr. HUMPHREY of Washington. I have always thought that that was one harbor that ought to be assisted. I am glad to hear what the gentleman says.

Mr. MADDEN. Will the gentleman yield?

Mr. WHALEY. I will.

Mr. MADDEN. How long is it estimated it will take to deepen this channel?

Mr. WHALEY. It can be done in six months. There are two Government dredges in Charleston Harbor now, and have been idle for two years.

Mr. MADDEN. What is the character of the work in the navy yard now?

Mr. WHALEY. They are repairing the *Olympia*, putting up building ways, which will build a boat 400 feet long. There is a torpedo squadron down there, and they are building tugs and ferryboats there to-day.

Mr. MADDEN. What facilities would a dry dock have for repairing ordinary-sized battleships if they were able to get into the yard?

Mr. WHALEY. There is every facility in the yard.

Mr. MADDEN. How about the docks?

Mr. WHALEY. It can accommodate any battleship 545 feet long.

Mr. SPARKMAN. I want to correct the gentleman in regard to the depth. The difference between him and myself is not very much. The engineers' report for the fiscal year is that the depth is 28 feet, with water at mean low tide over the bar and into Charleston Harbor.

Mr. WHALEY. It is 28½ feet, and every pilot in the harbor knows that it is 28½ feet, with a 5-foot rise at high tide. The report the gentleman is referring to is a report made in 1910.

Mr. SPARKMAN. It is the 1915 report.

Mr. TREADWAY. Mr. Chairman, may I not ask if we are not carrying in this bill here an appropriation for $70,000 in order to get 28-foot projects not yet completed?

Mr. WHALEY. Twenty-eight is there to-day.

Mr. TREADWAY. What is this item here for?

Mr. WHALEY. For widening the channel. It is a continuing project.

Mr. TREADWAY. The phraseology of the bill says "to complete."

Mr. WHALEY. To-day there is 500 feet width, and to carry out the project it is necessary to have 600 feet width of channel to the harbor.

Mr. HUMPHREY of Washington. I have forgotten, and I would like to ask what is the size of the dock there?

Mr. WHALEY. It is 566 feet 7½ inches, and it is 31 feet 1½ inches over the sill, according to the Navy Yearbook, 1915, page 544.

Mr. HUMPHREY of Washington. What is the width?

Mr. WHALEY. It is 134 feet wide, and will accommodate a vessel of 101 feet beam.

Mr. SPARKMAN. I will say to the gentleman that the report shows that it is 504 feet in length.

Mr. WHALEY. It will carry a ship 545 feet in length, but the width of the dock is 134 feet. It will only carry a vessel with 101 feet beam, because you have to have a space on each side, the same as you have to have a space at each end.

Mr. Chairman, when the chairman of the River and Harbor Committee was making a statement on this bill, I am glad to say, he was fair enough to set forth the Charleston proposition alongside of the New York proposition. I want to read to this House what the chairman of the committee said about these two propositions.

I read:

> The only other item that presents conditions at all similar is the navy yard at Charleston, S. C., the difference between it and the yard at New York being one of degree in the matter of importance.

Yes; "in degree," in that the New York navy yard is a larger yard and a construction yard. The Charleston yard is a repair yard, and is becoming a construction yard, and it will take $750,000 for New York and $175,000 for Charleston.

The CHAIRMAN. The time of the gentleman from South Carolina has expired.

Mr. WHALEY. May I have three minutes, Mr. Chairman?

The CHAIRMAN. The gentleman from South Carolina asks unanimous consent to proceed for three minutes more. Is there objection?

There was no objection.

Mr. WHALEY. Besides that, I read further:

> While the Charleston yard has a dry dock that can accommodate vessels drawing more than 30 feet, unlike the Brooklyn Navy Yard, it has no shipbuilding plant, its equipment being only for repairs. I believe, however, that a shipbuilding slip is soon to be located there, but when completed it will only accommodate, so I am advised, tugs, and possibly torpedo boats.

Now, Mr. Chairman, I want to state to this House that those shipbuilding piers will accommodate any collier or naval auxiliary about 470 feet long and about 4,000 tons. They will accommodate any torpedo boat 375 feet long. That is the largest type we have in the Navy to-day. The chairman went on to say:

> Like the New York Navy Yard, however, the channel leading to the Charleston yard is of less depth than are the slips or dry docks. While the latter can accommodate vessels of 30 feet draft, the former only has an available depth of 26 feet.

Mr. Chairman, we have this situation down there: A battleship can enter the harbor at Charleston and can anchor anywhere in the harbor, and yet if you want to take it to the dry dock, which has 31 feet of water on its sill, it is impossible to take it there now, because there are two little mud shoals that need to be dredged out to allow these ships to get into dry dock. If we increase our Navy, a repair yard like this yard will relieve these other yards up north of the repair work on these smaller ships.

There is no reason in the world why the Government should have a $5,000,000 plant up the river and be unable to get to it because Congress is bickering as to whether the Rivers and Harbors Committee should make the appropriation or the Naval Committee should make the appropriation. What I want this House to do is to allow the battleships that enter the harbor to go up to the yard and the ships that are constructed at the yard to go out to sea.

I hope the Government will adopt this project, because it is in line with the policy of national defense, and the appropriation necessary to do it is infinitesimal in comparison to the benefits to be gained.

The CHAIRMAN. The time of the gentleman from South Carolina has again expired.

Mr. TREADWAY. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Massachusetts offers an amendment, which the Clerk will report.

Mr. TREADWAY. It is an amendment to the amendment pending, as offered by the gentleman from South Carolina.

The Clerk read as follows:

> Add, at the end of the amendment the following: "*Provided*, That no part of the amount herein appropriated shall be expended until the local authorities shall provide sufficient public terminal facilities in Charleston, to be approved by the Secretary of War."

Mr. TREADWAY. Mr. Chairman, I have a good deal of sympathy for the cause as presented to this House by the gentleman from South Carolina [Mr. WHALEY]. I feel that line of sympathy because the relation between the two propositions, that of Boston and that of Charleston, is so similar that I feel a brotherly regard toward the proposition which he presents.

But I want to suggest this to the House: You voted out a few days ago an amendment offered in behalf of Boston Harbor, very largely looking to the same end as that which the gentleman from South Carolina is looking for in this, namely, better facilities to reach a dry dock and a navy yard. Now, his amendment has run the whole course of an effort to secure consideration from the Committee on Rivers and Harbors as a commercial proposition, and when the Committee on Rivers and Harbors voted not to put in new projects, it naturally turned down the Charleston proposition along with the others. The gentleman is disguising the fact that he is working in behalf of the commercial proposition in Charleston under the guise of possible "preparedness." In substantiation of that statement I want to refer to the hearings held by the Committee on Rivers and Harbors on January 14 last.

Mr. WHALEY. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Massachusetts yield to the gentleman from South Carolina?

Mr. TREADWAY. Yes.

Mr. WHALEY. Was not that hearing based largely on adding to the depth of Charleston Harbor from 28 feet to 30 feet? This is a different proposition. This is improving the Cooper River above the city of Charleston. The hearings were had on the subject of deepening the harbor channel to 30 feet from 28 feet.

Mr. TREADWAY. It is in order to get to a new town that the gentleman's people are laying out there.

Mr. WHALEY. This does not reach the new town. It misses the new town by a mile and a half, as the gentleman will find if he reads the hearing carefully.

Mr. TREADWAY. I am glad to be corrected if I am in error in my statement, because the gentleman knows the geography of that region better than I do. But, so far as the Committee on Rivers and Harbors is concerned, there was nothing before that committee except the hearing of January 14. Is that correct? I would like the chairman of the Committee on Rivers and Harbors to pass upon that statement.

Mr. SPARKMAN. That is correct.

Mr. TREADWAY. There is nothing whatever before the Committee on Rivers and Harbors on this subject except that hearing on January 14. Now, we are considering the river and

harbor bill, and if the gentleman's project is what it purports to be, and if it has to do with preparedness, he should take it to the Committee on Naval Affairs. I have no doubt he will take it there ultimately. If he is turned down here, he will take it before the Committee on Naval Affairs. The gentleman ought to be fair to the House. He is demanding the incorporation in this bill of an amendment that has nothing to do with the river and harbor bill, when the Committee on Rivers and Harbors has in no sense considered it. He ought to be fair in that attitude toward the House.

Mr. WHALEY. Will the gentleman look at page 127 of the report of the River and Harbor Committee?

Mr. TREADWAY. I call the gentleman's attention to several items in this report. The first is the testimony of Mr. Rhett. Mr. Rhett was introduced to the committee as president of the chamber of commerce and mayor of the city of Charleston. His very first statement is—

Inasmuch as this is a commercial proposition and there has gone abroad an impression that the commercial business of Charleston is not a particularly prosperous one, I am going to ask you to give me five minutes for a commercial review in order that you may understand the conditions actually existing there.

Then he goes on as to terminals, and states that a terminal company was organized which bought up a large portion of the water front and then failed. It was bought by the Atlantic Coast Line, which subsequently associated the Southern Railway in the ownership.

The CHAIRMAN. The time of the gentleman from Massachusetts has expired.

Mr. TREADWAY. Mr. Chairman, I ask unanimous consent for three minutes more. I was interrupted by a question.

The CHAIRMAN. Is there objection to the gentleman's request?

There was no objection.

Mr. TREADWAY. Then, later on he proceeds, Mr. Chairman, as follows:

Recently we have undertaken to build a new town above Charleston, which is on the point of a narrow peninsula, just like New York.

That is a land-development project, very plainly. Then he says:

The Seaboard Air Line have put in terminals costing over $300,000. Two private enterprises have put up cotton compresses and terminal piers, and so on, as you will see on this map. Four steamship lines have come into Charleston recently. The American-Hawaiian Line, with its very large ships, makes Charleston the only point of distribution on the South Atlantic coast. The Morgan Line, from Galveston, also makes Charleston its southern distributing port.

Further on he says:

We have no municipal terminals to speak of, but all privately owned by steamship companies, railroads, individuals, and corporations. The complaint was that the railroads would not build up their wharves, and there was not an adequate amount of berths for ships. That was the reason why we insisted that something had to be done. The city has an option on 850 feet of water front, but as yet nothing has been done toward its development.

Well and good. If they want to take Government money to improve a condition existing in Charleston Harbor, under the guise of a river and harbor bill, they certainly ought to comply with the very first requirement that the Rivers and Harbors Committee makes in every instance, namely, that there shall be public municipal terminals at the point where the appropriation is to be expended. Whether or not this particular improvement of the gentleman from South Carolina applies directly to the project we have before us I can not say, nevertheless my amendment is just as applicable to his amendment as it would be if we were considering the question of getting into Charleston, because it is just as much a commercial proposition as it is a naval proposition; and if it is not, it ought not to be here. If it is, as he says, solely a naval proposition, let it go into the naval bill when that comes along.

Mr. PADGETT. Mr. Chairman, the Secretary of the Navy appeared before the Naval Committee and called attention to the necessity of this improvement, as also did Admiral Benson, chief of operations. The situation is this: The navy yard is about six miles up the river from the harbor. These two shoals are outside of the limit of the navy yard proper, and between the navy yard and the regular harbor. For that reason it comes under the jurisdiction of the Rivers and Harbors Committee; but the Government has the yard above there, and in order that that yard may be as fully and completely useful and serviceable as it should be, in order that it may make the most out of the $5,000,000 now invested in this yard, these shoals should be removed. The cost of removing them would be about $175,000.

Mr. MADDEN. Will the gentleman yield to me for a question?

Mr. PADGETT. Yes.

Mr. MADDEN. It really does not make any difference whether it comes through one committee or the other. The people have to pay it, and what difference does it make which committee reports it?

Mr. PADGETT. That is true. I was going to say that in view of the necessity for it, I think the quibble between the two committees is uncalled for. It is clear that the Naval Committee strictly would not have jurisdiction, and we called the attention of the Secretary to that fact; because the Naval bill carries appropriations for dredging and improvements in the yard and the waters adjacent to the yard, comprised and embraced in the navy yard proper. If it were there, we could deal with it, but as it is outside of the limits of the yard, and intercepts the travel between the yard and the open sea down in the river, it comes under the jurisdiction of the Rivers and Harbors Committee. But the navy yard being there, and being a Government institution, and a very important and necessary one, that is a strong argument which addresses itself to the Rivers and Harbors Committee, and also to the Committee of the Whole, and to the House and to the Congress, why it should be taken hold of, and why this small appropriation should be made to take away these shoals that intercept the travel between the sea and the yard.

Mr. SWITZER. Will the gentleman please inform the House when the Committee on Naval Affairs first learned of this trouble down in Charleston, and first learned that our dreadnaughts and large vessels could not get into the dock there?

Mr. PADGETT. The first time it was brought before the committee officially, as I now remember, was during the present session of Congress. I have heard of it time and again, but I do not think it has been officially brought to the attention of the committee before this.

Mr. SWITZER. Will the gentleman please state why some representative of the Committee on Naval Affairs did not appear before the Committee on Rivers and Harbors while it was in session for two months or more.

Mr. PADGETT. Yes; I can give the gentleman the best kind of a reason. We were having business of our own, meeting every morning at 10.30 and holding until between 5 and 6 in the afternoon, and there were gentlemen representing the Navy who did appear. The Secretary of the Navy, and Admiral Benson, Chief of the Bureau of Operations, did appear.

The CHAIRMAN. The time of the gentleman has expired.

Mr. PADGETT. I will ask for three minutes more.

The CHAIRMAN. The gentleman from Tennessee [Mr. PADGETT] asks unanimous consent that he may proceed for three minutes. Is there objection?

There was no objection.

Mr. SWITZER. Will the gentleman please inform the House why Admiral Benson or the Secretary of the Navy were not requested by the Committee on Naval Affairs to make a recommendation that this improvement be included in the river and harbor bill by the River and Harbor Committee?

Mr. PADGETT. They did make it; they made it to us and made it to the other committee, too.

Mr. SPARKMAN. I do not know that there is any relevancy in it, but there was no application made to the River and Harbor Committee until we had finished and reported this bill to the House.

Mr. PADGETT. I do not know the date of it, but they did come before the River and Harbor Committee. Now, the question has been raised about the size of the dock. I have the official figures here.

Mr. SWITZER. Just one more question. Does the gentleman understand that this project was recommended for a depth of only 30 feet?

Mr. PADGETT. I do not remember whether it is 28½ or 30 feet.

Mr. SWITZER. Now, is it not a fact that the General Board of the Navy state that you should have at least 40 feet; that a crippled battleship will require 35, 36, 37, or 38 feet to bring it into one of these docks in order to make it effective again?

Mr. PADGETT. If the depth were 30 feet, with a 5-foot tide, that would make 35 feet at high tide. But let me state frankly to the gentleman that the largest dreadnaught could not be accommodated at Charleston. Let us not labor under any mistake. It takes ships of the *Utah* class and the *Florida* class, and from that size down; but for the classes above that it would not accommodate them.

Mr. O'SHAUNESSY. Will the gentleman yield?

Mr. PADGETT. Yes.

Mr. O'SHAUNESSY. I want to find out how long we are going to have ships of the *Utah* and *Florida* class. Will they be with us for some years to come?

Mr. PADGETT. Yes, indeed. They are very valuable ships. The *Utah*, if I remember, is about 22,000 tons displacement. I have the exact figures here, if it were necessary to look them up.

Mr. O'SHAUNESSY. I merely wanted to be advised about it.

Mr. PADGETT. It is one of our dreadnaughts, but not one of the largest ones. I think the draft is about 28 or 28½ feet. The depth of one of the largest dreadnaughts is not a great deal more, but it is the dock situation which is to be considered.

Mr. O'SHAUNESSY. There is no danger of their becoming antiquated for many years to come?

Mr. PADGETT. Oh, no.

Mr. O'SHAUNESSY. The gentleman looks upon this investment of $170,000 as making available the $5,000,000 investment?

Mr. PADGETT. Yes; our committee has not assumed to report it out, but advised the gentleman to go to the Rivers and Harbors Committee.

The CHAIRMAN. The time of the gentleman has expired.

Mr. PADGETT. One minute more.

The CHAIRMAN. The gentleman asks for one minute more. Is there objection?

There was no objection.

Mr. HUMPHREY of Washington. Will the gentleman yield?

Mr. PADGETT. Yes.

Mr. HUMPHREY of Washington. If this is in the interest of the Navy, why did not Admiral Benson say something about it before our committee—why did you not get some instructions from the White House about it?

Mr. PADGETT. We thought that the committee, on a plain proposition like this, could take care of it without direction from the White House.

Mr. HUMPHREY of Washington. Well, we could, but you could not on that side.

Mr. PADGETT. Then we will come and get you to help us out. Now, Mr. Chairman, referring to the dock, the length is 566 feet; the length of the forehead to the outer sill is 548 feet; width and coping, 134 feet; width from the top of the keel blocks, 96 feet and 2 inches; width at the coping, 113 feet and the fraction of an inch; governing width, 6 feet above the sill, 101 feet 11⅞ inches; depth at mean high water to sill, 34 feet 1⅛ inches.

So you see that it is a dock capable of dealing with, not the largest ships because they are too long for it, but it is for the type of ships of the *Utah* and the *Florida* and ships of that size and below it; and, as I say, the *Utah* has a displacement of 22,000 tons.

Mr. LEVER. Mr. Chairman, the amendment in this case presents a business proposition. The Government has invested $5,000,000 in a navy yard at Charleston, S. C., and the facts presented to the committee this morning show that at the entrance of the channel there is a certain depth of water, while at the other end of the channel where the navy yard is situated there is another depth of water, something like 30 feet, but in between the two places are certain shoals or bumps which reduce the depth to 26 feet. The amendment proposed undertakes to deepen the channel where the bumps are, so that you will have a uniform channel that will permit the entrance of larger ships to the navy yard. As I say, the Government investment is $5,000,000. As the situation stands now the investment is not bringing its fullest return, because it is impossible under the situation to utilize the navy yard to its fullest extent. We are called upon here this morning to invest another $170,000 to make available to the fullest extent the investment of $5,000,000 which we have made. That seems to be a good business proposition from the standpoint of a pure business principle. Now, more than that, it seems that all the testimony in this case agrees with that proposition.

Mr. TREADWAY. Will the gentleman yield?

Mr. LEVER. Yes.

Mr. TREADWAY. Where was the testimony submitted; was any of it before the Rivers and Harbors Committee?

Mr. LEVER. I will yield to the gentleman from South Carolina, my colleague Mr. WHALEY, to answer that.

Mr. WHALEY. If the gentleman will look on page 29 of the hearings before the River and Harbor Committee, he will find the following:

Mr. WHALEY. We are very much obliged to you, Mr. Chairman, for the hearing. I would not say anything to the committee at length, but I just wanted to call attention to this Cooper River project. That has only two spots in it that need dredging out to make the bar 28 feet, and that would give us a continuous passage up the river. Up the river to-day you have 26 feet, and it is not wide enough, but the naval officers go all over this country saying we have only 22 feet. We have 26 feet. It is not wide enough to allow a battleship to come up here. Therefore the river has been damned with 22 feet of water. I want the committee to take up particularly that Cooper River project and look into it.

The CHAIRMAN. That is a new project?

Mr. WHALEY. That is a new project.

The CHAIRMAN. We have not yet determined to take up new projects. If we do, of course, we will look into this proposition.

But you never looked into it.

Mr. TREADWAY. I would like to ask the gentleman whether he considers that very strong testimony before the River and Harbor Committee in behalf of the project that he is advocating, and also whether he himself does not say that the project is a new one, and consequently the committee having voted not to adopt any new projects, he thinks he is rightfully before the Committee on Rivers and Harbors in that respect?

Mr. WHALEY. I will leave it to the chairman of the Rivers and Harbors Committee to answer the gentleman from Massachusetts whether I have not been before that committee time and again to urge this thing.

Mr. TREADWAY. I do not deny that.

Mr. LEVER. Mr. Chairman, in respect to the testimony that I intended to bring before the committee, it does not deal with that feature. I am going to call attention to what took place upon the floor of the House this morning in Committee of the Whole. We have had the testimony of Admiral Benson quoted that the deepening of the channel is an urgent necessity in case of war. We have the statement of Secretary Daniels that the deepening of the channel was an absolute necessity to the fullest development of the Charleston Navy Yard and the fullest utility of it in time of peace.

The CHAIRMAN. The time of the gentleman has expired.

Mr. LEVER. I ask for two minutes more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. LEVER. Now, we have had the testimony likewise of the gentleman from Tennessee, the chairman of the Committee on Naval Affairs, supporting this proposition, and saying that it is an absolute necessity both in time of war and in time of peace. The deepening of this channel is also referred to by the chairman of the Committee on Rivers and Harbors in his opening statement on this bill, in which he says that this proposition differs from the New York proposition only in point of degree; namely, that they are both urgent and both necessary, the difference being that one is a big proposition and the other an apparently small proposition.

It seems to me that we have been shuttlecocking this Charleston proposition between the Naval Committee and the Committee on Rivers and Harbors. We are asking to spend $170,000 to do an urgent piece of work. That $170,000 must come from the Treasury, and it makes absolutely no difference from the standpoint of the taxpayer whether the expenditure is authorized by my friend from Tennessee [Mr. PADGETT], the chairman of the Committee on Naval Affairs, or by my friend from Florida [Mr. SPARKMAN], the chairman of the Committee on Rivers and Harbors. The question for this committee is, Is it an urgent necessity, is it a good investment, is it a good proposition? If it is, you must answer that this Committee of the Whole, representing both the Naval Committee and the Committee on Rivers and Harbors, will take the bit in its own teeth and do what seems to be a businesslike and reasonable thing.

The CHAIRMAN. The time of the gentleman from South Carolina has again expired.

Mr. TAGUE. Mr. Chairman, I ask unanimous consent that the time of the gentleman be extended for one minute as I desire to ask him a question.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. TAGUE. Mr. Chairman, agreeing with what the gentleman says as to the urgent necessity for making the proper provision for entering the navy yard at once available for the ships of the Navy, does the gentleman not think it should apply not only to his yard but to the yard at Charlestown, Mass.?

Mr. LEVER. I confess to the gentleman that I am not familiar with his proposition, and I would not care to discuss it.

Mr. TAGUE. They are both navy yards, and the gentleman is urging one, and why not the other?

Mr. LEVER. I am informed that the gentleman has 35 feet of water whereas Charleston has only 26 feet, under present conditions.

Mr. TREADWAY. But we have very much larger accommodations there.

Mr. LEVER. I am not familiar with the gentleman's proposition.

Mr. TAVENNER. Mr. Chairman, the argument of the gentleman from South Carolina [Mr. WHALEY] sounds good to me, and I intend to support the amendment. I would support an amendment to improve the channel to any useful navy yard in the United States. I believe that every year Congress is going

to build more and more of its naval craft in Government establishments and have fewer of them built in private establishments, and I am interested in seeing this amendment adopted for this reason. If it is not adopted, then when an amendment is offered to the naval appropriation bill when it comes up to build a certain vessel in a Government plant, the Charleston Navy Yard, say, some one will get up in opposing that amendment and say that one of these large ships can not get into that yard. For that reason I am in favor of having this channel dredged out so that that argument can not be made when the proposition comes up to have the Government build its own ships. I believe that appropriations for this kind of preparedness are the best kind that can be made, and that the public will get a larger amount of value out of appropriations of this kind than out of any kind, in keeping the Government establishments, particularly the arsenals and the navy yards, in shape, so that the Government can manufacture its own munitions and ships of every character. Therefore I shall support this amendment. [Applause.]

I shall also support the amendments of the gentleman from Iowa [Mr. GOOD], providing that no part of the large sums being appropriated for river and harbor improvement shall be spent by the awarding of contracts to private dredging firms whose bids are more than 25 per cent in excess of the estimates for the same work when done by the Government itself. The river and harbor bill is already much criticized as a "pork-barrel" proposition, but if the people ever find out that the Rivers and Harbors Committee is opposing amendments of this kind, river-improvement legislation will receive a blacker eye than it now has. I am in favor of legitimate waterway projects, but am not in favor of paying private firms more than 25 per cent in excess of the price at which the Government can itself do the work for. The improvement of rivers and harbors is to be a permanent policy of the Government, and therefore the Government is justified in doing a very large percentage of the work itself in the event private concerns ask extortionate prices.

Mr. SWITZER. Mr. Chairman, as a member of the Committee on Rivers and Harbors, I favored the taking on of new projects, and if the gentleman's project at Charleston has been suppressed or shut off, he has no one to blame but the majority of the Committee on Rivers and Harbors. I was in sympathy with his project, and I am in sympathy with all projects that are in the interest of commerce, and that is practically what this project is. This is just the same as the New York project, which was carried in the bill as an exception to the rule. That carries 45,000,000 tons of commerce a year, and that is the reason it was pressed before the Committee on Rivers and Harbors and the reason it was kept in the bill. But the River and Harbor Committee having adopted this rule not to take on new projects, and making but one exception, in the case of New York, that being the metropolis of the Nation, now, every time some one gets up and says that a proposition is in the interest of preparedness, although we know that the underlying reason is that it is in the interest of commerce, practically and solely, are we going to put it into the bill and load it down with that sort of propositions that have had no consideration, practically, before the Committee on Rivers and Harbors? The argument is that it is in the interest of preparedness. If this is in the interest of preparedness, and the Committee on Naval Affairs knew this improvement should be made, why did they not have before the Committee on Rivers and Harbors Admiral Benson or the Secretary of the Navy or some representative of the Navy, giving us some testimony on which we could rely and form some sort of judgment and conclusion, showing to us satisfactorily that this was vital to the Nation's defense?

Does any member of this committee believe to-day that if such testimony had been submitted to the Committee on Rivers and Harbors that committee would not have reported that project in the bill or in a separate bill; and if it had done the latter, does anyone believe that it would not have gone through this House without a dissenting vote? No, Mr. Chairman. This is all an afterthought and afterconsideration. The President, of course, is urged, just as he was urged in the New York proposition. If the gentleman has a letter from the President, he has not produced it. I believe he did say that the President had been seen. It seems also that the Committee on Naval Affairs has been seen and are appearing here to-day, although in our two months' consideration of this bill no such proposition came before us to deepen the channel at Charleston Harbor solely upon the ground of preparedness. The testimony will show that it was absolutely upon the ground and in the interest of commerce.

Mr. SPARKMAN. Mr. Chairman, I regret exceedingly that I can not recommend to the House the adoption of the project presented in the amendment offered by the gentleman from South Carolina [Mr. WHALEY]. Before I give my reasons for my objection to the amendment, however, I wish to do the gentleman the credit of saying that he has lost no opportunity at any time to present this matter to the chairman of the Committee on Rivers and Harbors. In addition to the statement made before the committee at the hearings, to which attention has been called, he has spoken to me many times and urged the importance, from his viewpoint, of inserting this project in the bill, and I am sorry I can not see my way clear to accept the amendment, but for reasons I am now going to set forth I can not do so whatever this committee may do.

In the first place, there is no project before us that, in my judgment, ought to be adopted. In the bill of 1909 a survey was ordered for Cooper Creek on which the Charleston Navy Yard is located. A report as early as 1910 was furnished by the engineers with a favorable recommendation in so far as the use of the navy was concerned, but with a statement that it was not needed for commercial purposes.

That is the project mentioned in the amendment proposed by the gentleman from South Carolina. The concluding paragraph of the chief's report is as follows:

> I concur with the district officer, the division engineer, and the Board of Engineers for Rivers and Harbors that Cooper River, S. C., is worthy of improvement for naval purposes up to the naval station as indicated. While no estimate is submitted for maintenance, the Board of Engineers for Rivers and Harbors is of the opinion that its cost will not be excessive, in which opinion I concur.

Now, when that was written there was no project for the improvement of the entrance to Charleston Harbor beyond 28 feet, nor is there any project for that purpose yet. Now it has been stated that the depth over the outer bar is 28½ feet, but the engineers in their latest report only report a depth of 28 feet.

Now, what would be the use, let me ask, of furnishing 30 feet inside to the navy yard with only 20 feet on the outer bar? The same suggestion would apply as was made awhile ago. A navy yard is put away up in a shallow stream and when it is once there they must have deep water to get to it. Now, if we deepened this creek to 30 feet the Navy officials will come and say, "You have given us 30 feet of water up to the navy yard, but we have only 28 feet on the outside. Now give us 30 feet from the outside into the harbor, and this though it may not be needed." That is the position in which we would be placed. Moreover, there is a tidal rise of 5 feet, so that a vessel carrying as much as 33 feet can come over the bar in the Charleston Harbor. Admiral Benson tells us that at least at one time he carried a vessel in there drawing 33 feet.

Now, they have, according to the report here, 26 feet of water up to the navy yard, through Cooper Creek. Add, then, 5 feet to that, and you have 31 feet of water, as much as is necessary to get to docks.

The CHAIRMAN. The time of the gentleman has expired.

Mr. SPARKMAN. Mr. Chairman, I ask unanimous consent for five minutes more.

The CHAIRMAN. The gentleman from Florida asks unanimous consent for five minutes more. Is there objection?

There was no objection.

Mr. SPARKMAN. Now, I made a mistake in my opening statement which I want to correct. I said something to the effect that the Charleston dock could accommodate vessels drawing 30 feet, maybe more. I want to correct that by reading from the report of 1910, the one to which I have already referred. The local engineer says:

> The dry dock is capable of taking the largest ships now authorized, as the *Utah* and *Florida*. It is 570 feet long.

The report says that it can take ships 540 feet in length instead of 570, and I believe that is correct; that is, 570 feet long, 110 feet wide at the entrance, and 28.9 feet depth over the sill at mean low water.

Now, that is the extent of the draft of the vessel that can go over the sill, namely, 28.9 feet. So I believe that 28 feet would be as much as would be required until the plant is enlarged.

Now, Mr. Chairman, there is another project for the improvement of that channel. We referred the matter back to the board two or three years ago. We felt we could not adopt the old project as it was not in the interest of commerce. The Naval Committee would not do the work. It was within its jurisdiction; it was also within ours, but we did not think it of sufficient importance to commerce to undertake it. But later it was stated that perhaps a smaller project might be in the interest of commerce. It was said that up above there somewhere, above the navy yard, one or more industrial establishments had grown up, and we referred the matter back to the board for report as to these changed commercial conditions, and whether or not a modified project would be advisable in the

interests of commerce. They came back with a report for a 26-foot project to cost only $14,000.

Now, since that report was made we have had no river and harbor bill with new projects in it. If it is worth anything, when we do undertake to adopt new projects, I for one shall be in favor of adopting that project or some modification thereof. But I have another suggestion to make that will meet the situation exactly, I think. We can—and it will be my purpose if this is not adopted here, and I do not see why it should be in view of what I have said—it will be my purpose to refer the matter again to the Board of Engineers and ask them to report upon a project for 28 feet, with an estimate as to the cost. I do not know what the cost for a 28-foot channel would be, and nobody else knows now, but a 28-foot channel, Mr. Chairman, is all that is needed at this time.

The CHAIRMAN. The time of the gentleman has expired.

Mr. SPARKMAN. Mr. Chairman, I would like three minutes more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. O'SHAUNESSY. I want to get this clear in my mind. You say that 28 feet is all that is necessary. Now, on the other hand, they say 30 feet. Do you say 28 feet for commercial purposes as distinguished from 30 feet for naval purposes?

Mr. SPARKMAN. They do not need 28 feet for commercial purposes, but for the purposes of the Navy they do, in my opinion.

Mr. O'SHAUNESSY. And this provides for 30 feet of water?

Mr. SPARKMAN. Yes; and they only have 28 feet over the outer bar.

Mr. O'SHAUNESSY. But this $175,000 proposition will take care of that?

Mr. SPARKMAN. Yes; and more too. What is the use of throwing away that much money?

Mr. O'SHAUNESSY. Yes; but what I have in mind is the $5,000,000 investment. What are you going to do with it?

Mr. SPARKMAN. That is the argument, then; there is a $5,000,000 investment there, and we must put in a lot of money because we have invested $5,000,000. The moment they get 30 feet inside they will come back and say, "Give us 30 feet also for the outer bar; otherwise the 2 extra feet will be thrown away."

Mr. PADGETT. It would not be thrown away, because there is a great deal of travel from the navy yard down the river, because they do not want to be held up there until high tide.

Mr. SPARKMAN. It has been said that "sufficient unto the day is the evil thereof," and similarly we may say sufficient unto the day is the good thereof. Whenever we get 28 feet of water over the bar I will not object to 30 feet through Cooper Creek, if the Navy requires it; but with the 28 feet and the tidal rise we would get 33 feet, which would be ample.

It will only be eight months from the time this bill will become a law, if it does become a law—and I hope it may—until another bill is due, and certainly eight months is not long, and it will not take long to do the work. It is in evidence here that this whole project can be completed in six months. So that it should be finished by September of next year, long before the project in New York Harbor is likely to be completed.

Mr. PADGETT. The gentleman is basing his whole statement on depth. This project of $175,000 is not only a matter of depth, but it is a matter of widening out at the turn, so that battleships can make the turn to go in there. If you do not give us that a ship can not go in at all, even if you have 30 feet. If you had the tide and get 30 feet or 33 feet, you have not got the width, and the ship can not turn. This is to get those angles at the turns and make the requisite width.

Mr. SPARKMAN. Oh, Mr. Chairman, my statement covers the turns and everything else, including the angles of the 28-foot project. What do you want to throw away money for?

I did state the other day—and I have nothing to retract—that the only difference between this and New York Harbor was one of degree of importance and urgency. I was referring then to the matter of preparedness, and not to these minor details. I do not want to be understood as intending to convey the idea that these two projects were similar in all respects, because the engineers have estimated exactly what the New York project will cost, but no one has told us yet what a 28-foot project for Cooper Creek will cost.

Mr. Chairman, I hope the amendment will not be adopted.

Mr. WHALEY. Mr. Chairman, the chairman of the Committee on Rivers and Harbors called attention to the fact that he believed we ought to have 28 feet up this river. I want to call the attention of the House to this fact, that there is 28½ feet of water over the bar, but the bar is 3 miles from the navy yard. A ship could go over the bar at high tide, but after going over the bar it would have to wait 12 hours to go up the river on the next tide. The local engineer, under date of April 2, 1910, reported on this very question. Here is what he says:

> The largest battleships can now cross the Charleston bar by entering at high water. * * * The entrance channels are straight and easily navigated. The requirement that the ship shall enter at high water is not seriously detrimental; but it is believed that, having entered the harbor, they should be enabled to proceed from the deep water of the harbor up to the navy yard at any stage of the tide. And as curvature in the trace of the Cooper River channel is inevitable, it is believed that improvement should contemplate greater widths and depths than are available on the bar. Where the channel is straight it should be made 600 feet wide; but in the bends it should be made 1,000 feet wide, and it should be made 30 feet deep throughout.

Mr. Chairman, the object of the chairman of the Committee on Rivers and Harbors is to make two projects out of what is one project. Instead of getting it down to 30 feet, so that the ships can go up to the yard without waiting for the next tide, his idea is to make it 28 feet now, and later on make it 30 feet, instead of doing it all at once. We all know it is cheaper if you make it 30 feet at once than if you were to make two contracts of it.

Now, Mr. Chairman, with reference to the amendment of the gentleman from Massachusetts [Mr. TREADWAY] to my amendment, his amendment should not be put in here. It is not put in here in good faith. It is offered under a misapprehension of the situation entirely. The committee was considering the deepening of Charleston Harbor to 30 feet, and the objection was made that there was no public wharf at the harbor of Charleston. This project is not for the harbor or the water front of Charleston, but for the removal of the shoals 3 miles up the river from Charleston.

There is ample water from Charleston Harbor up to the shoals, and after you pass those shoals there is again ample water around the navy yard. The whole object is to remove the shoals, so that battleships can get up to the yard, and so that the Government can use an institution which cost it $5,000,000.

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Massachusetts [Mr. TREADWAY] to the amendment offered by the gentleman from South Carolina [Mr. WHALEY].

The question was taken, and the amendment to the amendment was rejected.

The CHAIRMAN. The question now is on agreeing to the amendment offered by the gentleman from South Carolina [Mr. WHALEY].

The question was taken; and the Chair announced that the noes seemed to have it.

Mr. WHALEY. A division, Mr. Chairman.

The CHAIRMAN. A division is demanded.

The committee divided; and there were—ayes 44, noes 41.

Mr. SPARKMAN. Tellers, Mr. Chairman.

Tellers were ordered, and the Chairman appointed Mr. SPARKMAN and Mr. WHALEY.

The committee again divided; and the tellers reported—ayes 34, noes 49.

So the amendment was rejected.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

> Waccamaw River, N. C. and S. C.: Completing improvement and for maintenance, $8,500.

Mr. HUMPHREY of Washington. Mr. Chairman, I move to strike out the last word. I want to take this occasion to congratulate the gentleman from South Carolina [Mr. WHALEY] on the fight that he has made for his item. I am gratified to see that he at least had the courage to come in on the floor of the House and make a fight for what he believed was a meritorious project, and I had wondered what was the matter with the gentlemen who represent the Norfolk yard, that nobody was here to present that matter. That is one of the great yards on the coast. Conditions there are exactly what they were at New York. Yet no one on that side of the House made any effort to take care of that navy yard. If I had known it was going to be passed without anybody offering an amendment for it, I would have offered it myself. My good friend from South Carolina, Mr. WHALEY, made just one mistake——

Mr. SMALL. Mr. Chairman, will the gentleman yield?

Mr. HUMPHREY of Washington. Yes.

Mr. SMALL. I do not see the gentleman from Virginia [Mr. HOLLAND], who represents the Norfolk district, but I may state as a fact, which the gentleman from Washington knows, that there is already a depth of 35 feet to the Norfolk Navy Yard, and that the pending project there simply seeks to widen the

channel, but not to deepen it, and to provide anchorage ground at other places.

Mr. HUMPHREY of Washington. I hold in my hand the engineer's report as to Norfolk. It says:

NORFOLK CHANNEL.

The importance of this harbor is shown by the statistics given within, which indicate a total tonnage of about 22,000,000 tons, with a value of $1,600,000,000 The district officer states that an idea of the number of vessels navigating this channel may be had from the large amount of commerce carried, and that it is a very frequent sight to see four vessels going in one direction or the other practically abreast in the channel. There have been a number of collisions in recent years, due, it is stated, to inadequate width. To handle this great commerce safely, as well as to provide for the needs of the navy yard, he believes the width of this channel should be increased. He proposes a width of 600 feet in the entrance channel up to the mouth of the Southern Branch, at an estimated cost of about $560,000. In the Southern Branch, up to the lower part of the navy yard, it is impracticable to secure a width of 600 feet, and a width of 450 feet is recommended for this part of the channel. Along the lower part of the navy yard the width proposed is 600 feet, the same as below the mouth of the Southern Branch, while near the upper end of the navy yard it is practicable to secure a greater width, and as this is desired by the Navy Department for the proper handling of the large modern war vessels, it is proposed to increase the width here to 800 feet. This widening of the Southern Branch is estimated to cost about $280,000, which makes the total estimate for widening the Norfolk Channel $840,000. The district officer states that if the sum of $130,000 left in hand from the dredging of the 400-foot channel may be applied to the present recommended work, the additional funds required will amount to $710,000. The estimate for maintenance is $15,000 annually.

Now, that is a more important project than they had in New York. The only thing at New York was that they could not get in through one particular channel at all stages of the tide. My distinguished friend from South Carolina [Mr. WHALEY] simply made the mistake that down in South Carolina they are reliably Democratic. If they had a Tammany organization down there, and a son-in-law to handle the patronage, and somebody to placate——

Mr. SLOAN. A son-in-law of a present or a past régime?

Mr. HUMPHREY of Washington. Owing to the fact that I do not desire to say anything embarrassing to anyone present, I am not going to discuss the son-in-law proposition. [Laughter.]

Mr. MOORE of Pennsylvania. Does the gentleman object to having the RECORD show that the gentleman from Ohio [Mr. LONGWORTH] rose? [Laughter.]

Mr. SLOAN. I may say that what defense I propose to present will be in behalf of the gentleman from Ohio [Mr. LONGWORTH].

Mr. HUMPHREY of Washington. The gentleman from Ohio [Mr. LONGWORTH] needs no defense. He is always capable of taking care of himself.

Mr. MOORE of Pennsylvania. And so is his father-in-law, too. [Laughter.]

Mr. HUMPHREY of Washington. Mr. Chairman, if there had been a political situation down in South Carolina such as they had in New York, the distinguished gentleman who represents that district could not only have visited the White House and talked with the President, but he could have come back with a letter from the President's Secretary, and he would have got his project into the bill without any trouble whatever. That is the only difference there is between the two situations. As to the one at New York, there was an intimation from the Secretary of the President that the President wished the item included in the bill. That was sufficient for the Democratic side. If my distinguished friend from South Carolina, who presented the facts here very well indeed, instead of taking up so much of the time of the House had used a little more time up at the White House, if he had possessed a little more political influence, he might then have got his project into this bill.

The CHAIRMAN. Without objection, the pro forma amendment will be withdrawn, and the Clerk will read.

The Clerk read as follows:

Santee, Wateree, and Congaree Rivers, S. C.: For maintenance of improvement, including the Estherville-Minim Creek Canal and the Congaree River as far up as the Gervais Street Bridge, Columbia, $55,000.

Mr. TREADWAY. Mr. Chairman, I move to strike out this paragraph, lines 9 to 12, inclusive.

The CHAIRMAN. The gentleman from Massachusetts offers an amendment, which the Clerk will report.

The Clerk read as follows:

Page 11, strike out lines 9 to 12, inclusive.

Mr. TREADWAY. Mr. Chairman, in the course of the general debate a few days ago the chairman of the Committee on Rivers and Harbors [Mr. SPARKMAN] criticized me somewhat because I did not particularize what projects I was opposed to. It is not necessary to go into the details of all these various projects that any Member of the House may be opposed to, but here is one illustration that I think may be properly called to the attention of the House, to show what we are asked to appropriate $55,000 for in this bill.

The biggest thing about these three rivers is the name—the Santee, Wateree, and Congaree. You have got to twist your tongue a little to pronounce them. All three are given in one lump project, so we do not know where the money is going to be used. But here is what the engineers say about the Santee:

Its bar entrance was narrow, crooked, and shifting, and so situated as to be very difficult and expensive to improve. It had less than 5 feet of depth at low water. The river was navigated by several small steamers drawing less than 4 feet.

This is another project covered by my general criticisms in my minority report against the rivers and harbors bill. This report was adopted in 1881. That is a good while ago to be keeping up something if the local conditions are entirely different from what they were when the project was adopted.

The operations and results prior to this fiscal year were a passage 30 feet wide and 3 feet deep at high water through Mosquito Creek. It does not say what it would be at low water. At high water it is 3 feet deep. The entire river has been snagged; total amount expended, $272,245.74.

Operations and results during the present fiscal year. The work during the year consisted in snagging the upper end of the river, miles 120 to 143, and there were removed 2,405 obstructions and 195 trees.

There must have been fine navigation in that river. This work was for maintenance. It has to be continued, of course. Then at the end of this fiscal year the portion of the approved project accomplished is about 84 per cent. The available depth at low water is about 4 feet for the canal and 3 feet in the river. Formerly they had 3 feet at high water. Now they have got 4 feet at low water. That is a great improvement for the amount of money expended, which so far is $276,729.28! That is the reference in the bill and a few of the items in the engineer's report. Now let us see about the Wateree River.

Mr. COOPER of Wisconsin. Will the gentleman permit an interruption?

Mr. TREADWAY. Yes.

Mr. COOPER of Wisconsin. In this report that I have in my hand—the one furnished to Members—on page 131, I find that it says of the Santee River that the available depth at low water is about 4 feet in the canal and 3 feet in the river, and it says the tidal rise is 3½ feet.

Mr. TREADWAY. That would bring it a foot below the level; it would be half a foot less than when there was any water in it.

The CHAIRMAN. The time of the gentleman from Massachusetts has expired.

Mr. TREADWAY. Mr. Chairman, I ask for three minutes more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. COOPER of Wisconsin. It is important to get these facts before the House. I do not know anything about them, but I ask the questions to find out what the facts are. The gentleman from Massachusetts in his statement, reading from a report, said that at high water there was 3 feet of water in the river. This report says that at low water there is 3 feet, and 3½ feet tidal rise would make it at high water 6½ feet.

Mr. TREADWAY. The gentleman is reading from the report where it says that there is 4 feet in the canal and 3 feet in the river—that is low water. Now, I would like to pass on to the consideration of the Wateree River.

Mr. COOPER of Wisconsin. If the gentleman will wait a moment, let us see what the facts are. The gentleman said that at high water there was only 3 feet in the river.

Mr. TREADWAY. That was at the time that the project was begun, perhaps.

Mr. COOPER of Wisconsin. I want to know what it is now. It was begun in 1881—and naturally the tide has not changed any—and here is what the report says: "Available depth at low water, 4 feet in the canal and 3 feet in the river"; and at high water, with a tidal rise of 3½ feet, there would be 6½ feet.

Mr. TREADWAY. Mr. Chairman, I quoted from page 566 of the Engineer's report, which says that the lowest available depth is about 3 feet at low water.

Now, in reference to the Wateree River, we find that the work on the river has been snagging only. No dredging has been done. The expenditures have not resulted in a permanent increase in depth. We have spent on that project up to June 30, 1914, $186,307, of which $60,000 was for new works and $126,000 for maintenance.

Now, as to conditions at the end of this year. The report says that it is not practicable to state the percentage of the completion of the project. The work is snagging, and will be continued indefinitely. No increased depths were obtained.

These remain about the same as before the improvement, namely, 3 to 4 feet at low water. The total expenditures under the existing project were $195,000, of which $60,000 was for new work and $135,000 for maintenance. As to the effect of the improvement, they say that the project has had no effect on freight rates. There was practically no business on the river during the year. Some cordwood and staves were cut along the river and rafted out to market, but no records can be obtained as to amount or value.

It would be a great deal better for the Government to buy the staves and logs and let them stand as timber rather than to get the snags out so that they can be got down to market.

Mr. RAGSDALE. Will the gentleman yield?

Mr. TREADWAY. No; I can not yield; the gentleman can get his own time.

Mr. RAGSDALE. I only wanted to know what river the gentleman is referring to.

Mr. TREADWAY. To the Wateree River in South Carolina, and I am reading from the Engineer's report, on page 568.

Now, the third combined project is the Congaree River. Similar conditions exist on the Congaree River, as I find from this statement. The engineer says since continual work will be required to obtain the channel desired the approved project will never be completed. The expenditures have not resulted in a permanent increase in depth. The length of the improved section is from the mouth to Columbia, with the head of navigation at the foot of Senate Street, 51 miles from the mouth. The total expenditures on the existing project, which is also the original project, were $599,029, of which $363,674 was for new work and $235,354 was for maintenance.

Now, as to the effect of the improvement, they say that no actual change in railroad freight rates has been made by the railroads themselves in order to meet competition. Complaints made by Columbia merchants of discrimination against Columbia in favor of Augusta have caused the Commerce Commission to order a reduction in certain rates, thus giving Columbia the same advantage because of water transportation that had been given to Augusta, Ga., for the same reason.

Mr. Chairman, I maintain that I have a right to oppose such projects as this, even if I do not call attention to each one individually, as the chairman suggested that I ought to do.

Mr. MANN. Mr. Chairman, I suppose there is water in the Wateree River, judging by its name. Here is a river where up to date we have expended $195,000, of which $135,000 was for maintenance, and it is contemplated to use $15,000 the next year for maintenance. Nothing for the further improvement of the river, just to maintain the existing condition. It is not expected that commerce on the river will grow any because the situation is not to be changed. It is only for the protection of existing commerce.

I know nothing about the river except what is in the name and the report. In making these appropriations it is quite proper that we should examine the commercial statistics. Of course if you are improving a river commerce may increase after the improvement, but all this proposition does is to expend $15,000 to maintain existing conditions, to take care of the existing commerce.

I read from the report of the committee:

Commercial statistics. None reported for the year. A few logs were floated and some shingles and staves were hauled by a gasoline boat.

That is the commerce of the river. A gasoline boat, and owing to the high price of gasoline I am confidentially informed that that boat has gone out of business. [Laughter.] But to maintain existing conditions, to take care of existing commerce, it is proposed to expend $15,000 in order that these few logs may be floated down the river, and if there is any water in it they would float anyway, and to provide that a gasoline launch may take down a few more shingles and staves. The gentleman from Massachusetts [Mr. TREADWAY] said that the Government might easily buy these shingles and staves and let them stand as timber. Mr. Chairman, the Government could afford to buy the shingles and staves and put them into buildings and in barrels and save half the money. It is useless to send them down the river. We could build a house there, put the shingles on the house, make the staves into barrels and fill up the house and let them lie there and rot and be ahead $7,500 on the appropriation. [Applause on the Republican side.]

Mr. RAGSDALE. Mr. Chairman, there was one remark made by each gentleman that I could not help but agree with, and that is that they knew nothing about the project and nothing about the conditions surrounding it. This has been noticeable in other things that they have discussed, but certainly nothing to which it is more applicable than their remarks directed to this project. Fifty-five thousand dollars is included for these three rivers, and these three rivers connect not only the capital of our State but other towns of considerable size with the coast. If they do not succeed in transporting a single thing on that river during the year, the money that is saved to the capital of the State alone by the difference in transportation rates would more than justify the appropriation.

Mr. TREADWAY. Mr. Chairman, will the gentleman yield?

Mr. RAGSDALE. Yes, I will yield, although the gentleman would not yield to me; because the rule on this side is always to be courteous.

Mr. TREADWAY. I might say to the gentleman that my reason for not yielding was that my time had already been extended, and the other day a gentleman on that side objected to my having a further extension—not the gentleman who now has the floor, however.

Mr. RAGSDALE. I am sure that the gentleman's modesty would prevent his asking for additional time, but I will permit him to proceed out of my time.

Mr. TREADWAY. I only want to call attention to the question of the freight rates in connection with the Congaree River; that it was necessary to apply to the Interstate Commerce Commission to have fair treatment for Columbia, and it had nothing to do with the question of navigation. The Interstate Commerce Commission provided the rates, as will be found on page 531.

Mr. COOPER of Wisconsin rose.

Mr. RAGSDALE. Oh, I can not yield to all gentlemen. That would be three to attack one.

Mr. COOPER of Wisconsin. But this is not an attack. [Laughter.]

Mr. RAGSDALE. Oh, I thank the gentleman. It is such a surprise to find that there is anything from my State that is not attacked on that side I was misled. I yield to the gentleman.

Mr. COOPER of Wisconsin. The gentleman from Massachusetts [Mr. TREADWAY] has twice referred to the fact that the Interstate Commerce Commission reduced the rates, but the report goes on:

Thus giving Columbia the same advantage because of water transportation that had been given to Augusta, Ga., for the same reason.

That is something of a qualification to the gentleman's statement, and I want to know what the facts are.

Mr. RAGSDALE. Mr. Chairman, as stated by my colleague, the statement made is absolutely correct. The truth of the matter is that when the gentleman states we got relief from the Interstate Commerce Commission, the gentleman did not state that one of the reasons we were entitled to it was because of water transportation and competition. What he said was partly true, but not entirely true, and the gentleman might have said that but for water transportation to the capital of the State we would not have gotten the relief to which we are entitled, which this water competition gives.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Massachusetts.

Mr. MANN. Mr. Chairman——

Mr. SPARKMAN. I do not want to cut off any reasonable debate——

Mr. MANN. Oh, I never ask for any unreasonable debate.

Mr. SPARKMAN. How much time does the gentleman want?

Mr. MANN. All I want is a couple of minutes, maybe less. The gentleman from Washington [Mr. HUMPHREY] wants a couple of minutes.

Mr. SPARKMAN. Mr. Chairman, I ask unanimous consent that all debate upon this paragraph and all amendments thereto close in five minutes.

The CHAIRMAN. The gentleman from Florida asks unanimous consent that all debate on the paragraph and all amendments thereto close in five minutes. Is there objection?

Mr. HEFLIN. Mr. Chairman, I object; I think we have had enough debate upon this.

Mr. MANN. Then, Mr. Chairman, I move to strike out the last two words of the paragraph. My friend from South Carolina [Mr. RAGSDALE] talked about the Congaree River. He is right. I know nothing about the Congaree River. I was talking about the Wateree River, and the Wateree River is not the one that helps to reduce the freight rates to Columbia, S. C.

Mr. RAGSDALE. Mr. Chairman, will the gentleman yield?

Mr. MANN. Yes.

Mr. RAGSDALE. But to Camden, S. C.

Mr. MANN. I read from the report of the distinguished chairman of the Committee on Rivers and Harbors made to this House upon this bill concerning the Wateree River and its improvement and maintenance:

Effect of improvement: The project has had no effect on freight rates.

Now, if the distinguished gentleman from South Carolina [Mr. RAGSDALE] has information that the project has had an effect upon freight rates he ought to have communicated that information to the gentleman from Florida or some other member of the Committee on Rivers and Harbors. I have usually trusted to the statement of facts made by the gentleman from Florida, and I do now. It has no effect on freight rates, and there is no commerce to be taken care of.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Massachusetts.

The question was taken, and the amendment was rejected.

The Clerk read as follows:

Harbor at Savannah, Ga.: Completing improvement and for maintenance, $545,000.

Mr. GOOD. Mr. Chairman, I desire to offer an amendment.

The CHAIRMAN. The gentleman from Iowa offers an amendment, which the Clerk will report.

The Clerk read as follows:

Page 11, line 16, after the figures "$545,000," strike out the period, insert a colon, and add the following:

"*Provided*, That no part thereof shall be used to pay for any work done by private contract if the contract price is more than 25 per cent in excess of the estimated cost of doing the work by Government plant."

Mr. GOOD. Mr. Chairman, the report shows that the Government has two seagoing dredges that cost $135,000, or proposes to purchase two such dredges. There is left also an item of $90,000 for dredging, which it is proposed to do by private contract, and in addition to that, either under contract or by Government plant, as may otherwise appear the most advantageous to the Government, $150,000 additional. There will be $240,000 worth of work on this project, which I think is a meritorious project from the statement made by the gentleman from Florida, that may be let by contract. The committee has already provided that in letting a contract by the Government the engineers will be limited in the price at which they are let, so that the contract price shall not equal more than 25 per cent in excess of the estimated cost of the work to the Government if done by a Government plant.

Mr. SPARKMAN. Where is that to be found?

Mr. GOOD. We adopted an amendment.

Mr. SPARKMAN. We adopted one amendment that applied to one project.

Mr. GOOD. I say the committee has already adopted an amendment to apply to inland waterways at Norfolk, and I was in hopes that the gentleman from Florida would accept this amendment. The committee has already adopted as a principle that 25 per cent in excess of the price it costs the Government to do the work is quite sufficient profit to the private contractor. Why, the gentleman from Pennsylvania [Mr. MOORE] almost smashed this mahogany desk with his fist in denouncing that as a principle, proclaiming that the adoption of that latter amendment was the end of all waterway improvement. If it means the end of waterway improvement for this House to say that in letting private contracts we shall not give the private contractor more than 25 per cent in excess of the cost to the Government to do the same work, then we might as well come to the end first as last. Why, think of it. You gentlemen who have investigated the cost to manufacture by the Government know that it always costs the Government more than it costs a private contractor or manufacturer.

This amendment, therefore, instead of limiting him to 25 per cent profit, does not limit him to below 35 per cent profit. If the work is being done cheaper by private contract than it could be done by the Government, the amendment does no harm, but if the work is being let at twice what it costs the Government to do the work it will save the Government many thousands of dollars, and we ought to save it. I contend that the committee should write into the law the principle that in letting the private contracts the engineers should not be permitted to go beyond 25 per cent in excess of the cost to do the work by Government plant. And that is all there is to my amendment. I was in hopes that the gentleman from Florida [Mr. SPARKMAN] would recognize the temper of this committee, where by a vote of more than 80 to 60 the committee determined to place that limitation on one appropriation, and there is as much reason for it here as there was in that case. It is true that the hearings do not disclose what it is costing the Government to do this work either by private contract or by Government plant. But if it costs no more to do the work by private contract than by Government plant, then this amendment does no harm. If it is costing it much more by private contract, it will save the Government a great many thousand dollars.

Mr. MOORE of Pennsylvania. Mr. Chairman, I move to strike out the last two words, not for the purpose of disputing with the gentleman from Iowa, although I did not support his amendment on the Norfolk to Beaufort——

Mr. MADDEN. The gentleman did not oppose his amendment, but spoke after the amendment was adopted.

Mr. MOORE of Pennsylvania. I did not support the amendment, although I spoke after the amendment had been passed, and did it as effectively as I could to bring to the attention of the House this tendency toward Government ownership and control. I think it is highly probable, without knowing anything about the dredging business and not having any interest, of course, in the contracts of dredgers, that the amendment that was passed in respect to the inside waterway between Norfolk and Beaufort will lead to a great deal of trouble and confusion in the Engineer's Office. In the first place, as the gentleman from Iowa well knows, the law and the custom is to advertise for contracts for dredging or other work, and to award contracts to the lowest bidders. That is the rule of the Engineer's Office, and the work is supervised under the direction of the United States Army Engineers. The gentleman from Iowa has picked out two items in this bill of several hundred items, on which to attach his amendment. If he were dealing with the matter solely as to principle, he should bring this proposition before the House so that it might be general. There may be some reason for tacking this amendment onto the inland waterway between Norfolk and Beaufort; or there may be some reason for tacking it onto the Savannah Harbor proposition. I do not know, but I do not understand why, if the gentleman means to start on the road to Government control and ownership in matters of this kind and to put private operators out of business altogether, he picks out two items in the bill and leaves all the others to go scot free.

Mr. GOOD. Mr. Chairman, will the gentleman yield?

Mr. MOORE of Pennsylvania. I have indicated that this does tend to stop Government work. Yes; I yield to the gentleman.

Mr. GOOD. I offered practically the same amendment at the end of line 9 on page 1, and that applied to all the provisions of the bill, not tending toward Government ownership, but only tending toward a little economy.

Mr. MOORE of Pennsylvania. Then it was beaten in the committee, was it not?

Mr. GOOD. Yes. There were only about 60 Members of the committee present.

Mr. MOORE of Pennsylvania. That refreshes the memory of all of us. When the committee was here attending to its business——

Mr. GOOD. Sixty Members out of a total of 435——

Mr. MOORE of Pennsylvania. When the committee was here attending to its business the gentleman's amendment was defeated, but when the gentleman saw his opportunity to offer his amendment when few Members were present he managed to get it through.

Mr. GOOD. I hope the gentleman will be fair.

Mr. MOORE of Pennsylvania. I hope the committee will think this thing over before it votes for this amendment. There is no reason why this principle should be set up in respect to the item for the harbor of Savannah any more than with respect to any other item in this bill. I maintain that this tends to stop operations on these waterways.

Mr. MADDEN. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Pennsylvania yield to the gentleman from Illinois?

Mr. MOORE of Pennsylvania. Yes.

Mr. MADDEN. Will the gentleman tell us whether 140 is more than 160, or less? [Laughter.]

Mr. MOORE of Pennsylvania. The House reversed itself, although it has done so before for reasons which I hesitate to mention here. The House is as capable of changing its view overnight or in an hour as some very distinguished individuals are who in control of the affairs of this Nation; but as there is no politics in this bill it is regrettable that the House does not know where it stands with regard to an important proposition like this. When the gentleman from Iowa offered his amendment, the House was awake and alive to its importance, and it rejected his amendment. But when the House was asleep, some eloquent gentleman talked about economy; and then the deed was done. The Chicago Tribune and other newspapers will doubtless have their scarce headlines, and the gentleman who saved the Government money will account for it to their constituents.

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

Mr. GOOD. Mr. Chairman, will the gentleman yield?

Mr. MOORE of Pennsylvania. I do.

Mr. GOOD. Does the gentleman consent to have the same thing done under the Philadelphia item?

Mr. MOORE of Pennsylvania. If such an amendment goes in the bill it ought to be general, not pertaining to one item alone.

Mr. LENROOT. Mr. Chairman, I would like to have five minutes.

Mr. MADDEN. I would like to have five minutes, Mr. Chairman.

Mr. SPARKMAN. Mr. Chairman, I ask unanimous consent that all debate on this paragraph and all amendments thereto end in five minutes.

The CHAIRMAN. The gentleman from Florida asks unanimous consent that all debate on this paragraph and all amendments thereto end in five minutes. Is there objection?

Mr. MADDEN. I object.

Mr. HUMPHREY of Washington. I object, Mr. Chairman.

Mr. SPARKMAN. Then I ask unanimous consent, Mr. Chairman, that all debate on this paragraph and amendments thereto end in 10 minutes.

The CHAIRMAN. The gentleman from Florida asks unanimous consent that all debate on this paragraph and all amendments thereto close in 10 minutes. Is there objection?

Mr. HUMPHREY of Washington. I object.

Mr. MADDEN. And I object, Mr. Chairman.

The CHAIRMAN. Objection is made.

Mr. SPARKMAN. Then I move, Mr. Chairman, that all debate on this paragraph and all amendments thereto close in 10 minutes.

The CHAIRMAN. The gentleman from Florida moves that all debate on this paragraph and amendments thereto close in 10 minutes. The question is on agreeing to that motion.

The question was taken, and the Chairman announced that the "ayes" seemed to have it.

Mr. MOORE of Pennsylvania. A division, Mr. Chairman.

The CHAIRMAN. A division is requested.

The committee divided; and there were—ayes 54, noes, 25.

So the motion was agreed to.

Mr. LENROOT. Mr. Chairman, the gentleman from Pennsylvania [Mr. MOORE] said a moment ago that there was no politics in this bill, and there is not. But I want to say to the Democratic side of this aisle that if amendments of this character are going to be voted down, if the committee is going to continue to retain items in this bill such as the Wateree River, as you did a few moments ago, by the time this bill goes out of this House it will be as full of politics as any bill that was ever before this body.

I want to give you fair warning. A few days ago you voted to retain the tax on sugar. We upon this side voted for is at a protective proposition, and properly so. You upon that side voted upon it purely as an emergency, saying that you needed the revenue. If you are going to continue to keep indefensible items in this bill and say by voting down this amendment that you want the Dredging Trust to have a profit of more than 25 per cent, I say to you now we are going to meet you on the stump with reference to the items in this bill, and you will have some explaining to do, why you are voting and have voted to increase the cost of the workingman's breakfast table for the benefit of the Dredging Trust and authorizing the expenditure of money on rivers that have not a dollar's worth of commerce upon them, and never will have. [Applause on the Republican side.]

Now, I want to say a word with reference to the argument made by the gentleman from Pennsylvania [Mr. MOORE] that this amendment leads to Government ownership. The gentleman from Pennsylvania has declaimed many times upon this floor that Government ownership and Government operation is more expensive than private ownership and operation and has attempted to prove that assertion. Now, he says, or he implies, that Government ownership is less expensive and that a 25 per cent excess to private operators over Government cost is not a fair return to the dredging companies.

Mr. MOORE of Pennsylvania. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. LENROOT. Yes.

Mr. MOORE of Pennsylvania. I think the gentleman misstates the situation, so far as some of my alleged speeches are concerned. I have contended that the Government manufacture of munitions in the Frankford Arsenal at Philadelphia, which I have specified, has been cheaper than the manufacture of munitions in private plants. I know the gentleman wants to be accurate. I have confined my remarks to one institution.

Mr. LENROOT. I am not mistaken, for the gentleman, with reference to the building of battleships, has made that contention on this floor.

Mr. MOORE of Pennsylvania. I may have so stated as to the building of certain ships, overhead considered. That is true.

Mr. LENROOT. Now, the gentleman says that 25 per cent profit to the Dredging Trust of the United States is not a sufficient incentive to keep them in business. I say that if that is true, the Government had better go into complete operation. This bill carries over $40,000,000. If a 25 per cent saving could be made, $10,000,000 could be saved in a single year, and it would take only three or four years for the Government to own all the dredges that are necessary and then save money by it.

Mr. Chairman, I very much regret if Members take the position that the Members of this House must follow the recommendations of the Committee on Rivers and Harbors, irrespective of the merits of a proposition. It is no reflection upon that committee if we choose to vote down a proposition. The Committee on Rivers and Harbors is the only committee in this House where the members seem to take the position that the House must always and under all circumstances sustain it. We have no hesitation about disagreeing with the conclusions of other committees, and why should we as to the conclusions of this committee? I am sure the gentleman from Florida [Mr. SPARKMAN] and other members of that committee desire that the Members of this House should deal with this question on its merits, and they will not punish anybody for disagreeing with them upon any proposition.

The CHAIRMAN. The time of the gentleman from Wisconsin has expired.

Mr. SMALL. Mr. Chairman, the gentleman from Iowa [Mr. GOOD], who offers this amendment, is of the opinion that it will effect economy, and the gentleman from Wisconsin [Mr. LENROOT] thinks it ought to be adopted for the same reason. Unquestionably they are perfectly sincere in their position, and if they were right the amendment ought to be adopted. Now, all this arose out of the fact that as to one project the engineers reported that the Government dredges had been able to do a certain piece of work more cheaply than similar work was done by contract. That was simply sporadic and exceptional. This amendment provides that where a bid is at a price exceeding by 25 per cent what the Government could do the work for, then the bid shall be rejected and the work shall not be done by private contractors.

Mr. Chairman, the difficulty with this amendment is its impracticability. While the Government owns a large number of dredges in the aggregate, yet in proportion to the total work the number is exceedingly small. This amendment seeks to set up a standard here which can not be complied with. In the first place, it has been said in this debate—and is a fact, as I understand it—that the engineers in reckoning the cost of Government dredging do not take into consideration the investment in the dredge or the overhead charges of supervision by the engineers, but substantially only the labor cost involved. That is a very large proportion, but it is not all.

Mr. MADDEN. Will the gentleman yield there?

Mr. SMALL. Certainly.

Mr. MADDEN. Upon what authority does the gentleman make that statement?

Mr. SMALL. I can not cite any authority; but unless I am greatly mistaken it has been so stated before our committee by some engineer. Does the gentleman know to the contrary?

Mr. MADDEN. All I know is that on various occasions in the House it has been stated, when provisions similar to this were under consideration, that the Government authorities took into account not only the investment but the overhead charges, the depreciation, and everything incidental to the work in which they were engaged.

Mr. SMALL. By to-morrow I will attempt to verify it. I can not give the authority now.

Now, Mr. Chairman, as I said, this is an impracticable standard to set up. But I want to say further, in conclusion, every safeguard is thrown around contracts made to-day for the improvement of rivers and harbors. There is an advertisement. There are open bids. The right is reserved to reject any and all bids if the amount is too high. The engineers, with all the information then at hand, endeavor to ascertain the reasonableness of the bid, and if it is unreasonable they reject it. So there is every precaution to obtain the lowest price at the present time, dependent upon the integrity, the skill, and the ability of the engineers who have the final word in the letting of the contracts. I do not think this amendment will tend in the slightest degree to effect any additional economy.

This is not the only public work done by the Government. There are public buildings, there is work for the Army and for the Navy and for the other departments of the Government, all regulated by a general law, and a very large proportion of the work is done by contract. There are no unusual complaints in

the other activities of the Government, and I take it there is no well-justified complaint here, and the amendment is unnecessary.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Iowa [Mr. GOOD].

The question was taken; and on a division (demanded by Mr. GOOD) there were—ayes 41, noes 40.

Mr. SPARKMAN. Tellers, Mr. Chairman.

The committee again divided; and the tellers reported—ayes 50, noes 41.

Accordingly the amendment was agreed to.

The Clerk read as follows:

Altamaha, Oconee, and Ocmulgee Rivers, Ga.: Continuing improvement and for maintenance, $53,000.

Mr. TREADWAY. Mr. Chairman, I move to strike out the paragraph, lines 22 and 23.

The CHAIRMAN. The gentleman from Massachusetts [Mr. TREADWAY] offers an amendment, which the Clerk will report.

The Clerk read as follows:

Page 11, strike out lines 22 and 23.

Mr. TREADWAY. Mr. Chairman, a few minutes ago I made reference to some high-sounding names as being the principal part of the item covered. Here is a worse one as far as names are concerned: Alta-ma-ha, Oco-ne-e, and Oc-mul-ge-e Rivers. I am sorry for anyone who has to navigate vessels on those rivers. But I have made a mistake in speaking of vessels. There is no such thing there. I have in my hand a report of the hearing on these wonderful rivers, held on January 14, 1916.

Mr. HOWARD. Let me correct the gentleman on his pronunciation of those names. They are the Altamaha, Oconee, and Ocmulgee. I have fished in all of them, and know all about them.

Mr. TREADWAY. I congratulate the gentleman on his facility in pronouncing those names, which he has evidently acquired by long practice. I can not swing my tongue around them. But I want to refer to the report of the hearings before the committee. The chairman of the committee [Mr. SPARKMAN] the other day offered some criticisms or references to my speaking about shallow rivers. This is one of them. The witness appearing before the committee was Mr. Walter De Four. He stated:

The shallow water made it necessary for us to get together all the information that it was possible to get and then, in addition to all the information we could get from the outside, to apply a little ingenuity of our own and develop a boat about which Mr. Long will tell you later on—a boat with which we are able to navigate the river. We can now navigate this river, which is something we were never able to do before, notwithstanding the fact that the people of Macon had spent more than $100,000 in the building of boats.

The gentleman from Minnesota [Mr. SMITH], who sits by me, suggests that they could navigate the boat a great deal better if they put wheels under it, because then they would not need any water at all for the keel and the rudder.

Then Mr. De Four goes on to say:

That boat is now in actual operation.

Think of it, gentlemen, a wonderful advance. They are asking Congress to appropriate money for these high-sounding names, and there is actually a boat in operation on the river, by the testimony of a gentleman who appeared before the committee. Then he goes on to say:

When we appeared here in 1914 we promised to build a boat and put it in operation on the river if given the necessary appropriation. We did not give up, but we have built the boat.

[Applause.]

A wonderful event! Further description of the boat:

In building this boat and operating it since July 20 last, we have learned more about navigation than we knew when we undertook to build that boat.

[Laughter.]

They learned considerable about navigation.

As the result of that, we now have in process of construction a boat that is built on even higher scientific principles and more advanced theories than the former one. With the information about this boat which Mr. Long will be able to give you later on, you can go back home to your people and assist them greatly in the navigation of the waters throughout their territory. I would like to impress upon the members of the committee that what we have done is the best that we could do under the conditions. We were forced to do something, and usually a man can do something when he is forced to do it.

This is the kind of an item by which this bill secures the reputation of being "pork." [Laughter.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. TREADWAY. Mr. Chairman, I ask for five minutes more.

The CHAIRMAN. The gentleman from Massachusetts asks that his time be extended five minutes. Is there objection?

Mr. RAGSDALE. I object.

Mr. WISE. Mr. Chairman, I really thought the gentleman who has just taken his seat, being a member of the River and Harbor Committee, would at least have submitted this proposition fairly.

Mr. ADAMSON. Will the gentleman yield?

Mr. WISE. I will.

Mr. ADAMSON. If the Altamaha River was transferred to the State represented by the gentleman from Massachusetts, how much of the State would be left uncovered by it? [Laughter.]

Mr. WISE. Mr. Chairman, my only purpose in these few minutes is to state the facts. I have no desire to deal in personalities or make insinuations against anybody. The truth about the proposition is this: The boat that the gentleman from Massachusetts refers to applies solely to that part of the river from Macon, Ga., down to Hawkinsville, where for years and years we have been trying to navigate the river, but were prevented from doing so because the Government did not supply the little money to dredge the river. The Oconee River on the other branch is practically in the same condition. They have been unable to use it because the Government, through a parsimonious method of appropriating funds, applied just enough money to use a little on the various places where they run together and form the Ocmulgee.

Mr. MOORE of Pennsylvania. Will the gentleman yield?

Mr. WISE. Yes.

Mr. MOORE of Pennsylvania. I have an indistinct recollection that a company was formed to operate boats on the river.

Mr. WISE. That is correct; and they have built a boat and are carrying commerce all the year around except a month or two in the summer, when they can not do it because the Government has not cleaned the river. They not only have built one boat, but they have another under construction, and they propose to continue to build the boat and put them on the river from Macon to Brunswick, Ga., and to Savannah, Ga.

Mr. MOORE of Pennsylvania. I would like to know whether agriculture and commerce have been developed in consequence of putting the boat on.

Mr. WISE. Yes; the report shows that in 1913 there were 16,000 tons in this part of the river, and now there are 169,000 tons over this particular part of this system. We have built a boat and are still building them, and the commerce is growing, and all we need is a little money. Gen. Kingman recommended $120,000 a year for five years to put the river system in a condition where it could be used. Not only that, but by virtue of the improvement freight rates have been reduced from 25 to 40 per cent up to Macon, Ga.

Now a few words about the whole situation. There are 494 miles of navigable river. You propose to spend only $53,000 to maintain it and continue the improvements which have been recommended heretofore. Five hundred miles practically, and $53,000 for all that system.

Mr. MADDEN. Will the gentleman yield?

Mr. WISE. Yes.

Mr. MADDEN. How deep and how wide is the river?

Mr. WISE. The channel at Macon, the head of navigation, has now 3 feet of water. We are insisting that it shall be increased to 4 feet in depth.

The CHAIRMAN. The time of the gentleman from Georgia has expired.

[By unanimous consent, the time of Mr. WISE was extended five minutes.]

Now, Mr. Chairman, I say there are 500 miles of this project running through 24 counties in the central part of the State of Georgia. Now, there are grown in those 24 counties, according to the last census, 500,000 bales of cotton and twice that weight in cotton seed, besides all the other products that will be affected by this improvement. There are at least a million people directly affected by the improvement on this system of rivers who will receive the benefit of any reduction in freight rates, which, as I say, has already been 25 to 40 per cent, as shown by the report of the engineers.

Not only that, but it is shown that this system will affect Macon, Ga., which has one to two millions of freight. We come here and ask for the paltry sum of $130,000, what the engineer recommended; but the committee, in accordance with their policy of not increasing anything, but cutting down everything, recommended only $53,000 for the entire system of 500 miles.

Mr. STAFFORD. Will the gentleman yield?

Mr. WISE. Yes.

Mr. STAFFORD. Does the State in any way contribute at all to the expense of keeping these channels clear?

Mr. WISE. It does not; because under our State law we can not do it. What right has the State to improve navigable rivers?

Mr. STAFFORD. Do the municipalities contribute anything?

Mr. WISE. Yes. Macon, Ga., went to the legislature and secured the passage of a special act to allow them to do that.

In the city of Macon they contributed $5,000, and propose to spend the same every year on the terminal. If there ever was a meritorious project, a meritorious system, it is this system of rivers. They would be justified in spending what the engineers said we ought to have—$125,000 a year for five years—and finish it. [Applause.]

Mr. HUMPHREY of Washington. Mr. Chairman, I did not intend to take part in the discussion of this particular item but inasmuch as the gentleman from South Carolina objected to the continuation of the description of this boat by the gentleman from Massachusetts I think the committee ought to have the benefit of it. We are asked to appropriate $53,000 a year to keep this boat running.

I want to read a little further description of this boat, given by one gentleman who appeared before the committee. He said:

There is not a piece of wood in this boat as big as your lead pencil except what went into the screens to keep the mosquitoes from biting the crew and what went into the construction of the ice box.

[Laughter.]

Here is another thing about this wonderful boat for which they want $53,000 a year to run:

We were just as careful about the installation of the power in this boat as we were about the boat itself, because we realized that that is the heart of the boat. If we made a mistake in the installation of the parts the whole structure would be a failure. We investigated every engine made in this country, and I regret to say that we had to select a European article to put in that boat because of its superiority. We selected a Bollinger engine, manufactured at Stockholm, which requires 28 cents an hour to run.

We put an electric plant on this boat. We can blow a horn or, rather, a whistle by electricity and do various other things.

[Laughter.]

We have a number of conveniences and so on. Our boat carries 83 tons on a 30-inch draft; 160 tons on 48 inches. We can load that boat down as low as 54 inches. When those photographs get back to me I will go into detail, because there are some points that are very important. It requires a crew of 10 men on this boat to run it night and day. We do run it night and day. By the way, it is the first boat that was ever installed on that system of rivers that runs night and day. It is the first boat that ever made the trip between Hawkinsville and Macon in less than 40 hours' running time.

* * * * * * *

We have solved the problem of navigating water less than 4 feet in depth without a shadow of doubt.

[Applause and laughter.]

Mr. RAGSDALE. Mr. Chairman, I am very glad to hear the gentleman from Washington [Mr. HUMPHREY] reading this report. It is quite a relief to hear anything by way of pleasantry from him, instead of his whining about hard times. Usually we hear him talking about hard times and the calamities of the country, and we have grown so accustomed to hear his mournful voice, like that of a dog who has lost its owner, that this bit of pleasantry upon his part, I am sure, is highly appreciated by more than one gentleman here. As to the gentleman from Wisconsin who spoke just now, again reverting to the Wateree River, I do not know whether it was the thought of the workman's breakfast or the sight of water that caused this rabid frothing of the "watchdog of the Treasury," but certainly the gentleman is too late in getting into action, because if he wanted to say anything about the Wateree and wanted to test the strength of the House on that proposition, he ought not to have sat supinely in his seat, but should have demanded a vote by tellers. The truth of the matter is that he has been so engaged in filibustering that he has lost sight of everything else.

Mr. LITTLEPAGE rose.

Mr. SPARKMAN. How much time does the gentleman desire?

Mr. LITTLEPAGE. About five minutes.

Mr. SPARKMAN. Mr. Chairman, I ask unanimous consent that all debate on the paragraph and all amendments thereto end in five minutes.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. LITTLEPAGE. Mr. Chairman, I have heretofore taken but little time of this House, but to my mind a very peculiar spectacle has been presented in relation to this amendment. Here we have the information before this House that a million people are interested in a stretch of river from four to five hundred miles long, and have secured in this appropriation bill the pitiful sum of $53,000, in the section of the country where because of previous condition the people are poor, a few on the minority side have slipped into the Democratic side of the House and have gotten the leaders of the Democratic Party to desert, as it were, this committee, and after having done that gentlemen on the other side of the House have seen cause to criticize and make fun of as good a people as God Almighty ever permitted to live, because they have not the grandeur of a steamboat that costs $1,000,000. They make fun of the best those people have. That criticism is unjust, unkind, and unfair to that southern country and its great people struggling, as it has been, during all these years. This is a mere pittance to hand out to a great people, and I am astounded that men of caliber, men in high position, should criticize and move to strike out this item which is recommended and reported by the committee. Every man is the architect of his own fortune in this House; every man has his own destiny to look after. I do not get one dollar for my district in this appropriation bill. We will get it later, if entitled to it. But when Members accuse others, either inferentially or directly, of being interested in a pork barrel, I feel like rising and resenting it on behalf of the entire membership of the House, because I do not believe there is a Member in the House on either side who cherishes such dishonorable sentiment. They say they serve notice that they are going to work politics. When has the time ever been when they did not work politics? Work it? Of course, they will. The majority—this side of the House—is responsible for the legislation that occurs here, and I, for one, even though I am not interested as much as some others, am willing to stand up and take my part of the responsibility. What has grieved my heart is to see my own people suffer themselves to be deceived on this side of the House. I came here to stand hitched. [Applause.] I came here to stand by the committees of this House. [Applause.] I came here believing that the great leaders of this House would not appoint upon the committees any but the best men, and it seems to me that the report of this committee should be sustained. [Applause.]

The CHAIRMAN. The time of the gentleman from West Virginia has expired. The question is on the amendment offered by the gentleman from Massachusetts.

The question was taken, and the amendment was rejected.

The Clerk read as follows:

Flint River, Ga.: Continuing improvement and for maintenance, $60,000.

Mr. FREAR. Mr. Chairman, I move to strike out the paragraph.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Amend, on page 11, by striking out lines 24 and 25.

Mr. FREAR. Mr. Chairman, the remarks of the gentleman from South Carolina [Mr. RAGSDALE] may have been intended for me——

Mr. SPARKMAN. Mr. Chairman, how much time does the gentleman want?

Mr. FREAR. Five minutes.

Mr. SPARKMAN. As much as five minutes?

Mr. FREAR. Yes, I should like as much as five minutes on this matter that involves an expenditure of $60,000.

Mr. SPARKMAN. Mr. Chairman, I ask unanimous consent that all debate on this paragraph and all amendments thereto end in seven minutes.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. FREAR. Mr. Chairman, I desire to state, if the remarks of the gentleman from South Carolina [Mr. RAGSDALE] were directed at me, as suggested a while ago, that I have not spoken on any proposition for over an hour. There has been no attempt, I am sure, at filibustering.

I desire to say that if I consulted by own choice I would not oppose this proposition. I believe the gentleman who appeared before this committee and who is an estimable Member of this House has quite an interest in it, but the facts should be known to the committee. I can not understand why it should be in the bill in its present form. We spent $421,000 on this river, which I believe is a large river. Last year $40,000 was transferred from the allotment to this river and this year $60,000. That makes $100,000 in two years. The total traffic during last year was 37,000 tons. That traffic occurred close to the mouth of the river. The average haul is about 40 miles, which is near the mouth of the river.

According to the engineer's report only one boat makes an occasional trip above. I believe it is above Bainbridge, or some other town near there. I believe, Mr. Chairman, that there ought to be some reasonable appropriation made for these rivers, but when a project has been under improvement since 1880, 35 years, and we have only 37,000 tons developed with a haul of 40 miles, and $40,000 appropriated last year and $60,000 this year, we certainly are not getting a proper return from the money that is being spent.

The suggestion has been made in regard to other rivers, by different speakers, as to waterways up in my own country. We have a river where I live that formerly carried a great commerce, larger than the Mississippi at that time or the Mississippi commerce now. It will carry large boats to-day, the largest on the Mississippi, and yet very little freight has gone

there in the last few years. Only a few hundred tons goes down the river annually. It seeks the railroads, as it seeks the railroads everywhere else when they are within reach.

Mr. MOORE of Pennsylvania. Will the gentleman indicate what that stream is?

Mr. FREAR. That is the St. Croix River.

Mr. MOORE of Pennsylvania. How much money has been spent on it?

Mr. FREAR. A little over $100,000 some years ago. It will carry the largest boat that is on the Mississippi River to-day. I was going to speak about the appropriations made for the gentleman's river, which are very large indeed, and I wish to say there was as much traffic on the St. Croix, and far more at that time, than there was at the same time at Philadelphia.

Mr. MOORE of Pennsylvania. I would like to ask if an appropriation is made for it in this bill?

Mr. FREAR. No; nor for many years past, because there is no commerce. The river is large, just like the Flint River that is mentioned here, but it is commerce that should determine the question of appropriation.

Mr. MOORE of Pennsylvania. Will the gentleman say that commerce ought always to go to the railroads?

Mr. FREAR. The gentleman has suggested that several times, and he has intimated that the railroads are interested in this bill; but they are no more interested than the dredgers, as the gentleman knows they are not, and he would not charge that personally.

Mr. MOORE of Pennsylvania. Of course I would not.

Mr. FREAR. But his publication charges it by implication.

Mr. MOORE of Pennsylvania. I was trying to learn whether the gentleman prefers, in the case he cites, to have the commerce go on the railroad or on the river?

Mr. FREAR. We can not determine that question. It is according to what the needs of commerce are. It is not governed by preference, but by convenience and comparative expense.

Mr. PARK. Mr. Chairman, I wish to call attention to the meager appropriations that have been given to this river through a long series of years that have amounted to the sums that the gentleman from Wisconsin refers to.

There was expended on that river in—

1892	$12,080.74
1893	10,121.60
1894	7,560.76
1895	4,232.97
1896	4,874.75
1897	5,019.45
1898	1,346.10
1899	1,328.68
1900	5,373.88
1901	299.58
1902	430.15
1903	4,111.89
1904	14,469.96
1905	5,269.65
1906	6,662.03
1907	10,207.40
1908	19,781.40
1909	10,349.59
1910	17,402.19
1911	20,075.51
Total	160,998.28

Appropriations of that character, Mr. Chairman, can not mean any more work than the removal of snags and driftwood, the removing overhanging trees, and the raising of bowlders that fall into the river, and that should not be taken into consideration when you speak of permanent improvement. This river carries now some 37,000 tons of freight. From 1912 to 1914 it has increased over 11,000 tons, and the commerce is over $2,300,000 on the river at present. There are five boats running on the river now regularly. And it seems to me, Mr. Chairman, that when we ask for these little appropriations it is considered wrong and called pork-barrel statesmanship, but when a four or five million dollar appropriation is asked for it is called broad, patriotic statesmanship; and I am against that kind of unfair discrimination. [Applause.] There has been more permanent improvement on the river during the past two years, in real aid of navigation, than has been accomplished in the previous 10 years.

This is a very meritorious project and should be carried through. The people are cooperating, and it will not be 10 years before we should have a commerce of not less than $10,000,000 on this magnificent river.

The CHAIRMAN. The time of the gentleman has expired. The question is on the amendment of the gentleman from Wisconsin [Mr. FREAR] to strike out the paragraph.

The question was taken, and the amendment was rejected.

The Clerk read as follows:

Coosa River, Ga. and Ala.: Continuing improvement and for maintenance between Rome, Ga., and Dam No. 4, Ala., $68,000; completing construction of the lock in Dam No. 4 and completing construction of Dam No. 5, in the State of Alabama, $30,000; in all, $98,000.

Mr. FREAR. I move to strike out the paragraph.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Amend, on page 12, by striking out the paragraph beginning with line 7 and ending with line 12.

Mr. SPARKMAN. I would like to ask the gentleman how much time he wants.

Mr. FREAR. Five minutes.

Mr. SPARKMAN. Mr. Chairman, I ask that all debate on this paragraph and amendments thereto end in 10 minutes, and that the gentleman from Alabama [Mr. BURNETT] have five minutes.

The CHAIRMAN. The gentleman from Florida asks unanimous consent that the debate on this paragraph and amendments thereto close in 10 minutes, and that 5 minutes of the time be granted to the gentleman from Wisconsin [Mr. FREAR] and 5 minutes to the gentleman from Alabama [Mr. BURNETT]. Is there objection. [After a pause.] The Chair hears none.

Mr. FREAR. Mr. Chairman, the last river and harbor bill carried 10 different projects on which the engineers were directed to make a reexamination. The Coosa River was one of these projects, and no report, to my knowledge, has come before the River and Harbor Committee to determine the merit of this particular river. The mouth of the river is three hundred and some odd miles from tide water, where it opens into the Alabama, I believe, and it is over 280 miles farther up the river to where this project is being carried on. In other words, the river as a whole is not navigable. It is much like a bottle in the fact that at the upper headwaters they have made some improvement for navigation, and down at the lower end of the river there are some improvements, but nothing has been done between the head and lower river. The Army engineers have urged that in a case of this kind the whole river be improved instead of building these locks and dams at different points. And on page 9 of the Coosa River report Maj. Brown says:

I consider the improvement of the entire river as more important than of that between Rome and Gadsden.

This improvement is going on with the understanding that until we have spent all the money, reaching many millions and now reaching over a million dollars, the river will not be in navigable shape.

Now, the Alabama Power Co. has a number of power plants upon this river. They so advertise in their literature. There are some dams being built—I have forgotten just how many—on this river, and have been for a number of years. The open-channel work is 30 per cent completed after all these years. Navigation is now practicable between Rome, Ga., and Dam No. 4 for the entire year, with 3½ feet, but down below that there is an obstruction again and no chance for any navigation.

The commerce last year, after deducting wood and timber from the 28,000 tons, amounts to 17,427 tons, the result of an expenditure of $1,384,000. On page 349 of the engineers' report it says that the decrease over last year is probably permanent. Only one boat is operating on this improvement, and that is not a paying investment. The cost of maintaining the locks last year was $15,000, interest at 4 per cent upon money invested so far means $69,000 additional every year, and we are now proposing to put in $98,000 more.

And I wish to suggest this in passing, Mr. Chairman, that this river is no different in character than many other rivers now being canalized in this country. We have canalized and spent $12,000,000 on the Warrior, for instance, and only nominal returns have come from that large investment.

There is not a single river in this country that has been canalized where any reasonable showing can be made in proportion to expenditures that the Government has made on it. The highest type of men among economists, who are considered authorities in this country, have shown that it is impossible in this country to drive the traffic to the rivers. In this connection, Mr. Chairman, I ask leave to insert a brief statement from a gentleman who is one of the best authorities in the country, Prof. Moulton. I ask for that privilege.

The CHAIRMAN. The time of the gentleman from Wisconsin has expired. The gentleman asks unanimous consent to extend his remarks in the RECORD as indicated. Is there objection?

There was no objection.

Following is the statement referred to:

River transportation is usually analogous to that by canal, for comparatively few of our streams are really natural highways of commerce. As a rule, they are navigable for the purposes of modern transportation, in name only, rather than in fact. So long as the cost of canalization of a river amounts to forty, sixty, or a hundred thousand dollars a mile, it belongs in the same category as a canal. A river like the Rhine,

whose banks are firm, whose gradient is gentle, whose water supply is constant, and the cost of regulation of which is almost negligible, may indeed be regarded as a natural avenue of commerce, but a river such as the Mississippi, with ever-caving sides and shifting bottoms, with periods of alternating floods and droughts, and the control of which is, in the opinion of engineers, a greater task than the building of the Panama Canal, is no more to be regarded as a natural highway of commerce than any artificial channel whatsoever. The test of the commercial success of such a river must lie in the cost of rendering it navigable for the purpose of modern transportation. Our investigations have indicated that it is only in rare instances that river transportation can be made as economical as transportation by rail.

Mr. FREAR. Let me explain Prof. Moulton's standing as an expert.

In June, 1911, there was offered a prize of $1,000, open to all the writers of the country, for the best work on economic and commercial subjects. The committee was appointed to pass upon the most meritorious of all contributions and included among its members leading authorities on economics, comprising J. Laurence Laughlin, of the University of Chicago; J. B. Clark, of Columbia University; Henry C. Adams, of the University of Michigan; Edwin F. Gay, of Harvard University; and Horace White, New York City.

Many contributions were offered by eminent men. The one receiving first prize of $1,000 was unanimously given to Harold G. Moulton, a political economist, whose subject is "Waterways versus Railways."

Mr. Moulton traveled extensively throughout Europe and this country, making a careful study of the waterway question. Briefly speaking, he reached the conclusion that inland rivers and canals in this country can never compete with railways, and that in Europe, with a few exceptions, the same rule applies.

Mr. BURNETT. Mr. Chairman, the gentleman is mistaken in the statement that the Alabama Power Co. is developing several powers on this river.

Mr. FREAR. I beg the gentleman's pardon; I did not say "developing"; just opening.

Mr. BURNETT. I understood the gentleman to say "developing."

Mr. Chairman, every dollar of this appropriation is recommended by the engineers. The Coosa River is formed by the junction of the Etowah with the Oostanaula. From Mobile to Rome, Ga., is 825 miles that may be made navigable by opening up obstructions in the center of the stream. The upper stretch of the river is navigable from Rome, Ga., by the city of Gadsden, where I live, and there is navigation for about 200 miles down to Dam No. 4.

Thirty thousand dollars of this appropriation is recommended for the completion of Dam No. 5. If that is not done, if these improvements are not made, the engineer says in his statement before the committee that it will cost $10,000 a year for the upkeep of the boats and machinery that the Government has in there and has kept in there for years.

Mr. Chairman, the engineer says another thing: The fact that the river is navigable and the fact that boats are running there has decreased freight rates 50 per cent on the railroads that run from Rome, Ga., to Gadsden, Ala.

This work has been going on for years. Sixty-eight thousand dollars of this appropriation is for dredging and for channel work and improvements on the upper stretch of the river. If these obstructions are removed, it will be the longest navigable stream in the South flowing into deep water except the Mississippi, and it is perennial navigation. It is not a stream that goes dry in the summer. The rainfall on the upper section of that river is greater than that on any other river in the United States except that on the Columbia River, in the country represented by my friend from Washington [Mr. HUMPHREY].

The Government has been dilatory, it seems to me, in not opening up all these streams, because it is a river that can be navigated all the year around. The engineer acknowledged that he was mistaken in stating before the committee that there is only one boat running on the river. There has been one boat running all the time, and in a letter that I filed with the committee it is shown that another boat has been completed, and it is carrying 16,000 tons of freight a year, and near where Dam No. 5 is being completed a company has been formed for the purpose of operating a third boat. Mr. Chairman, it is not simply small commerce, but the people all along this line get the benefit of the competitive rates. It holds down the freight rates on the railroads, and, as the engineer says, it gives them a 50 per cent reduction by reason of having the river there.

I hope the motion of the gentleman from Wisconsin [Mr. FREAR] to strike out the paragraph will not prevail.

I have here a letter from a gentleman of Rome, Ga., addressed to Mr. LEE, of Georgia, in which it is stated that the railroad carries 400,000 tons a year, and the people get a 50 per cent reduction by reason of the improvements on the river. It is a 10-cent flat rate.

Now, Mr. Chairman, I do not desire to take up the time of the committee longer.

The CHAIRMAN. The time of the gentleman from Alabama has expired. All time has expired on this paragraph. The question is on agreeing to the amendment offered by the gentleman from Wisconsin [Mr. FREAR] to strike out the paragraph.

The question was taken, and the amendment was rejected.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Harbor at Miami (Biscayne Bay), Fla.: Continuing improvement, $140,000: *Provided*, That the work proposed under the project adopted by the river and harbor act of July 25, 1912, may be done by contract if reasonable prices can be obtained.

Mr. FREAR. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Wisconsin moves to strike out the last word.

Mr. FREAR. In this connection, Mr. Chairman, I call the attention of the committee to the fact that, so far as my examination goes this is the only project in which that condition is attached. I ask the chairman of the committee what was the purpose of attaching that provision requiring a "reasonable price" on contracts entered with private parties in this case? I ask the chairman of the committee what was the purpose of attaching that provision to this particular project?

Mr. SPARKMAN. I do not think I can make it any plainer than the language itself is. It is for the purpose of having a reasonable contract.

Mr. FREAR. I thank the gentleman for that information. In view of that fact, Mr. Chairman, I call the attention of the gentlemen on the other side, who have voted against the proposition offered by my friend from Iowa [Mr. GOOD], to the fact that the Committee on Rivers and Harbors have placed in this item that very proposition he urges, though without limitation as to the 25 per cent profit. They have placed that very proposition in the bill. Why place a limitation in this one case at Miami? Why not also at Philadelphia and in connection with every other project that we have? Here is a requirement that we must in this case have a reasonable contract performed. But who is to determine the reasonableness of it?

Mr. SPARKMAN. One reason for placing that in there is that the Government has no suitable dredges down there, and it was feared that if it were left to the bidders to bid freely and untrammeled—as, of course, they would—the Government having no dredges down there to hold them down, the bids would be too high.

Mr. FREAR. I fear the gentleman is entirely mistaken there, although the reason given is right; but I fear the result.

Mr. SPARKMAN. I do not think it amounts to much, because the engineers are not going to make an unreasonable contract, anyway.

Mr. FREAR. It puts it up to the Army engineers, and we have had eulogies upon their judgment. Yet the engineers have made contracts reaching $800,000 for the waterway from Norfolk to Beaufort at double the Government's price, or at least they did last year; and they would this year were it not for the amendment offered by the gentleman from Iowa [Mr. GOOD].
